The areas which have been most effected are those which now are suffering from chronic unemployment. The basic problem of unemployment cannot be entirely contributed to the loss of some textile jobs. Nevertheless, the total loss of these facilities has, and will continue to have, a detrimental effect upon the economy of the areas deprived of these jobs. This loss is not only felt by those who have lost their means of livelihood. When an industry closes its doors every merchant who services these people suffers loss. The local tax rolls are depleted. In actuality, the general economic complexion of a community is caused to degenerate.

Another aspect of this force upon the industry of the district which I represent are the problems caused by diversification. One of the larger manufacturers in my district has told me he is going to purchase more and more of his uncut fabrics on the foreign market instead of producing it himself. He will proceed to make finished garments from this material. He now employs 200 people making uncut fabric, but if he makes finished products from his own material he cannot compete with foreign imports. Nearly all of these 200 people are skilled in the uncut fabric field. However, this skill will be of no value to them as this manufacturer changes the orientation of his operations. This individual says he is sorry this must come about, but to stay in business these moves must be made.

These people are caught in the infamous cost-price squeeze. They are being priced out of the market by the foreign imports. This merchandise is being manufactured in countries where U.S. foreign aid has been used to assist in the revitalization of industry. The money to support these programs has come from the taxes levied upon the incomes of the very people who now face unemployment. I feel it is the duty of the Government to protect and maintain our domestic market for these so very generous people.

This body is well aware of the many constructive proposals made to alleviate this unpardonable burden upon one segment of America's economy. I would like to add my voice to those of my distinguished colleagues urging remedial action as soon as possible.

Bloomington, Minn., Athletic Stadium

EXTENSION OF REMARKS
OF
HON. CLARK MacGREGOR
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. MACGREGOR. Mr. Speaker, on Friday of this week the citizens of Minnesota, and especially those in the Twin Cities area of Minneapolis and St. Paul, will embark on a new adventure which I think is significant of the growing economic life of our State. During 1961 two new major league professional athletic teams are making their new home at one of the finest athletic stadiums in the country, at Bloomington, Minn.

The Minnesota Twins baseball team will play its opening home game Friday afternoon. The Minnesota Vikings football team will begin its play in Bloomington in the fall. We think these new ventures are appropriate additions to the rich recreational, educational, economic, and cultural life enjoyed in Minnesota for the past many years.

The suburbs of the Twin Cities are the fastest growing suburbs, in terms of the rate of growth, in the Nation. I invite the Congress and the Nation to note our growth, as symbolized by the coming of two major league athletic teams to our area during this year.

Unemployment: Federal Reserve Versus Council of Economic Advisers

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. CURTIS. Mr. Speaker, a basic controversy as to the nature of our present unemployment and the proper means for combating it has become evident in the statements which have been made regarding this very important subject. A comment on this controversy, as it was recently presented before the Joint Economic Committee in its hearings on the state of the Nation's economy, appeared in an editorial "Showdown Ahead?" in the April 12 issue of the Journal of Commerce of New York. I would like to enter this editorial at this point in the RECORD:

SHOWDOWN AHEAD?

The administration's economist and the Federal Reserve Board may have sought to minimize the differences between them after their spokesmen testified before Congress last month on economic conditions, but their actions since give every indication that their basic disagreement is as strong as ever.

It had appeared in the first week of March that Dr. Walter Heller, Chairman of the President's Council of Economic Advisers, and William McC. Martin, head of the Federal Reserve Board, had clashed in their opinions of what was needed to bring full-scale recovery after the economy started turning up. But immediately every effort was made to indicate that there was basic agreement—for both pointed out that there was enough basically wrong with the economy to require continued stimulation after business starts to pick up.

Yet no mention was made of the fact that they remained in basic conflict as to what means should be used to bring about this full recovery.

And what makes the situation even more arresting is that each of these men has since that time taken occasion to restate his own view of the conflict.

Dr. Heller's restatement of his basic position took place in an address to a press group in Washington a full 2 weeks after his testimony before Congress.

Simply, his position remained that the administration desires and plans to keep interest rates from rising again after business recovery get underway.

Instead of having interest rates turn around as soon as the recovery begins, the council chairman said, the administration wants the present rate structure to hold as long as unemployment continues high and the gap remains between potential and actual output of the economy. This, in essence, Dr. Heller restated his position that credit ease is needed to bring general economic recovery, and that this is a basic prerequisite to a lessening of the number of jobless.

Federal Reserve Board Chairman Martin also passed up his opportunity to let the whole matter of conflict drop. For he had his testimony before Congress reprinted in its entirety in the latest Federal Reserve Bulletin. Mr. Martin thus took the best means at his disposal to publicize the Board's feeling that the present unemployment is nothing easy money can help, but structural—caused by lack of training and need for relocation of the unemployed.

And in publishing the full reasons why the Board feels interest rates must be allowed to rise as the economy recovers rather than being kept low to fight a type of unemployment it can't cure, Mr. Martin is challenging the administration's concept that credit ease must be maintained as recovery progresses.

The willingness of both parties to restate their positions, even though they realize that it would be possible to assume a public posture of harmony, indicates how important each side holds its position to be.

It is thus hard to see how a showdown between the administration and the Federal Reserve can be avoided as the recovery develops, unless the administration beforehand takes basic steps to solve the structural unemployment problem.

Without doubt, the Federal Reserve realizes the truth of the administration's contention that easy credit and a general business recovery can do something to relieve joblessness. It just fears that if too much reliance is placed on credit ease to do a job it can't perform, the monetary authorities will cure only a small amount of the unemployment but at the price of a considerable amount of inflation.

Thus the administration has a chance to save face if it can induce Congress to help cure unemployment through specific actions, such as retraining, relocation, and measures to keep the very young out of the working force.

Otherwise it is apparent that a showdown with the Federal Reserve will be unavoidable. And that would have sharp unfavorable domestic and international consequences no matter which side won the battle.

The Constitution and What It Means

EXTENSION OF REMARKS
OF
HON. DELBERT L. LATTA
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. LATTA. Mr. Speaker, each year the American Legion of Ohio promotes an essay contest among the high school students in Ohio.

The subject assigned was "The Constitution and What It Means." I am proud that the Fifth Congressional District of Ohio is represented among the 12 winners selected this year.

Mr. Hal Hanna of Bowling Green, Ohio, is one of the ninth grade winners. His prize winning essay is as follows:

THE CONSTITUTION AND WHAT IT MEANS
(By Hal Hanna)

The Constitution is a written plan for building a "government of the people, by the people, for the people; whose just powers are derived by the consent of the governed; a democracy in a republic; a perfect union; established upon the principles of freedom, equality, justice, and humanity." It may be likened to a blueprint which architects draw.

This "blueprint" was drawn with great thought, prayer, patience, and compromise by dedicated, learned, and wise men who had risked their lives and fortunes for freedom. These architects, first of all, stated what they thought to be true purposes of a government: to form a more perfect Union, establish justice, insure domestic tranquility, provide for the common defense, promote the general welfare, and secure the blessings of liberty.

To carry out these purposes, the architects planned a strong but limited central government. They described and stated all the powers of the national government, the powers and rights of the States, and the rights and freedoms of the individual citizen. The plain laid out the machinery for government with checks and balances to make sure no group could usurp power. It provided for government by law instead of by men. The written Constitution was the supreme law of the land. The architects allowed for careful and deliberate change, but they made the process of amendment difficult so as to avoid hasty and unwise changes.

After a workable form of government had been built, the architects of our Nation added "specifications" to the "blueprint" in the form of a Bill of Rights. These first 10 amendments guaranteed certain basic rights and freedoms for which people have worked and fought for many centuries. They include: freedom of religion, of speech, of the press, of assembly; the right to petition the Government for the redress of grievances; freedom from unreasonable search and seizure; the right to a fair trial by jury; just compensation for property taken for public use. Twelve other amendmens have been made since the Constitution's existence. One of them forbids slavery, and another gives women full voting rights.

Gladstone, a great English statesman, said, "The American Constitution is the most wonderful work ever struck off at a given time by the brain and purpose of man." It has been a working blueprint for America for more than 172 years. It is the oldest written Constitution still in force in the world today and has been preserved only through great idealism and great human sacrifice.

We Americans today dare not take the Constitution and our free Government for granted. Its usefulness is being challenged. There are some who say it is out of date and they would impatiently toss it aside. Some are indifferent, neglectful, or cynical and so have no reverence or respect for a "welfare state." Some say life has become so complicated that we must submit to increase control by the Government. Communism threatens our free way of life at home and abroad. Farseeing as the early architects were, they alone cannot safeguard our Constitution and liberties. If neglected, they will slip from us or be changed by selfish, ambitious, or foolish men from within our own land or from foreign shores. We must be as vigilant in guarding and preserving our Constitution and Bill of Rights as were the founding architects who achieved them.

Let's Encourage Rather Than Discourage the Buying Public

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. COLLIER. Mr. Speaker, reports from a variety of business sources indicate the recession low is past and the level of business is pointed upward. In fact, there are economic experts who insist that the 1960–61 recession will be the mildest in the postwar period.

It also appears now that while we may be plagued with spotty unemployment for quite some time, there will be a gradual pattern of expanded business activity and consumer buying in the months ahead. Recently one of the national magazines carried an article which forecast a boom year in 1962 and another year of high prosperity in 1963.

There is no question that many enterprising small business leaders were upset by the pessimistic reports of some of the top people in the Kennedy administration. The fact of the matter is that no economic slump is helped by casting a pall of gloom and doom upon the Nation's buying public. This statement by no means purports to minimize the plight of the unemployed nor the conditions which create serious personal problems for many of our people who are hit by business recessions.

Perhaps one of the best letters I received dealing with the problem of public confidence was written by Mrs. Lillian M. Baar, a local businesswoman, who had this to say in a letter also directed to President Kennedy, Secretary of Labor Arthur Goldberg, and our two Illinois Senators:

> Too much fear of recession is being thrown into the hearts of the American people with such overemphasized talk, and it doesn't help matters in America or our prestige abroad to hear so much of this talk. It is like a cancer; it grows and grows—and becomes worse.
>
> I have been in business for over 16 years and have been doing very well. Now buyers of homes are bringing in newspapers with quotes from the President and Mr. Goldberg saying there is a recession which may get worse and develop into a depression. So, many prospective buyers are saying that they will not buy at this time. Yet these people are qualified and are in a financial position to buy. In fact, in most cases, if they were to buy homes they would improve themselves, put more money into circulation and improve matters generally.
>
> Recently I spoke to a woman who a few months ago was going to purchase $2,000 worth of new furniture. When I visited her home recently, she didn't have the new furniture and when I asked her if the furniture company had delayed in delivery it, she simply told me that she had canceled her order because she had been reading about Mr. Goldberg predicting a possible depression.

I should like to quote the entire letter which my constituent wrote, but suffice it to say that this portion clearly illustrates the point of these remarks.

The very nature of some of the legislation which may be foisted upon the American people seems to create a lack of confidence in our free enterprise system—a lack of confidence which is funneled right down to the level of John Q. Public, whose consumer dollars keep the wheels in motion.

What this country needs more than anything else today is a shot in the arm of good, old-fashioned confidence. Favorable economic climates are more than often created by public confidence in the future of this great Nation of free enterprise. If we get into the spirit of talking positively rather than negatively, we will best serve the interest of all the people of this country and its institutions.

San Antonio Girl, 15 Years Old, Inspired To Write and Dedicate a Poem to 87th Congress

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, April 19, 1961

Mr. YARBOROUGH. Mr. President, a group of 95 high school students from south Texas made the trip to Washington to attend the inaugural events.

One of these youngsters, Miss Carole Whitehead, a 15-year-old San Antonio high school student, was so impressed by the visit that she wrote a poem which she dedicated to the 87th Congress.

I ask unanimous consent to have the poem with the accompanying letter printed in the Appendix of the RECORD.

There being no objection, the letter and poem were ordered to be printed in the RECORD, as follows:

SAN ANTONIO, TEX.

DEAR SENATOR: In the month of January, I had the privilege to attend the inauguration of the President, accompanied by 94 other high-school students from south Texas.

The ceremony was so solemn and beautiful it brought tears to my eyes. I'll never forget that day as long as I live. It was so moving, I can't begin to tell you how it affected me.

There I was in the heart of America witnessing the workings of freedom and democracy. The things I saw would go down as historic events in the annals of history. Standing there in the snow on Capitol Hill, I realized and truly understood what America meant to me. The love I cherish for this country and the men who govern it is unparalleled to anything in my life. I am only 15 but if I live to be 1,000 that will be the most thrilling moment of my life.

I also recently completed "Profiles in Courage." That marvelous piece of literature combined with the inauguration absolutely overwhelmed me.

Perhaps this letter and explanation will help validate my reasons for writing this poem dedicated to the heart of America's democracy, the Congress of the United States.

Sincerely,

CAROLE WHITEHEAD.

AN HONOR SO RARE

(By Carole Whitehead, dedicated to the 87th Congress of the United States)

The goal that great men work to,
Great men of faith and virtue,
Is one that sets them off from all the rest.
These men of greatness honor
The work of our forefathers
And make their code of morals free from fear.

These men that we elect
Are men of intellect.
They represent the people the best they can.
No matter their ambition
They'll fight for freedom's mission
Should conflicts come between them and their duty.

Men like Norris, Webster, Houston,
On high hopes had built their future
To reach the highest honor in the Nation.
But they cast their hopes aside
And withstood the pressing tide
For they could not give up fighting for mankind.

Their duty lay before them
And they progressed up and onward,
But their lives as public servants had been harmed.
They well knew the consequences
For they had taken many chances
Throughout their lives as servants of the people.

These men of courage hold
Their freedom and the sword
Above all else including their desires.
The Nation sees and waits
And knows it's not all fate
That sees the country through its times of need.

Few men can claim the goal
That a fewer number hold.
But the men that hold this office can be proud
That they found the needed courage
Many evils to discourage
From corrupting the foundations of our freedom.

Not just any man can be
A leader of the free.
Each must look inside his heart and find the truth.
He must find the wine of honor
In his heart above all others.
He must keep in mind the foundries of our hopes.

Some men have held this office
And not fulfilled the promise
They swore to when they took the oath of office.
But the great have pledged their all
And more will follow—rise or fall.
So, hurry, gentlemen. America is waiting.

The Coming Din of Inequity

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, in order to assist the Members in a better understanding of the true nature and implications of the social security financing mechanism, I would like to include a series of statements written by Mr. Ray M. Peterson, vice president and associate actuary of the Equitable Life Assurance Society of the United States. Mr. Peterson has long been recognized as one of the Nation's outstanding actuaries and authorities on the social security system.

Following is the introduction to Mr. Peterson's articles on "The Coming Din of Inequity":

THE COMING DIN OF INEQUITY

(By Ray M. Peterson)

A great national debate is now in progress as to the issue of providing medical care and hospital benefits under the social security system. That debate can be pursued intelligently and wisely only if we understand the true nature and implications of the social security financing mechanism. Advocates of the social security approach assert that it is best because the social security financing mechanism is time tested and tried and proved. In my opinion this is not so. The social security financing mechanism has not yet met the test of time; its crucial tests still lie ahead. To argue otherwise either reveals an inaccurate or incomplete conception of the true nature of the social security financing mechanism or suggests a willful attempt to distort and misrepresent.

One purpose of this paper is to set the record straight by portraying an accurate picture of the financing mechanism as now operating and by exposing the distortion and misrepresentation, no matter what its origin. Another purpose, and the main one, is to show that there are excellent reasons for grave concern as to the probable ultimate effects of continued distortion and misrepresentation by interpreters of the Social Security Act, by statements of inadequately informed Members of Congress, and even by publications of the Social Security Administration itself.

Such concern arises because the public is being given the false impression that our social security program has many of the unique attributes of voluntary private insurance—attributes which the American people have come to value highly. When the American people ultimately come to know that the nature of our social security program is distinctly different, a rude awakening may well occur, one which could have important political and economic consequences. Will the youngsters of the future protest what the oldsters of this generation have voted for themselves? During the decade ahead, will we oldsters, as we seek to enjoy our social security benefits, hear a rising clamor of unfairness—a din of inequity? Let us examine the situation that is building up.

BACKGROUND INFORMATION

Here is some vital background information. In financing a national old-age pension program, there are possible two approaches as extremes—pay-as-you-go and full reserve—and an infinite number of combinations of the two.

Pay-as-you-go financing, as the term is used in the field of social insurance, means that the Government raises currently through taxes just enough funds to pay the cost of benefits currently due. No reserve is accumulated; no element of prepayment is involved; money is raised as and after payees become eligible to receive benefits. In this latter sense (i.e., relative to the time persons become eligible for benefits) pay-as-you-go is really a postpaid system of financing.

Full reserve financing, on the other hand, is a prepaid system of financing. All benefits are fully paid for or financed during the years prior to the time they are entered upon. Under full reserve financing, the dollar sum of all payments into the fund, together with the interest income earned from its investment, is sufficient to pay off all liabilities for guaranteed or promised benefits. No benefits are promised beyond what can be provided for—at any given point in time—by payments into the funds, plus interest earned.

Full reserve financing in the field of private insurance is the test of actuarial soundness, and it is the only concept of actuarial soundness with which the American people are generally familiar. The actuarial soundness of private insurance is assured by the use of insurance principles; any fiscal soundness (not actuarial) possessed by social insurance depends mainly on the taxing power of the Government. To call a social insurance program actuarially sound just because income balances outgo is to misuse the term.

Two other important points need to be made. One is that under voluntary private insurance the principle of individual equity is preserved; i.e., there is a direct relationship between contributions and benefits; one receives as insurance or annuity coverage precisely what one pays for. This is rarely the case under a social insurance pro-

gram. There a new concept, called social adequacy, prevails. As defined by R. A. Hohaus, in 1942: The measure of protection should be social adequacy for the insured and their families—that is, it should represent, as far as practicable, a basic layer of protection. Social adequacy usually makes it impractical to have individual equity for the insured in the sense of a mathematical quid pro quo return on account of the contributions made by or on behalf of the individual. A socially adequate benefit provides an income sufficient as basic protection against want and destitution, and, consequently, may be much more, or even much less, than an "equity" benefit.

TRUE NATURE OF SOCIAL SECURITY FINANCING

Now, let us establish the true nature of our social security financing mechanism. Evolving through a political process, there has been, beginning with the 1939 amendments, a continuing shift away from substantial individual equity toward social adequacy, and the financing method has become a mixture of full reserve financing and pay-as-you-go, with the latter far outweighing the former. All this has been clearly stated by the Chief Actuary of the Social Security Administration. With respect to the gradually emerging philosophy of benefits, the Chief Actuary said:

"The issues of underlying philosophy for an old-age benefit formula under the social insurance approach have been summed up in the expression individual equity versus social adequacy.' It was generally recognized that individual equity is of paramount importance in administering voluntary old-age insurance on a sound financial basis since each individual has the right to purchase insurance or not as he wishes. However, under a governmental social insurance plan, individual equity in the relationship of the individual's future benefit to his current contribution is not essential to financial soundness, since the individual has no choice as to being covered or as to his rate of benefits or contributions.

"The issue was resolved in the 1939 amendments by a major change in emphasis, as a result of which the old-age benefit formula is based largely on the adequacy concept—and thus to only a small extent on the equity concept."

Then, as to the financing method, he added:

"The principles upon which to base the financing of old-age and related benefits in a social insurance system have been discussed at great length both in this country and abroad.

"This debate was especially active early in the development of our old-age insurance system, when the size of the fund to be accumulated was a burning question. As is often the case in this country, the answer was arrived at through a pragmatic political process rather than through a theoretical philosophical process. And, as is also often the case, the pragmatic process has resulted in an answer which, to date at least, has worked out satisfactorily. Just as the benefit formula is a blend of equity and adequacy, with much greater emphasis on the latter, so is the financing method a blend of reserve and pay-as-you-go, with the latter having the greater weight."

Are these blends so bland as to blind us to blunders? There is grave danger of this.

Let us turn now to another authoritative source, which describes the pay-as-you-go nature of our financing method and shows that an individual's benefits are not financed by his own contributions but by the contributions of others. In an opinion handed down on June 20, 1960, the Supreme Court of the United States had this to say:

"The program is financed through a payroll tax levied on employees in covered employment, and on their employers. The tax proceeds are paid into the Treasury 'as internal revenue collections,' and each year an amount equal to the proceeds is appropriated to a trust fund, from which benefits and the expenses of the program are paid.

"Persons gainfully employed, and those who employ them, are taxed to permit the payment of benefits to the retired and disabled, and their dependents. Plainly the expectation is that many members of the present productive force will in turn become beneficiaries rather than supporters of the program. But each worker's benefits, though flowing from the contributions he made to the national economy while actively employed, are not dependent on the degree to which he was called upon to support the system by taxation."

In Great Britain, the national pension scheme was recently modified so as to bear considerable resemblance to ours both as to benefit formula and financing method. A recent British observer had this to say:

"The conservative scheme is dignified with the actuarial name 'assessmentism' (the cost of the pension is assessed annually and the contributions to pay them arranged accordingly), or in common parlance 'pay as you go'; the future pensioner is paying for existing pensions and will in turn have to trust to a future generation of taxpayers in his retirement.

"What is the employee's security in a state scheme? It accumulates no funds; the money he pays in goes out almost at once to pensioners; when he retires he will have to rely on the contributors and taxpayers, on the value of money, on the government, on the economic and social climate, and on world conditions which the government cannot control. If employees were told these things, would there be an overwhelming vote for state pensions? For 'pay as you go' they might read 'hope as you pay.' "

For the years 1956 through 1965, tax collections for old-age survivors, and disability insurance (OASDI) will total $115.1 billion and OASDI benefits and expenses will total $114.5 billion. These figures clearly show that we are now almost completely on a "pay as you go" or "hope as you pay" basis.

Anniversary of Warsaw Ghetto

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ROOSEVELT. Mr. Speaker, on April 19, 1961, I sent the following telegram to Jewish Labor Committee Workmen's Circle, Congress for Jewish Culture, on the occasion of a dinner to commemorate the Warsaw Ghetto uprising against the Nazis on April 19, 1943:

APRIL 18, 1961.

JEWISH LABOR COMMITTEE WORKMEN'S CIRCLE,
CONGRESS FOR JEWISH CULTURE,
New York, N.Y.

Message to antitotalitarian grouping to be read at meeting, Hotel Statler, April 19: "The brave and nameless heroes who displayed superhuman courage and the deepest love for human freedom by standing against the subhuman hordes of Nazis in Warsaw are as immortal as their deed. It is right that they should be honored at any time, but particularly now during the trial of a chief Nazi criminal, as a reminder of the inhuman acts against which the Warsaw heroes fought and as a warning that there shall never be another Nazi era nor another such sacrifice as the Warsaw ghetto annihilation. I salute the brave men among you who survived that costly freedom stand."

JAMES ROOSEVELT,
Member of Congress.

Savings-Loan Holding Units Buy Banks, Rent Offices, Build Homes—They Invest in Rivals' Stock, May Enter Insurance Field; Trend Arouses Criticism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. MULTER. Mr. Speaker, the following article, which appeared in the Wall Street Journal on April 12, 1961, describes the expanding activities of a bank holding company. I feel that this article points out the need for immediate remedial legislation in this area. I have been working on a bill toward that purpose and I hope to have it ready for presentation to the Congress very shortly. I am pleased to commend the article to the attention of our colleagues:

[From the Wall Street Journal, Apr. 12, 1961]

SAVINGS-LOAN HOLDING UNITS BUY BANKS, RENT OFFICES, BUILD HOMES—THEY INVEST IN RIVALS' STOCK, MAY ENTER INSURANCE FIELD; TREND AROUSES CRITICISM

(By Mitchell Gordon, staff reporter of the Wall Street Journal)

Philip J. Matthew, energetic executive vice president of Empire Financial Corp., a Los Angeles-based savings and loan holding company, is currently in the Bahamas, where finishing touches are being put on a new bank Empire will open there officially next week. When that's done, Mr. Matthew plans to return to southern California to start a personal loan company and he hopes to acquire a casualty insurance company as well.

Says Mr. Matthew: "We intend to create a supermarket of finance—and we may get into other businesses besides."

Such activity reflects, admittedly to an extreme, the intense diversification effort now being made by an industry which until recently hardly knew what the word meant. Until a few years ago, only a small number of savings and loan units were set up as holding companies legally entitled to enter any business they pleased. The rest, some 6,200, were established as individual associations required by State and Federal laws to put most of their funds into mortgages on real property, mainly single family homes, or in municipal or Government bonds.

FEDERAL LIMITATION

Today, however, there are more than a dozen savings and loan holding companies in operation with better than 50 associations under their wings. A growing number of these companies are turning to other kinds of businesses even though the savings and loan field remains prosperous. The reason: Federal legislation enacted last year prevents holding companies from acquiring additional interests in savings and loan associations if they hold a 10 percent or greater interest in one such association. But the law says nothing about other activities the holding companies might pursue.

Consequently, the holding companies are speedily entering other fields. Trans-World Financial Co., another Los Angeles-based savings and loan holding company, expects to complete its first development of homes—61 are being built in all—in Northridge in the San Fernando Valley by the middle of June. Forty-two of the homes, which range in price from $30,000 to $35,000, already have been sold and the company may soon pick up 40 acres for an additional 80 to 100 homes, according to Louis J. Galen, Trans-World's 35-year-old president.

In Hawthorne, Calif., Hawthorne Financial Corp., also a savings and loan holding company, is negotiating for the purchase of the Pacific State Bank. The bank, which has a headquarters facility in Hawthorne and four branches elsewhere in the Los Angeles area, had assets of $20 million at the end of 1960. Cecil Garton, Hawthorne Financial's president, says his company hopes to have a string of at least four banks within the next year or two.

INTEREST IN BANK

Besides its new operation in the Bahamas, Empire Financial has an 88.25-percent interest in another bank, the Erie Bank of Erie, Colo.

Since it began operations about 2 years ago, Midwestern Financial Corp. of Boulder, Colo., has added to its string of three savings and loan associations the following diverse concerns: A mortgage loan company (which acts as an intermediary between mortgage lenders and borrowers), and an industrial bank (which makes installment loans to consumers and businesses) in Colorado, a real estate agency in Kansas and a land development company in Missouri.

Lytton Financial Corp. is considering erecting a multistory office building adjacent to its headquarters on Sunset Boulevard in Los Angeles and recently announced the acquisition of the Southland Co., a Beverly Hills mortgage loan outfit with a capitalization of $1.5 million.

At least one savings and loan holding company is delving into the investment business for its own account. An executive says the company so far has put more than $100,000 of spare cash into the common stocks of some of its holding company competitors and into certain insurance firms. He says the holding company realized a capital gain of "a penny or two a share" in 1960 and has a 20- to 30-percent paper (unrealized) profit on its portfolio at present.

Such activity on the part of the holding companies is kicking up considerable criticism from more conservative members of the industry, particularly by executives of savings and loan associations that are not affiliated with holding companies. These associations, owned by their savers, comprise about 90 percent of all the savings and loan institutions in the Nation. Says one such executive in reference to the holding companies: "These people are being allowed to do, indirectly as holding companies, what they're prohibited from doing directly as associations. Furthermore, if they get into trouble financially, some savers are going to be confused and pull out their money and that could have repercussions throughout the entire savings and loan field."

Holding company executives argue few savers know which holding companies own which associations since rarely do their names indicate any relationships. Furthermore, these officials declare, accounts in most savings and loan institutions are insured up to $10,000 each by an agency of the Federal Government and this in itself tends to assure stability. These executives also argue that State laws in the case of State-chartered associations and Federal laws in the case of federally chartered institutions prevent holding companies from raiding their associations, no matter how desperate their need for funds might become.

Critics of the holding companies' diversification also contend the companies are pushing too deeply into fields that are unrelated and perhaps even unfamiliar to savings and loan executives. If the holding companies can enter the homebuilding and office rental business, these critics argue, they might even get into manufacturing enterprises someday. Most opponents of the diversification trend hope for some sort of legislation that will limit the activities of the holding companies to areas traditionally associated with savings and loan institutions. But no such legislation has been introduced at the Federal or State level, so far at least.

Holding company officials take exception to the charge that they are entering unfamiliar fields. Mr. Galen of Trans-World Financial, for instance, notes he was a builder before he ever got into the savings and loan business and that anyway building isn't foreign to savings and loan associations. Federal law, he notes, permits federally chartered associations to invest up to 20 percent of their resources in raw land for development as they see fit. Mr. Galen says a number of individual associations have used this provision in the past to contract with builders to build and sell houses for them, with the associations carrying the mortgages.

Address by Congressman Walter

EXTENSION OF REMARKS
OF

HON. JOHN J. RHODES

OF ARIZONA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. RHODES of Arizona. Mr. Speaker, on April 1 the Sertoma Club of Mesa, Ariz., was fortunate to be able to present as the speaker for an all-community and area meeting the Honorable FRANCIS E. WALTER, chairman of the Committee on Un-American Activities of the House of Representatives. Congressman WALTER spoke on the subject about which he knows so much and feels so strongly—communism, and its threat to our way of life and the freedom of the world. His speech was so outstanding and so enthusiastically received by his audience that I am proud to share it with all the Members of the Congress:

ADDRESS BY CONGRESSMAN WALTER TO THE SERTOMA CLUB OF MESA, ARIZ.

It was with great pleasure that I accepted the invitation to address you men of the Mesa Sertoma Club who have dedicated yourselves to services to mankind. The goal of your organization is certainly most praiseworthy, one that is in the best tradition not only of our American heritage but of our entire Judeo-Christian civilization. It is also a goal which, if properly pursued in the context of today's developments, can perform an extraordinary service to mankind—because mankind today faces an extraordinary peril, one that it can meet only by extraordinary effort. This peril threatens the eclipse of freedom and the destruction of civilization which makes it possible for us to meet here today with the tremendous political, social, economic, and cultural advantages we enjoy—advantages far greater than those enjoyed by any other people in the past.

It is not necessary for me to spell out in detail the nature of the peril mankind faces. I am sure that recent and current developments in the Congo and Laos—and just 90 miles from our shores, in Cuba—have made that peril plainly evident to all thinking persons.

A recent report indicates that, in western Cuba, an installation has been completed which required hundreds of tons of portland cement. It is more than probable that this installation is a missile base. If so, it means that every single city in the United States is within a few minutes range—and I want to stress that, a few minutes range—of Soviet nuclear missiles.

In the light of these developments, what service can you perform for mankind and for your fellow American citizens? In the past, the Mesa Sertoma Club and Sertoma Clubs in all parts of the country have completed many worthwhile projects of assistance, in one form or another, to a variety of deserving organizations, agencies and individuals in the fields of medicine, education and social welfare, to name just a few—not only in the United States but abroad as well. To the best of your ability, you should certainly continue such undertakings which serve to make your community, your country and the world a better place to live in.

As worthwhile as these projects are, however, I believe that, today, all of us must do more because, if the threat we face is not defeated, your ability to perform the services you have rendered in the past will be taken away from you—completely. If it is not defeated, in place of freedom to serve you will have only the compulsion to slave, to serve a totalitarian, monolithic state that considers man no more than another kind of animal, a kind of rational cog in a political and economic machine.

What can you do? To answer that question you must first analyze the nature of our Government and how our Nation is geared to meet all challenges.

In our representative form of government we have four major weapons in meeting any problem, whether it is domestic communism, flood control, conservation or military defense. Our weapons are information or knowledge; legislation, that is, laws; prosecutive or law enforcement agencies, and finally—and most important of all—an alert, informed and active citizenry.

It is the function of the Congress and its committees to develop information on national problems through investigation, research and hearings, and to pass appropriate legislation, if it is needed, to cope with these problems. It is also its job to plug loopholes in existing laws and to oversee the operations of the executive branch.

Congressional committees, in the course of their hearings, perform a valuable and essential side function—that of informing the American people, who are the ultimate rulers of this land, about a problem and the issues involved in it.

This informing function is accomplished through the committee's published hearings and reports and also, of course, by press, magazine, radio, and TV coverage of committee proceedings.

For over 20 years the House of Representatives has relied upon the Committee on Un-American Activities to perform its vital legislative and informing functions in the field of countering Communist subversion—and the committee has done a creditable job in this field.

The committee's enemies claim that it has accomplished little in the way of legislation and that it has operated primarily to expose people. The truth is very much the opposite.

Independent studies made by the Library of Congress reveal that in the years 1941 to 1960, the Committee on Un-American Activities has made 96 separate and distinct legislative recommendations to the Congress. They reveal that 35 of these recommendations have been adopted by the Congress and are now a part of the law of this land which

is designed to protect you and the Nation from the destructive, subversive forces of communism.

These studies also reveal that 52 bills and 1 House resolution embodying recommendations of the committee were pending at the close of the last Congress, the 86th, and that 8 of these bills had been passed by the House, although the Senate did not act on them.

Again, these studies reveal that the executive branch of our Government has adopted 13 recommendations of the Committee on Un-American Activities which covered policy matters rather than legislation.

It is unsound, of course, to judge a congressional committee solely on the quantity of its legislative recommendations and the number of them enacted into law—just as it is unsound to judge an artist by the number, rather than the quality, of the works he produces. The facts I have cited, however—plus the findings of the courts on legislation which has resulted from committee recommendations—completely refute the charge that it has ignored its legislative function.

As far as its informing function is concerned, the many thousands of published pages of committee hearings, reports, consultations, and scholarly works—on numerous facets of communism—have been a vital service to the Congress, the executive branch, and to the American public. I believe I can say without fear of contradiction that there is no agency in the United States today that has provided the Government and the people with both the quantity and quality of information on communism that the Committee on Un-American Activities has.

Once legislation has been passed, it becames the duty of the executive branch to enforce it. This is where, in the field of Communist activities, the Federal Bureau of Investigation enters the picture as a branch of the Department of Justice. The Federal Bureau of Investigation operates under directives of the Attorney General of the United States, our country's chief law enforcement officer. It is his investigative arm.

The Federal Bureau of Investigation's job is to collect evidence that will make possible the trial and conviction of lawbreakers. Over the years, in the field of Communist subversion the Federal Bureau of Investigation, under its great Director, J. Edgar Hoover, has done a marvelous job of penetrating the Communist Party, keeping track of all its activities and the identity of its members. Numerous Communist Party leaders have been tried and convicted under the Smith Act—on evidence collected by the Federal Bureau of Investigation. Others have been tried and convicted under our espionage laws, or, if diplomats, have been exposed and shipped back behind the Iron Curtain as persona non grata—all on the basis of evidence provided by the Federal Bureau of Investigation.

It is most important that we remember, however, that most of the extensive information the Federal Bureau of Investigation collects on the operations of the Communist conspiracy in this country, for a number of good reasons, is kept absolutely secret. For the most part, it is never revealed to the public except in the case of a court trial.

Because the FBI is purely an investigating agency and has neither the legislative nor the informing function of a congressional committee, it, alone, cannot do a thorough job of protecting this country from communism.

I have heard some people criticize the Committeee on Un-American Activities because it has not "convicted" any Communists or spies lately. It is not the committee's job to do this. As I have just indicated, this is the work of the executive branch of the Government, the FBI, and the Department of Justice.

In some cases, in the course of its hearings, the committee has produced evidence that was later used in the courts to convict certain individuals. The most famous of these cases was that of Alger Hiss. There have been quite a few others. But when this happens, it is more or less an incidental development, on offshoot of the committee's primary function of holding hearings for legislative purposes.

Here, then, we have in a nutshell, the picture of how our Government is set up to meet the threat of internal communism:

The Congress, with the Committee on Un-American Activities playing a special role, develops information and legislation pertinent to the problem. The Department of Justice, with the FBI playing a special role, then develops the evidence to prosecute those who have broken the law—with the courts judging innocence or guilt.

Many people wrongly believe that this is all that needs to be done to defeat communism. They feel that they can relax and forget about the problem because appropriate governmental agencies are taking care of it. I am sorry to say that these people are wrong. The committee and the FBI have found Communists operating in every important phase of American life—in Government, in trade unions, in the moving-picture industry, radio and TV fields; in the theater, the publishing industry, the Armed Forces, the teaching, legal and medical professions. It is difficult to name an area, profession, trade, or industry that has not been infiltrated by the Red fifth column.

The most dangerous type of Communist activity is the day-to-day semiconcealed agitation and propaganda which is being carried out by this fifth column in the cities, towns, and villages across the country; in schools, colleges, and churches, in clubs and organizations of all kinds, in unions, in industry, and in the press.

This is the weapon with which the Communists have subverted other nations and weakened them for the kill. It is the weapon with which they can eventually destroy this Nation—if it is not wrenched from their hands.

Most important, this activity is not illegal. The FBI can do nothing about it—except to add to its bulging files the names of the individuals taking part in it.

What can the Committee on Un-American Activities do?

J. Edgar Hoover testified in February 1960, that the FBI then had 160 known or suspected Communist controlled and infiltrated groups under investigation. Party members in this country number many thousands and fellow travelers many, many thousands more.

Obviously, the Committee on Un-American Activities, in the course of each year, can investigate no more than a very small fraction of the activities of these groups and individuals.

This means that for the most part, as far as governmental agencies are concerned, most of the Communist Party's most dangerous operations are completely unimpeded.

Let me give you one example of how fateful these operations can be.

A new nationwide Communist front is set up. It establishes branches in many cities and towns. Its members start passing out propaganda and hold public meetings and rallies at which pro-Communist and concealed Communist speakers are featured. By a concerted campaign of deceptive propaganda and agitation, it induces many citizens in many communities to accept a position on some vital national question—such as that of nuclear weapons testing—which follows exactly the line of the Communist Party and of Moscow. It succeeds in getting many of these people to promote this position in letters to Members of Congress, the White House and the Department of State—and to sell their friends the idea that the United States should sign an agreement with the Soviet Union banning nuclear tests, even though Moscow will not permit adequate inspection of its territory so that we can be sure it is living up to the agreement.

Concerted nationwide activity along these lines—if not fought and exposed—could have disastrous effects, not only on our country's testing policy but, through it, on our very survival.

The Communist Party's extensive activity of this type, designed to gradually bring about Communist conquest of America, must be fought on the community level by Mr. and Mrs. America. It must be fought by businessmen, educators, clergymen, municipal officials, the press—people in every walk of life.

How can you fight it? Through letters to local newspapers; by countermeetings and rallies at which persons well-informed on Communist activities, startegy, and tactics are featured as speakers; by the issuance of effective counterpropaganda; by the exposure of the backgrounds of the Communist and pro-Communist agitators doing the conspiracy's work.

Because it is so difficult to obtain documentary evidence of Communist Party membership today—there has been no such thing as a card-carrying Communist since 1948—those who would fight the Communists must be better informed on national and international issues than ever before. When you cannot destroy the effectiveness of the Communist propagandist by revealing his subversive ties, you must then be able to meet and defeat him on the facts and issues of each case.

Communist front organizations are not the only danger. There are many other types of Communist-serving activity which the American people must fight:

A Hollywood producer hires a person who is a Communist to write the script of a film admirably suited to promotion of the Communist Party line. He may do so openly or in a sneaky, under-the-table manner, with the writer's true name concealed;

A respectable publishing firm releases a party-line book on some foreign country or on a vital foreign policy matter which is written by a man who is a member of the Communist Party and has extensive affiliations, over a period of many, many years, with Communist front organizations.

Again, there is nothing illegal about any of these activities. The FBI can do nothing about them and, in most cases, neither can the Committee on Un-American Activities. Yet each incident such as these—and there are many of them taking place all the time—is a battle or engagement in the continuing internal conflict the Communists are waging against the Untied States to weaken and destroy it as a free nation.

What are now the main goals of the Communist Party? What are the issues on which you must be particularly well-informed today if you want to be effective in fighting communism?

On January 20 the Communist Party's national secretary, Gus Hall, addressed a meeting of its national executive committee in New York City. He told the leaders of the conspiracy that, to promote world Communist victory, the new administration must be pressed to act in the following directions:

"1. To begin immediately to dismantle the whole system of camps.

"2. To end all squabbling and obstruction by our representatives and to reach agreement to abolish all nuclear testing now.

"3. To put an end to all policies of brinkmanship and the fomenting of increased world tensions. To * * * accept as our policy the outlook of peaceful coexistence."

(By this he means, of course, the abandonment of any resistance to Soviet aggression—such as in Laos.)

"4. To take up seriously the task of disarmament and to plan now for the use of

the billions being squandered on arms for houses, hospitals, schools, roads, and other social service and social welfare needs.

"5. To end the Dulles-Eisenhower era of war alliances and war pacts * * *."

(In other words, disband NATO, SEATO, and all other international, mutual defense agreements.)

After outlining these five key Communist goals, Hall said that the Communist fight for general, universal disarmament was "of special importance" and that the movement to ban nuclear tests and outlaw nuclear weapons was "of the most immediate importance" to the Kremlin and "must be pressed with the greatest vigor."

So here are the keys, immediate goals of the Kremlin and its fifth column in the United States. Not every one who believes in these goals is a Communist. But I would say that anyone who agrees with all or most of them had better do some rethinking and studying the facts and issues involved.

They may sound fine on the surface but you can be sure there is a joker in them somewhere. If not, Communists in all parts of the world, under Moscow's orders, would not be working day and night for them.

As you can readily see, neither the FBI nor the Committee on Un-American Activities can determine whether or not the United States will sign a nuclear test ban with the Soviet Union, and if so, what the provisions of that pact will be. They cannot decide whether this country will adopt a policy of universal disarmament, or whether it will begin dismantling its overseas bases. The vital question of U.S. policy in the face of Soviet aggression will be decided by neither of these agencies.

The same applies to the question of recognition of Red China, the abolition of compulsory ROTC, repeal of the Smith Act and the Internal Security Act, the abolition of the Committee on Un-American Activities and the Senate Internal Security Subcommittee and numerous other matters which are the openly stated goals of the U.S. Communist Party and, therefore, of the Kremlin.

Each one of these questions—and they are all significant issues as far as the outcome of our battle for survival is concerned—will be decided largely by the average citizen and the views on them he makes known to the Congress, the White House, to the press and his fellow citizens.

The key battles in this war are being fought in the towns and villages of this country, in our schools and colleges, in the press, and in citizens associations and organizations of all kinds.

The people of this country, on the local level, can meet—and defeat—the traitors and their collaborators who are trying to sell America down the river. Morever, they must do it.

This country has never won any war without the all-out support of the great majority of its people. It is engaged in world war III at this moment. At the present time, within this country, we are in a nonmilitary phase of that war, but it is a war nevertheless, and the all-out support of the American people is needed if we are to win.

Many years ago Lenin wrote: "We must train men and women who will devote to the revolution, not merely their spare evenings, but the whole of their lives."

Communist success in training such men and women is the key reason for the tremendous power they wield today. Members of the various Communist Parties of the world comprise only a little more than 1 percent of the world's population—yet they completely rule one-third of the people of this globe and have extensive influence on millions of others. They have devoted to their cause not merely their spare evenings, but the whole of their lives.

Sixty years ago when Lenin wrote the words I have just quoted, he faced the challenge of converting the world to his philosophy and of destroying ours. Today, we are faced with a similar challenge. If we are to defeat the international Communist conspiracy so that our own way of life may endure, we must devote ourselves to our cause as wholly as the Communists have devoted themselves to theirs. There is no other way.

The Communists have thrown a challenge to the members of the Sertoma Clubs—as they have to all Americans. It is a challenge to your good citizenship, your loyalty and devotion to your country—and your true devotion to mankind. It is also a challenge which, I am sure, all of you will accept and on which you will not give ground until it has been totally defeated.

Politics and Social Security: A Dangerous Combination

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. CURTIS of Missouri. Mr. Speaker, on March 6 of this year I placed in the RECORD a speech which I had made entitled "Politics Can Destroy Social Security" (CONGRESSIONAL RECORD, 87th Cong., 1st sess., pp. A1512–A1514). I believe that it is necessary to evaluate proposals made in the field of social security legislation with respect to the basic premise of my speech, that political tampering with our social security system can do it serious damage.

One aspect of this danger is cited in the report of a statement by Mr. Ray M. Peterson, vice president of Equitable Life Assurance Association, in the New York Times of Saturday, April 8. I would like to insert that report at this point in the RECORD:

ACTUARY HITS BILL ON MEDICAL CARE—FEARS FINANCING THROUGH SOCIAL SECURITY MIGHT PERIL INTERNAL PEACE

(By Russell Porter)

An insurance expert said yesterday that proposed financing of medical care for the aged through social security might eventually endanger the Nation's internal peace.

Ray M. Peterson, a leading actuary, said the proposal might lead to further costly expansion of the social security system that might have "important political and social consequences." Future generations might ultimately revolt against the cost to them of benefits that present older citizens voted to themselves, he suggested.

Mr. Peterson, a vice president of the Equitable Life Assurance Society of the United States, made these statements in an article in the current issue of the Journal of the American Medical Association. The article was released to the lay press yesterday.

The title of the article, "The Coming Din of Inequity," refers to a "rising clamor of unfairness" that Mr. Peterson predicted would be heard from younger generations unless social security was reorganized and unless medical care was kept out of it. The entire social security structure might collapse unless put on a sound basis, he warned.

AMA LEADING FIGHT

The AMA has led the fight against President Kennedy's program and other Democratic proposals in Congress to bring medical care under social security. The President sent Congress a message in February with a program to finance health benefits for 14,200,000 citizens 65 years old or over through higher social security payroll taxes.

Others have proposed greatly increased social security benefits and taxes in a broadly expanded program. Some critics have predicted that medical care for the aged would lead to a health insurance program for everybody with a tremendous tax burden.

Mr. Peterson said the various Democratic proposals for medical care for the aged now before Congress would add $15 billion to $30 billion to the permanent debt of the social security system. He charged that future generations would have to pay interest forever on this debt, which he estimated had grown from $150 billion in 1952 to $300 billion in 1958. If all current proposals to expand social security were enacted into law, he went on, they would raise the debt to more than $500 billion.

RUDE AWAKENING SEEN

Charging that the system had been officially misrepresented by likening it to private insurance, which he said sets up a full reserve to provide for benefits, he went on:

"When the American people ultimately come to know that the nature of our social security program is distinctly different, a rude awakening may well occur.

"Will the youngsters of the future protest what the oldsters of this generation have voted for themselves?"

He said older members of the social security system received large unearned benefits compared to their contributions, but "the pendulum swings the other way for the youngest members and all new entrants." He said they had to pick up the tab in the form of paying interest on the debt for unearned benefits paid to their elders.

Department of the Interior and Related Agencies Appropriation Bill, 1962

SPEECH
OF
HON. ROBERT F. ELLSWORTH
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 6345, the Department of the Interior and related agencies appropriation bill, 1962.

Mr. ELLSWORTH. Mr. Chairman, under leave to extend my remarks in the RECORD in connection with the Interior Department appropriation bill, 1962, I would like to say that I am pleased to have voted in favor of the Ryan amendment to that bill—the amendment which would, if it had passed, have prohibited the expenditure of Civil War Centennial funds appropriated by the Congress for the use of facilities in which individuals are segregated because of race, religion, or color, or for activities in which individuals are discriminated against for reason of race, religion or color. I am sorry that the amendment was voted down, but I am pleased that the Chairman of the Com-

mittee of the Whole House ruled that such an amendment was germane.

If segregation and discrimination did not exist, an amendment of this nature, naturally, would be unnecessary. Unfortunately, these practices do exist, and there is some evidence that they have existed in the activities of, and in the facilities used by, the Civil War Centennial Commission, a Commission whose real purpose is to commemorate the historic convulsion which, at the expense of many lives and great suffering, decided that America would be perpetuated as the land of equality of opportunity for all, regardless of race, religion or color.

As a Kansan I am particularly pleased to have had the opportunity to lend my support to the amendment. The Kansas Centennial Year and the Civil War Centennial Year come at the same time. A great deal of the history leading up to the admission of Kansas into the Union and the beginning of the conflict of 1861 are one and the same. Kansas was admitted to the Union just a few days before the war began. Abraham Lincoln raised the first 34-star flag, the flag with the star of Kansas, over Independence Hall in Philadelphia while en route to his inauguration here in Washington. Of course, Kansas stood with Lincoln and the Union and the idea that "all men are created equal." Many rivers ran red with the blood of Kansans who fought to insure the idea of equality of opportunity for all, and for me to vote "yes" on the Ryan amendment was consistent with those ideals for which my forebears fought and died, and those same ideals in which I firmly believe.

Minority Views on Social Security Amendments of 1961

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, for the convenience of the Members who are interested in the actuarial soundness of the social security system, I herewith include as a part of my remarks the minority views on the report on H.R. 6027, the bill now before you:

VIII. MINORITY VIEWS

We believe in a soundly financed and equitably conceived system of social security that properly seeks to provide a basic floor of retirement and survivorship protection for the American people on a nondiscriminatory basis. The existing old-age, survivors, and disability insurance program falls considerably short of meeting these requirements.

We are opposed to a system of so-called social insurance that (1) discourages individual productivity, (2) impairs individual ability to achieve self-sufficiency, (3) illogically and arbitrarily differentiates among citizens in regard to benefit eligibility and amount, and (4) spends currently the savings of the present generation so that the commitments of the system to one generation will inevitably fall on succeeding generations in increasing magnitude. The present old-age survivors, and disability insurance program tragically possesses these shortcomings on every count and with seemingly unshakable firmness persists in their retention.

We are opposed to the enactment of H.R. 6027 because it seeks to enact a combination of illy conceived or inadequate modifications in a social security structure that urgently requires much more basic and sweeping reform to be acceptable and workable. There seems to us little merit or future in adding another room to a house built on sand.

We associate ourselves fully with the criticisms in the supplemental views by our Republican colleagues with respect to the proposal to reduce the possible retirement age for men to 62 years. We also tend to support the recommendations of our Republican colleagues to liberalize the retirement test and to end the present unconscionable discrimination against those present aged who through no fault of their own are precluded from a benefit entitlement even though their need is the greatest and even though they may have contributed as much to the OASI trust fund as many present beneficiaries. With respect to the proposed increase in certain dependent's benefits, we can see no reason or rationale for saying to a widow that she can have only 75 percent or 82½ percent or any other percent less than 100 percent of the amount paid to a retired man. We would support a proposal to equate the benefit entitlement between these two classes of beneficiaries.

We should frankly recognize that the present social security system is not insurance and we should end the cruel pretense of maintaining on the basis of an insurance concept that some citizens are deserving of higher benefits than others and some citizens are deserving of no benefits. It serves no useful purpose to characterize as insurance what is merely a statutory mechanism combining welfare and insurance characteristics which emerge as a hybrid that is not insurance and that provides welfare only on a hit-or-miss basis. This mechanism is essentially a device for taking the productivity of one group of our citizens to provide for the welfare of another group and these groups may or may not be of the same generation.

We support the portion of the supplemental views of our Republican colleagues expressed in regard to the tax schedule in existing law and proposed in this legislation necessary to finance the OASDI program. In commenting on the tax burden we stress the fact that the OASDI system has not met the critical test of time. We are told that the system will not mature until well into the 21st century. In the interim it is entirely possible that experience will prove the present tax schedule inadequate. We are perhaps not justified in assuming that future generations will acquiesce in tax burdens to which we are now so willing to commit them.

We also join in the supplemental views of our Republican colleagues with respect to concern over the willingness of the administration to utilize the OASDI program for pump-priming purposes. The fact that the administration did not recommend any comparable liberalization of the public assistance programs under the Social Security Act reveals a dangerous inclination to use the OASDI trust funds for fiscal policy purposes to pursue an objective that, if it is to be done at all, should be done through the Treasury general fund route.

Our reservations with respect to the existing social security program and the amendments proposed in H.R. 6027, aside from considerations of equity and fairness, are primarily directed to our serious doubts over the financial ability of the program to sustain itself in perpetuity. The assumptions on which the system is pronounced sound are inescapably predicated almost completely on economic and population forecasting. There is less reason to question the actuarial conclusions if the assumed economic and population forecasts are correct. Our concern is that these forecasts may prove to be at substantial variance with experience, with the result that the tremendous obligations already accumulated under the OASDI system will prove an intolerable burden.

The existing system is established on the principle that taxes will be imposed on future earned income of future workers to pay benefits obligations that have been previously incurred. The magnitude of these obligations can be demonstrated by an examination of certain actuarial data:

First, an employee with maximum taxable earnings since the program began in 1937 would have contributed, through December 31, 1960, a total of $1,290, so that the combined employer-employee taxes are $2,580. If such an individual reached age 65 on January 1, 1961, and had a wife the same age, the average total amount of benefits that would be paid out in this case would be about $31,200.

Secondly, a similar individual who qualifies for the minimum benefit could have contributed as little as $6.50 (by obtaining 13 quarters of coverage at the minimum rate of $50 of wages per quarter during the period 1937–49, when the contribution rate was 1 percent); in such case, the combined employer-employee taxes would be $13. The total amount of benefits that would be paid out, on the average, in such case (considering that the widow would receive the full minimum benefit under the present law of $33) would be about $9,100.

Thirdly, the total contributions that have been collected by the OASDI system since the inception of the program through 1960 amount to approximately $81.6 billion. The present value of future benefit obligations incurred with respect to existing beneficiaries is estimated at about $95 billion. This latter figure does not take into account the benefit obligations currently being developed for persons who have not as yet reached retirement age or died, or the total benefits paid since the inception of the program through 1960, amounting to $62.9 billion. The combined OASDI trust funds at the end of 1960 amounted to only $22.6 billion.

And, fourthly, the present unfunded obligations of the OASDI system are estimated to be approximately $300 billion on the assumption that no new workers enter the system but that only presently covered persons and their employers make contributions and acquire benefit rights.

These actuarial data give some meaning to the magnitude of the future obligations that have already been incurred under the social security program and suggest the compelling reasons why care must be exercised in the evaluation of the existing program and any proposed liberalizations thereof.

We favor a program that is sound in principle and in its financing features. We are opposed to imposing on future generations the obligations that we should be meeting for ourselves. For these reasons we are constrained to express our opposition to the favorable consideration of H.R. 6027.

NOAH M. MASON.
JAMES B. UTT.
BRUCE ALGER.

World Court Headed by Communists

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. HARVEY. Mr. Speaker, under leave to extend my remarks in the

RECORD, I include the following article from the Richmond (Ind.) Palladium-Item:

WORLD COURT HEADED BY COMMUNISTS

The International Court of Justice, usually referred to as the World Court, is a product of the United Nations.

Our readers will remember that the Congress last year was confronted with a strong group of Members who sought to have the Connally amendment repealed.

This amendment reserves to our Government the right to decide whether a case taken to the World Court involving the United States is purely a domestic issue or whether it involves international affairs.

As long as the United States can safeguard our internal matters from becoming entangled in world political issues we can prevent control over our affairs as they pertain to our domestic laws, principles, and practices.

But within our Congress and among our national leaders there are advocates of repealing the Connally amendment. Their campaign for repeal came close to winning in the last Congress. New attempts are expected in the current session.

It should be of interest to all of us that there now is a Soviet Communist judge as head of the 15-judge World Court. There also is a Communist judge from Poland among the world jurists.

While there are 15 judges, a majority of 9 judges can convene and make decisions. With nine judges considering a case, it takes only a majority of that nine to make a ruling. This means five judges out of the nine could decide an issue. Two of those judges would be known Communists.

If that issue involved our Panama Canal agreement, or the maintenance of our naval base at Guantanamo Bay in Cuba, we would have to accept the decision if our Connally amendment were to be repealed by the present Congress.

The Court also could rule that our tariff schedules were too high, or that our foreign aid to dozens of foreign countries should be increased, including greater aid to pro-Communist governments.

Such action by an international court would be final. Our United States Constitution would be no protection. No precedent would stand in the way of a World Court which itself would establish its own precedents for the future decisions of the Court.

There would be plenty of other countries outside of the big Communist countries which would be glad to take a slap at us if they, too, thought they could profit at our expense from a World Court decision.

The Connally amendment should, by all means, be retained. Our people and our Government should never open the way for international political crooks to rule us through a World Court supporting international dictatorship.

Social Security Conditioned Germany for Hitler

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, as we are faced with demands by the administration to expand the social security system, it may be well for the Members to pause and note the following excerpt from the book "The Rise and Fall of the Third Reich," by that well-known correspondent, William L. Shirer. Mr. Shirer's comments on how social security conditioned the German mind to accept Hitler is most intriguing.

The excerpt follows:

SOCIAL SECURITY AND THE THIRD REICH

Bismarck put through between 1883 and 1889 a program for social security far beyond anything known in other countries. It included compulsory insurance for workers against old age, sickness, accident, and incapacity, and though organized by the state it was financed by employers and employees. It cannot be said that it stopped the rise of the Social Democrats or the trade unions, but it did have a profound effect on the working class in that it gradually made them value security over political freedom and caused them to see in the state, however conservative, a benefactor and a protector. Hitler took full advantage of this state of mind. In this, as in other matters, he learned much from Bismarck. "I studied Bismarck's socialist legislation," Hitler remarks in "Mein Kampf," "in its intention, struggle, and success."

An Analysis of Depressed Areas Legislation

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. CURTIS of Missouri. Mr. Speaker, on Monday, April 10, the Wall Street Journal published a column by Paul Duke analyzing the politics and potential of the depressed areas legislation which this body has passed. Mr. Duke's treatment of the Congress acts is harsh, but I am sure we all recognize them as both fair and truthful. I should like to insert this column in the RECORD at this point:

DEPRESSED AREAS—AID LEGISLATION RAISES SKEPTICISM EVEN AMONG BACKERS

(By Paul Duke)

WASHINGTON.—Within the next couple of weeks an uncertain Congress will put the final legislative touches on an ambitious new Federal program that even some ardent supporters doubt will be able to accomplish its assigned task.

The bill, a major recommendation of the Kennedy administration, is designed to rehabilitate areas suffering from prolonged unemployment by funneling more than $400 million in Federal grants and loans into hard-hit regions of Pennsylvania, New York, West Virginia, Kentucky, Michigan, Illinois, and elsewhere.

Yet, even those who have fought hardest for the new program are skeptical of its potentialities. A Democrat from depression-ridden West Virginia is typical. "If anybody thinks this will solve the unemployment problem, he's crazy," the lawmaker declares.

If such a remark seems strange, it expresses perhaps the overriding contradiction of a new Federal program that is riddled with paradoxes. Consider: President Kennedy listed aid-to-depressed-areas as part of his antirecession program to pep up the economy quickly and put people back to work. Yet, Labor Secretary Goldberg and "liberal" Democratic sponsors in Congress don't regard the program as an antirecession device at all, but rather an attempt to revive communities over a period of years. "There's nothing (in it) that will put a man back to work tomorrow," says a House Democrat from Ohio.

Far from curing unemployment, many liberals who support the new program fear its chief impact may be merely to reshuffle unemployment geographically. That's because, despite alleged safeguards written into the bill, they're afraid the result may be to encourage the pirating of industry from one region of the country to another. "The Jolly Roger is flying at the masthead of this bill," gripes a New England Senator.

To win the votes of southern Democrats, a special provision was inserted in the bill to permit Federal aid for rural areas. Yet, almost no one thinks such a program is necessary because the Agriculture Department already has a rural development plan.

LOTS OF CAPACITY

Though the aid-to-depressed areas scheme is designed primarily to help medium-sized communities, such industrial giants as Detroit and Pittsburgh would also qualify for assistance in building new plants and for community face-lifting projects. Yet, their unemployment troubles stem more from unused rather than a lack of industrial capacity. "We've got more damned plant space in our State than we know what to do with," snaps a Michigan Democrat.

These, then, are just some of the more obvious difficulties involved in undertaking from Washington the job of invigorating local economies. The more subtle complexes can be enormous. Solutions that may seem logical on the surface can turn out to be illogical upon closer examination; actions to help can produce counteractions of harm.

Consider, for example, the plight of a major company that planned to move its plant from one area of a State to another. To soften the impact on the community it was leaving, the company decided on what it thought was a bold stroke—save the jobs of its 300 workers by taking them along. Not that simple, however. New employment opportunities were scarce in the community where the plant was relocating, and the influx of 300 new workers threatened to create bitter antagonism from the local citizenry.

If the program's chances of success are so doubtful, why then is it all but certain to become law? The answer is not unfamiliar in the realm of politics: It's hard to oppose extending a helping hand to the downtrodden, even if the gesture outdoes the accomplishment. Most liberals, when discussing aid to depressed areas, will echo the philosophy voiced by President Kennedy in his inaugural address: "If a free society cannot help the many who are poor, it cannot save the few who are rich." But many of these same liberals, when pinned down on the potential effectiveness of the legislation, agree with one colleague who concedes that the chief value of this bill will be symbolic. Or, in the words of still another: "This is like the United Nations, the faith will greatly exceed the accomplishment."

To be sure, supporters of the depressed areas legislation see some solid good coming from the new multimillion dollar rehabilitation effort. The very passage of the legislation, they believe, will lend new encouragement and hope to scores of areas on the economic skids. In more practical terms, backers believe the program will genuinely help some areas which have been unable to attract industry because of a lack of lending funds.

In West Virginia, for example, a shortage of private credit is cited as a major adverse factor in the State's drive for new businesses. Proponents of the new legislation note that the Pennsylvania Industrial De-

velopment Authority has lent $17 million since its creation 5 years ago and this has accounted for 26,000 new factory jobs with payrolls of $93 million annually. If such a program can work at the State level, they ask, why can't it work on a bigger scale nationally?

NINETEEN HUNDRED AND FORTY-SIX EMPLOYMENT ACT

Advocates claim that the Government already has a mandate to clear up pockets of depression under the 1946 Federal Employment Act which calls for policies promoting full employment in the United States. The longer Uncle Sam remains aloof, they contend, the more serious the blight becomes. Besides, the argument goes, the Government is losing potential tax revenue from economically depressed regions while Federal and State welfare and unemployment compensation payments mushroom.

Moreover, the plan's pushers envision it as the last barrier to a general public works program that would cost billions instead of millions. Commerce Secretary Hodges has already said that a new Public Works Administration will be necessary unless the economy snaps back soon and reduces the number of areas with substantial unemployment, now at 101.

Critics don't question the motives behind the new program, only its chances for success in easing unemployment. "This is one of the biggest phonies to come down the legislative pike in a long time," grumbles a Virginia conservative. What provokes him and others of like mind is that the program probably will take years to produce results, which may well be niggardly. For example, it has been estimated that only about 1 of every 17 unemployed workers in a depressed locality could hope to obtain a job as a direct result of the Federal help that's contemplated.

Most importantly, perhaps, many opponents think the program skirts the root problems of persistent unemployment. "It prescribes a painkiller without being concerned whether the pain is caused by an incurable cancer or a hangover," cracks a western GOP critic. Better, the foes say, to remove the 10-percent excise tax on automobiles to help stimulate car sales; or to launch a crash program to find new uses for coal; or to undertake a major job retraining program; or to reconsider trade policies.

Besides, the argument goes, factors other than favorable financing are frequently more important to business in choosing a plant location. What industry can overlook an area's transportation connections, the availability of raw materials, and the closeness of markets? Too, business is increasingly concerned about the character of the community—its schools, its recreational facilities, the quality of the work force. Some lawmakers suggest the Federal inducements will tend to attract only speculative and undesirable industries looking for windfall aid.

And, of course, it's pointed out that the Federal Government already is offering some area assistance through the Small Business Administration and the Community Facilities Loan Program. Moreover, 22 States now have privately financed development corporations to help in the obtaining of credit; Pennsylvania and nine other States have gone even further and set up State-supported credit corporations. New Hampshire and Maine have established public authorities for the construction of industrial parks.

PHILOSOPHICAL QUESTION

But even granting that economically stricken regions do need more help, there's the philosophical question of whether the job should fall to a special Federal program. And opponents pose these other questions: Should hard-hit communities be helped while others, only less slightly depressed, be denied assistance? What about the communities which aren't depressed but are earnestly trying to build up their economies and will face rougher competition in attracting new businesses? Should the Government favor some areas over others? Concludes a New England conservative: "This is a bad bill because it forces Uncle Sam to play favorites among his children." Possible upshot: Greater political pressure to enlarge the program to include more areas.

For all their self-doubts, supporters of the new depressed areas legislation tend to reject as exaggerated claims that the program eventually will expand significantly. "This is a rifle for a specific target," proclaims a Pennsylvania Democrat. "It was never meant to be anything else, and if properly administered, should not be anything else."

Nevertheless, friend and foe alike can pretty much agree on one basic conclusion: Even if the rifle does strike the target, it's not likely to penetrate deeply.

Migrant Farm Labor Problems and "Harvest of Shame"—XIV

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 14th in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

[From the Palm Beach Post-Times, Feb. 3, 1961]

MIGRANT COLLEGE GRADS BUSY TEACHING OTHERS

"The U.S. Office of Education reports that the migratory workers have the highest rate of illiteracy in the country. Approximately 1 out of every 500 children whose parents are still migrant workers finished grade school. Approximately 1 out of every 5,000 ever finishes high school. And there is no case upon the record of the child of a migrant laborer ever receiving a college diploma."—"Harvest of Shame."

At Lake Shore High School and Lake Shore Elementary School in Belle Glade there are at least three degree-holding teachers who are former migrants.

And the parents of Mrs. Earline Hudson, Mrs. Delores White, and Mrs. Addie Pearl Hill still are engaged in the business of following the crops.

The three teachers agree that there are other degree-holding persons here whose parents were migrant laborers. Most are teachers. Examples? They point to the following:

Gerald C. Burke, Eddi Queen Oates, Helen Vereen, Ollis Davis, Jordan, John Mays, Willie Pyfrom, and his wife, Lenoir Lincoln, Eugene Lincoln, Doris Davis, Leola Miller, and Mary Elizabeth Thompson.

Mrs. Hill and Mrs. White said there are many others.

"It would take a while to list all of them," said Mrs. Hill apologetically. Can others break out of the migrant stream and go on to better lives?

"That's one of the first things I begin teaching them," said Mrs. Hill, a first grade instructor. "I tell them I myself once worked in the fields."

The bright and energetic little teacher said this frequently leads her into conversation, she said.

"Often they tell me of how much work members of their families have done, and then I tell them of my own experiences," she said.

Mrs. Hill said she constantly impresses on her pupils that they must let nothing interfere with their education if they want to follow a better line of employment than that of their parents.

"I'm preaching all the time to the children," she said. "It's the only way."

Mrs. Hill, a graduate of Bethune College at Daytona Beach, was one of four children. She and Mrs. White were classmates through high school at Belle Glade.

Mrs. White attended Florida A. & M.

The two come from families of workers, not crew leaders. Interest shown by their parents caused them to go on to higher education.

Their parents, they said, made arrangements for them to stay in Belle Glade for the full school year. But they joined their families and worked with them after school was out.

Mrs. White, a fourth grade teacher, agreed with Mrs. Hill and Mrs. Hudson that education is the answer to getting out of the migrant stream.

"Children now have a better chance than we did," said Mrs. Hill with obvious conviction.

Would adult migrants go to the trouble of improving their education if facilities were available?

Mrs. Hudson said most would find it impossible because of their working hours and the physical effort involved.

Mrs. White said it wouldn't work "unless they knew there would be jobs waiting at the end of the education."

"Then you'd have lots of them," she said.

Has the life of migrants shown any improvement here over recent years? "In the last 2 years, some of the migrants have started building homes in the Belle Glade area," Mrs. White said. "This is one of the most hopeful signs."

Mrs. White was one of nine children. Her parents bore the basic cost of financing her college education, but she helped both at school and on the farms during some of her summer vacation periods.

Smiling, she and Mrs. Hill recalled that some of those vacations were devoted to picking beans and harvesting potatoes.

Mrs. White was graduated in 1956 and reported immediately to school here. She has been here continuously since except for 14 months spent with her husband in Germany. She was married after college graduation.

Mrs. Hill is in her 4th year of teaching here.

Mrs. Hudson, a physical education instructor, stressed that although it might be difficult to break away from the farm labor, it is not impossible.

"If there's something you really want to do, regardless of where you are, you can find a way to do it," she said. "If they are determined enough, there is a possibility. They can find a way."

In her own case, Mrs. Hudson said, the chief difficulty in getting through college lay in the fact that the family income was not steady.

"During some months, there was no trouble," she said, "but in others, it was tough. The main thing is to have the desire."

Two other children in Mrs. Hudson's family began college but failed to graduate.

Mrs. Hudson is a daughter of Ed King, a crewleader seen on the Murrow show. She had her primary and secondary schooling in Belle Glade and attended Tuskegee University from 1953 to 1958.

During at least two summers while she was in college, Mrs. Hudson worked in the harvest fields, she said, and found other work during other summers.

Her education was interrupted for a year when she married just before entering the senior class. Her husband now is employed by a Fort Lauderdale bakery. They have one child.

Mrs. Hudson believes Palm Beach County education is being provided by "a good, competent staff."

But the education of children of migrant workers suffers because some of them are not here for more than 2 or 3 months of the school year, she said.

The three teachers are in accord that the interest of the parents is of paramount importance in kindling within children the desire for self-improvement.

They pointed out it was only through the sacrifice of their parents that they themselves had been able to go on to college.

Did Sanctions Against Trujillo Help the U.S.?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial from the Saturday Evening Post of April 1, 1961; a cogent comment on Dominican-United States relations:

DID THE SANCTIONS AGAINST TRUJILLO HELP THE U.S.A.?

(By Donald M. Dozer)

It is time to appraise the effects of the action taken against the Dominican Republic by the Foreign Ministers of the American nations at San José, Costa Rica, last August.

Last summer, at a time when the Castro revolution in Cuba was boiling furiously, the Inter-American Peace Committee, headed by U.S. Ambassador John C. Dreier, attributed the increase of tensions in the Caribbean to the "flagrant and widespread violations of human rights which have been committed and continue to be committed in the Dominican Republic."

Later a special Inter-American committee of five members, including Mr. Henry C. Reed for the United States, reported to the Foreign Ministers' meeting that Generalissimo Rafael Trujillo Molina, who has ruled the Dominican Republic for the past 30 years with dictatorial force and considerable brutality, had been implicated in an attempted assassination of President Betancourt of Venezuela. Thereupon, the foreign ministers, including the then Secretary of State Herter, emphatically condemned the Dominican Republic, called for a rupture of diplomatic relations with it, banned all trade with it in arms and implements of war of every kind and agreed to study the desirability of extending this boycott to other articles of trade.

The Inter-American system, for the first time since its establishment in 1889, outlawed a member. Several American governments, including the United States, broke relations with the Dominican Republic. In doing so at the behest of the Organization of American States, the State Department abandoned our previous diplomatic practice of not employing this drastic sanction except where the interest of the United States itself is definitely involved. The Eisenhower administration sought to deny the dicator's government a portion of the Cuban sugar quota that was due it under an act of Congress, but could not receive the necessary congressional authorization. Though it was forced by law to assign the sugar quota to the Dominican Republic, it nevertheless penalized that country by offering to pay 35 percent less a pound than we are paying other foreign suppliers of sugar.

What has all this done to America's position in the Caribbean? For one thing, Trujillo, whose cooperation with the United States in anti-Communist measures has been exemplary for a quarter of a century, has removed the ban on the Communist Party and now allows it to operate as the only legal opposition party in his country. He has temporarily withdrawn into the background of Dominican politics and is permitting the restoration of civil rights, many of which were denied by his regime. His newspapers and the powerful Radio Caribe are subscribing for the first time to Tass, the official Soviet press agency. A rapprochement between the Dominican Republic and Cuba is in the making. Politics has often made stranger bedfellows than Trujillo and Castro.

The choice at San José seemed to lie between the principle of nonintervention and the goal of representative democracy. The foreign ministers decided in favor of the latter, but in trying to impose an unfamiliar system upon the Dominican Republic they weakened the solidarity of the Americas and impaired our national defenses in the Caribbean, which have deteriorated to an alarming extent.

They did so at a time when Castro is making a squeeze play on our naval base at Guantánamo, when the United States has been forced by nationalists in the West Indies Federation to surrender five of the bases that we acquired in the destroyer-bases deal of 1940. Any compensating advantages to this country from going along with the OAS in this matter is difficult to detect.

Samuel Gompers on Compulsory Social Insurance

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, in view of the demand by those who profess to speak for labor in urging an ever greater expansion of the welfare state I would like to call attention to the following words of one of the most able leaders of labor of all time, Mr. Samuel Gompers. Perhaps it would be well for those who believe in the freedom of the individual to ponder his words on compulsory social insurance legislation:

SOCIALIZED MEDICINE

Compulsory social insurance is in its essence undemocratic and it cannot remove or prevent poverty. The workers of America adhere to voluntary institutions in preference to compulsory systems, which are held to be not only impracticable, but a menace to their rights, welfare, and their liberty. Compulsory sickness insurance for workers is based upon the theory that they are unable to look after their own interests and the State must interpose its authority and wisdom and assume the relation of parent or guardian.—Samuel Gompers, January 22, 1917.

A Reappraisal of the United Nations

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. AVERY. Mr. Speaker, the following is a speech given by the Honorable Alf M. Landon at the 13th annual Institution of International Relations, Washburn University, Topeka, Kans., April 9, 1961. In view of the international situation, I think all Members of Congress will find Mr. Landon's comments of great interest. The speech follows:

A REAPPRAISAL OF THE UNITED NATIONS

I speak tonight to focus attention to the facts in this momentous monument of world history. My final conclusions will be neither pessimistic—or optimistic—since it is uncertain yet whether reason will prevail.

There have been incredibly dangerous developments in world affairs in the past few weeks. There has been a failure to make clear the true import of events and their long term consequences. If anything, I am particularly dismayed by the opposite tendency—namely the sugarcoating of deliberate optimism. In some cases, there has been downright concealment of important and deadly significant facts.

One of my major purposes tonight is to try—as fairly and objectively as possible—to reveal what the truth is and how all the elements of crisis revolve about and ultimately center on what I believe to be the most dangerous single conclusion—the potential death of the United Nations.

Let me first clarify certain technical administrative problems which are central to an understanding of the political processes of the United Nations. The U.N. is not—and I must emphasize this point—is not—an independent entity. It has no being and no reality outside of its membership and is entirely the dependency of its membership. In the same sense that a mirror reflects the face—so the U.N. is as strong or as weak, as good or as evil, as much a success or failure as the world it reflects.

But does the U.N. in reality reflect the world? Only the naive would believe that. Member nations are not equally powerful; member nations are not totally independent of political control and manipulation. What the world really is today—and the U.N. beautifully mirrors this—is that Communist power bloc which will act predictably on crucial issues according to the dictates of the Soviet. Of course, on minor matters, there are factions and differences. But don't let that confuse us. On all matters of substance, bloc discipline is enforced.

The secretariat of the United Nations—and in particular, its chief executive officer, the Secretary-General, is the servant of the membership. No matter his personal convictions, he is bound by the language and the substance of the instructions of the membership. He is further bound, as we are tragically learning, by the willingness of the membership to obey their own directives—on all levels—including the financial one.

At this very moment, two international problems are most revealing—Laos and the Congo.

The history of Laos is a most distressing one. From the very inception, this problem was dealth with outside the United Nations and represented the bitter conclusion of the French collapse in what was then French Indochina.

At the meeting in Geneva of the great powers conference, it was agreed that Laos would be constituted as a neutral state and that all participants to the great powers convention would obey the conventional terms of neutrality. As I have already stated elsewhere—the United States as well as the Soviet Union disobeyed the convention. And no matter how we attempt to justify this in terms of Chinese, Russian, and Vietnamese intervention, we did not take this case to the United Nations, but supplied arms and military personnel to a faction in Laos in contravention of the Geneva agreement.

In the face of the deepening crisis—we did not steadfastly rely on the United Nations—but on SEATO—a rather ineffectual structure, built by late Secretary of State Dulles. A structure which has admittedly been of little value because of Britain's and France's indifference—amounting to negative policies. Even in the face of the devastating lesson of the Baghdad Pact, we still followed a course of reliance on a jerry-built power alliance. Furthermore, for 6 years, both SEATO's military and political values were hamstrung by the Eisenhower administration's lack of any positive, definite, and consistent policy in Laos.

In the final analysis—great harm can come from dealing with Laos as an independent problem. Because of its strategic position, it is a part of the whole world's fateful issues.

Despite sugar-coated official pronouncements—Britain, France, and the United States did not present a solid front in SEATO—nor with the United Nations policies in the Congo.

I now turn to the Congo—another key country—unable to defend itself against imperial Soviet control.

Prior to the eruption of the Congo crisis, Dag Hammarskjold had been carefully, skillfully and bravely attempting to strengthen the position of the United Nations so that it would best serve the smaller nations in the face of the East-West power struggle and make possible efficient, immediate action in the face of crisis. Hammarskjold had made great progress in his efforts—so that at the beginning of the Congo crisis—it was possible to field a United Nations army with speed and precision. But here the simmering, underground dangers suddenly burst to the fore. The United Nations blundered in administering policy in the Congo—blunders partially due to the improvision necessary in the planning and administering of new and uncharted procedures.

The Soviet Union, which felt the time ripe for a major imperialistic move, felt itself frustrated and the stakes were big enough to make major battle. The stakes were and are the continent of Africa. The Soviet Union waged its war on many grounds, but the most important ground was the United Nations itself.

It would first destroy the Secretariat and, by so doing, create anarchy within the United Nations itself. When the initial attack failed and Dag Hammarskjold refused to resign, the Soviet Union extended its attack by creating a precedent by refusing financial support.

Without money from the Soviet Union and its satellites, United Nations effort would be seriously hampered. The arbitrary withdrawal of troops by member states created near panic in attempting to field a force large enough to cope with the most difficult situation. And finally, the various political factions in the Congo itself, seeing dissension and disunity in the United Nations proper, were encouraged to defy the United Nations, thereby creating increased economic and political instability which always favors Communist expansion.

In the face of the impudent and cynical junking operation other member states were handed a precedent for like action. Not until April 3 did Belgium agree to withdraw its military personnel from the Congo in compliance with U.N. resolutions.

The French have refused payment of their financial commitments to the Congo operation and—with the inadequate exceptions of Australia, Ireland and the Netherlands, who have made only partial payment—the United States alone has paid the 1960 Congo assessment in full.

There has been much talk—at times of past crises—of the capacity of the United Nations to survive. It is my considered opinion that it is this crisis now which represents the great turning point—for it is this crisis which has produced general disobedience and not disobedience merely on the part of the imperialist Soviet bloc.

The League of Nations died in the face of the Italian invasion of Ethiopia—not simply because of unilateral disobedience on the part of Germany and Italy—but of general failure throughout the membership to provide support. No single nation of power and substance elected to go to the defense of the League in clear and certain terms.

At this moment the question of survival by the United Nations relies largely on American leadership. We are compelled to act both within and outside the United Nations to save its very existence. And our actions within and without must be consistent. In terms of our allies and all those areas of the world where the United States is central for aid and survival the United States must demand compliance with the Charter of the United Nations. But it can do that only when it, too, complies with the charter.

And when it acts unilaterally—as in Laos—its political position and its moral position in support of the United Nations evaporates. If we don't value the maintenance of the United Nations as the only essential organism which breeds hope for peace we must then clearly face the alternative and the certain inevitability of war. No other organism—no other structure—no other mechanism exists which can act as well to inhibit "the seeds of destruction" leading to eventual general conflict.

Having presented a general background to this momentous crisis, let me deal with those elements which bring us closer to the heart of the problem. The best way is to cite opposing viewpoints and reveal the counter arguments. We all agree on certain basic matters, namely:

1. The policy of the Soviet Union is clearly and by its own admission imperialistic. It will use all means at its disposal to secure world dominion.

2. Even if there be no other choice—in the last analysis, the prospect of war is too dreadful to accept with a casual shrug of the shoulders.

3. If there is any way—any way at all—to preserve freedom—the only condition appropriate to man and that makes life postively good—every effort must be made to find that way—without war.

4. The only way that offers hope is the existence of a third force—a force capable of channeling—focusing—concentrating the power—the idealism—the will of peoples everywhere. That third force presently exists in the form of the United Nations.

Here are some recent countering positions:

The first of March, Paul Henri Spaak—a Belgian statesman of impressive stature—said that "the idea of a general war such as those of 1914–18 and 1938–45 could now be ruled out. Competition with the Communist East now is in the economic sphere. The test is taking place in Asia—Africa and South America rather than in Europe."

Dr. Spaak went on to say that NATO and the new Organization for Economic Collective Development are the best reliance of the free world and the United Nations is ended.

That is merely one variant on a position held by many—that the United Nations has failed. And there should be a return to out-and-out power bloc alliances.

In the first place, I cannot agree with Dr. Spaak's optimistic conclusion that a general war can now be ruled out—and his optimistic reliance on an empty shell like NATO and an untried organization like the OECD. While the United Nations is facing tis greatest test—neither do I agree with him that it has been ineffective and is finished.

But far more important, at the heart of what Dr. Spaak proposes is a return to tested methods, mehtods predicated on the certainty of general war, and not, as he says the end of the possibility of general war. Power alliances are formed for purposes of mutual defense against aggression. They do not contain within themselves the ingredients for buffering antagonists. Two armed camps facing each other with no middle ground define the logical conclusions of their existence—ultimate conflict. And if the grounds for that conflict already exist, then the greater the need for a common meeting ground. Despite his vast experience, Dr. Spaak starts with a false premise, a premise utterly out of accord with a rational world. His conclusions are consequently false.

Another argument gaining recent support calls for a withdrawal to our own shores, the Fortress America theory. This would mean turning the world over to imperial communism, and act of betrayal and almost inhuman surrender of our fellow men. It would also hasten, rather than retard, war, for with massive control by the Soviet Union of the resources of the world, attack would surely follow, an attack against a weakened and demoralized America fearfully awaiting the awful day.

Against the background of the need for immediate decision, I propose the following as the necessary steps for reasonable men:

I emphatically believe President Kennedy and our Congress must make up their minds soon whether we are going to emphasize the key place of the United Nations in world affairs, as our President did in his inaugural address.

I have made it plain in every address I have made on international relations, that we must keep our armed forces and our military strength second to none. That involves our own defense, even though, like an umbrella in a storm, it covers others.

While keeping second to none in our armed strength, I believe we must concentrate on more support of the United Nations.

We really only started that policy last September. It must be continued to a greater degree than heretofore, because, as I have said, the United Nations, as a result of that policy, was steadily growing in responsibility and strength until the member nations failed to keep even their financial commitments.

There has been much talk that the United Nations—to be effective—would have to be

equipped with a permanent international army to force peace on the world.

I do not believe that is wise.

It is hard for all peoples to break away from age-old customs and believe that international affairs and basic major conflicts can be ultimately settled only by armed force.

However, slowly and falteringly, homosapiens is feeling his way to new rules, new methods, for avoiding that folly. I believe there are sound grounds for optimistic conclusions that, given persistent and consistent strong support by the major powers of truly peoples' government, the United Nations can and will grow in strength and responsibility.

That is not to say that we're not testing fate by our policies in world affairs.

The incredible danger we face is whether Khrushchev and the Soviet, Mao and his Chinese echelons, are going to make the same mistake of Kaiser Wilhelm and his war lords, of Hitler and his Nazis, of Mussolini and his Black Shirts, in underestimating the latent power of the undisciplined peoples of popular governments like Britain, France, and America.

The Prussians—Nazis and Fascists relied—and the Russian Soviet Imperialists are relying—on the same erroneous basic principle. The Soviet believes that disciplined peoples can conquer the undisciplined peoples of true democracies, where—as in America—local labor unions attempt to establish their own foreign policy contrary to their government's international trade agreements.

Khrushchev cries the free press does not understand him. So did Kaiser Wilhelm II and Hitler.

Khrushchev and Mao keep pushing here and pushing there—testing the will and the determination of truly peoples' governments to stand their ground for their principles and their freedom. So did Kaiser and Hitler and Mussolini.

All three made the great mistake of believing Great Britain and France were decadent and America "too proud to fight." Well, they got their answer in two world wars. However, Mao and the Soviet apparently are still not convinced that governments that permit organized pacifist demonstrations, unrestrained criticism and ridicule in all phases of national life, and are devoted to the rights of the individual, can and will do a better job in war when the incentive is there, than their disciplined masses. They confuse willing-to-live-and-let-live policy, up to a point, with faint heart. Therein lies the danger of destruction of the world by a great nuclear war.

Khrushchev, a superb actor or a superb statesman and possibly both, has truly said no nation can win a third general nuclear war. Therefore, the Imperial Soviets' policy is a methodical process, both economically and militarily, in brush wars involving internal conflict. Questions of internal conflict anywhere can quickly become a matter of unilateral action between two major powers and thus resolve themselves into a general war.

When the United Nations charter was adopted—many people vowed that was the answer to war and peace. That reminds me of a conversation I had with an old hard-boiled Republican leader in the 65th Congress that enacted national prohibition.

He told me of a visit he had with several other leaders in the Congress who liked their nip. They talked about brilliant colleagues whose opportunity for great public service had been ruined by overindulgence in intoxicating liquors. They were willing to make the sacrifice of their own tastes in order to eliminate that evil.

When I was talking to him, he was disillusioned by the results. He said, "It never occurred to us that the law would not be obeyed."

And it never occurred to people who built too high hopes on the United Nations Charter as the complete answer to settling difficulties by collective process instead of unilateral actions—that the U.N. would not be obeyed forthwith.

The United Nations is going through the same period of trial and error—of growth—that our Republic has gone through—that the British Commonwealth has gone through—that France has gone through—and Germany—and free country after free country.

Take Kansas for an illustration. Its trials and tribulations in the days of horrible brutality of bitter border warfare were born of the failure of the Missouri compromise and the Kansas-Nebraska Act—and of leadership in both the North and the South—the follies of statesmen and of generals—which resulted in approximately 600,000 casualties on both sides in the Civil War.

And yet—100 years later—we have not yet reached the solution of the basic principles of that war—or, for that matter, in the Bill of Rights adopted almost 200 years ago. That is, civil rights for all in this great country of ours.

Two groups represent the Despair theme of Washburn's Institute of International Relations:

1. The despair of negative thinking is expressed by the tinkling cymbals of pacifists who would supinely surrender to the tyranny of communism—or reach the same end by appeasement. This very principle of nonresistance is an invitation to the Soviet and Mao.

2. The sounding brass thinking by those who believe another world war is inevitable.

I do not agree with such extreme positions. I believe that—in the basic interest of the world's mankind—our eagle must neither fold its wings nor yield to the natural impulse in combating danger. We must not abandon our presence of mind and become—as it were—a cosmic vigilante committee.

The United Nations is neither the failure some claim—nor the shining forceful success that others expected. It is now facing its greatest test. Its survival is at stake, precipitated by the failure of all the member countries to pay their share of the Congo expenses—thus playing into the hands of Khrushchev and Mao.

If the U.N. is forced to depend on the United States to pay more than its share—in order to continue the United Nations policies in the Congo—the collective position of the United Nations in world affairs is drastically altered by being heavily dependent upon one nation for the financing of its Congo policies. To that extent its collective function is weakened.

Although the possibility of the most dreadful and destructive war in the history of mankind cannot be completely ruled out—the prospects of avoiding that holocaust will improve as the free people's governments learn to compose their divergent views and pool their strength by and through the United Nations.

The hope—the creative theme—is expressed by such meetings as this that grasp the fact that the days of self-dependence by a nation are gone forever.

This is a new day and we must adjust ourselves to fit the new rules of the world in which we live. That calls for omniactive leadership by men of determination—of insight—whose eyes are open to the necessity and opportunity of fighting for extended cooperation by and through strengthening the United Nations as the most effective agency for peace.

If it is impossible to present a firm and united position by the United Nations—for equity and justice in the world—I fear a great calamity may be in the making, with the United Nations fading away as did the League of Nations.

Minority Has Questioned the Unsoundness of the Social Security System Since Inception

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, since the very beginning of the program for old-age and survivors insurance, warnings have been sounded that such a program is of dubious constitutionality and that the basis upon which the program was financed is unsound.

In order that the older Members may refresh their memories and the newer Members may have the historical background of the minority views, I would like to include as part of my remarks minority views on the social security system beginning with House Report No. 615 of the 74th Congress:

THE COMPULSORY SOCIAL INSURANCE SYSTEM

The provisions we oppose will increase the cost of this system at its maturity by approximately $3,500 million a year and this amount when added to the huge and pyramiding cost of the other features of the program may well mean the difference between the success or breakdown of the system.

In our opinion, the purpose of compulsory social insurance is to provide a basic floor of economic protection for the individual and his family and in so doing to encourage and stimulate voluntary savings through personal initiative and ambition. It should not invade the field historically belonging to the individual.

We believe that such a form of compulsory social insurance which unnecessarily takes from the individual funds which he would invest or otherwise use for building his own security is incompatible with our free-enterprise system. Accordingly, we do not conceive it to be a proper function or responsibility of the Federal Government either to compensate individuals for all types of losses in earning capacity or to provide a scale of benefits which pay substantially higher amounts to those with higher income.

We believe further that if this vast program is to fulfill its social objectives, the most important factor is to restrict the burden of its pyramiding cost within an amount which the economy can bear. This is so because in the final analysis the basis of all security is a productive economy and the burden in any one year of the mounting cost of this program will have, in the main, to be paid for out of the production of the goods and services which the system seeks to distribute. In 20 years the payroll tax provided for in this bill will be 6.5 percent or a dollar cost based on present wage levels of over $8 billion a year in this one program alone. If this burden becomes too great, the system may well be repudiated by future generations, and if benefit payments are carried to extremes, the inevitable result of the companion tax burden will be a stifling of the incentive and ambition to produce.

Daniel A. Reed, Roy O. Woodruff, Thomas A. Jenkins, Richard M. Simpson, Robert W. Kean, Carl T. Curtis, Noah M. Mason, Thomas E. Martin, Hal Holmes, John W. Byrnes.

Minority views as expressed in House Rport No. 1300, 1st session, 81st Congress, in the report on the Social Security Act Amendments of 1949:

COMPULSORY OLD-AGE ANNUITIES

The bill is separated into several titles. Title II provides for compulsory old-age annuities, and title VIII provides the method by which the money is to be raised to meet the expense thereof.

The two titles are interdependent, and neither is of any consequence without the other. Neither of them has relation to any other substantive title of the bill. Neither is constitutional. Therein lies one of the reasons for our opposition to them.

The Federal Government has no power to impose this system upon private industry.

The best legal talent that the Attorney General's office and the brain trust could marshal has for weeks applied itself to the task of trying to bring these titles within constitutional limitations. Their best effort is only a plain circumvention. They have separated the proposition into two titles. This separation is a separation in words only. There is no separation in spirit or intent. These two titles must stand or fall together.

The learned brief submitted by the Attorney General's office contains in its summation the following, weak, apologetic language:

"There may also be taken into consideration the strong presumption which exists in favor of the constitutionality of an act of the Congress, in the light of which and of the foregoing discussion, it is reasonably safe to assume that the social security bill, if enacted into law, will probably be upheld as constitutional."

We also oppose these two titles because they would not in any way contribute to the relief of present economic conditions, and might in fact retard economic recovery.

The original bill contained a title providing for voluntary annuities. This was another attempt to place the Government in competition with private business. Under fire, this title has been omitted. It was closely akin to title II. In fact, it had one virtue that title II does not possess in that it was voluntary while title II is compulsory. These titles impose a crushing burden upon industry and upon labor. They establish a bureaucracy in the field of insurance in competition with private business.

The minority membership of the Ways and Means Committee have at no time offered any political or partisan opposition to the progress of this measure, but on the contrary have labored faithfully in an effort to produce a measure that would be constitutional and that would inure to the general welfare of all the people.

Excerpts from the minority views of CARL T. CURTIS, then a Member of the House, to the report on the Social Security Act Amendments of 1949:

MINORITY VIEWS

My dissent from the bill reported out does not stem from opposition to a liberalized social security program; instead it arises from the fact that the bill reported out fails in some major respect to do the very things a liberal and effective social security program should do.

The old-age and survivors insurance program is a grossly unsound and ineffective tool for the social security purposes it attempts to accomplish. Because it is so unsound and ineffective, I cannot agree that the mere extension of its coverage or a mere numerical revision of its benefit formula, such as the majority of the committee proposes, can bring about significant improvement. Instead, the very fundamentals of the program should be objectively reexamined, and to the extent that such reexamination indicates the need for drastic overhauling of the program, that overhauling should be done, even though it proves necessary to abandon completely those concepts on which the present program rests.

Social security funds are necessarily limited in amount, since they depend upon the amount of economic productivity in the Nation and the possibility of drawing off a portion of this productivity for social security purposes that is not too large to injure the Nation's economic health. Because of this limitation, it is of the utmost importance that these funds be distributed wisely.

On frequent occasions Congress has voted a very costly program, such as in the field of veterans' legislation or housing. There is an end to such programs. They do expire. There is no end to our social security program. It runs into perpetuity. We bind oncoming generations to pay untold billions of dollars not only 50 years from now, or 100 years from now, but so long as the Government of the United States stands. It is totally unmoral.

Let us permit our children and our grandchildren to decide how much per year they of their generation will pay for social security. We should not bind them by contract to pay untold billions each year, as the present system does. The right of self-government means not only freedom from kings, tyrants, and dictators, but it means freedom from the past.

Minority views to the report on the Social Security Amendments of 1954:

DISSENTING VIEWS ON H.R. 9366

The committee has the grave responsibility of framing social security legislation which will improve and maintain the system on a sound basis, compatible with its purpose and with our system of free enterprise.

Some of the hastily adopted amendments contained in H.R. 9366 are highly questionable and probably would not have been adopted upon mature consideration. The most important of these amendments, expanding the social security tax base from $3,600 to $4,200, are fundamentally wrong and have far-reaching implications. The inflated wage base proposals were adopted with a strong dissenting vote and mark a departure from the basic purpose and justification of social security—that of affording a basic floor of protection—and would directly impair both the ability and incentives of the individual to achieve security through the normal processes of free enterprise.

Private arrangements for security, in contrast with the sterile taxing and spending processes of social security, are an integral part of free enterprise and provide the funds for capital investment upon which our economic system is based. Private thrift and insurance purchases also provide a flexibility of protection adaptable to the particular needs of the particular family. This flexibility is impossible under social security. Furthermore, security privately achieved by voluntary action, as contrasted with unnecessary inflated compulsory social security, is compatible with our traditions and our way of life.

Thus, even though social security were in fact bought and paid for by the individual and his equities, typical of free enterprise, were preserved, it would violate our basic principles to extend its taxes and benefits beyond the levels required to meet its purpose of providing a minimum floor of protection against destitution.

The bill's provisions extending the system's taxes and benefits to earnings in excess of the present $3,600-per-year limit, manifestly raise the fundamental issue of whether we shall progressively depart from the original purpose of the system. The proposal assumes that the $4,200 man requires more compulsory, publicly provided protection that does the $3,600 man. The next step, already proposed and urged, is that of providing still greater Government protection for the $6,000 man than is provided for the $4,200 man. There is no stopping point when one accepts the philosophy of more and more compulsory reliance upon the State, with the corollary of less and less reliance by the individual upon his private voluntary arrangements.

These amendments are indefensible in our opinion. The proposed superbenefits for the high-income man are incompatible with the purpose of the system. Burdening other social security taxpayers with their payment shocks one's sense of equity.

The powerful drive for expanding the wage base and providing higher and higher benefits, and the lack of public understanding of the consequences of this action, place the committee and the Congress in a most difficult position—particularly in an election year.

But the inescapable fact is that younger people, including those not yet of voting age, and millions yet unborn, must largely support benefits for persons who retire in the next two or three decades. This situation places a special trusteeship on this committee and on the Congress. For not only the purpose of social security, but the welfare of our young people and their children, strictly limits the social security benefits which can be provided for the aged through taxation of the young. We must halt the constant increases in present and future benefits, and in the taxes required to support those benefits.

It is far from certain that the present tax schedule will support the presently scheduled benefits, and still less certain that the proposed increased taxes would support the increased benefits.

It is manifest, in any event, that the proposed wage base extension would provide an unwarranted increase in benefits of persons with high earnings, who least need social security protection. It is also manifest that the unwarranted increase in benefits—and for younger people the lifetime burden of the additional social security taxes—would adversely affect individuals and our economy and would be contrary to the general welfare.

FURTHER DISSENTING VIEWS OF MR. UTT

In addition to the foregoing minority report, I wish to state it is my fearful belief that the social security tax is fast shaping up to become a secondary graduated income tax upon wages and salaries, a tax which, when its full impact is felt, will shake our social security system to its very foundation.

Supplemental views to the report on the Social Security Amendments of 1955:

BASIC PROBLEMS

Cost: In order to finance the multibillion-dollar increase in benefits contained in this bill, a higher tax schedule is provided. An almost immediate increase to 2½ percent each on employees and employer, respectively, is provided effective January 1, 1956. Each of the subsequent periodic increases provided under existing law is also increased by one-half of 1 percent. As a result the ultimate tax rate projected under the bill, effective in 1975, is 9 percent shared equally by employees and their employers. The self-employment tax, applicable to professional individuals, will become 6¾ percent at that time.

As high as these future rates are, the rates themselves do not convey a complete picture of the true burden they involve. The tax on

wages is a tax on gross wages without any allowance for personal exemptions, dependents, or other deductions. The tax on self-employment income only permits certain business deductions, such as depreciation. It is, in effect, a tax on adjusted gross income. Therefore, unlike the income tax, the social security tax is not limited to net income. As a result, that tax, as a percentage of net income, is substantially higher than the actual rates would indicate. In fact, the eventual 6¾-percent rate on the self-employed would be the equivalent of a net income tax in the neighborhood of 20 percent and higher in many cases.

Let us take the example of a farmer with a net income from self-employment of $4,200 in 1975. Assuming that he has a wife and two children and uses the standard deduction, his Federal income tax under present rates, will be $276. His social security tax, on the other hand, will be $283.50. In this example, which is a completely average case, the social security tax, as a percentage of net taxable income, would be in excess of 20 percent. If the same individual had three children his income tax would be cut to $156 but his social security tax would still amount to $283.50. In such a case, the latter tax would be the equivalent of a net income tax of 36 percent. We again point out that this would be an ordinary case and not at all an unusual one.

It is estimated that in 1975 the total social security tax collections will approximate $20 billion annually, a colossal sum. Moreover, this estimate assumes continuation of existing wage levels and makes no allowance for the increase in those levels which past experience indicates will occur. The $20 billion estimate, is therefore, extremely conservative.

We are concerned over this fact, moreover, because by their very nature, the liberalizations contained in this bill will create demands for additional changes involving further costs.

We are further concerned over these ultimate costs because of the danger that they may eventually weaken or even destroy public acceptance of the social security system. A social insurance program cannot be expected to provide against all insurable risks. It must be designed to provide a basic protection at a cost within the reach of all, especially those in the lower income brackets who are most in need of that protection. Despite this fact, we are creating a scale of benefits which must be supported by a social security tax which, in the not too distant future, will be equal to and in many cases higher than the Federal income tax.

Finally, insofar as the cost of this program is concerned, we should take sober warning that, in our zeal to provide ever greater benefits and to provide against an ever wider area of need, we do not destroy the very system which we have created. We have succeeded in avoiding the full impact of the cost by shifting most of the burden to the future. At that time, the high tax rates may make it very difficult to retain the contributory principle which we believe so essential to the program. However, we would be deluding ourselves should we believe that the general revenue could be depended upon to support the system. We have already pointed out that, under the present schedule, social security tax collections in 1975 will amount to about $20 billion. If such a vast sum were financed through the individual income tax for example, it would necessitate approximately a 50-percent across-the-board increase in that already burdensome tax. These figures show clearly the magnitude of the problem we are so casually creating.

It is our earnest hope that the questions we have raised will lead thoughtful citizens everywhere to search for the answers. The social security system was created to give our people confidence and faith in their future. It should be above politics.

THOMAS B. CURTIS.

Brief excerpts from the committee report on the Social Security Amendments of 1958:

The old-age and survivors insurance benefit structure and the contribution schedule by which the benefits are financed have not been revised by the Congress since 1954. Since that date there have been significant increases in wages and prices; also, new cost estimates have shown an increase in the actuarial deficit of the program. In the light of these developments, it is imperative that the Congress take prompt action to assure that the program be kept both effective and actuarially sound.

The latest long-range cost estimates prepared by the Chief Actuary of the Social Security Administration show that the old-age and survivors insurance part of the program (as distinct from the disability part) is further out of actuarial balance than your committee considers it prudent for the program to be. When the last major changes were made in 1956 the estimates prepared at that time showed an expected long-range actuarial deficit for old-age and survivors insurance of two-tenths of 1 percent of payroll on an intermediate cost basis. More recent estimates show that the old-age and survivors insurance part of the program is now expected to be out of balance by fifty-seven one-hundredths of 1 percent of payroll. Your committee believes that a deficit of the size indicated by present cost estimates should not be permitted to continue.

Textiles Essential to National Defense

SPEECH
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. PRICE. Mr. Speaker, will the gentleman yield?

Mr. KORNEGAY. I yield to the gentleman from Illinois.

Mr. PRICE. Mr. Speaker, I, too, want to associate myself with the remarks of the speaker now in the well of the House and with the remarks of the gentleman from South Carolina [Mr. DORN], and the remarks of the gentleman from Georgia [Mr. VINSON]. I think they are to be commended for bringing this issue to the floor of the House this afternoon, and not only for this effort but for the effort they intend to put behind a program that may at least lead to a solution of this problem.

I listened with interest a moment ago after the gentleman from South Carolina [Mr. DORN] yielded to the gentleman from Ohio [Mr. SCHERER] and was particularly interested in his reference to the competition that we are receiving in connection with products that go with our national pastime, the game of baseball.

A few days ago I inserted an editorial from the Sporting News, which is the bible of baseball in this country and the leading publication in the United States on sports, that commented on the competition of American producers in the sports field which they were receiving from Japanese imports. I was startled to find that as of the present time 40 percent of the equipment used and sold over the counter at retail in American stores for our own national game of baseball is now produced in Japan. So I think it is about time we become alarmed and alerted to this problem. It is serious and affects every section of the country.

I want to commend you gentlemen this afternoon for trying to forcefully bring this to the attention of the American public.

Mr. KORNEGAY. I thank the gentleman for his very timely and appropriate remarks.

Did Biased Reporters Cost Nixon the Election?

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. WILSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from Human Events of April 7, 1961:

DID BIASED REPORTERS COST NIXON THE ELECTION?
(By Willard Edwards)

This is a report on some research since the election last November on a subject which has disturbed the newspaper world, although it has gained very little public notice.

To put the question simply—did a substantial portion of the American press sabotage Vice President Nixon in the Presidential campaign, thereby cheating the American public of its right to a fair and unbiased report of the Republican candidate's words and activities, and thereby helping him to lose the election?

I covered the Nixon campaign from the time of his nomination at Chicago in late July to election day, November 8. I heard every Nixon speech—hundreds of them—was present at all press conferences and traveled a total of 64,000 miles including the flights to Alaska and Hawaii.

After I returned to Washington November 9 and had a couple of days rest I reentered the civilized world and joined in the great Washington sport of explaining the election outcome.

I attended a number of gatherings of conservatives and here I first ran up against the complaint that Nixon had lost the election because he conducted a me-too campaign. He hadn't hit Kennedy hard enough. There were, of course, other reasons discussed but this one complaint has grown in volume until it has reached the peak of alleging that Nixon threw away a sure victory, just like

Dewey in 1948, through the soft and ineffectual nature of his campaign.

I was confounded by the complaints of Nixon's me-tooism. In arguments on the point, I would cite from speeches he made during the campaign.

Here are some of the things he called his opponent:

Dangerously irresponsible, reckless, utterly unfit to assume the duties of a President.

He lashed Kennedy for downgrading the United States and caught him in falsehoods. He accused him of aiding Communist propagandists. He called him a bare-faced liar, dangerous and dead wrong, a rash, impulsive, immature, inexperienced young man who wanted to use the White House for job-training. He said repeatedly—and these are his exact words—that Kennedy stood for wild spending, higher taxes, higher prices, seizure of industry, and raiding of the Treasury.

He also called Kennedy an ignoramus, a divider of America, one of Khrushchev's most helpful aids.

On the domestic side, he said that Kennedy's program would bring about ruinous inflation. He jabbed at Kennedy's wealth and charged him with attempting to buy the people's votes with their money—not his.

But when I mentioned these things, people looked at me blankly. "When did Nixon make these remarks?" they asked. They hadn't read them in the newspapers.

So I decided to do a little research and discover just what they had been reading. Since these were residents of Washington, D.C., I concentrated on the newspapers which are read in the Capital.

The task was enormous. A one-man survey could do little more than make a spot check. And yet, the results were significant. I began to understand why some supporters of Nixon grew indifferent as the campaign progressed.

First, let me make you acquainted with the atmosphere among the newspaper followers of the Republican candidate. Ninety percent of this press corps, which ranged between 50 and 100 at various periods in the campaign, were all-out supporters of Kennedy. They were not only opposed to Nixon, they were outspoken in their hatred and contempt of him.

This attitude was not concealed. It was loud and open. When Nixon was making a speech, there was a constant murmur of ridicule from many in the press rows just beneath the platform. It was an extraordinary hostility and I can recall no precedent for it in all the campaigns I have covered.

Their adulation of Kennedy was just as open. Most of them shifted back and forth between Nixon and Kennedy during the campaign. They regarded service with Kennedy as a lover regards a honeymoon and assignment to Nixon as a penalty—an enforced association with a discreditable character.

I have not drawn too strong a picture and I think the condition can best be described by telling an incident which occurred during Nixon's whistlestop tour in mid-October. On October 26, as the train was pulling out of Cincinnati, a stranger appeared in the press car where some 50 newsmen were present.

The man was introduced as Mario G. Remo, a New York department store executive, who had been serving as finance chairman of the Democratic National Committee's nationalities division.

Mr. Remo was a man of high standing in Democratic Party councils in New York City and his post was a very important one in the campaign.

He had decided to quit his job and switch over to Nixon. Leonard Hall, the Republican campaign chairman, regarded his decision as so important that he had asked Remo to join the Nixon train and explain his position to the big press group, thereby gaining the maximum publicity for what appeared to be a big political break for Nixon.

There was silence and a growing chill in the press car as Remo stated his reasons for resigning his Democratic post. He said he was alarmed about Kennedy's foreign policy and convinced that Kennedy, as President, would involve the United States in war within 2 years.

At this point one or two reporters raised a yell of "turncoat." There was a chorus of agreement and backs were turned on Remo. Although it was a good story, especially for New York newspapermen, only the two wire service reporters and a few others took notes and filed dispatches.

Mr. Remo was understandably puzzled. He had sacrificed his Democratic political career for patriotic reasons. He was quitting a winner for a loser because, by that time, it was evident to all that Kennedy was going to capture the New York metropolitan area where Remo made his home.

He now found himself treated as a cowardly deserter, a turncoat, a renegade, by the great majority of correspondents assigned to cover the Republican candidate.

I think I can assure you that if one of Nixon's top assistants had shown up on the Kennedy train to announce a switch of allegiance, he would have been greeted like the prodigal son and thousands of words in press dispatches would have been filed. Do you know where the Remo story showed up in a leading New York paper? On page 27—at the bottom—two paragraphs.

Here's another story to give you the flavor of the Nixon press corps. Toward the end of the campaign, a young reporter for a large eastern newspaper joined up. Older correspondents had covered Nixon to this point. Apparently the young man's editor had been a little dubious about his political faith and had made a checkup.

"He called up my wife the night before I left," the young man told his friends, "and he said he was a little worried that I might be brainwashed by Nixon. He asked her how I felt about the candidates."

Then, very proudly, "When she got through telling him about my feelings for Kennedy, he didn't have any more doubt about me."

This was regarded by his colleagues as a pretty funny story. None of them found it strange that an editor should regard an assignment to cover the Republican candidate somewhat like a mission into an enemy camp where his loyalty might be undermined. I feel pretty sure that this young reporter sent no stories on the Nixon campaign which might savor, in any manner, of "brainwashing" by Nixon. This state of affairs became so scandalous that just before the election, Editor and Publisher, a trade journal for the newspaper business, rather uneasily brought it out into the open. The article opened with a quotation from a story I had written which stated that most of the newspapermen covering Nixon were staging a premature victory celebration for Kennedy, the man they favored.

Then Editor and Publisher presented the findings of its own representatives. It carried interviews with a number of reporters. Here are some quotes:

"If the publishers only knew how emotionally involved some of their reporters are for Kennedy, there'd be some real pink-slipping going on."

This was a pertinent observation. A survey had shown that Nixon had the editorial support of more than 57.7 percent of the Nation's daily newspapers while Kennedy was supported by 16 percent. The remainder proclaimed themselves uncommitted.

It seems obvious that some newspapers, which endorsed Nixon, were publishing dispatches on his campaign written by reporters who regarded his possible election as a national calamity.

Here are what some other reporters said when interviewed by the trade journal:

"I've already cast my absentee ballot for Kennedy but I don't like the way the press covering Nixon reacted while watching the television debates. They kept saying things like 'give it to him, Jack.' I figure every guy deserves a fair shake."

Another: "The Democrats are relaxed and carefree and almost haphazard. When I was with Nixon I felt an oppressive suspicion of the press. They think newsmen are out to get Nixon and they may be right."

After the election was over, the New York Daily News brought the whole affair into the open with an editorial which created a stir in the newspaper world. It flatly stated that some reporters covering Nixon "sabotaged" Nixon and his cause with every dirty-pool device known to dirty-pool newspaper people—of whom, unhappily, there are still too many.

"They slanted their dispatches against the Republican candidate. They left out incidents and sidelights which might have been helpful to him. Editors shirked their duty by permitting these slanted, distorted, biased or downright false statements to be published as allegedly honest and factual news."

The editorial continued:

"The whole disgraceful performance was bad journalism, bad ethics and a breaking of faith with the readers of the newspapers we are talking about."

These were harsh words but I have yet to hear of any indignant rejoinder. When Sigma Delta Chi, professional journalistic society, staged its annual convention in New York City a few days later, it called upon Herbert Klein and Pierre Salinger, press secretaries for Nixon and Kennedy, to discuss the question of press fairness in the campaign.

This didn't disclose much. Klein suggested only that the society investigate charges that political reporters had been unfair to Nixon. He said the Vice President had received many complaints accusing newspapers, radio and television of biased coverage.

Salinger agreed that the majority of reporters covering the candidates apparently decided, as he put it, that Kennedy was the better candidate. He remarked, with gratification, that the great majority of newspapers were very fair to Kennedy—a decided understatement in my opinion.

Thus, there is no dispute that most of the correspondents were supporters of Kennedy. You will find no newspapermen, who had anything to do with the campaign, who will deny it. In fact, there has been a great deal of conversation—all private of course, in which misgivings were expressed and even a small amount of remorse in some instances. Nobody, however, seems ready to repent in public.

So now we come to the heart of the matter. Did some of these correspondents permit their partisanship to tinge their accounts of the Nixon campaign? Did their fierce conviction of Kennedy's superiority cause them to subordinate, even unconsciously, the Vice President's most telling attacks on their idol? Did their contempt and scorn for Nixon warp their news judgment so that they played up trivia and neglected major developments?

Well, even after 35 years in the business, I'm pretty naive about my fellow reporters. I'm also proud of my profession. If asked these questions during the campaign, I would have ridiculed the suggestion that these colleagues, almost all skilled veterans, did not keep in separate compartments their private views and their judgment of news values when they sat down to their typewriters.

I did not, of course, know what they were writing at that time. In the whirlwind of a campaign, you're lucky if you can keep up with what your own newspaper is printing. Now and then I picked up a newspaper which gave me an uneasy feeling. I saw leads on Nixon speeches which did not seem justified.

But it was only after I decided to do some research on selected newspapers that I realized what the New York Daily News was talking about when it charged sabotage and dirty-pool tactics.

I must emphasize again that this research was limited to a spot check of several newspapers which are widely read in Washington. A survey of this nature is no one-man job. An exhaustive investigation would require a big staff, well-financed, of the strictest impartiality, and with at least 6 months to do the job.

But my findings force me to this conclusion: There is at least a prima facie case for the charge that animosity for Nixon, concededly felt by most of the newspapermen covering him, did creep into dispatches. In an election as close as this one, the possibility certainly arises that this type of reporting may have affected the final result.

What did this research disclose? It revealed that a substantial portion of the newspaper reading public did not get what it was entitled to get—a full and fair account of the Vice President's words and actions in his campaign for the Presidency.

Time permits only a couple of samples here but I assure you they are typical. Let me describe to you how a major Nixon campaign speech in the very first week of his campaign in September was treated in one of our greatest metropolitan dailies.

On September 15, Nixon delivered a speech in St. Louis before the International Association of Machinists. The audience was hostile but he boldly accused Kennedy of submission to the dictates of organized labor and he just as boldly proclaimed his own independence of pressure from any group.

He quoted from a speech made by Kennedy in Detroit a few days earlier, describing Kennedy as having pledged himself to be for whatever labor was for, and against whatever labor was against. That kind of promising, he said, wasn't good for labor or America. A President ought not to be 100 percent for any group—labor, farm, or business—and ought not to set one group against another. For himself, he would play to no group, no class, no section.

It was a bold talk in the camp of the enemy. This was the Nixon whom a great many Americans had come to admire since his visit to Russia in 1959—the man who poked his finger into Khrushchev's paunch and told him he didn't know everything. Here was a tough-talking candidate, jabbing his opponent in one of his softest spots, and it certainly could not be described as a me-too speech.

How was the speech covered in the great newspaper to which I am referring? A first reading of its bulky columns seemed to indicate that the speech hadn't been reported at all.

True, there was a two-column story from St. Louis which referred to the speech but didn't quote from it. Instead, it carried about 1,000 words of quotes from the labor leaders who had heard it and described the scorn they felt.

This story led with the news that the machinists union, after listening to Nixon, had voted overwhelmingly to endorse Kennedy. Then followed the quotations from labor leaders. They agreed that Nixon had a smooth delivery but the very adroitness with which Mr. Nixon met their hostility had reinforced their feeling that he was still a "tricky Dick" and that both the country and labor would suffer if he won in November.

Some readers, at least, must have wanted to read the speech for themselves and thus savor its "tricky Dick" qualities.

To do this, they would have had to engage in a real hunt. They would finally have discovered, as I did, that there was a report on Nixon's St. Louis speech in that issue. It wasn't very long—about 400 words and paraphrased—and it was buried near the bottom of another story on page 20 telling of another speech made by Nixon in Roanoke, Va.

So, if you wanted to read what Nixon actually said in St. Louis, you had to read 500 words about the Roanoke speech, then you came upon this notation: Nixon spoke earlier in St. Louis.

The writer seized upon a statement Nixon had made at the very end of his labor speech—a polite assertion that, if elected, he would never close the doors of the White House to any group representative of a great segment of the American people.

"The Vice President promised that he would always have the door of the White House open to labor whether it supported him or not,"—that was the lead.

Nixon's sharp jab at Kennedy's Detroit speech emerged in translation this way: "By implication, he [Nixon] suggested that Senator Kennedy had abandoned the interests of all the people when he said in his Labor Day speech in Detroit * * *."

Nowhere in this brief account, even entombed as it was where very few readers would find it, was there a suggestion that the Republican candidate for President had made a major statement of his views on the pressures of organized labor and the vulnerability of Kennedy to such pressures. Nowhere was a hint of its toughness and forcefulness.

In fact, some of the labor delegates were themselves impressed. Sitting in the press section, I heard one delegate say to another rather grudgingly: "This guy talks straight, doesn't he?"

Instead of this, readers of this newspaper did indeed get an impression of me-tooism—Nixon would throw the White House open to labor, whether it supported him or not.

Or—you could take your choice—he was still "tricky Dick."

I found this pattern developed in a number of instances. Whenever Nixon intensified his attacks on Kennedy, he promptly became the "old Nixon" with the ugly connotations of that term built up over the years—the ruthless character assassin who had incurred the anger of Harry Truman by his unprincipled attacks upon the Democratic Party.

On another day, and in the very same newspaper, he would be depicted as exercising the "soft sell"—an equally repellent role in which he sought to ingratiate himself with voters by promoting the image of a lofty idealist. He was Uriah Heap one week and bloody Lord Jeffreys the next.

Here is another sample of the kind of reporting that dogged Nixon's footsteps during the campaign.

The Vice President had imposed upon himself a vow not to discuss the religious issue during the campaign. It was constantly pounded, of course, by the opposition. On October 24, the provocation was so great that press secretary Klein issued a statement which referred to a television broadcast by Bobby Kennedy, brother of the Democratic candidate.

Bobby had charged, among other things, that Republican headquarters in San Diego, Calif., was "openly issuing anti-Catholic literature."

Klein said he had checked this report and secured denials not only from Republican officials but from the Democratic chairman of San Diego County. If there was anti-Catholic literature in San Diego, no one had seen it. Klein suggested that the younger Kennedy had made a false charge to exploit the religious issue. Continuance of such tactics, he stated, might force Nixon himself to take cognizance of them.

This is how Klein's mild statement was handled by the correspondent for a large Midwest liberal newspaper:

"Vice President Richard M. Nixon has cleared the way for using the cruelest of all issues, religion, against Senator John F. Kennedy."

In the long story which followed, there was no mention of the denials by both Republican and Democratic leaders that anti-Catholic literature had been issued in San Diego.

But the story did say that the Vice President had revived memories of the "old Nixon" by the ominous warning that he might open up the Pandora's box of religion.

I submit that the total effect of such journalism was to confirm Nixon's opponent's in their conviction that he was a devious scoundrel and to convince many of his supporters that he was wavering back and forth in his campaign methods in an uncertain, indecisive manner. The net result was certainly not to win votes for him. In the opinion of some political authorities, it cost him thousands, perhaps hundreds of thousands of votes by producing an indifference or repugnance to him among many who would otherwise have voted for him.

These incidents are typical of a number discovered in what could only be a spot-check of some prominent newspapers. I can assure you they are not isolated instances.

Let me summarize:

First, the great majority of the newspapermen assigned to report the Nixon campaign were openly hostile to hm and openly favored Kennedy.

Second, a spot check of several newspapers disclosed evidence sufficient to raise a presumption that some of this animosity crept into dispatches, to the detriment of Nixon's candidacy.

Third, the case seems strong enough, at least, to be submitted to a jury—in this case, a research organization, of unquestioned standing and impartiality, with sufficient staff and funds to conduct an exhaustive survey.

Finally, the press itself should take the lead in providing such a survey.

Many reasons have been advanced for Nixon's loss to Kennedy by a small fraction of 1 percent. He faced a big Democratic superiority. He was opposed by big-city political machines who used the customary fraudulent methods to roll up tremendous majorities against him.

Some Republican leaders have opined that he should have hit harder. His performance during the television shows has been criticized. The factor of the religious issue in the campaign awaits definitive analysis.

If there was still another obstacle to his candidacy—slanted reporting which did not fully and fairly acquaint a portion of the voting public with his words and actions during the campaign—that condition demands exposure.

The people are entitled to it. The press itself is most vitally concerned. It faces an evil which threatens its honor and its proud estate.

The Fall of Bataan

EXTENSION OF REMARKS

OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. DINGELL. Mr. Speaker, Sunday, April 9 was the 19th anniversary of the fall of Bataan. In honor of that event the Board of Commissioners of the District of Columbia named two streets near

the Philippines Chancery, Bataan and Corregidor. In the official ceremony, Secretary of State Dean Rusk delivered the main address.

The names of these two streets in our Capital City recalled the deep and binding brotherhood between the people of the United States and of the Philippine Republic that was welded in the fire of war and quenched in the blood of heroes of American and Filipino descent who suffered and died together in that area.

It is also particularly appropriate that our country and our Capital should celebrate this day while the Republic of the Philippines is represented by the Honorable Carlos P. Romulo, its outstanding and distinguished Ambassador.

Not only is General Romulo remembered for his services in the Congress of the United States, but for his contribution in the long and difficult struggle against tyranny by our two peoples from 1941 to 1945. General Romulo during that time served as General MacArthur's aide-de-camp in Bataan, Corregidor, and in Australia and returned to the Philippines with the U.S. forces which landed in Leyte. General Romulo has continued to distinguish himself as a diplomat, scholar, and world statesman. In the United Nations his voice has been heard always on the side of freedom and on the side of the ancient and unbreakable friendship of the American and Filipino people.

General Romulo has never swerved from his friendship with the United States and by act and word has constantly enunciated the common ideals which we share so well with the Republic of the Philippines.

The fall of Bataan was regarded as a great victory by the Japanese Army but was in a more real sense a symbol of a victory of the human spirit. It was in reality the first step on a road traveled not only by the citizens of the Philippines but of the United States and other free nations to a world in which we hoped we would enjoy lasting peace and a sharing of our different backgrounds and origins in a common cause for liberty. The suffering and loss which followed the fall of Bataan proved to the people of the Philippines and the United States their common heritage and their need to rededicate and renew their devotion to freedom and the ideals of liberty and self-determination. In the words of that great statesman, Gen. Carlos Romulo:

> Bataan proved that the men of the west and the men of the east can face a common foe in absolute and unquestioned equality.
>
> That was the victory of Bataan. It sealed the bond of friendship between Filipinos and Americans—a bond already established through the long years that led up, before the war came, to the guarantee of national independence. As the long shadows of military defeat fell over those Filipino and American warriors in the tropical night in Bataan, the victory of the free spirit hovered overhead. It foretold the irreversible march of nationalism in Asia and Africa, the massive and exciting roster of nations that would quickly win their freedom in the years to follow—India, Pakistan, Burma, Ceylon, Indonesia, and all the others.

General Romulo had other great words to say on this day of mixed sadness and rejoicing:

> To us in the Philippines and to you here, Bataan is a symbol of the bond between us. Bataan is of the past; but the bond lives, and must never be shaken.
>
> So today, in 1961, we Filipinos and Americans recall the symbolism of Bataan—the spiritual victory that makes the military defeat look puny—and in the remembrance of that great moment in our common history we have the right to stand side by side through all the years to come, certain of the rightness of our case and the timelessness of our friendship.

It is for us now to remember and to carry with us, in all the days of the future, not only the ideals for which our two peoples suffered in the late war but also a firm remembrance of the warm friendship and good will which our steadfast friends in the Philippines share with us, which is so well exemplified by the great and distinguished representative of the Philippine Republic, the Honorable Carlos Romulo.

The Coming Din of Inequity—II

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, following is the second in a series of statements explaining the structural mechanism of the social security system written by Mr. Ray M. Peterson, an outstanding authority on social security:

A PERMANENT AND GROWING DEBT

(By Ray M. Peterson)

Now, let us return to the terms "individual equity" and "social adequacy." What is their significance? Individual equity, remember, equates contributions (or taxes, employee's and employer's combined) and benefits; the benefit is earned by the contribution. A socially adequate benefit, however, may be more or less than an equity benefit. The fact is that, for the vast majority of present members of the OASDI system, benefits will be much greater than an "equity" benefit. An income that meets social needs includes a large element of unearned benefit or unearned increment for most of the present members. But the pendulum swings the other way for the youngest members and for all new entrants. Social adequacy for some means individual inequity for others.

The decided swing away from substantial individual equity toward social adequacy which began with the 1939 amendments has been accelerated since 1939. This has been the result of deferring scheduled tax increases, extending coverage to new groups, and increasing benefits for both retired and nonretired groups without increasing the taxes with respect to them by an amount sufficient to cover the cost of their increased benefits.

One need not be an actuary to realize that if large classes of persons receive benefits of greater value than the taxes paid with respect to them, then somebody else must pick up the tab. The unearned benefits are in one sense a subsidy which the older generation has voted for itself, and in another sense a debt representing the present worth of the subsidy which that same generation has assigned to younger generations for service or payment. In view of section 1104 of the Social Security Act giving Congress "the right to alter, amend, or repeal any provision" of the act, this debt does not have the same legal character as the national debt represented by Government bond promises to pay, but if social security promises are to be honored, the debt is just as real as the national debt. The younger generations can either pay off the debt or they can settle for just paying the interest on it. Under the present system of self-support through payroll taxes, these are the only two choices seemingly open to them, short of congressional repeal.

But, is it that simple? Are there really two choices? The great emphasis on social adequacy has some very disturbing implications.

The first is the dawning realization that we have but one choice, and that choice is to pay the interest on the debt forever, since the debt is premanent. The only way the debt can be reduced is to have a given generation of workers build up a huge reserve fund (over and above present payments) solely for that purpose. To expect this to happen is to be politically and economically unrealistic. With no reserve fund in sight to reduce the debt, the burden being passed on to future generations is permanent. It is not something that will somehow work itself out, or go away; it is not an actuarial fantasy.

Second, not only is the debt permanent, but the burden being passed on to future generations is a growing one. Under the 1956 act, the debt arising out of the unearned increments was estimated to be $269 billion. This is the difference between (a) the present worth, $486 billion, of all future benefits and expenses for all persons then OASI members and (b) the sum of the present worth, $194 billion, of all future taxes with respect to such members and the trust fund, $23 billion. The corresponding present worth of unearned increments at the end of 1958 was $289 billion. Estimates of the writer, based on available data, show the debt growing from about $150 billion under the 1952 act to $200 billion under the 1954 act, and on to about $300 billion under the 1958 act. The 1960 act will produce some further increase.

Third—and most serious of all—because of this debt, employee and employer taxes with respect to the average new entrant will always exceed the value of the benefits such a new member will receive. The constant combined employer-employee tax rate estimated as sufficient to pay for all future benefits was 7 percent of taxable payrolls under the 1954 act. Of this, 4.6 percent was needed to support benefits for the average new entrant, and 2.4 percent was interest on a debt of about $200 billion. Under the 1958 act, such tax rate requirement was about 8.75 percent, of which 5.25 percent was needed for a new entrant and 3.5 percent for interest on a debt of about $300 billion. Under the 1954 act, the value of total new entrant taxes was 152 percent of the value of the benefits (7 divided by 4.6); under the 1958 act this became 166⅔ percent (8.75 divided by 5.25). There is no intrinsic reason why this percentage cannot exceed 200 percent. At this point, the average new employee, alone, more than pays his own way. Today, the average new self-employed person is paying 20 percent more than the value of his benefits. The taxes payable by and in respect of the new entrant must forever be greater in value than the value of the benefits that the new

member will receive. The price of social adequacy is perpetual individual inequity.

When the magnitude of this individual inequity becomes more fully understood, will a "din of inequity" arise? Will there be a demand for support from general revenues? Will there be a refusal to pay increased social security taxes? Will there be a demand for reduction of benefits? Will an employer ask a private insurance company whether he can obtain larger benefits for new employees with the same joint employer-employee contributions? If he should ask me, this is what I would have to say. "About 80 percent of joint employee-employer taxes involving your new employees is for old-age benefits for the employee, his wife or widow. The remaining 20 percent is for survivor and disability benefits before retirement. Depending upon the marital status and the sex of your new employees and the rate of earnings, this 80 percent of taxes would buy under an Equitable group annuity contract, at our present rates, 40 to 60 percent more in old-age benefits than are provided under the OASI system."

The foregoing situation would be further aggravated if more is added to this unearned-increment debt by deferral of scheduled tax increases and by benefit increases without fully compensating tax increases with respect to those receiving the benefits. This is to be expected because the 1958 advisory council on social security financing questioned whether the 1969 tax increase should go into effect, and benefits are almost certain to be increased by Congress.

TRSUT FUND VERSUS VALUE OF CURRENT BENEFITS

The shift in principle from individual equity to social adequacy and from "full reserve" emphasis to "pay as you go" financing is vividly reflected by the change in the relationship between the amount of the old age and survivors insurance (OASI) trust fund and the value of the benefits for persons currently on the benefit rolls (disability benefits and trust fund excluded). The following table shows, for example, that if taxes had ceased in 1950, the trust fund would have covered 113 percent of the benefits promised for the future for those then in receipt of payments; but if taxes should cease in 1965, it is estimated that only 20 percent of the benefits for those then on the rolls would be covered, with no provision for those not on the rolls.

Relation of trust fund to value of benefits in current payment status [1]

[In billions of dollars]

Year	Trust fund	Value of benefits	Ratio of (2) to (3)
(1)	(2)	(3)	(4)
1945	$7.12	$2.31	309
1950	13.72	12.10	113
1955	21.66	39.32	55
1960	20.15	88.28	23
1965	23.14	114.23	20

[1] Estimates based on (a) Annual Statistical Supplement, 1958, Social Security Bulletin; (b) "Present Values of OASI Benefits in Current Payment Status, 1940–1956," Actuarial Study No. 45, U.S. Department of Health, Education, and Welfare, Social Security Administration, Division of the Actuary; and (c) reference 6.

In the 20th annual report of the trustees of the OASDI funds, an estimate is made of the progress of the OASI trust fund "in the unlikely event of a sharp reduction in the level of economic activity during calendar years 1960–64, with a relatively high rate of unemployment during the entire period." Based on these estimates, the OASI trust fund would drop to only 10 percent of the value of benefits current in 1964.

EXPANSION BEYOND SOCIAL ADEQUACY

We have observed the growth of unearned increments and the departure from individual equity in the name of social adequacy. For a social insurance system established to provide only a minimum basic coverage as protecttion against want and destitution, this is fully justified. It is in harmony with the 1937 Supreme Court decision which declared the system constitutional as a welfare measure. The advocates of great expansion of social programs, however, have now dropped the adjective "social" and speak only of "adequacy." Here are proposals for departure from social adequacy to higher orders of "adequacy."

Prof. Wilbur Cohen, of the University of Michigan (now Assistant Secrtary of Health, Education, and Welfare), recently said we must develop a concept of "greater adequacy." Speaking of the 50–50 payroll tax financing, he said that there was no reason why it could not be 40–60, or have the Government make a substantial contribution.

Nelson H. Cruikshank, director of the AFL–CIO Department of Social Security, recently wrote:

"The proportion of present earnings that is represented by benefits on retirement must be materially increased for workers in the middle- and upper-income brackets. A worker with average wages in industry today receives only about 30 percent of his present earnings. In order to keep pace with the rising levels of living and to maintain confidence of the system on the part of those in the middle- and upper-wage ranges, he should receive 25 years from now, or sooner, at least 60 percent of his earnings on retirement."

(Based on a current average wage of $4,600, the primary amount is about 32 percent for an employee, and the total benefit for a married couple is 48 percent.)

These proposals go far beyond the concept of social adequacy. Their enactment could increase the permanent social security debt to more than one-half trillion dollars.

TRUE NATURE OF SOCIAL SECURITY RIGHTS

The true nature of social security rights has been well stated by the Solicitor General of the United States and by the Supreme Court of the United States.

Solicitor General: "Social security must be viewed as a welfare instrument to which legal concepts of 'insurance,' 'property,' 'vested rights,' 'annuities,' etc., can be applied only at the risk of a serious distortion of language. We are dealing with a social instrument by which public action, involving compulsion, is invoked to deal with the social problem—the lack of basic economic security of large segments of our society. An understanding of the difficult and changing problems of public policy arising out of attempts to eliminate individual or family insecurity on a national scale will be obscured by Procrustean efforts to force the social security program into the mold of inappropriate analogies."

Supreme Court: "The social security system may be accurately described as a form of social insurance, enacted pursuant to Congress power to 'spend money in aid of the "general welfare." * * * It is apparent that the noncontractual interest of an employee covered by the act cannot be soundly analogized to that of the holder of an annuity whose right to benefits are bottomed on his contractual premium payments.' "

Proposed Federal Courtroom, Oakland Main Post Office

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, as we consider S. 912, I would like to bring to the attention of the Members some data prepared for me by a highly reputable contractor and engineer that clearly refutes statements made by the Judicial Council in August 1958 about the cost of adapting facilities in the U.S. post office at Oakland, for use by an Oakland division of the northern California Federal District Court.

I would like to insert the findings of Mr. John F. Tulloch of Oakland, Calif., in this regard:

JOHN F. TULLOCH,
Oakland, Calif., February 24, 1961.
OAKLAND CHAMBER OF COMMERCE,
Oakland, Calif.
(Attention Mr. James Cowart).

GENTLEMEN: Our estimate for the proposed alterations to the center section of the present Oakland Main Post Office Building for a Federal court of original jurisdiction as discussed with Mr. James Cowart, Mr. Gilbert Calden, and Colonel Herrick, postmaster, is in the amount of approximately $40,420 as discussed with these gentlemen, as shown on our attached sketch No. 1, and as noted below.

We include in the above price the following work:

(1) Preparation of architectural design drawings and details including submittal for bids and negotiations of contract.

(2) Necessary demolition and removal work in removing present partitions in civil service examination area, cutting of new doors and stripping of present lighting system, installation of new partitioning for jury room complete with necessary millwork, finish hardware and trim as well as installing new entry doors to courtroom and to jurist's office.

(3) Modernization of entire area including jury room, jurist's office, and courtroom, approximately 3,750 square feet, with new acoustical tile ceiling glued on existing plaster ceiling, new vinyl tile floors and base, necessary patching of existing walls and complete paint job in jury room and courtroom and with hardwood paneling in jurist's office.

(4) Entire space to be air conditioned with air-conditioning equipment mounted on roof and supply and return ducts run into new diffusers in ceiling.

(5) Present lighting fixtures to be removed and new modern fluorescent lighting installed of 50-foot candle level with necessary switching and convenience outlets.

(6) Exterior windows facing on court to have new venetian blinds with plastic tapes and metal slats.

(7) Job to be cleaned up at conclusion and left in first-class condition subject to a 1-year guarantee.

We do not include in the above price jurist's bench or any furniture or draperies, but otherwise include everything necessary for a complete workmanlike job in accordance with all applicable codes.

This should be the information you need for your appropriation request and we are happy to supply it with the thought that this will improve the Government facilities available to our city. If further is necessary, please advise.

Very truly yours,

JOHN F. TULLOCH, INC.,
J. B. TULLOCH.

You Must Stand for Something or You Will Fall for Anything

EXTENSION OF REMARKS
OF
HON. JOHN J. RHODES
OF ARIZONA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. RHODES of Arizona. Mr. Speaker, a good teacher will not only impart knowledge, but also will do all in his or her power to get the student to think for himself. Such a teacher is Mrs. Nancy Arter, who teaches the fifth grade in Lincoln School in Prescott, Ariz.

One day Mrs. Arter wrote on the blackboard of her room the sentence "You must stand for something or you will fall for anything." The next day, she asked the pupils of her class to write interpretations of this sentence. I think the results are not only outstanding, but encouraging to persons who are concerned about the preservation of our American way of life. Therefore, it is a pleasure for me to share the answer of each pupil with the Members of the Congress:

This means to me that if you don't believe in some form of government enough to protect it, you will soon become involved in some other form of government you don't want to have anything to do with—Carole Cline.

I think that means that you must stand for what you want or you'll go for what somebody wants you to do. You must think over which party you want to be for, either Democrat or Republican. If you don't know which party you're for, a friend could talk you into being a Republican—Shelly Lyttle.

To me these words mean that if you don't believe in something you won't know which way is right. Then if someone tells you he is right you would believe him for you have never known which way is right—Susan Henson.

At this point it seems to me that there are only two great beliefs in life, communism and democracy. I live within the democratic law. I feel that someday there will be a great war between democracy and communism. When that day comes, if I still live on the face of the earth, I will stand up for democracy—Jill Goodell.

It means to me that you learn something that you know is right, so if someone who you know is wrong cannot lead you in the wrong way—Paul Martin.

You must stand for honesty, keep your pride. Say a man came to you and said, "Let's rob a bank." You must stand for something or you'll fall for anything. You must have the ability not to go and do what the crowd wants you to do. You must have the ability to say, "No."—Ronnie Seets.

You have to be "a somebody" or you will do almost anything. Try to have people respect you, follow the Golden Rule during your lifetime. If you let people talk you into things that you know are not right you're bound to get into trouble—Tom Ravey.

You must stand for something important or you'll fall for something not so important.—Irene Kinder.

I think that means you must stand for something such as the Republican or Democratic Party and what it says or you'll fall for anything, I think that means you'll fall for anything such as communism.—Celia Devereaux.

A Worthwhile Project

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. COLLIER. Mr. Speaker, today will mark the presentation of the first major contribution to finance the publication, the Talking Lion, to be provided free of charge to thousands of blind citizens of Illinois. Soon many blind adults in my State will be able to read a recorded magazine especially written for them and transcribed for use on their talking-book machines.

This very worthwhile project is sponsored by the Lions Clubs of Illinois and founded by Don O. Nold, a longtime resident of my congressional district.

The Talking Lion will contain original writings in addition to specially selected items from well known published periodicals. The contents will be divided in six general classifications and a well-rounded assortment of interests will be presented in each issue. At present, plans call for four editions annually.

Section 1 will be devoted to items of general interest, including many informative messages concerning the special regulations of social security and income tax regulations, the work Lions Clubs are doing for the blind, news of public and private agencies offering services to the blind. Section 2 will be dedicated to women, with articles on fashions, homemaking, household hints, and child care. Men's interests will be the feature of section 3, with items on sports, hobbies, business, clothes.

Fiction will be the keynote of section 4, with short stories and poetry as material. Blind authors will have an opportunity to have some of their works published in this section. Section 5, nonfiction, will feature biographies, vignettes, verbal portraits, travelogues, essays. The final section, No. 6, will be a potpourri of assorted subjects, including letters to the editor, questions and answers wherein blind persons can seek answers to problems, book reviews of the latest talking book releases, editorials, commentary.

Mr. Nold states:

At present most of this information is not now available to blind persons in a form which they can read. The American Foundation for the Blind estimates that less than 8 percent of blind persons read braille, largely because most of them lose their sight at an advanced age. Except for radio or friends who read to them, there is no reading matter available which is especially designed for their use and which concerns itself with their problems and desires.

The Central Lions Club of Chicago has contributed $1,000 to this project and the Berwyn Lions Club has pledged $500 to the publication fund for 1961. The Stickney-Forest View Lions Club has also sent in a contribution and other clubs in district 1–A have shown an interest in participating in this project. Several personal contributions have been made by those interested in having blind residents of the State receive this aid. Needless to say, the corporation being formed to conduct this venture is one of a nonprofit nature.

This project is one that deserves wide commendation because it provides for a great need of our blind citizenry which is too often neglected or bypassed in the hubdub of our daily lives. It might well set an example for other groups and organizations to serve those among us who are deprived of sight and many of the benefits of self-education and entertainment which the rest of us enjoy. This will be made eminently clear to the representatives of some 92 Lions Clubs in the Chicagoland area who will witness the fund presentation ceremony this evening.

The Coming Din of Inequity—III

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, following is the final part of an article on the structure of the social security system prepared by Mr. Ray Peterson, a well-known and able actuary.

I urge all the Members to study these three insertions as a single unit in order that they may better understand the financial structure of the social security system and the built-in dangers which make it actuarially unsound:

INACCURATE PRIVATE INSURANCE PARALLELS

Space will permit only a few illustrations of statements which seek to liken social security to private insurance.

I. MEMBERS OF CONGRESS

Congressman (now Senator) KEATING: [1] "It has always been my feeling that since social security is essentially an insurance system, there should be no limit on the amounts which beneficiaries can earn, and still receive benefits * * * it is my feeling the ceiling should be removed entirely."

Senator PROXMIRE: [2] "The fact is that this is an insurance system. This is a premium that he is paying. His employer is paying a part of the premium. It is entirely different from income tax. It is a benefit that comes back to him. He is buying something for himself."

Footnotes at end of speech.

Senator DOUGLAS: [3] "I'm in favor of eliminating completely the limit on earnings of OASI recipients. To require all those getting OASI payments to give up gainful employment is, in reality, attaching a condition to insurance which they themselves have bought."

Senator (now President) Kennedy [4] (campaign statement): "I believe, with Governor Rockefeller, that people should be able to save for the medical care of their retirement years in the same way that they set aside money for other needs—through the social security system. My health plan would extend to our older citizens a life policy of paid-up medical insurance. It would afford them hospital benefits, nursing home benefits and X-rays and laboratory tests on an outpatient basis.

"It would allow people to provide for the costs of their retirement while they work—so that their needs could be met in later years without burdening their children."

It is evident from the earlier analysis in this paper that the social security financing mechanism is not a savings system, that the granting of unearned increments creates a debt that employees and employers of the future must cope with in perpetuity, and the Supreme Court opinion makes clear that there would be no such document as a "life policy of paid-up medical insurance."

II. SOCIAL SECURITY OFFICIALS AND DEPARTMENT STATEMENTS

Robert M. Ball,[5] Deputy Director of the Bureau of OASI (in defense of the policy of fixing social security taxes without any initial income-bracket exemption): "The argument as used in the United States for such a policy under old-age insurance is that the contributions, though legally a tax, are a premium for social insurance benefits."

Charles M. Schottland [6] (formerly Social Security Commissioner): "Medical care for the aged can best be approached through the social insurance route. Nine out of ten persons reaching age 65 today are eligible for OASI benefits. They have paid for these benefits through a tax system which has been proved workable and financially sound."

"Insurance for You and Your Family" (1952): [7] "Your account number on your social security card identifies your old-age and survivors insurance account. Your card is the symbol of your insurance policy under the Federal social security law."

Social Security Administration release of November 1959: "Beginning January 1, 1950, 50 cents more social security tax on every $100 you earn (and 50 cents more from your employer) * * * provide monthly payments for you and your family at retirement, or when you are between age 50 and 65 and severely disabled."

III. WRITERS

Arthur Larson: [8] "Social security is a combination of old-age pensions, disability insurance, and life insurance. The premium for this combination of benefits is a payroll tax of 5 percent on your wages up to $4800 a year.

"Social security is based on the same principle as private insurance, with variations to accomplish its social purpose and to keep it inexpensive.

"Social security differs in important ways from commercial annuities and private life and disability insurance, but the general idea is the same. The idea is that contributions are made by you (and on your behalf by your employer), in return for which you get certain insured rights, including pensions and death benefits."

Wilbur J. Cohen: [9] "The proposal [social security financing mechanism] uses the tried and tested insurance method of payment for hospital and medical care with which millions of Americans of working age are familiar through Blue Cross and other private insurance."

Sidney Margolius [10] (referring to 1960 amendments): "You and your family ought to know your social security benefits as thoroughly as you know how much money you have in the bank. For that's what social security really is: money in the bank against the day you might lose your income because of disablement, death of the family breadwinner or old age."

It must be clear to all discerning readers that, in the light of our initial analysis, there is no foundation for these inaccurate parallels. Indeed, there is desperate need to dispel these self-mesmerizing, foggy concepts.

SOCIAL SECURITY FINANCING OF MEDICAL CARE

What happens when the social security financing mechanism is used for medical care benefits? Let us first recall that the proponents of the contributory old-age and survivors insurance system, led by Arthur Altmeyer, have always been axious to preserve the contributory principle; that is, no one receives cash benefits under that system unless he contributes for a minimum period of time. Even though contributions have been only token payments for hundreds of thousands of members, Congress has adhered to this principle. Now, with an entirely new type of proposed benefits, i.e., medical care, for which the present persons on the old-age payment rolls would pay nothing, this principle is thrown overboard; all present social security payees would be blanketed in. Also, millions of active workers and their employers would pay in taxes only a fraction of the cost of the benefits.

With no necessary applicaiton of the principle of social adequacy, another segment of unearned increment would be granted which would add to the permanent social security debt on which future generations and their employers would need to pay interest forever. A good guess would place this sum at $25 to $30 billion for the Forand bill, $15 to $20 billion for the Kennedy-Anderson bill, and around $30 billion for the McNamara bill. This would be only the start. The admitted political technique is a fragmentary approach: separate pieces of benefits are added from time to time. The McNamara bill had two steps in benefits and a two-step progression of taxes. Furthermore, most students, pro and con, believe that it will be virtually impossible to limit benefits to the aged. Such benefits will inevitably be extended to all ages. In this steady procession of developments, the principle of social adequacy—the idea of basic protection against want and destitution—is lost, with no replacing anchor of control to restrain expansion of so-called social insurance.

CONCLUSIONS AND RECOMMENDATIONS

What to do? The objective of the social insurance system should be clearly enunciated. It is imperative that the objective be to serve only the limited purpose of social adequacy, the recognition of society's obligation to provide basic minimum protection against want and destitution. The objective should be unequivocally declared by the Congress. As our society becomes more affluent, the relative role of social programs should diminish. The following measures are necessary to meet that objective:

1. No further increases in OASDI benefits should be enacted except those required to recognize changes in living costs for the aged. For this purpose, a special consumers' price index for the aged is needed and should be developed. Changes should be made only after careful consideration by Congress, and not automatically.

2. Congress should enact legislation that will provide tax incentives for all persons to save for their own old-age needs, including, in particular, funds dedicated to pay premiums for medical care insurance.

3. The self-supporting principle must be retained so that we do not lose its values of cost control and cost consciousness. If benefits are restricted to the social-adequacy level, pressure for support from general revenues can probably be successfully resisted.

4. To promote better public understanding of the nature of the financing method and of social security rights, a separate agency, similar in function to the Federal Trade Commission and State insurance departments, should be responsible for checking all statements and publications of the Social Security Administration for the purpose of disclosing to the public inaccurate and incomplete statements.

5. To promote better understanding of costs, congressional committees and other responsible persons not in Government should know, with respect to each proposed social security amendment under consideration, in addition to a single constant tax-rate requirement: (a) the tax-rate requirement for the average new entrant; (b) the present worth of the unearned increments for present members; and (c) the tax-rate requirement for the interest on the additional debt represented by such increments.

The adoption of these measures may be expected to have the following salutary effects:

1. As real wages increase, lower rates of social security taxes than those now in the law will suffice to support the present level of benefits; workers will have greater margins to save for their own old-age needs, and the wage-related feature of OAS I benefits will become less of a feature as more persons in the course of time will have the same flat benefit represented by the present maximum.

2. As the American people gain a better understanding of the nature of the social security system with the social objectives limited as herein stated, and of the differences between private and social insurance, changes of public acceptance of a certain measure of individual inequity for coming generations would be much improved.

3. As the following factors become effective it should become increasingly clear that provision of medical care benefits under the social security mechanism is unnecessary and unwise: (a) tax incentives to save for cash- and medical-care needs in old age; (b) the increasing capacity of present workers to save, as compared with the former capacity of the present aged; (c) the vigorous development of the Federal-State medical aid for aged program; and (d) the further evolution of voluntary private insurance.

Our social security system can be preserved only if we keep benefits within the limits of carefully defined social objectives. Abraham Epstein, a pioneer in the development of old age income programs, is reported to have said that social insurance is like a drug: a limited quantity can serve a vital need; an excessive quantity can be fatal.

If the recommended measures are not substantially adopted, but, instead, we attempt to finance cash benefits of greater adequacy and also full medical care benefits through the social security system on the self-supporting principle, and the system continues to be likened to private insurance, then surely a great din of inequity will be heard. The towering social security structure which we will have piously erected in the name of taking the burden of the old from the shoulders of the young will fall flat on our posterity.

Bipartisan Efforts To Give Relief to Nation's Textile Industries

EXTENSION OF REMARKS
OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. MATHIAS. Mr. Speaker, I want to give my strong support to the bipartisan efforts being made in the Congress to effectuate some relief by the administration for the Nation's textile industries. As the Representative of Maryland's Sixth Congressional District, I can speak out on the economic distress increasing foreign imports have caused in the manmade fiber industry. As many of my colleagues who have traveled through the Free State know, the city of Cumberland, Md., lies in the "narrows" of the Allegheny Mountains. With a population of 33,400 people the city depends on a diversified and healthy industry, and one of its mainstays is the Celanese Fiber Co. which produces such manmade fibers as acetate and triacetate.

As the Members of the House know, we have recently been informed that the Federal budget will operate at a deficit for this fiscal year of at least $2.2 billion and for next year nearly that amount again. With the increased spending for defense and other programs requested by the administration, we certainly must realize that this deficit will go even higher if all these programs are approved by the Congress. In the meantime, the Secretary of Labor has added 25 new industrial areas where substantial unemployment conditions exist, making a total of 101 such areas where unemployment is present or 6 percent or more of the work force is out of jobs. It would certainly seem proper to review whether it makes good sense to permit excessive quantities of foreign imports that destroy our own industries to continue at a time when conditions of deficit financing and unemployment exist at home.

Mr. Speaker, what are the economic facts in the manmade fiber industry? Currently, over 20 percent of the U.S. industrial capacity is idle. That is the first statistic.

Second. There is no adequate protection against those nations increasing their already growing imports to this country and thereby liquidating the domestic manmade fiber industry. If the excess capacity in those foreign nations were exported to the United States, the idle capacity at home would increase to 83 percent.

Third. In the last 11 years, foreign imports of manmade fibers to the United States increased by 440 percent.

Fourth. The labor costs of manmade fiber production workers in some foreign production centers make it economically questionable for our industry at home to be confronted with a constant upward trend in foreign imports. Average hourly wages are as follows:

Japan	$0.26
Italy	.62
West Germany	.78
United Kingdom	.54–$1
United States	2.76

Fifth. Imports of manmade fiber fabrics and apparel have also increased substantially. From 1957 to 1960, imports of manmade fiber fabrics increased by 194 percent, and imports of apparel and other manmade fiber products increased 137 percent.

Sixth. The domestic rayon staple fiber industry operated at a loss in 1960. This is a major segment of the manmade fiber industry. It foreshadows developments in the rest of the industry. Reductions in employment in the rayon staple fiber industry have brought the 1960 work force 30 percent below the 1957 level.

Mr. Speaker, these facts speak for themselves. Even though the industry expended 6.5 percent of its sales dollar last year in research, we can no longer claim a preemptive position for our technological advances in manmade textiles. We must continue certainly on a steady course in looking for the new advances in this technology, but we must not sacrifice to foreign imports the minimum economic status necessary to keep our industry's research laboratories operating. Production and sales of products are the prerequisite ingredients to vigorous research programs, and other industries at home in recent times have been washed down the drain by excessive and basically unfair important trade policies.

If the time should come when this Nation faced a world military conflict again, the essentiality of the textile and apparel industries to national security would be made apparent then, as it was apparent in World War II and the Korean conflict. In the event of such emergency, the manmade fiber industry—not dependent on production periods of natural fibers—alone presents the ability to meet urgent military requirements. The Soviet Union understands this fact of reality since it is now engaged in a crash program to catch up with the manmade fiber technology of the United States.

In view of the current conditions in this industry, Mr. Speaker, I want to join my colleagues on both sides of the aisle in urging the President to study carefully the relief being requested from these foreign imports. Industry can again, as it has in the past, play the major role in ending current unemployment and deficit financing, too; it only requires an interested, sympathetic, and enlightened policy of its Government in Washington.

The President must, of course, examine this request in the light of the whole national welfare, including our diplomatic posture with our allies. He must consider the question as it bears upon existing commitments of the United States. Subject to these considerations, I hope that it will be possible for the President to grant this relief.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Senator Dodd, of Connecticut, Delivers Americanism Conference Speech at Annual American Legion Event in West Virginia

EXTENSION OF REMARKS
OF
HON. JENNINGS RANDOLPH
OF WEST VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. RANDOLPH. Mr. President, it was the privilege of our esteemed colleague, Senator THOMAS J. DODD, of Connecticut, and the Senator from West Virginia who now speaks, to have been invited to participate in the annual Americanism Conference of the West Virginia Department of the American Legion held in Fairmont, W. Va., April 15, 1961.

Senator DODD delivered the conference keynote address—a forthright and thought-provoking message which was declared by seniors among the active American Legion members in attendance to have been one of the most inspiring in the long series of the West Virginia department's annual lectures on Americanism. Adjutant Tommy Jones announced that he had arranged to have the address by Senator DODD broadcast by radio on stations throughout the State.

In being privileged to introduce our distinguished colleague, I said:

I am especially gratified to bring to you tonight a speaker who has developed high competency in areas that are particularly relevant to the theme of this conference.

As a citizen, as a practicing lawyer, as a legislator, and as the father of two charming daughters and four sons, our speaker, Senator THOMAS J. DODD, of Connecticut, has a very real investment in Americanism and in the problems of our achieving a more viable democracy.

His professional engagement in this field began with the conferring of his law degree at Yale University in 1933. In 1935 THOMAS DODD established and directed the national youth administration in Connecticut, thereby initiating a very deep commitment to juvenile problems and the development of our youth. This interest and responsibility he has carried with him to the present time, in which it guides his very able work as chairman of the Subcommittee on Juvenile Delinquency of the Senate Judiciary Committee.

In 1938 our speaker joined the Department of Justice, where he served with distinction until 1945 as special assistant to the Attorney General. In that year he was called from the Department of Justice to serve with Justice Jackson at the Nuremburg Trials for the War Crimes. During the remainder of 1945 and 1946 he acted as vice chairman of the board of review and executive trial counsel in the U.S. Chief of Counsel for the Prosecution of Axis Criminality, earning a Presidential Citation and the Medal of Freedom for the high service he rendered.

After several years of active practice in law, our guest returned to public service as a Member of the House of Representative in the 83d and 84th Congresses, and was elected to the Senate in 1958. Throughout a wide and varied practice of law, as a private practitioner, as a public servant, and as a legislator, the consistent thread of Senator DODD's career has been his high dedication to the principles of Americanism and his devotion to the task of making those principles secure.

It is with a keen awareness of the clarification which he can bring to the deliberations of this conference that I take pleasure in presenting the Honorable THOMAS J. DODD, a distinguished U.S. Senator from the State of Connecticut.

Mr. RANDOLPH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of Senator DODD's speech.

There being no objection the text was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR THOMAS J. DODD, OF CONNECTICUT, BEFORE THE AMERICAN LEGION CONFERENCE, FAIRMONT, W. VA., APRIL 15, 1961

Distinguished guests, ladies and gentlemen, it is a great pleasure for me to be here with this group of American Legion members and their wives, who have contributed so much in the effort to inform the American people about the essential evil of communism and the threat it poses to freedom.

I am glad to be here in West Virginia for another reason. Thanks to the energetic and effective efforts of Senator RANDOLPH and Senator BYRD, I probably know more about the problems of West Virginia than those of any other State in the Union, excepting my own State of Connecticut. In Senator JENNINGS RANDOLPH, I have been fortunate to have a warm and wise friend, who is known and respected as one of the most eloquent and capable Members of the Senate.

I have been privileged to know Senator BOB BYRD for a long time and have served with him in the House and Senate. I have always regarded him as one of the most earnest and dedicated public servants in America. West Virginia can well be proud of its representation in the Senate. There is no State whose interests are more effectively or tirelessly represented.

The word "Americanism" has, I am afraid, been much misunderstood.

It has been abused by ultraconservative extremists who claim it as their peculiar property.

On the other hand, it has been unjustly vilified by the ultraliberal extremists, who equate it with bigotry and reaction.

Why there should be such confusion, I find difficult to understand. The meaning of "Americanism" should be plain enough.

"Americanism" means loyalty not merely to our country but to its traditions and to the moral values for which it stands.

It means dedication to the concepts of justice and tolerance and fairness that are enshrined in our Constitution.

But above all, it means dedication to the cause of human freedom—the kind of dedication to which Thomas Jefferson gave voice when he wrote the line: "I have sworn upon the altar of Almighty God eternal hostility to all forms of tyranny over the minds of men."

No American who is true to the traditions of his country could fail to be opposed to Nazi and Communist tyranny.

Americanism in our day and age does not mean simply opposition to communism. It means adherence to a positive set of values. Dedication to these values, however, automatically brings us into opposition to communism.

Whether they realize it or not, those "ultraliberals" who repudiate the word "Americanism" have in effect turned their backs on the American tradition.

By "ultraliberal" I mean those intellectuals, naive or softheaded, who refuse to believe that communism can be all evil; who insist that the Communists are like ourselves and that, if we are prepared to be reasonable, coexistence with them is possible; who close their eyes to all the massive evidence that communism is an international conspiracy committed to the destruction of freedom and religion; who cry "witchhunt" or "McCarthyism" at every effort to investigate Communist-front operations and Communist infiltration of Government positions; who are not pro-Communist, but react with far greater emotion against every manifestation of anticommunism than they ever seem capable of displaying against communism.

But the American tradition is equally betrayed by those ultraconservative extremists who pretend to speak in the name of Americanism, but who forget that fairness and moderation and justice are essential ingredients of our nationhood. The result is that these extremists of the right frequently take the stand that everyone who disagrees with them is either a Communist or a dupe of the Communists, that every political figure who has been guilty of an error in judgment or a policy that failed, is, ipso facto, a member of the Communist conspiracy.

In reply to the ultraliberal extremists, I say that there is a problem of Communist infiltration in government, a very real problem. It has been with us before and I am sure it will continue to be with us so long as the cold war exists. Let me review a few pertinent facts in this connection.

Alger Hiss, one of the top officers of the State Department and the secretary of the founding conference of the United Nations, was identified as a Communist agent and was convicted of perjury for denying that he turned over state secrets to Whittaker Chambers, a self-confessed Soviet agent.

Harry Dexter White, who, as the energetic assistant to Secretary of the Treasury Morgenthau, in effect ran the American Treasury, has also been proved, beyond any reasonable doubt, to have been a Communist agent.

Frank Coe, one-time assistant to White, was compelled to resign as head of the International Monetary Fund when he claimed protection of the fifth amendment in refusing to reply to the question: "Are you a Communist agent?" Mr. Coe is today in Communist China.

Think of the implications of this: Communist agents have at different times directed the American Treasury, the International Monetary Fund, and one of the key offices in the U.S. State Department.

Those ultraliberals who charge that every investigation into the possibility of Communist infiltration or of Communist influ-

ence in government policy is a witch-hunt, are either wrongheaded, or blind, or worse.

But as bad as the ultraliberal extremists are those ultraconservative extremists who charge, for example, that President Eisenhower and the late Secretary of State John Foster Dulles and Mr. Allen Dulles were conscious members of the Communits conspiracy.

To accuse people like Presiednt Eisenhower and John Foster Dulles of being Communist agents is an affront to both decency and intelligence. It brings our leaders and our institutions into disrepute, it sows division, it makes it easier for the Communists and the ultraliberals to equate opposition to communism with political lunacy.

In the realm of foreign policy, Americanism means certain concrete things.

Above all, it means commitment to the principle of freedom for men and nations.

It means that we can never reconcile ourselves to the enslavement of hundreds of millions of people in Europe and in Asia by the most bestial despotism in history.

It means that we must seek, by every means short of war, to help these peoples recover their freedom.

It means that we must avoid all measures which might be construed as an acceptance of the permanence of these regimes.

It means an abiding faith in the triumph of good over evil and freedom over slavery.

It means that we must call a halt to the partial surrender and partial retreats that have characterized our foreign policy since Yalta and Tehran.

It means a willingness to fight, if fight we must, to protect our freedom and the freedom of other peoples.

It means the kind of courage and the kind of dedication our forebears had when they pledged their lives, their fortunes and their sacred honor to the cause of freedom.

I know that I do not have to agitate or exhort the members of the American Legion on the subject of communism. But we must be frank in realizing that the viewpoint which we in this hall hold, is shared only by a minority in our own country and by a much smaller minority throughout the free world community.

With the exception of the fellow travelers and the ultraliberal extremists, the majority will agree with us that communism is inherently evil, that it has cost the lives of scores of millions of people, that it is militantly opposed to belief in God, that its totalitarian government violates all of man's God-given rights, that the leaders of communism have on frequent occasions proclaimed their intention of burying the free world.

But after admitting all these things our friends of the majority will turn around and say: "We have to be realistic. We cannot afford a nuclear war. Therefore we must seriously attempt to negotiate with the Communists, seriously strive to achieve coexistence with them."

This brief statement of position is, I am certain, an accurate characterization of the present attitude of the free world. But within these brief sentences there are so many grave fallacies that I sometimes wonder what has happened to the intelligence and sanity and morality of civilized men.

This position assumes that the essential differences between communism and freedom are negotiable. But while many minor and peripheral differences are negotiable, the essential difference between freedom and slavery is not.

It also assumes that the cold war is two-sided in origin, that if we abate our hostility, the Communists will abate theirs. But the cold war does not originate on our side; the hostility of the Communist world to the free world does not spring from anything we have done. The Kremlin is opposed to us because of what we are and what we believe. It seeks to destroy us—in fact I would say that it is under compulsion to destroy us—because we stand for the dignity of man and it stands for human enslavement; because we stand for freedom and it stands for the total subjugation of the rest of the world; because we stand for belief in God and in man's God-given rights, while the Kremlin denies these beliefs; because America is the one thing that stands in the way of global victory for the Kremlin.

Unless we are prepared to abandon belief in God and freedom and all the other virtues of our civilization, we will remain what we are. And so long as we remain what we are, communism will seek—must seek—to destroy us. Let us have no illusion on this score.

This quest for coexistence, where coexistence is not possible, represents an abandonment of the first of all moral and religious precepts: Thou shalt love thy brother as thyself. It also represents an abandonment of the moral foundation of the American revolution and American civilization. Whether they realize it or not, those who argue in favor of an entente with the Kremlin, are urging that, for the sake of preserving our own precious skins, we forget about the agony of the hundreds of millions of people enslaved by communism.

I say that we cannot forget about their agony. I say that if we declare peace with the tyrants, morally we are declaring war on their victims.

I say that we cannot defend freedom if we limit it to mean only our freedom.

I believe that in the long run we will protect ourselves best and defend freedom best if, together with Thomas Jefferson, we "swear upon the altar of Almighty God, eternal hostility to every form of tyranny over the minds of men."

I have repeated this quotation from Thomas Jefferson because I feel that it is something that every American should remind himself of every day of his life.

I say that the hesitant, compromising, coexistential foreign policy of recent years encourages aggression, endangers the peace, imperils our freedom, and every day erodes our own integrity.

I say that we can neither preserve the peace nor defend freedom, nor win the cold war unless, as the very first act, we commit ourselves to the universal triumph of the faith in God and freedom which is the very heart of our civilization and culture.

I say that this is the essence of Americanism in our time, that only thus can we defend our freedom, perpetrate the American tradition, and ultimately make the American dream available to peoples everywhere.

Rt. Rev. Theodore G. Kojis

EXTENSION OF REMARKS
OF
HON. CHARLES A. VANIK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. VANIK. Mr. Speaker, on Sunday, April 30, the Right Reverend Theodore G. Kojis, abbot of St. Andrews Benedictine Abbey of Cleveland, Ohio, will be honored by the entire Cleveland community on the occasion of his 25 years in the priesthood and his dedicated service to the Cleveland community.

The Right Reverend Abbot Theodore G. Kojis, O.S.B., of Cleveland, is a native of Slovakia. He came to this country as a 4-year-old in 1914. His family first settled in Milwaukee and later moved to a nearby town in Wisconsin. After completing his elementary education in St. Matthew's Parochial School, the future abbot of St. Andrew's Abbey enrolled in St. Procopius Academy in Lisle, Ill., in the fall of 1923. He obtained his high school diploma in 1927 and spent the next 2 years in St. Procopius College before entering the novitiate at St. John's Abbey in Collegeville, Minn., in the summer of 1929.

Abbot Kojis came to St. Andrew's Abbey in the summer of 1930. Besides teaching in the Benedictine High School, he studied at John Carroll University and St. Mary's Seminary. In 1934 he received his bachelor of arts degree from John Carroll University. He was ordained 2 years later on May 1 by Bishop Schrembs. Before preparing for preaching missions at Catholic University, he continued teaching for a number of years at Benedictine. Moreover, he served as prefect of the boarding-school students and procurator of the abbey.

At the time of his election as the second abbot of St. Andrew's Abbey on June 20, 1946, Abbot Kojis was the youngest Benedictine prelate of abbatial rank in the world. While in Europe for the general election of the abbot primate in the fall of 1947, he visited Slovakia. The hometown folks in his birthplace of Koseca gave their renowned son a warm welcome.

The abbot attended the International Eucharistic Congress in Barcelona, Spain, in 1952, and made a tour of Italy, Germany, France, England, and Ireland. He became acquainted with many Slovak refugees while on the continent. Giving aid to the needy Slovaks in exile has been one of the favorite charities of the abbot who has always shown a generous heart to his fellow countrymen now living in exile.

Despite his manifold duties as abbot of St. Andrew's and president of Benedictine High School, Abbot Kojis studied art at Western Reserve University and obtained his master's degree several years ago. He holds membership in the First Catholic Slovak Union, First Catholic Slovak Ladies' Union, Slovak Catholic Sokol, Pennsylvania Slovak Catholic Union, Slovak Catholic Federation, the Slovak League of America, and is a fourth degree member of the Knights of Columbus. The abbot has been honored with honorary offices in most of these organizations. Moreover, he is the president of the Slovak Institute here, and protector of the Slovak Catholic Center in Rome. In addition he is honorary president of the Slovak News Association.

The entire Cleveland community and the Nation is proud of the achievements of this distinguished citizen.

Address by Senator Robert S. Kerr

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. HARTKE. Mr. President, the Wabash Valley Association is an organ-

ization dedicated to the control of the great water resources of the Wabash River and its tributaries. One of the high points of its 13-year history was the annual meeting held this year in Mount Carmel, Ill., on March 9, 1961, when they were addressed by my distinguished colleague and the champion of America's natural resources, Senator ROBERT S. KERR, of Oklahoma. I ask unanimous consent that the text of his inspiring speech on that occasion be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY SENATOR ROBERT S. KERR AT THE WABASH VALLEY ASSOCIATION, INC., ANNUAL MEETING, MOUNT CARMEL, ILL., MARCH 3, 1961

Thank you for the invitation to speak here today. I accepted it gladly. I realized it would give me an opportunity to meet more of the fine folks from the great States of Indiana and Illinois. It gives me an opportunity to talk on my favorite subject—water.

We in Oklahoma are deeply indebted to Indiana for a lifetime of service from one of your greatest sons. Elmer Thomas, born in Greencastle, became one of Oklahoma's great statesmen. We called him the tall Sycamore from the Wabash Valley. As Congressman and four-term U.S. Senator, he made a great contribution in developing an unparalleled program of soil and water conservation for Oklahoma. We build today on the foundation he helped to lay. If I can be of any help to your great Senator HARTKE and those who assist him in developing a conservation program for Indiana, it would be but a small payment on the debt I owe to your State because of what HARTKE does today and what Elmer Thomas did in other days.

As indicated by his message to Congress last week, it is apparent that our new President is keen on the development of natural resources and water conservation, in every sense that these broad terms embrace. Therefore, I think your water problems in the Wabash Valley will receive every consideration from the White House. I know—that due to the splendid efforts of VANCE HARTKE—your water problems will continue to receive favorable attention in the Senate of the United States.

The Wabash River, celebrated in song, story, and poetry, is more beautiful than it is long, stretching as it does only some 475 miles.

But the beautiful Wabash is like all rivers. It is a Jekyll and Hyde thing, gracing the countryside with its stately flow on the one hand and devastating it with flood torrents on the other. Unleashed it is appalling as it endangers and even tramples the 2½ million people in Illinois and Indiana who live in its basin of 33,000 square miles.

The Wabash River Valley with its fertile valley and its mighty volume of water are yours—your to neglect if you desire, or to use if you choose. Yours even if you permit its uncontrolled floods to destroy fertile land, vast agricultural crops, cities and towns with their homes, mills and factories, and human lives. Also, it is yours to control, chain, and harness, making it a mighty reservoir of stored water and the source of abundant resources, out of which to fashion vast farm production and unlimited industrial output.

I first saw a river prove itself both Jekyll and Hyde while I was Governor of Oklahoma. But it was my father who pointed out to me, when we were living in a log cabin in Indian territory, the importance of water. His words lived on with me—but I did not fully know their meaning until I saw one river valley in my State twice devastated by roaring floods, and once seared by burning drought in one short spring and summer season. Then did I fully realize the great truth he had taught me.

As a result of his teaching and that experience, my first bill in the U.S. Senate was one to set up the Arkansas-White and Red River Interagency Study and Planning Commission—a bill similar to which Senator HARTKE is pushing in the Congress for the Wabash.

In Oklahoma, we are now well along with our program. We have, for example, more completed watershed projects under the Soil Conservation Service than any other State on a comparable basis; we have more projects under construction, more authorized projects, more planned projects, more applications for planning, and more organized soil conservation districts.

Water is fast becoming a controlled asset in Oklahoma with vast recreational advantages which are almost as important to our State as flood control, power, and other features. For example, Oklahoma has more lakes and farm ponds than any other State in the Union except Minnesota. More than 8½ million tourists come each year to our lakes and reservoirs, to fish and boat, to water ski, and play. I believe that is as many as in your great Indiana, even though you have a million more people than we do.

And consider this: The one recreational area in the United States which for many years has attracted most visitors was not Yellowstone nor Yosemite—it was Lake Texoma, on the border of Oklahoma and Texas.

This is just one of the benefits that result when you control water, when you make it work for you instead of against you.

You may well ask—how come Oklahoma, a prairie State of rolling plains and oil, has all this water development? How can all this be possible?

Well, my friends, Oklahoma was fortunate indeed in her early days. We had a few—and there were only a few—men who had a dream of water for Oklahoma, water clean, water abundant, and water for power and recreation. We had men of vision—men who were crusaders for a cause—men who would not give up in the face of ridicule and opposition.

Their dreams are not yet complete, but certainly well on the way to a day of realization.

Ten years ago, these pioneer watermen (or as you say here, "river rats") were pressing the Congress for leadership and cooperation. They sought and got community backing. They hired experts. They raised money. They joined the National Rivers and Harbors Congress. They belonged to the National Reclamation Association. They joined hands with other water conservationists throughout the land. And Oklahoma moved.

You, too, have had a long, hard struggle in the Wabash. Ten years ago, I am reliably informed, the legislature of Indiana passed a resolution, which stated for all to hear, that Indiana could take care of her own water problems * * * that the development of her water resources was a local matter, that she neither wanted nor needed help or interference from the Federal level.

You and the forerunners of the Wabash Valley Association have certainly had a hard row to hoe. When Senator HARTKE was mayor of Evansville, for example, he must have been sadly reminded of that legislative action when floodwaters covered the city.

But his disappointment over that action—and yours as well—must be lessened in the knowledge that only a few days ago the legislator at Indiana passed a joint resolution asking the Congress to cooperate in the development of the Wabash.

I congratulate you that you and your leaders, such as Vance Hartke, Roy Dee, and George Gettinger, are now getting your message across. Neither you nor these men have lost heart. You know, and they know, that just because the Wabash is in bad shape today, it need not stay this way. As Senator HARTKE said last August, "I know that some Government agencies will say it cannot be done but it can be done." He knows that a very few letters in the alphabet make the difference between a "pork barrel project" in Indiana and a fine "foreign aid project" in India.

One of the great opportunities for water development in the Nation is here. The St. Lawrence Seaway is now operating at long last, and Indiana's participation in it makes it all the more valuable.

In many ways, Indiana and Illinois are going through the same problems we had earlier in Oklahoma, and unfortunately still have—though not to your extent. We have had—and still have—some stream pollution. I am sorry to say that formerly some oil operators, through ignorance and carelessness, contributed to that pollution. But today, they are among our most zealous advocates to clean up our Oklahoma streams and rivers.

Like you, we have streams which have been polluted by raw, untreated sewage. We have streams which have become silted, banks which have eroded, and streambeds that have become clogged with debris and flotsam.

Oklahoma has another common problem with your valley. There was a time in our history when the Arkansas-White and Red Rivers were plied by steamboats, when such a famous historic figure as Sam Houston looked out over our rivers and saw a veritable tide of boats and shipping.

Our water pioneers wanted navigation of our streams again. And we have been working toward it with a program of bank stabilization, planning programs for locks, and dredging, as well as the construction of reservoirs. We expect our plans will come to fruition for navigation by way of the Mississippi and Arkansas to eastern Oklahoma by 1970. I hope to see the day when boats and barges will again haul their cargoes to Oklahoma on controlled waterways.

But the streams and rivers in Oklahoma never played the part in our economy that yours have here in Illinois and Indiana. The Wabash floated many a craft that bound together your communities in a solidly flourishing economic unity.

Yes, this great stream that drains 70 percent of Indiana and 30 percent of Illinois is a prime example of man's neglect and misuse of a great national resource. But it will not long remain so.

The dynamic growth of your Wabash Valley Association indicates a tremendous growing interest in this famous river. In the 12 months of 1960, your membership has almost doubled. Your county chapters have tripled in number. You have sent your messengers to Washington to tell your story. You have held meetings that counted attendance from 45 counties in your two States. You have even dropped State designations and divided your basin into districts so that you propose remedial action with greater unity.

You have convinced your legislature that your future is bound and tied up with the cleanup and utilization of this great river.

You have set your goal as 10,000 members. You should have no trouble. Remind your people that the river at their back door in the last 12 years has 10 times threatened to wash away their homes. Remind them there have been almost three times as many floods in the last 12 years as there were in the 43 years before.

I would remind them of the time that the Wabash was a great water highway. I would remind them of the time that the Wabash was a stream, the mere sight of which inspired poets and songwriters—a stream where fish abounded and where an outing on

its waters was a never-to-be-forgotten time of beauty.

Remind them that today the Wabash suffers from the foul odor of neglect and untreated sewage, that even its indigenous inhabitants, the fish, have ceased to regard it as a suitable place to swim and propagate.

Yours is a giant education job. These facts must be presented time and time again, even though you, yourselves may be full of it up to the ears. You must tell your story so often and so well that not a single one of the more than 2 million people who live in this basin will be unaware of the potential of this glorious river.

In this educational program, you must enlist the support of every possible newspaperman, and his paper, and the support of the radio and TV people. With the economic shot in the arm that utilization of the Wabash can bring, the news media stand to gain as much as any part of the valley economy. There will be greater newspaper readership, more listeners for the radio, more viewers for the TV, and more advertising revenue for all. These people are your natural allies in this educational campaign. You must have their help.

And above all, you need the support of the other Members of the Congress from Illinois and Indiana to cooperate with Senator HARTKE in his interagency bill. This is a matter above partisan politics. Development of the Wabash is entitled to the support of the men who represent you.

Once you enlist the people in the Wabash Valley and have them thoroughly and completely with you, putting through the Hartke program will not be too difficult.

The Senator has carefully outlined the steps which must be taken. He has called for a jet-propelled program. He realizes the need for speed. You are already too far behind the States where water has for years been crucial and vital. With hard work you can catch up. You can be thankful that others have travelled the road before you. You can count on much help from many Members of the Congress who have had in their States the same problems you face here in Indiana and Illinois.

The Interagency Commission bill which Senator HARTKE has introduced will place the planning resources of all the Federal agencies involved directly at your disposal. Senator HARTKE's estimate of $271 million to complete all of the water projects in Indiana, most of which are in the Wabash Valley, is a relatively modest one. Speeding up surveys and studies is a reasonable request as well.

You are fortunate indeed that you have a dynamic power in the person of VANCE HARTKE. From his long experience as a leader and worker in his State, he has a great knowledge of the Wabash watershed. From his years as mayor of Evansville, he brings official experience with him to the U.S. Senate.

In these remarks I have dealt often with the progress made in Oklahoma in water development. From a firsthand viewpoint, I can tell you that water is going to be more and more an object of national attention.

During the 1957 drought, people in nearly 1,000 communities across the Nation had to cut down on their use of water. One of every seven persons in the United States even then suffered some kind of water shortage. In Dallas, water was sold for half a dollar a gallon—and the people queued up to buy it at the price. In Orange, N.J., people were subjected to fines for leaky faucets.

Droughts have periodically occurred throughout our history. We know they will occur again and again. We must move in time to store and save and protect our water supplies to take drought in our stride.

To meet this need a special committee was created in 1959 by the Senate. It was called the Select Committee on National Water Resources, and I was proud to serve as its chairman. Its membership numbered some of the leading water statesmen of our times. There were such men as CHAVEZ and ANDERSON of New Mexico, KUCHEL of California, ELLENDER of Louisiana, MAGNUSON of Washington, CASE of South Dakota, HART of Michigan, and MCGEE of Wyoming.

Our committee contacted the Governors of our 50 States. We held 26 hearings throughout the United States. We welcomed every private and public water expert who was willing to testify. We were in touch with local and county governments and their officials. We had the help of every Government agency interested in water, including the Bureau of Reclamation, Corps of Engineers, the Soil Conservation Service of the Department of Agriculture, etc.

In short, we made the most exhaustive study of national water resources this country had ever seen. And we came up with some startling conclusions before our committee was disbanded early this year.

We learned, for example, that the water requirement of this Nation will double by 1984 and triple by the year 2000. We learned that local, State and the Federal governments will have to spend $60 billion or more by 2000 to keep up with the urgent demand for pure water.

We learned that this Nation might easily need more than the vast quantities of water in our streams and rivers, even though we use it over and over again. We learned that we must turn to other means of conserving and reclaiming water. We learned that water conversion plants to desalt the ocean would be part and parcel of our future way of life. We learned we might even have to use solar distillation methods. We learned that at the end of 1960, fresh water was being produced from saline or brackish water in at least 17 plants scattered throughout the world—on islands in the Persian Gulf, Aruba, Bermuda, and in Greeland, Italy, Latin America, and the United States.

Look at these facts in connection with our exploding population; 270 million by 1980, 350 million by the year 2000, and you better understand the great value and potential wealth in your vast volume of water in the Wabash Basin.

Already the pressing question of usable water supplies is influencing the location of vital industries in new areas. Along with favorable tax structures, favorable labor supplies, and suitable economic land areas, there is inevitably the question of water, its availability and abundance, for consumptive use, for transportation, for recreation.

When the Governor of Illinois about 10 days ago asked his legislature for funds to attract new industry to the southern part of his State where it is greatly needed, he realized that industry will be looking closely at the future availability of water in the Wabash Valley.

In fact, your eyes, and those of people far beyond, must be on the Wabash if you are to build a prosperous and stable future. The control and use of its water will determine the strength of your economy and the pattern of your living. Now for a moment let us gaze into this mirror of destiny.

Come with me and stand on the banks of the beautiful Wabash. The imagination soars as we mentally wander this legendary valley.

We see two phases of the river—what it is and what it can become. I see what it is and what it has been.

I know that it has overflowed its banks year after year—15 major floods since 1875. I know that drought also can bedevil this land, which is so often plagued by roaring floods. I know that 20 million acre-feet flow down the Wabash and into the Ohio every year, almost uncontrolled and unused—a treasure going to waste.

I look again, and I see a paradise of plenty in Indiana and Illinois.

I see a great market for the industries who would build in this valley of natural wealth. I see a growing population, a growing income, a growing capacity to produce for your children and future generations.

I see great barge tows taking out raw material—the beautiful limestone and bountiful coal, the products of the farm—such as corn and soybeans; an infinite variety of finished products of industry now in being and to be built.

I see other great barges coming up the river, bringing you, at more favorable freight cost, goods from all over the world.

I see a great area restored to a competitive basis. I see more and more of your people staying at home. I see new people coming to share in the development of this storied region. I see income rising, full opportunity to develop your basic resources of soil, water, and the infinite capacities of your people.

Such a bright new epoch looms over the horizon of the old Wabash. Already I have seen this drama being enacted in my homeland of the Arkansas Valley, and I know that with your association, with such capable leaders as Senator HARTKE and Roy Dee, there also will be a magical change in your valley. The legendary river will be chained and then harnessed and put to work. There will be the hum of better days and permanent prosperity. I can hear a new lilt to the old songs about the Wabash.

The Judgeship Bill of 1961

SPEECH

OF

HON. WM. J. RANDALL

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill S. 912 to provide for the appointment of additional circuit and district judges, and for other purposes.

Mr. RANDALL. Mr. Chairman, I support S. 912 as reported with an amendment on March 30, 1961, by the Committee on the Judiciary which provides for the appointment of an additional circuit and district judges. In the report submitted by the commitee to accompany S. 912, being Report No. 215, a document of 359 pages, containing a wealth of statistics which shows conclusively that the bill is justified and should be passed. At page 10 of the report starts the listing of the creation of the judgeships approved by the Judicial Conference on September 21–23, 1960, and then at page 11 appears a letter from Warren Olney III, director of the Judicial Conference of the United States addressed to the chairman of the Committee of the Judiciary under the date of Monday, March 13, 1961, when the Conference voted to recommend to the Congress the creation of additional judgeships in the several district. It was in this letter that was included one

additional judgeship for the western district of Missouri. At page 12 of the report is a letter from the Attorney General, Robert F. Kennedy, addressed to the chairman of the Judiciary Committee stating that the Department of Justice concurs in the action of the Judicial Conference and specifically mentions and includes one additional judge of the western district of Missouri. That same letter recommended the early enactment of legislation creating all judgeships approved by the Judicial Conference.

As Representative in Congress for the Fourth District of Missouri which is located and situated in western Missouri, I noted in the report at page 181 that there is a rather comprehensive description of the judicial business of the U.S. District Court for the Western District of Missouri which continues through and including page 189. It is not my purpose to review all of these facts and figures but it is noted that the chief judge is the Honorable Albert A. Ridge, who has occupied the bench since 1945 and a statement furnished by Judge Ridge came to our office which was also presented to the Judiciary committee for consideration when hearings were held on the bill. I think that it is important that there be preserved in the RECORD excerpts from this statement as follows:

The three judges who serve the U.S. District Court for the Western District of Missouri continue to have a civil caseload which is 40 percent above the average. The caseload per judgeship in this district at the close of the fiscal year 1960 was 218 private cases. I am not informed as to the location of all the additional judgeships your committee presently has under consideration; but the fact is, that the caseload per judge in this district exceeds the caseload in 14 of the districts for which the Judicial Conference has previously recommended additional judgeships. In other words, in but six districts in which additional judges have been recommended by the Judicial Conference does the caseload exceed that of the western district of Missouri.

On a comparative basis, the private caseload per judgeship in this district is thus established to be in excess of the caseload per judgeship nationally.

The median time interval for disposition of civil litigation pending in this court continues in excess of 11 months. With the number of cases commenced in this district exceeding the number of cases terminated, the only reasonable expectation is that such median time interval will continue to grow.

In considering the caseload of the judges in this district, it should be noted that, statistically, 91 condemnation cases were pending in this district as of December 31, 1960, with 670 tracts involved, as revealed in table C–10 of the second quarterly report ending December 31, 1960; also, that the judges in this district are constantly called upon to consider numerous habeas corpus proceedings by reason of the location of the Missouri State Penitentiary and the U.S. Medical Center for Federal Prisoners, at Springfield, Mo., being within this jurisdiction. During the first half of the fiscal year 1961, 39 habeas corpus proceedings were commenced in which the United States was named a defendant, and 10 such cases in which the warden of the Missouri State Penitentiary was named a party.

The western district of Missouri is not an average district, statistically or when human equations are considered. The location of the western district at Kansas City is in a metropolitan area of Jackson and Clay Counties, in Missouri, and Johnson and Wyandotte Counties, in Kansas. The homogeneous character of that area places the three divisions of court held in Kansas City, Mo., at the hub of business for a population of over 1 million persons, around 35 percent of whom travel via interstate commerce to work in this district.

As the 1960 report of the administrative office reflects, the statistical caseload per judgeship is enhanced in the 86 districts by reason of consideration given to metropolitan courts of the southern district of New York, the eastern district of Pennsylvania, the northern district of Illinois, and the southern district of California. Be that as it may, a study of the statistical data in the annual and quarterly reports of the administrative office will reveal that only in 20 other districts is the caseload exceeded as to cases pending and commenced, and that this district is 18th as to the number of cases terminated.

With the growth in population in the metropolitan area in Kansas City, Mo., and the continuously growing backlog of cases, there is no foreseeable shortening of the interval between filings and trial in this district, unless one additional judgeship is created for the western district of Missouri. A consideration of statistical reports of the business in the western district does not reflect that the three judges in this district do not take a full month's vacation, and that the trial of cases in this district occurs in each month of the year by one, if not all, of the three judges.

The above information as supplied by the chief judge at Kansas City constitutes a solid foundation which the Judiciary Committee acted upon when it reported out S. 912 which included one additional judgeship for the western district of Missouri.

During the course of action by the other body in the Congress and during the course of hearings before the Judiciary Committee, a respectable volume of mail has been received, all of which urged the passage of a bill which would include the additional judgeship for western Missouri.

In consideration of the showing by Judge Ridge and further from the presentation made in the report by the committee and from some personal knowledge concerning the average workload of the judges now sitting in this district, it is my conclusion that an additional judgeship in western Missouri is needed and for these reasons I support S. 912.

Address by Senator Wiley Over Wisconsin Radio Stations

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. WILEY. Mr. President, on April 15, the 1961 shipping season opened for the St. Lawrence Seaway.

This is expected to be the most rewarding year in the history of the waterway.

The expansion of traffic through the seaway should, in my judgment, be a high priority target for the Great Lakes region and the Nation.

Why? Because this less expensive route to consumers around the world, if utilized to the maximum, offers a great opportunity for economic growth and progress.

Recently, I was privileged to outline some steps in which I believe we can reap maximum benefits from such expanded trade and commerce, as well as comment on other problems confronting us and the economy, in a radio broadcast over Wisconsin radio stations.

I ask unanimous consent to have the text of the broadcast printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

EXCERPTS OF ADDRESS PREPARED FOR DELIVERY BY HON. ALEXANDER WILEY, REPUBLICAN, OF WISCONSIN, OVER WISCONSIN RADIO STATIONS

Friends, the economic crisis in business confronting the country continues to be extremely serious. The rates of unemployment are far too high. Throughout Wisconsin, these total about 117,000, or over 7 percent of the labor force of 1,576,000. Lags in job-creating, economy-bolstering business and industry also have serious repercussions in the economy.

The unemployed and their families are suffering severe hardships;

Progress is retarded in the economy;

The loss of buying power is being felt by sales, services, and other enterprises;

Uncle Sam, too, feels the pinch in reduced revenue.

Fortunately, signs on the horizon are pointing to an upturn in the economy.

Although this won't be magically accomplished overnight, our task now is (1) to speed full recovery; (2) to get our jobless back to work; and (3) to learn a lesson from the setback and develop more effective machinery to curb such dips in the economic cycle in the future.

To guard against such setbacks in the future, also, we need to mobilize, and fully utilize the available economic potential.

During the past week, I was privileged to meet with civic, labor, business and other leaders in Wisconsin. The purpose was to take a new look at the situation and try to find new ideas for improving the economic outlook.

Working on the spot, these leaders have a firsthand knowledge of the situation. Consequently, they are in a good position to evaluate the economic factors and make recommendations for improving the outlook.

To an ever-larger degree, the Nation, in my judgment, needs to depend upon enlightened leadership in business and labor to find solutions to problems in the economy.

In these difficult times, particularly, we need real economic statesmanship.

Now, what can be done?

In Congress, legislation is being considered for improving the economic picture.

The State and local governments, also, could well speed up timetables for procurement and construction of public projects.

Business and industry—as economically feasible—could well move up plans for plants and operational expansion.

Communities can undertake self-help "bootstrap" operations to evaluate potential human and natural resources and better utilize these to bolster the economy to meet the needs of the people.

The creation of multicommunity cooperative programs for pooling of manpower and natural resources also can help to resolve problems and improve the economic outlook. The potentials of an area may be

neither local, nor State, but rather intercommunity, or interstate. Pooling such manpower or resources on an area or regional basis often can result in more effective programs.

We can establish a higher priority for Buy American policy in times of national economic distress.

We can encourage wise investments of private business and public funds and job-creating enterprises. The purpose would be to promote further economic recovery. Today, there are about $12 billion in financial savings by individuals; and $33 billion in corporate funds.

The total assets of life insurance companies amount to about $114 billion. One of the problems is to encourage the use of such funds in more productive investments.

We need a reexamination of our tax system also to provide encouragement and incentive for expansion of job-creating enterprises.

ST. LAWRENCE SEAWAY

Now, I want to discuss with you one of the great, new opportunities to improve our economic life; that is, the St. Lawrence Seaway.

As a sponsor of the Wiley-Dondero law, authorizing U.S. improvement of the waterway, I am naturally deeply interested in its ability to better serve all of us, and the economy.

Since its completion in 1959, the seaway has experienced a promising expansion of trade and commerce.

Now, the 1961 shipping season is about to get underway and it is expected to be the most rewarding year of the history of the waterway.

True, the volume of traffic—until now—has been less than the more liberal "guesstimates."

All of us around the Great Lakes, including commercial, industrial, agricultural, civic and all other interests, have a deep interest in assuring maximum utilization of the seaway, however.

Why? First, because we, as taxpayers, have a $140 million investment in the project. The Seaway Corporation, designed to be self-supporting, will be able to pay off the debt by charging tolls only if there is an adequate traffic.

Second, there is economic advantage in fully utilizing the seaway, a less expensive trade route for traffic now flowing between Great Lakes and the ports of the world.

Third, we need to develop new markets for the products of our farms and factories. Unless this is done, we will miss a great opportunity; and also find our domestic economy seriously handicapped. Over the years, human ingenuity and technology have dramatically increased our productivity. As a result, the domestic economy, more and more, will not only be fully supplied, but, in some instances, glutted.

Consequently, we need to look for consumers elsewhere in the world. Today there are nearly 2 billion consumers outside the Iron and Bamboo Curtains. Except for a relatively few industrially advanced countries, they need literally everything.

This is a great potential if we develop the programs and policies to profitably supply such markets.

And, fourth, the seaway, defensewise, also plays a significant role in the transportation of vital materiel to and from the lakes region.

These, then, are a few of the reasons why we need to encourage cooperation among all Great Lakes States to fully utilize, and benefit from, the seaway.

Progress, however, has been sufficient to inspire optimism of new economic life, transfused through the seaway, for the Great Lakes region and America.

Now, what are some of the steps that need to be taken to reap maximum rewards? These include constructive efforts to—

Assure fast, smooth handling of shipping through the seaway itself, eliminating bottlenecks and expediting traffic;

Finish the job of deepening and improving the Great Lakes connecting channel, so that deepsea vessels can sail to all lake ports; at present rates of progress, it appears that the channels will be usable at a controlling depth of 27 feet by June 1962, the target date;

Expand promotion efforts to provide shipping, trade, and related interests with a better knowledge of advantages;

Speed up completion of port and harbor developme t projects, to enable ports to expeditiously handle available traffic and larger volumes of trade and commerce for the future;

Enlarge research efforts to find markets for the wide variety of products of the agricultural-industrial complex of the upper Midwest—the greatest in the world;

Undertake pilot studies on deicing to determine the feasibility of attempting to further extend the shipping season;

Find early, favorable solutions to problems arising out of pilotage, labor-management negotiations, and other situations; and

Encourage greater cooperation among Lake States in the development of trade and commerce.

In addition to these measures, there is a need for:

Carrying forward the kind of national trade policies that will encourage trade and commerce on the Great Lakes;

Establishment of "tie-ins" in road, rail, and air transportation; and

Encourage an ever-greater flow of traffic through the Great Lakes ports and the St. Lawrence Seaway—a less expensive route to destinations around the globe.

Maximum utilization of the seaway can prove to be a vital lifeline for improving the economic outlook.

OUTLOOK IN AGRICULTURE

Now, let's turn to another important aspect of our economy, agriculture.

To maintain balanced economic progress, we need to assure the farmer a proportionate share of the national income.

The objectives of a realistic program include—

Creation of a positive—not a negative—image of the American farmers' contribution to our economic progress.

Attempting to establish a relatively good supply-demand balance for production or consumption of farm commodities;

Finding better ways to utilize farm surpluses, plus reducing costs of storage, and using these invaluable resources as assets, not as economic millstones around the neck of the economy; and

Assuring the farmer of a fair share of our ever-growing income.

Today, there are about 7 million people working on farms. Sixteen million additional persons process and market farm products. Farm sales for cash total about $32 billion a year, twice that of total auto and truck sales. Farms also employ 10 times as many people as automobile manufacturing and 14 times as many as in steelmaking.

These highlights of the farm picture help to illustrate the significance of agriculture to the overall economy.

FARM PROGRAM

In the near future, the President is expected to propose legislation to Congress for a new farm program. As recommended in his message, a highlight involves recommendations for establishment of the National Farmer Advisory Committee system. The committees would be established to handle production and marketing programs for each commodity in which supply adjustment is required. The developed programs, involving controls over production and marketing, however, would not go into effect until approved by two-third of the producers.

The committees would make recommendations to the Secretary of Agriculture. If approved by the Secretary—and not vetoed by Congress within 60 days—the programs would go into action.

Personally, I have long felt that (a) the farmer should have a stronger voice in programs affecting his economic future; (b) that solution to the supply-demand imbalance of farm products can best be resolved on a commodity-by-commodity basis; and (c) that self-help as a principle should be encouraged—reducing the load on Uncle Sam.

However, there are serious questions to be resolved, including—

How much authority should be granted the committees and the Secretary of Agriculture in controlling production and marketing of farm products?

Can the farmers and their organizations, until now unable to agree on a national farm policy, develop acceptable plans for separate commodity programs?

How complex will be such a multicommodity program?

How much will it cost the taxpayer, and what effect will it have on consumers?

Congress, of course, will have to examine these recommendations very carefully. As yet, the farm message has not been followed up by proposals for legislation. It's expected, however, that this will come to Congress in the near future.

REVIEWING FEDERAL MILK ORDER SYSTEM

Recently, also, the President appointed a committee to make a special study of the Federal milk marketing order system, which offers a real opportunity to make a useful, much-needed study—one which I have long recommended. Over the years, dairymen in Wisconsin and throughout the Midwest have received far less for fluid milk than producers elsewhere in the country.

A view of the milk order system—I sincerely hope—would provide evidence to wipe out inequities in the system.

EXPANDING SCHOOL LUNCH PROGRAM

Looking now at another program—of interest not only to farmers, but to the youth and parents of Wisconsin and America, we find that, regrettably, the national school lunch program is running out of money for the current year.

Consequently, the program is in danger of being cut back severely.

Over the years, the program—benefiting more than 13½ million students—has been (1) an important factor in maintaining the health of our youth, and (2) a significant outlet for surplus farm commodities. About 265,000 students in Wisconsin are enjoying and benefiting from lunches served in the schools.

Because of a shortage of funds, Gordon Gunderson, director of the school lunch program for Wisconsin regrettably found it necessary to inform participating schools that it would be necessary, on May 1, 1961, to cut back Federal reimbursement for lunches from 5 to 1½ cents per lunch. This serious curtailment would occur not only in Wisconsin but in other States throughout the Nation.

The history of the school lunch system, I believe, well justifies Federal support at the current level of reimbursement.

Consequently, I have introduced a bill to provide an additional $10 million supplemental appropriation for the current year.

Moreover, I shall urge Congress to take early and favorable action on such legislation.

CONCLUSION

This, then, is a brief look at some of the challenges and opportunities confronting Congress and the country.

As always, I welcome the opportunity to report to you.

As there is legislation of particular interest to you coming up in Congress in the days ahead, I shall be glad to hear from you.

Now, this is ALEC WILEY signing off.

Apparel Industry and Imports

EXTENSION OF REMARKS

OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. DORN. Mr. Speaker, the textile import situation is critical and needs our urgent attention. The following fact sheet concerning the apparel industry should awaken all of us:

FACT SHEET ON THE APPAREL INDUSTRY AND THE APPAREL IMPORT PROBLEM—INTRODUCTION

The term "apparel" refers to all forms of men's, women's, and children's garments, underwear and outerwear, including work clothing. The apparel industry uses all types of fibers; cotton, wool, and manmade fibers. This industry is the largest user of cotton textiles in the world.

EMPLOYMENT

The apparel industry employs 1.2 million workers. Add to this figure 900,000 persons employed in the basic textile industry, plus the workers in manmade fibers and those in other textile products lines, and the overall employment approaches 4 million. Thus, a major economic and social problem is aggravated by steadily rising imports.

GEOGRAPHIC LOCATION

The apparel industry is located in 43 States from coast to coast. There is some concentration along the Atlantic Seaboard because of nearness to the historic source of the basic supply of cotton. In recent years, however, the industry has spread across the Nation to get closer to its market.

SOME CHARACTERISTICS OF THE APPAREL INDUSTRY

This is essentially a small business operation. There are over 31,000 plants employing an average of 250 workers each. Only 30 factories employ more than 1,000 people.

The apparel industry is located, for the most part, in smaller communities. Usually, these factories are the major employers in the area and with their payrolls and purchases of local supplies and services are often the economic lifeblood of the community.

AUTOMATION AND MECHANIZATION

The apparel industry, because of its peculiarities, defies automation or mechanization. The basic machine is the sewing machine. Most labor is human. There are no machines in existence, nor on the drawing boards, that will put the cut parts of a shirt, slacks, or other garment together for stitching. This can only be done by people. Speeding up the machines would do little good, they still could be operated only as fast as the worker.

PAYROLLS

The annual payroll for apparel and allied products, but excluding footwear, is in excess of $3½ billion. (Statistical abstract of the United States, 1959).

FACTORY VALUE OF SHIPMENTS OF THE APPAREL INDUSTRY PRODUCTS

The value of apparel industry products at the factory level is $9.2 billion.

CAPITAL EXPENDITURES

As noted, the apparel industry does not require heavy expenditures on capital equipment. Most of its capital outlay is for textiles and labor.

PROFITS

The apparel industry averages 1 to 1.3 percent profits on sales. This is the second lowest profit ratio in the Nation.

STABILITY OF PRICES

The U.S. Department of Labor, BLS, reports on February 28, 1961: "Continuing the downtrend, average apparel prices dropped by 1.1 percent from December to January and accounted for the major share of the decline in the national Consumer Price Index. For January 1961 all items in the index were at 127.4 (1947–49=100). Apparel, except footwear, is at 101.1, the lowest figure in the index."

IMPORTS

The import figures for the six major apparel imports from Japan and Hong Kong only are:

	Japan	Hong Kong	Total
1958	5,112,000	3,176,000	8,288,000
1959	5,217,000	6,788,000	12,005,000
1960	5,026,000	9,760,000	14,786,000

(Note that under the voluntary quota arrangement with Japan exports have remained stable, while those from Hong Kong, without a quota, have soared.)

(For the impact of imports on jobs, payrolls, etc., see the table on the last page.)

The dollar value of the same six categories of imports from Japan and Hong Kong in relation to imports from all countries is:

	Imports	
	From Japan-Hong Kong only	From all countries
1958	$31,296,111	$40,083,235
1959	36,724,796	41,555,936
1960	65,190,108	80,594,091

THE FUTURE OF IMPORTS

Taking only a few items at random and comparing January 1961 imports with imports of the same items for January 1960, clearly indicate the trend.

[In dozens]

	January 1960		January 1961		Increase
	Japan	Hong Kong	Japan	Hong Kong	
Dress shirts	10,336	10,931	7,291	25,243	11,769
Sport shirts	25,574	16,718	24,222	25,106	7,036
Trousers, walking shorts	1,939	7,286	4,250	11,434	6,469
Playsuits, swimsuits, etc.	348	550	180	1,689	971
Brassieres	63,767	73,814	14,236	133,418	10,073

EXPORTS

The apparel industry has sought every possible means to boost its exports. In practically all foreign markets American producers are unable to meet the price competition of products from the Orient.

Fifty-five nations do not permit U.S. textiles or textile products to be shipped into their countries.

Despite these facts the industry has managed to keep exports about level for 1958–59 and showed a slight increase in 1960.

Exports to all countries of six major categories of cotton apparel only:

1958	$13,663,962
1959	13,226,743
1960	15,656,332

These exports will slide sharply in 1961 because a big share of these exports went to Cuba. Now, for reasons of national policy, this market is closed and exports will reflect this development this year.

The facts of the effect of excessive imports from low-wage areas are explicit.

The only equitable remedy, it seems to us, is country-by-country, category-by-category quotas. This seems fair to American producers, foreign manufacturers who gear production to the U.S. market and to the emerging nations which are certain to enter the textile and textile products fields with the U.S. market their primary outlet.

EXHIBIT C

Analysis of effect of imports, 1958 through 1960

	1958	1959	1960
Dozens imported from Japan and Hong Kong	8,288,000	12,005,000	14,786,000
Units	99,456,000	144,060,000	177,432,000
Direct labor man-hours lost	28,427,840	41,177,150	50,715,980
Direct labor man-days lost	3,553,480	5,147,144	6,339,498
Resultant direct labor disemployed [1]	14,214	20,589	23,358
Resultant indirect labor disemployed [2]	4,738	6,862	8,452
Total disemployment	18,952	27,451	31,810
Lost direct labor payroll [3]	$34,113,408	$49,412,580	$60,859,176
Lost indirect labor payroll [4]	18,952,000	27,448,000	33,808,000
Total payroll lost	53,065,408	76,860,580	94,667,176
Wholesale value of imports [5]	$207,200,000	$300,125,000	$369,650,000
Equivalent factories lost [6]	76	110	127

[1] Assuming 50 weeks per year production at 250 man-days per employee.
[2] Calculated at 1 indirect to 3 direct.
[3] Based on $1.20 per hour.
[4] Calculated at $2 per hour or $80 per week or $4,000 per year.
[5] Calculating average domestic wholesale price of $25 per dozen.
[6] Average 250 employees per factory.

Inter-American Development Bank

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address delivered by Dr. Pedro G. Beltran, Governor of the Bank for Peru. Dr. Beltran is also Prime Minister and Minister of Finance of Peru, and is one of the hemisphere's most farsighted and courageous statesmen.

I have just returned from the Conference which was held from April 10 through the 14th. I thought Dr. Beltran's address one of the finest that was given there. It represents the type of Latin American initiative necessary for implementation of the Act of Bogotá and the Alianza para Progreso. It is a stimulating and interesting statement, and I recommend it to my colleagues.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS DELIVERED BY THE GOVERNOR FOR PERU, DR. PEDRO G. BELTRAN, PRIME MINISTER AND MINISTER OF FINANCE OF PERU, AT THE CLOSING SESSION, HELD ON APRIL 14, 1961

While enjoying the generous hospitality of the Brazilian people, we have found in this meeting of the Inter-American Development Bank many other motives of satisfaction: In the excellent speech of our President, Mr. Felipe Herrera, in which he showed the tremendous importance the Bank has for the present and future of this hemisphere. In the equally eloquent remarks of the delegates, and in the warmth and enthusiasm of the roundtable discussions; in short, in all our activities, in the very fact of meeting beside the beautiful Bay of Guanabara, we have been able to confirm the family spirit which inspires the governments of this hemisphere and the peoples they represent.

That is the way it ought to be. That is the way it is. The inter-American system has never been better described than when it has been called a family of nations. As in any family, the ties which unite our countries, our peoples, are ties of natural affection and of an inevitable common destiny. And as in any family, we find not only mutual respect but the duty to help one another.

The presence of one rich and powerful member, in our American community, could be a disadvantage and even a cause of irritation and estrangement but this would be true only if we lost sight of the family concept. Fortunately as we have seen in the words of President Kennedy, and in the deeds which accompany these words, and as Secretary Dillon has just confirmed in this room, the bigger and richer brother, moved by higher considerations of morality, and in accordance with the common interest, which includes self-interest, has extended his hand manfully and fraternally to his less fortunate and still growing brothers. In doing this he fulfills a family duty. He strengthens the hemispheric unity essential for the survival of the family as such, and for the survival of each member.

We of America are engaged in what we can call a task of bringing ourselves closer together. In terms of the hemisphere we are united in the close brotherhood inspired by our common history and geography, and by the clear ideals of liberty which we all share. And that same spirit of brotherhood must reign equally within each country. Thus, at the national level and not only at the continental level, the more prosperous must understand their obligations toward their less fortunate brothers. Those who have much must understand their fraternal and Christian duty toward those who have nothing. They must accept sacrifices and renounce privileges for the great task which awaits us with such terrible urgency and which consists in raising the standards of living of all the men and women of America.

That is the clear objective to which we aspire: To improve the way of life of the American, equip him for the battle of life, free him from the scourge of misery and the torture of ignorance, respecting his liberty and his dignities as a creature made in the image of God. We know well that for this objective, as Mr. Dillon has said, the stability of our economy is the cornerstone, a proper tool and certainly not the final goal in itself.

There is a false notion that we must choose between stability and development. As if stability were an obstacle to development or as if for unexplained reasons development required the instability of our economy. The truth is exactly the opposite. There are the countries of America which have been able to stabilize themselves financially through policies of austerity—difficult to apply, resisted by demagogery, sometimes poorly understood even by the people who benefit. But they have done this, not to stop at mere stability, but to lay the groundwork for sure and sound progress in direct benefit of the great majority.

But we could not seriously defend collaboration among countries of America, if the action of the United States, through the Inter-American Development Bank and other entities, represented a subsidy for an unbalanced budget, for financial anarchy, for political ineptitude, or especially for administrative corruption or slothfulness of the people.

We believe it is our obligation to put our houses in order and to dedicate ourselves to hard work. We believe in the necessity of freely elected governments, governments which respect liberty, governments which are honest, prudent and diligent, governments which are imbued with the idea of the common welfare. We believe in the protection of the law as the best and indispensable guarantee to encourage saving and investment of capital. We believe in economic stability as the only way to protect the peoples from the burden of continental rises in the cost of living. Exactly because we believe in all these things we believe also in Operation Pan American, conceived and expounded by Brazil, and in the Alianza para el Progreso proposed by President Kennedy.

For our countries of Latin America where the population increases so rapidly, where the production of goods and services does not always increase in the same proportion; where each year new useful jobs must be found for the increasing population; the question of progress is, literally, a question of life and death. We must face the double challenge of the growth of population and the general longing for a better life. Because if we do not meet this challenge, we shall certainly perish.

Progress, economic growth, expansion of wealth, industrialization, expansion of markets, substantial increase in buying power, whatever words you use, we all understand the concept. But we do not believe in the methods of the Pharaohs. We do not believe in their present-day counterpart, totalitarian methods, which consist in planning great works but with the sacrifice of millions of human beings and of several generations. Therefore we must think in terms of the human being of today, not as a figure of statistics but as a man of flesh and blood, who lives and breathes, who knows hunger, perhaps is attacked by sickness requiring medical attention, lacks schools, needs a roof over his head, and longs for a bit of land to work and to call his own and to be able to pass on to his children. The present living conditions of our peoples in many cases are terribly difficult. Therefore paralleling a plan of economic growth, we must carry forward without delay a bold and creative program of social betterment.

In view of such formidable and essential obligations, I must say that it seems to me frankly foolish for governments to use up their always insufficient resources in trying to take the place of private enterprise in economic activities which private individuals can carry out for the benefit of themselves and the community. On the other hand, it also would be absurd for a government to use public funds merely to help private businessmen to get rich. As I have already indicated private enterprise needs only the safeguards of law and a reasonable expectation of profit to develop itself and to contribute to the progress of the nation.

Private capital has a duty, moreover, to contribute to the acceleration of the development process by a policy of reinvestment in our countries. This policy, as our President, Felipe Herrera, has well said, will help to overcome the deficit in the rate of economic growth which is one of the most pressing problems which we have to face.

If we will do what must be done; that is to say if we will encourage and stimulate private investment, and if, on its part, private capital will recognize its duty to work for the good of the great masses of our population, this problem will be on its way to solution according to the capacity of each country and for the common good.

In my opinion, once a government has met such basic responsibilities as police protection, public administration, health services, education, and national defense, public funds should be used with the most scrupulous care for two purposes: in the economic field to carry out works which are indispensable for progress but cannot be executed by private enterprise because they involve too much risk or because there is no immediate profit, or because the benefits would be spread over a very long period of time.

And in the field of social progress, the government as servant of the common welfare, must think exclusively of the less fortunate, the dispossessed, who are everywhere the most numerous. And government must mobilize the energy of the nation for that vast cooperative effort which is the Alianza para el Progreso.

President Kennedy's proposal is without parallel in the magnitude and nobility of its aims and which is intended to satisfy the basic necessity of the peoples of this continent, bringing to them housing, jobs, land, health, and schooling.

Mr. President, I deeply appreciate the honor shown my country in selecting me to express, on behalf of all the delegations, our thanks for the many attentions received from the Government and people of Brazil which I do with all my heart.

As for myself, I take this opportunity on this day, which is by auspicious coincidence the Day of the Americas, to ratify publicly my faith as a citizen of the Americas, and as a democrat. I must say, with the utmost frankness, that the ideal and yearning for progress in our hemisphere cannot be represented even remotely by a revoltuion such as the Communist revolution which, to the regret of all, has now seized one of our countries; a revolution which represents the degrading spectacle, from a moral point of view of executions by firing squad without due trial, of imprisonment for indefinite terms; a spectacle of terror and despotism. From a material point of view it presents the spectacle of hardships, privations, and wage cuts.

Our forefathers did not rise up against colonial domination a century and a half ago merely to convert our countries into concentration camps of any hue whatever, be

they red, black, or yellow. In our American community we do not conceive of the individual as being at the service of the state or politics. On the contrary, we believe the state and politics to be instruments at the service of the individual. We do not see the individual as an abstraction but as a human being with a name and life of his own.

We cannot forget either the spiritual or the material side of man. This is the true Christian human spirit which animates our peoples. For us liberty is incomplete without economic welfare. But at the same time we reject the fallacious promise of economic welfare which not even the totalitarian regimes fulfill, and which begins by depriving us of our divine gift of liberty. Here also there is a false notion that we must choose between liberty and economic welfare. No; because liberty is not sufficient or authentic without welfare; and welfare is not possible and would be humiliating without liberty.

I confess that I am not only impressed, I am deeply moved by the success of our meetings, by the enthusiasm which I have observed here. At last we are busy with the task of today and with thought for tomorrow, and no longer with the sterile recriminations of yesterday suitable perhaps for a debate of historians but not for an assembly of economists. How small and how pointless seems the artificial bickering among our countries when we contemplate the great enterprise on which we have embarked.

I have the conviction that we still have time to take up and complete the work which the peoples of the Americas are awaiting. I also have the certainty that tomorrow would be too late. Happily, we all now have understood this. I have the conviction that in the Alianza para el Progreso the Inter-American Development Bank is going to be an increasingly useful tool. It already has made astonishing headway in a few short months thanks to its own resources and to the moral and intellectual qualities of our president, Felipe Herrera, and of the other executives.

At this time there can be no doubt of the fundamental role which the bank is playing to bring our countries together and to work united in the knowledge that we are all pursuing the same objective. Joint action based on the sincere spirit of solidarity among our peoples is the only secure base from which success can be achieved.

The fervent hope which should arise in all of us is that the family of American nations should continue united. In carrying out our common efforts for the common goods, the Inter-American Bank will be decisive in that the philosophy with which it is inspired transforms it into not merely a financial entity but rather a collective organism dedicated to the spiritual and material progress of Latin America.

Finally, I am convinced that nothing has contributed more to the cooperative spirit of this meeting than the friendly and charming atmosphere of Brazil, our sister nation, the colossus of South America, a country great also in its spirit, forged by civilization and democracy, warm in climate and cordial in heart, which is without doubt the most important.

Many thanks.

God Love You

EXTENSION OF REMARKS

OF

HON. WILLIAM G. BRAY

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. BRAY. Mr. Speaker, in view of the recent distress about Africa, the following article from Our Sunday Visitor by the Most Reverend Fulton J. Sheen is most pertinent:

GOD LOVE YOU

(By the Most Reverend Fulton J. Sheen)

Behind the minor political struggles in the Congo is the implacable war of the Communists against the church. Here are the inside facts of the Congo story:

Russia plans to "Sovietize" Central Africa.

For 2 years the Soviets gave Lumumba $400,000 a month to buy followers and provide them with cars.

Lumumba set up a Communist organization among his fellow tribesmen, the Batelca, making them believe he was the incarnation of his ancestors.

During the elections, Lumumba's troops destroyed most of the ballot boxes of the other candidates. But only 23 percent of the population voted because of their opposition to him; in other regions, 85 percent voted.

The plans for the Communist revolution in the Congo were prepared in Prague and in the first 3 months Lumumba carried out the first three points: 1. Organize mutiny in the army; 2. put the blame on the Belgians; 3. organize a terrorist regime.

The resentment of the Soviets against the death of Lumumba reveals their disappointment in not taking over the Congo. (The Soviets could astonish the world by telling their part in his death. Remember, Lumumba failed them.) But the Soviets have a substitute for Lumumba in Gizenga, the Communist dictator in Stanleyville who was educated in Moscow and Prague. Others are Kashauka, who visited Peiping, and Dayal who works under Communist orders.

The Communists have planted two advisers in Washington, both of whom were thrown out of Lovanium University in the Congo for their Communist activities.

Seventy percent of Leopoldville's population are unemployed. Communists have introduced moral degeneration to the youth of the city. Some 90 percent of the boys smoke hemp; immorality is encouraged; attendance at mass has declined to 10 percent of the men, 7 percent of the women.

Missionaries have been persecuted beyond description—priests mutilated, nuns tortured and ravished. Next week we will give you the full story of this religious persecution.

Hill-Burton Program Helping With Texas Hospital Construction

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. YARBOROUGH. Mr. President, all of us are keenly aware that one of the most important legislative issues before the Congress at this time is the President's sound proposal on health and hospital care for the aged.

For this reason, I think it is especially appropriate, while we are considering Federal action in this field, that we not only consider what needs to be done, but also what has been done.

I would like to call the attention of the Senate to the Hill-Burton Act, which has proven of tremendous national benefit to millions of Americans by helping provide for construction of needed hospital facilities.

If the Congress had not acted to extend financial assistance for hospital construction in areas of greatest need, the problem before us today would be even much more serious then it is.

So to those individuals and organizations which so strongly oppose President Kennedy's health care for the aged proposals on the basis that the Federal Government should leave the problem's solution up to the individual, or the local or State government, I say look at the success of the Hill-Burton program. It is a soumd example of Federal and State and local government cooperation to meet the needs of the people all levels of government serve.

Mr. President, recently Mr. Charles O. Bettinger wrote an excellent article on the Hill-Burton program for the March 1961 issue of the Texas Business Review. I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Hill-Burton Program Spurs Hospital Construction," by Mr. Bettinger.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HILL-BURTON PROGRAM SPURS HOSPITAL CONSTRUCTION

(By Charles O. Bettinger)

The construction of new hospital accommodations did not keep pace with the growing populace and post World War II Texans and citizens of other States found themselves in dire need of additional medical facilities. Acting to remedy this situation, the Congress of the United States passed the Hill-Burton Act. The act was adopted as a measure to provide Federal assistance to those areas with the greatest need for supplementary hospitalization. Construction in Texas of more than $250 million in additional facilities under this plan alone is completed, under construction, or in the planning stages.

Although the maximum limit of Federal participation was set at 50 percent, the large number of applications requesting a portion of the Federal allocation to Texas forced the Government's share of expenditures down to only 34 percent since the institution of the program. However, some projects are still able to secure the maximum subsidy, depending upon the needs of the area and the type of hospitalization that is being considered.

Laurels must also go to the state department of health in Texas for a speedy job in developing the Texas plan which was necessary before Texas could get any allocation of Federal money. On the basis of surveys of existing medical care and equipment available, the Texas plan set forth all the requirements necessary to participate, established priority areas on the basis of needed facilities, and set all other regulations necessary for the smooth, nonpolitical operation of the Hill-Burton program under the direction of that State agency. In addition, this agency has administered and directed the activities of the program for almost 15 years at a cost which is now less than 1 percent of the total funds allocated. When the extensive supervision necessary for the proper operation of this program is taken into account, these administrative costs are indeed low.

Due to the strict construction requirements set forth in the Texas plan of the Hill-Burton program, Texas hospitals have also pushed the standards of their accommodations up to a peak in 1960. The state department of health has set specifications to control the sanitary aspects of the hospitals falling under this subsidy. The ventilation

system is one such example, and it must meet rigid requirements. For instance, the same air must not be circulated into the maternity ward and then into surgery.

Although this program has nothing to do with the operation of the hospital after it is opened, several administrative policies assist in getting the hospital off to a good start. The excellent sanitary precautions are but one of the minimum standards set up in the Texas plan. Other Board decisions as to the original allocation directly affect the working policies of the new hospital. For instance, two organizations with the same basic priority may not have an equal chance of getting an allocation if one group has included training facilities to help in staffing the new unit. The administration, therefore, can recognize good planning and amply reward that group with the allocation. Usually, however, the Federal funds available are distributed to as many applicants as possible thus lowering the percentage participation that is represented by the Government and encouraging much more construction.

Excluded under this act are private hospitals established for profit reasons. Also, until an amendment of the original law which made it possible for groups to borrow money and repay it to the Government, several organizations refused to accept Hill-Burton money because of certain moral objections to this use of Government money. However, some of these objections have been overcome with the amendment since the amount of assistance may be issued in the form of a loan rather than a subsidy. Certain other hospitals will not participate in the program due to the high standards and restrictions of the Texas plan. Others may go ahead and build a hospital unit without Federal assistance due to the low priority rating of the area where they are building.

Costs of hospital construction have continually risen until the average construction cost per bed in Texas is from $17,000 to $19,000. This figure represents the total costs of all equipment, designing, and other costs of the project. While this figure seems high, a comparison shows that Texas is one of the lowest States in the United States. As an example, it is not exceptional to find the cost per bed in California as high as $35,000. Another method of expressing relative costs is by the square foot which fall between $22 and $25 in Texas. Comparison with other States illustrate the fact that Texans are getting a bargain in hospital construction.

On the above map (not printed in RECORD), the density of projects by total cost is shown for projects constructed or planned under the Hill-Burton program. Houston and Harris County led in the dollar value of these projects with a total construction of over $37 million since the institution of the program. Other counties with over $10 million were Dallas, Tarrant, El Paso, Galveston, Nueces, Travis, and Bexar. This construction and future construction give each community a great stimulus to the industrial trade in the area. Other than the labor used to construct a hospital, the specialized nature of hospital construction requires tremendous quantities of plumbing equipment, ventilation supplies, and wall and floor finishes that can be cleaned and scrubbed easily. Supplying unusual building design features and special equipment can be especially beneficial to local dealers in the area of construction.

Two types of funds are available for the construction of new hospitals. The largest allocation goes to general hospitals or public health centers, and the funds thus allocated are called C-funds. The remaining classification consists of institutions such as diagnostic, rehabilitation, nursing, and chronic illness centers and receive G-funds. In 1960, G-funds accounted for 97 percent of construction under this program.

Some mention has been made of priority areas based on the need and the population in those areas. The first step in assigning classifications to these areas was to get a complete census of the facilities available all over the State. This count was expressed in the number of beds available. The second step was to determine the need of the areas expressed in comparable terms. This was accomplished by assigning an established number of beds needed for each 1,000 persons depending on density of population of the area, such as rural or metropolitan. Then the number of beds available is compared to the number needed, and that percent determines the priority classification of the area. There are four classifications ranging from A to D, with the A grouping having the range of 0 to 40 percent of available beds to needed beds. The D group with minimum priority ranges from 80 to 100 percent.

Estimated value of building authorized

[Dollar amounts in thousands]

Classification	January 1961	December 1960	January 1960	Percent change: January 1961 from December 1960	Percent change: January 1961 from January 1960

Source: Bureau of Business Research in cooperation with the Bureau of the Census, U.S. Department of Commerce.

Leading the Hill-Burton projects in size in the calendar year of 1960 were the Scott and White Memorial Hospital in Temple, Tex., total $7,675,000, and the Galveston County Memorial Hospital with a value of $4 million. These two units alone were responsible for adding a total of 480 beds, which greatly alter the previous classifications of the areas involved. Total cost of hospitals receiving allocations in 1960 totaled $26,385,045 with the Government share of this bill amounting to $9,277,045, or 35 percent. Due to a 2-year limit on the allocations, work must be started on most of these projects in 1961.

Actual construction work started on hospital projects in 1960 is best evidenced by the number of authorizations to build during the year. Total authorizations amounted to over $37 million in 1960. This represented an impressive 56 percent increase from the previous year. January 1961 permits authorized exceeded $13 million to start the new year with a total which was more than one-third of all 1960 permits. Therefore, with just 2 more months like January, the 1960 total will be passed. With this rate of growth, Texas should soon catch up with its hospital needs.

While the Hill-Burton program has largely been responsible for much of the stimulated growth, hospital construction has progressed equally in other categories such as proprietary hospitals which numbered 219 of the total 556 listed by the American Hospital Association in 1959. Federal hospital care has also increased substantially in VA hospitals and on military bases since World War II.

Texans appear determined to use both the Federal program and private enterprise to meet the requirements of this State. With the spectacular start in 1961, this year may set a record for some time to come. Many of the 1960 Hill-Burton allocations will carry over into 1961. Long-range projections do not indicate a major slowdown of activity but, instead, show continued increases in Federal spending in this area. This should prove especially true if the liberal Democrats in Congress can get their proposed plan for Federal medical care for the aged passed. These plans make Federal money available through the social security tax for medical care of elderly people.

To sum up, hospital construction prospects in Texas are good. Another record-breaking year as well as excellent long-range prospects in this area of construction can be forecast.

Hill-Burton project allocations in Texas

[In thousands of dollars]

Fiscal year ending June 30—	C funds	G funds	Total allocations
1948	$4,828	0	$4,828
1949	4,864	0	4,864
1950	9,492	0	9,492

Award to Miss Mary Lindsey Hoffler, of the Cradock High School, Portsmouth, Va.

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. BYRD of Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD remarks made by Miss Mary Lindsey Hoffler, of the Cradock High School, Portsmouth, Va., at ceremonies held at Augusta, Maine, in connection with the presentation of the National Bellamy Award to Cony High School.

There being no objection, the remarks were ordered to be printed in the RECORD, as follows:

MISS MARY LINDSEY HOFFLER, SENIOR SCA REPRESENTATIVE, CRADOCK HIGH SCHOOL, PORTSMOUTH, VA.

DAVID ELVIN. Next we have Miss Mary Lindsey Hoffler, senior SCA representative at the Cradock High School, Portsmouth, Va. Her school received the second Bellamy award for the State of Virginia. Mary Lindsey is a member of the National Honor Society, is State vice president of the Student Virginia Education Association; was one of eight Virginia delegates to the White House Conference on Children and Youth, in Washington, D.C., in the spring; and this past summer was awarded the gold key for outstanding scholastic achievement at the National High School Institute, Northwestern University.

MARY LINDSEY HOFFLER. When you hear the letters C-H-S what do you think of? Cony High School—the building, the students, the fun? This morning I would like to tell you a little about my C-H-S—Cradock High School. These letters mean a great deal to me. The C stands for community, the H for school and State history, and the S the student body and its spirit.

Our school spirit has been created by students and teachers alike. Some schools only express themselves on the cheering line as they shout athletic teams on to victory. Our enthusiasm for all projects, through the full cooperation of student and teacher alike, brings the ultimate reward. Our teachers work tremendously hard to bring out and display the talents of all Cradock's students. Our vocational and work programs have in past years captured almost every State honor, our dramatics, future teachers, and SCA are known throughout Virginia.

Cradock is a nautical school in name and theme. We were named for Sir Christopher Cradock, an admiral in the British Navy during World War I, my community was originally a housing project for war workers. Cradock proper is laid out in the form of an anchor with the main streets forming the shaft, stock, and arms. The nautical theme was further carried out in the naming of its streets for such famous naval men as Farragut and John Paul Jones.

Therefore, it is not surprising that our school newspaper should be called the "Shipmate," our literary magazine, the "Log"; our yearbook, the "Admiral"; and our student handbook, the "Quartermaster." Our yearbook cover carries the admiral's stripes and stars, Cradock's own special stars and stripes.

You are all familiar with Virginia's history because it involved the beginning of our Nation. I understand that an exploring party of Englishmen sailed up to the site of Augusta in 1607. The date of the first permanent English settlement in Jamestown, Va., as you know, is 1607. Before coming here I was told that if I mentioned Jamestown, I had better stress the word permanent so as not to be confused with your own historical first.

Virginia, called "Mother of Presidents"—and rightly so because she has given birth to six "first men" of the Nation. Cradock High School has also earned this title. This year our students have held the offices of four presidencies in the State. We are mighty proud of our distributive education, diversified occupation, Future Teachers of America, and Student Cooperative Association State presidents.

The schools represented here today differ in many ways. We come from different parts of the country; the enrollment of the schools may be unusually large or small; the school buildings may be very old or comparatively new; and the students speak with different accents and inflections; but we have all been drawn together by one great occasion—the National Bellamy Award. I am glad to say: Cony High School—welcome to our Bellamy Award family.

David, I would like to present a copy of our 1960 yearbook, the "Admiral," for your school library from our student council, and as a permanent record of one of your proud sister schools.

Edward P. Halline of the Milwaukee Sentinel Tells Why America Must Triumph Over Tyrants Over the Human Spirit, Whether From Left or Right

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. REUSS. Mr. Speaker, the man from Mars, landing on our shores, must think we have all gone "wacky." We are the inheritors of Leonardo and Shakespeare, Tolstoy and Beethoven, yet the art forms which seem to engross our people at the moment are a movie called "Operation Abolition" and a book called "The Politician" by the founder of the John Birch Society. America is better than this, and it is time we began to realize it.

Most welcome, therefore, is the astringent advice from the talented and honest dramatic critic of the Milwaukee Sentinel, Edward P. Halline, from last Sunday's edition:

A DIFFERENT APPROACH—FREE, BOLD MEN BRING LIGHT INTO DARK WORLD

(By Edward P. Halline)

The lights of civilization, dimmed during the Hitler onslaught and then darkened by the chilling fear spread by the coldblooded Communist empire, have gone on again in the Western World.

Men's minds are not in chains. Free enterprise is comparatively free for the necessary but uneasy cooperation between Government and private industry in the United States. A bold and fearless young President gives us new hope for stopping the Communist tide. His leadership in the world transcends politics, bitter quarrel over domestic policies, and the wait and see attitude of those who have not yet caught the spirit of confidence.

In Milwaukee, as in other great cities, practically all segments of our politico-economic body are cooperating in the rebuilding and reinvigoration of the city which has lived on praises for good government, law, and order and the scent of a fabled gemuetlichkeit. The lights are on aagin in Milwaukee. Great plans are being made for the future, and dreams are becoming realities.

The long needed Music Hall-Theater is just ahead. The few years before it is built are but weeks in this Rip Van Winkle of metropolitan cities.

The intensifying interest in music and theater is a sign of the ferment which needs but unity and organization to reach a new level. The press is free, debates over national policy are protected from the agents of a police state.

Always the potential foe of tyranny, the theater is widening the horizons of free men and exerting its right of inquiry, into our still imperfect civilization and culture. Culture implies growth and it cannot grow in darkened worlds. Great music, is stirring the hearts and bringing a greater glow to the spirit abroad in the land as never before.

Bach, Haydn, Mozart, Beethoven, and Wagner are for freemen though Haydn and some of the other composers had to make private adjustments with their patron's antiquated beliefs and foibles, such as Haydn made with the demands of the Esterhazy family. When Haydn was free of them, he wrote his greatest music, notably the 12 last symphonies composed for enthusiastic British audiences.

Except in Soviet Russia where Communists have found a way to fetter their greatest composers, Western music stays free.

Is ours then the sick society, bloodless and decaying as the Communists and present day Fascists and their fellow Fascist travelers would have us believe? And who is sick? Francois Mauriac, the celebrated French writer who has discussed the problem of literary creation as seen in the light of a Catholic faith, said:

"I belong to a generation which believes in man and in Him of whom man is the unchallengeable witness."

"Freedom, not capitalism or communism, is the supreme issue in the world today. Yet the world is divided on what it means," says the Saturday Review. "To the underprivileged peoples—the majority of mankind—it means escape from tyranny or exploitation. But this is only its negative aspect. For the nations that have won their way to freedom, it is also responsibility, economic and social justice, and political security, discipline as well as a privilege."

But the weepers and wailers and the gnashers of extreme right-wing teeth continue their lamentations over the sickness of American civilization today and their own nostalgia for some remote era when the mob, that's you and I, groveled under the patriarchal lash of the oligarchs. These oligarchs, presumably men of means such as Texas oil billionaires and a few generals, would cure this Nation with the disciplinary measures of an army in war. Their captive intellectuals, voices of despair, keep in step. Their great foe is communism and they would turn this democratic Republic into a quasi-Communist police state in order to fight the enemy. They are like the Communists in methods, and in believing that the ends justify the means, that a vigilante society operated by lynch law from kangaroo courts is the way to crush freedom and dissent.

They would destroy the American Constitution in promising to save it from its foes.

Hitler, using the same terroristic methods in Germany, won the support of big industrialists and a good proportion of the masses by promising to save the nation from the Communists and the Jews.

The result was the Nazis got control and proceeded to enslave not only the people but the very industries they were supposedly saving. Communists propose to rescue the masses from slavery by seizing industry.

So it was complete government control in both countries, just a matter of which form of tyranny helped you more than the other.

Both groups wore masks of respectability in the communities. The current American neo-Nazis are utterly respectable, have influence in American politics and are extensively admired as strong men dedicated to preservation of American institutions, so they say. Most of the present day American Communists on exhibition are a seedy lot, but when the revolution comes they will have to step aside for the now respectable butchers from the Kremlin.

The neo-Nazis and the Communists are so much alike in their belief in an authoritarian state that it is not difficult at all for an avowed American Communist of the 1930's to recant and come up as a pillar of orthodoxy preaching ostensibly against communism but more against moderate conservatives and moderate liberals who dominate American politics today. It is easy to transfer their allegiance from one tyrant to another.

Even former President Eisenhower is denounced as a Communist stooge and a traitor to America. What they think of others slightly to the left of Eisenhower can well be imagined. And, of course, they would impeach Chief Justice Earl Warren because of the Supreme Court decision ordering integration. Naturally, they get the support of the diehard southern Senators who longed for the last century when Negroes were serfs, not even citizens but menials and happy in their lots until they got educated and uppity.

Robert Elliot Fitch, dean of California's Pacific School of Religion at Berkeley, has written a book, "Odyssey of the Self-Centered Self." Dr. Fitch was originally a Presbyterian, then a Congregationalist, an atheist, and a Socialist who supported Norman Thomas in 1932. Like others, he recanted and made the complete turnabout to the new orthodoxy. So his switch is not a surprise.

Dr. Fitch concentrates more on religion and psychology and perhaps does not seek to repeal every advance in the 20th century. But, as quoted in Time magazine, he is against atheism, agnosticism, romanticism, rationalism, humanism, positivism, extentialism, and cubism. He inveighs against such diverse men as the famous Rousseau, Schopenhauer, Walt Whitman, Kinsey, Adlai Stevenson, Aldous Huxley, Jack Parr, Caryl Chessman, Boris Pasternak, Charles Van Doren, Tennessee Williams, Francoise Sagan, Archibald MacLeish, Samuel Beckett, and James F. Powers. This is a typical bracketing by neo-Fascist minds.

They worship the false god of self, says Fitch. Man began with God, the only true faith, and finally wound up with the self. The self as deity pursued power as Faust did and pleasure as Don Juan did. The self is sick, says Fitch, looking through a small chink of his secure castle of orthodoxy to see a world which is poisoning itself with the venomous fumes of moral and mental bankruptcy.

Dr. Fitch, of course, surveys gloomily the hijinks and Bacchanalian revels of 20th-century man. He seems to have forgotten that he was a teenager once himself and that these outbursts of despair, of letting the morrow bring what it will of moral and mental anarchy itself, are encountered periodically throughout history.

And what is the world which Dr. Fitch does not see? We have been through two World Wars, a great depression, a frustrated Korean war and a cold war which may run to the end of the century. We are literally living under the gun as the Europeans have for centuries. Annihilation can be only a few minutes away. Yet Americans as a whole are taking it in their stride. They have bigger families despite imminent catastrophe. They are building more schools and sending through high school and college more children than ever. More and more are going to churches, more and more are searching for God. It is an explosive age where the sciences and technologies are fortunately outstripping the comprehension of most people.

All over the country the interest in good music has multiplied. People go to concerts to listen and not just to be seen there. The Metropolitan Opera, once the exhibitionistic ground for society, belongs to opera lovers who listen by the millions to its radio broadcasts. The sale of good records, complete operas, and symphonies of such towering masterpieces as Bach's "B Minor Mass" and the "Matthew Passion," is far above the puny driblets manufactured for a small audience of esthetes 30 and 40 years ago. Does that show sickness, Dr. Fitch?

The theater is free to pursue its inquiries into the relationship between God and man. We have seen Archibald MacLeish's "J.B.," a modern version of the great debate in the book of Job; Jean Anouilh's "The Lark," the story of Joan, as intensely moving as Shaw's "St. Joan," and this same French playwright's "Beckett," a vivid dramatization of the age-old struggle for power between the church and young ambitious kings like Henry II of England. We have seen Frederick Duerrenmett's "The Visit," where a whole community decays, and Tennessee Williams' plays about the dark miasmatic swamps where men and women decay. Duerenmett and Williams are not writers of shockers nor are they contributing to delinquency. They are scourges of God.

Who is sick? The answer is easy. Dr. Fitch and his phony prophets should get out of the light if they can't stand it and crawl back into their fever-stricken beds.

People-to-People Medical Aid

EXTENSION OF REMARKS
OF

HON. HIRAM L. FONG

OF HAWAII

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. FONG. Mr. President, I invite the attention of my colleagues in the Senate to the observations of Dr. Mary A. Glover of Kailua, Hawaii, who recently served on the steamship *Hope I*.

The SS *Hope I* is a medical mercy ship transporting volunteer medical personnel to ports in the Far East and southeast Asia for the purpose of rendering medical assistance to the people there. It is a project of the People-to-People Health Foundation, Inc., and significantly, the letters H-O-P-E stands for health opportunity for people everywhere.

Through the work of the SS *Hope I*, a program of people-to-people diplomacy is effected. It demonstrates the American people's willingness to share their resources when and where needed.

Dr. Glover has written of her experiences and observations for the daily newspaper, the Honolulu Advertiser of March 12. I ask unanimous consent that Dr. Glover's news article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Honolulu, Hawaii, Advertiser, Mar. 12, 1961]

ISLE MEDIC FINDS "HOPE" EXIT HARD

(By Dr. Mary A. Glover)

(Dr. Mary A. Glover of Kailua returned last month from 4 months aboard the medical ship *Hope*, while it visited Indonesia to care for patients and teach new methods to local medical people. Project Hope is financed by gifts of the American people. In this story, Dr. Glover sums up her impressions of the time she served aboard the ship.)

After my experience on this project, for which I thank my patients, Dr. Dixie Soo, and the many of you who have contributed money and written encouraging letters, I will never be the same again.

I guess this is inevitable. Reading or hearing about life in a less privileged country cannot begin to give one a concept of what those hardships are like.

You have to see the patient faces of men and women with goiters so big they can hardly turn their heads. You have to walk up the dusty, worn trail with its betel nut and tuberculosis-spit stains.

You have to watch the stoop and then the straightening of the shoulders of the barefoot betjak driver when he sees that the price of rice in Djakarta has doubled in the past 8 months but his income is the same, with no way he can see to increase it.

You have to run your finger over the smooth surface of the beautiful wood carvings a white-haired craftsman has produced.

Singing alternate Indonesian and American songs in the back of a dusty pickup truck; trying to ignore the heavy ache of your muscles when you have slept 4 hours in 36, and are trying to start a transfusion on a desperately ill patient; surreptitiously watching the face of a young Indonesian nurse as she samples a bowl of poi and then eats it all.

These are very different pictures in very different moods, but they add up to something that brings a lump to the throat and sometimes a few tears to the eyes.

It was difficult to leave. I had the feeling that in many ways I was departing at the time when I could contribute the most.

It always seems to take a while to develop trust, respect, and friendships. This period had elapsed, and we and our Indonesian staff members were known quantities to each other.

Through the hours when all of us applied the best of our knowledge and ability to relieve suffering and save lives of other human beings, we saw in each other qualities we like and admire.

Indonesia is ideally suited to mutual projects for peace which have a well-equipped ship as a base. Communications and transportation are two of this country's major problems.

Naturally, in a pilot project, there is much that one learns and would do differently a next time.

For example, we felt that we had too brief a stay in some ports; we would have liked to follow the patients just a little longer after starting treatment.

In the three medical school ports we visited, several of us general practitioners began to realize that we might be of most help if we worked in the outlying hospitals and dispensaries rather than in the city hospital "polykliniks" where more doctors were available.

A large portion of the medical care in the outlying areas necessarily must be carried

out by only partially trained personnel, as one doctor cannot care for all the illnesses of 60,000 people. We can contribute greatly by teaching these nondoctors.

Although I am now back in Hawaii, the SS *Hope* is still in Indonesia, between Ambon and Kupang, Timor. On it are the 65 American medical staff members, approximately 35 Indonesian medical staff members, and 135 American crew.

They are providing proof that the "people to people" feeling of concern is not dependent upon politics or geography or race.

They can continue because enough of us in the United States believe that this is the firmest foundation for world peace, and are sending some of our money to prove it.

The address, by the way, is Hope, Post Office Box 9808, Washington, D.C.

The Great Tourist Bill Hoax

EXTENSION OF REMARKS
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. WALTER. Mr. Speaker, for well over 14 years it has been my privilege to carry the responsibility for presenting and explaining to the House most of the legislation dealing with immigration problems.

I believe it is my duty now to advise the House that we may have to deal soon with legislation vitally affecting immigration and, in a broader context, bearing on vital national interests.

I have in mind the bill, S. 610, which passed the other body and is now pending before the Committee on Interstate and Foreign Commerce, a bill purporting to promote tourist travel to the United States.

In my opinion, this legislation, if stripped of its verbiage, represents simply an attempt to have the Federal Treasury finance advertising and promotional activities of private transportation business, mostly the shipping lines and airlines.

In the Sunday magazine section of the New York Times of April 16, 1961, there appeared an article adorned with the name of the distinguished senior Senator from the State of Washington. Having read the article carefully and being fully aware of the Senator's sincerity as well as of his exceptional ability to express his views with clarity, precision, and ever-present realization of facts, I am inclined to believe that the article attributed to him has actually originated on Madison Avenue in New York City, rather than in the Senate Office Building.

I do not intend to contribute at this time to the amusement of the House by quoting the characteristic Madison Avenue "punch line" of the article, its opening paragraph, in which it is stated that Christopher Columbus would have been denied a tourist visa to the United States because he was born in Italy, was an indigent, and—believe-it-or-not—insane, says the article entitled "Columbus Couldn't Get a Visa."

The basic premise of this splendid example of promotional prose is the alleged fact that a foreign tourist who wishes to visit the United States is faced with insurmountable difficulties.

What are the facts?

According to the annual report of the Attorney General of the United States for the fiscal year ending June 30, 1960, there occurred a total number of 68.5 million—exactly 685,563,571—entries across the borders of the United States in that year. This number of entries includes U.S. citizens and aliens, immigrants and nonimmigrants, border crossers, seamen and airmen, and it includes, of course, multiple entries made by the same person.

However, excluding entries made by all seamen and airmen; excluding entries made by our neighbors coming from Canada and Mexico; excluding returning residents and foreign students returning to their studies; excluding persons entering without documents, the total number of entries was 1,406,134. Of this number 1,140,736 aliens entered the United States as nonimmigrants. Of this number 108,130 were visitors for business, while 671,075 were visitors for pleasure, or tourists. Exactly the type of tourists with which the Columbian article concerns itself.

According to the Attorney's General report, the number of visitors for pleasure, or tourists, is increasing year by year. Looking back over the last 5 years, this country played host to 399,704 tourists in 1956; 453,514 in 1957; 514,599 in 1958; 597,982 in 1959; and, as I said, 671,075 tourists in 1960. In addition to that, we had in 1960, 32,569 foreign government officials entering the United States; 119,291 alien travelers passing in transit; 35,415 students entering for the first time and a steadily increasing number of exchange visitors—25,233 in 1960—industrial trainees, temporary workers in the highly skilled category, and so forth.

I believe it would be safe to assume that somehow even Christopher Columbus could have squeezed himself into this flow of tourists.

If the difficulties in obtaining temporary visas were even partially as prohibitive as described by the Madison Avenue drum beaters mobilized by the shipping interests to press for the enactment of S. 610, it would hardly be possible to have those visas issued around the world at a steady pace of over 2,000 visitors' visas every day of the year.

But this is not all. The article attributed to the Senator from Washington goes on to stress further difficulties encountered by foreigners who desire to pay us a visit. This, according to the article, is a second wall erected around the United States by our immigration officers who are just mercilessly excluding visitors displaying a valid visa stamped into their passports. Let us have a look at this exclusion wall.

Out of 1,406,134 aliens entering the United States in 1960, 411 persons were excluded at the ports of entry. Is not that a terrifying proportion? Of the 411, only 53 came from Europe and only 7 from Asia, while 12 came from South America. One hundred and forty-two of those excluded attempted to enter from Cuba, 96 from Mexico, and 42 from Canada.

I do not believe, Mr. Speaker, that I have to dwell further on the veracity of the article. Let me turn, however, to the administrative operations of our consulates.

The New York Times conducted, just a short while ago, a worldwide survey of the visa issuance operations. I wish to include at this point the reports carried by that newspaper in its issue of March 5, 1961:

FRENCHMEN ARE PLEASED

PARIS, March 4.—The U.S. consulate here is now able to issue nonimmigrant visas to French applicants in 30 minutes instead of the 8 to 10 days it used to take.

John R. Diggins, Jr., in charge of the visa section, described the new approach as follows:

"In the old days our system was geared to screening the 2 percent we didn't want. Now we're concentrating on making things as easy and pleasant as possible for the 98 percent who are welcome."

The French applicant simply turns over his passport and waits in a comfortable chair in the waiting room while the staff and the latest in electronic machines quickly process the application.

Before the visa is issued the tourist is interviewed for about 5 minutes on possible Communist affiliation, contagious diseases, and length of residence in France.

The officials in charge of interviewing applicants lean over backward to pose these questions in the least embarrassing way possible. They report that very few French tourists are disturbed by the questions.

LONDONERS GET QUICK ACTION

LONDON, March 4.—Consular officials at the U.S. Embassy in Grosvenor Square today began asking applicants for nonimmigrant visas only four simple questions.

The new short form is a further refinement of the simple visa procedure that has been in effect for more than a year at American consulates in Britain.

Its additional abbreviation was spurred by a directive received this week from the State Department that said, in effect: Make it as easy as possible to get a visa and still comply with the basic requirements of the law.

In the nonimmigrant (tourist and businessman) section of the consulate this afternoon there was a steady flow of applicants through the comfortably appointed waiting room in the new Embassy building.

It took only 10 to 20 minutes for each applicant to obtain a visa, provided he had proper photographs, a valid passport, and some sort of informal statement indicating that he intended to return to Britain after his visit.

It took Mr. and Mrs. E. G. Brooks, of Eastbourne, about 20 minutes to get their combined tourist and business visas.

The four questions asked were:

Does the applicant suffer from mental illness or a serious contagious disease; has he had a serious criminal conviction; has he ever been deported from the United States; is he a member or an affiliate of a Communist organization?

SWISS GET QUICK VISAS

GENEVA, March 4.—The receipt of instructions to simplify visa formalities and the speed with which Mme. Edouard Wurmser got her visa were a pure coincidence.

"My husband and I obtained our first visa a year ago and we have nothing but praise for the prompt and courteous service we

received at the U.S. consulate," Mme. Edouard Wurmser said.

"We found the questions we were asked to be a little unusual, but there was nothing objectionable about them," she said.

Consular officials here say they have been issuing visas without any delays for Swiss. Local travel agents confirmed that the processing had been rapid for several years.

Irish Find It Easy

DUBLIN, March 4.—This must be one of the most pleasant cities in Europe in which to obtain a tourist visa for the United States.

That was the impression formed after spending some time sitting among tourist applicants at the U.S. Embassy in Merrion Square.

Both the consul in charge and his secretary dealt with each applicant in helpful and friendly manner. No embarrassing questions were asked and, in fact, it was learned that only two applicants had been refused visas in the last 2 years. Those were for health reasons.

There has been no change in the procedure since President Kennedy assumed office. But the whole atmosphere of the visa section has become more relaxed and friendly without short-circuiting State Department regulations. Twelve hundred tourist visas were issued last year, compared with 900 in 1959.

German Tourist Surprised

BONN, GERMANY, March 4.—A would-be West German tourist in the United States consulate here today said:

"If I had known before that all I had to do was to fill out this little thing, I'd have applied for a visa long ago."

The "little thing" he referred to, the size of a playing card, was an application form asking for name, address, profession, date and place of birth, nationality, ethnic origin, marital status and passport details. The applicant had heard he would have to fill out a lengthy questionnaire.

This is a thing of the past, according to American consular officials here. It was used in what are described as "emergency cases," where the consular officer could not satisfy himself of the nature of the applicant's visit. But on March 1 all copies of the questionnaire were burned, consular officials said.

For a number of reasons, Bonn is not a typical visa office in West Germany. This is a comparatively small town and nearly everyone wanting to go to the United States is known to the Embassy. The average number of visa applications has been 100 monthly. The processing has been swift and competent.

Identity Cards in Belgium

BRUSSELS, BELGIUM, March 3.—Getting an American visa became easier for Belgians on February 13 when the State Department ruled that they could present identity cards in place of passports.

All Belgians are obliged to carry identity cards but not many every take the trouble to get passports.

This change of procedure, which seems to have been in the works for some time but which occurred soon after President Kennedy showed an interest in tourist travel from Europe, has impressed transport men. A typical comment was that of Robert H. Jerosch, director of Pan American World Airways in Belgium.

"This change in regulations is helpful to tourists," he said. "But I hear comments to the effect that Belgians think there is still too much redtape about traveling to the United States. As they put it: 'We let Americans come here without a visa so why shouldn't they let us visit them on the same basis?' "

The procedure for obtaining a visa takes about a half hour.

Usually the questions asked of an applicant are those on form FS 257, which are about the same as those asked on an automobile license application.

Form Dropped in Oslo

OSLO, NORWAY, March 4.—The consul here, Karl Ackerman, said that the order would have little practical effect here as it had been necessary to make only sparing use of the forms in granting visas to Norwegians. But he termed it the first concrete step by the Kennedy administration to speed the process.

The consul said that the applicant was required to read through a statement listing criminals, prostitutes, those affiliated with Communist organizations and the like as ineligible to receive visas. The applicant is then asked whether he is eligible, and his reply is under oath.

Greeks Are Special Problem

ATHENS, March 4.—The Greek immigration quota to the United States is limited to 308 persons yearly.

Owing to Greek population pressures and the fact that almost every Greek family has a member in the United States, more than 100,000 applications for emigration are on file. The result is that many Greeks try to obtain tourist visas and hope for a later change in status after arriving in the United States.

Well-known businessmen and convincingly bona fide tourists have been able to get a tourist visa within 24 hours or less. The average lag for other applicants is about 2 months.

Joseph B. Costanzo, U.S. Consul General here, said:

"We have to be most careful with tourist visas and establish beyond a doubt that the applicant has no reason whatever to abandon Greece."

He said that about 11,000 persons called at his office each month—twice as many as 5 years ago.

Visas Issued in an Hour

MEXICO CITY, March 4.—Even with the substitution of the short form, there is some opinion here whether the process has improved.

Under the long form a series of questions was posed calling for a "yes" or "no" answer. The questions were based on law 212a listing the restrictions for issuance of non-immigration visas.

This law specifies that persons are not eligible for such visas if they have been treated for instanity, have been narcotic addicts, have engaged in prostitution, vagrancy or a number of other things. Finally it was asked in the long form whether the applicant had ever belonged to a Communist organization.

If any of these questions had to be answered in the affirmative, it would require that the applicant bring the details to the attention of the visa official.

Now it is the responsibility of the examining consulate officials to decide whether the questions based on the law, which remains valid, should be asked verbally.

No oath in the issuance of nonimmigration visas has been necessary for more than a year.

Brazilians Must Give Color

RIO DE JANIERO, March 4.—The stress has been switched from security to public relations in granting visas to Brazilians, U.S. consular officials said today.

In Brazil, the question as to ethnic class usually has been answered as Latin and race as white or black. In Brazil anyone half white is classed as white.

Rio's Jornal do Commercio on February 7, published a story by its traveling correspondent, J. Barros de Morias, which said: "One of the things which cause a magnificent impression on a Brazilian traveling to the United States today is the readiness with which American consuls attend Brazilian nationals, thus disproving hostile propaganda spread by elements interested in creating unfriendly atmosphere for the sons of Uncle Sam.

"Naturally, any great nation has an obligation to prevent the entry of dangerous elements to its territory."

No Recent Change in Toyko

TOKYO, March 4.—The visa situation here has improved since formalities for obtaining visas were instituted last fall.

Before, it took at least 1 month for Japanese applicants to obtain U.S. visas. Local applicants can now get their visas in a week to 10 days. In some cases, visas have been granted in 2 days.

All of more than 10 applicants who were interviewed at the U.S. consulate here said that it was easier to get U.S. visas than they had been told by their friends who had gone through the formalities.

Goro Hasegawa, a business executive in Tokyo, said:

"A marked improvement has been made since I applied for my first American visa about 2 years ago. I have never been asked any embarrassing questions."

The elimination of oathtaking in obtaining a visa has been welcomed. Local applicants were not familiar with that custom.

Currency restrictions are still a major factor responsible for holding down the flow of Japanese tourists to the United States.

No changes have been made in procedure since January 20, so far as Japanese applicants are concerned.

Mr. Speaker, could the process of visa issuance to visitors be further simplified?

Having reviewed the regulations promulgated by the Department of State and personally observed the operations abroad, I do not believe that much could be further improved in a situation where a nonimmigrant visa to the United States is issued in 30 minutes flat, authorizing the holder to enter the United States an unlimited number of times within 4 years without practically anyone taking an additional look at him. Similarly, I do not believe that the application form establishing the visitor's identity and nationality on a card, size 2½ inches by 5 inches, could shrink much further.

Could visas for tourists be abolished altogether?

Certainly not, considering the fact that as of January 25, 1961, there was a worldwide total of almost 1 million—966,675—aliens who by registering at an American consulate have taken the affirmative step to indicate their desire to come to the United States and remain in this country permanently. Of this number, 253,183 are registered for immigration in Italy; 100,022 in Greece; 71,057 in Poland; 38,891 in Portugal; 135,630 in Yugoslavia; 23,433 in Jamaica; 14,833 in Spain, and so forth.

Considering this constant pressure upon our immigration quotas, how could this country forego one simple—and rather perfunctory—check on whether the tourist is not, in fact, an immigrant who desires to enter the United States in the guise of a nonimmigrant, while he

actually intends to evade the regulatory laws.

I would invite my colleagues of the House to review the files of the Committee on the Judiciary and see how many of the alleged tourists have private bills introduced in their behalf for the purpose of granting them permanent residence status. The Immigration and Naturalization Service would also, I am sure, be happy to indicate the number of tourists who, having entered the United States, fell in love with this wonderful country to the extent that they do not mind violating its laws by remaining here.

Having said all that, I wish to stress, Mr. Speaker, that the committee upon which the House has imposed the responsibility for handling immigration matters, have done all that is possible to encourage the Departments of State and Justice to facilitate the issuance of visas to bona fide tourists, businessmen, newspapermen, students, transit passengers, and others. Your committee has been responsible for legislation providing for a variety of waivers of excluding provisions in the case of visitors. Your committee has encouraged the administrators of the law to use the waivers and—naturally—to use good sense in granting them. Your committee has promoted the stationing of immigration officers abroad in order to expedite and facilitate the granting of waivers. Your committee is convinced that any further relaxation of these procedures would be detrimental to the best interest of the United States. Existing procedures, however, provide for fair, equitable, and speedy removal of the obstacles that a deserving alien visitor might be faced with.

What then is behind all the drum beating?

The answer is simple. Private travel agents, transportation, and hotel interests would like to obtain Federal funds, taxpayers' money, to pay for the printing of posters, pamphlets, and other publicity material promoting travel to the United States. That is all. There is nothing in the bill, S. 610, of substantive nature except the provision authorizing the financing of tourist propaganda. That, however, I submit, is the business of those who sell tickets, and rent rooms and cars and buses, who derive profit from tourist trade. That, I submit, is the business of hotelkeepers and travel agencies, airlines and shipping lines, the sole beneficiaries of S. 610.

Obviously, national economy would benefit if more Fords, Chevrolets, Chryslers, or Ramblers were sold abroad. However, how would this House look upon legislation providing for the utilization of Federal funds to pay for advertising in the newspapers and magazines of Europe, Asia, and South America of the splendid American cars? How would this House look upon legislation appropriating taxpayers' money for advertising abroad the blessings of nylon or of the soft or not-so-soft drinks manufactured in the United States?

Senate 610 would do precisely that for the tourist transportation interests.

Let me return once more to the Columbian article of last Sundays. It says there that when you walk along Fifth Avenue in New York—and Madison Avenue, too—you will see the splendid window displays of tourists offices maintained in this country by the governments of foreign countries like France, or Italy, or others. Certainly, but these governments are the owners of the airlines and the shipping lines which they advertise. They advertise their own business. They are not financing publicity for private business. This, I submit, is a difference which the article failed to notice.

Mr. Speaker, I sincerely hope that my able colleagues on the Interstate and Foreign Commerce Committee will not be misled by the smart boys of Madison Avenue and that they will accord the Senate measure the same treatment they accorded its predecessor bill last year—sit on it.

Free World Unity

EXTENSION OF REMARKS

OF

HON. JOHN SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. SPARKMAN. Mr. President, twice in a few short years has Russia electrified the world with spectacular space conquests. These have captured not only the imagination but also the minds of men. Yet while they are remarkable scientific feats, they also pose political and military dangers for the free world. This threat, these dangers, will persist and bedevil us until the United States and its Allies catch up and surpass the Russian achievements in space.

Until then, we must rely on the great atomic defense systems in missiles and planes of the free world as well as on the great shield called NATO. What other practical alternatives have we at this time?

In this connection I invite attention to the public service editorial efforts appearing in leading newspapers throughout the free world in paid space from the pen of A. N. Spanel, founder of International Latex Corp., of Dover, Del. For 22 years this company has continued its tireless efforts on behalf of free-world unity and for over 10 years it has championed NATO as the shield and sword of the Western World.

Certainly this public-spirited business organization deserves the highest of praise, and I ask unanimous consent that the editorial by Mr. A. N. Spanel which appeared in the Washington Post and Times Herald on Monday, April 17 be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

BACK TO EARTH—THE TARGET IS THE WORLD

(By A. N. Spanel)

The hypnotist's pendulum, used by some practitioners of the art, forces the subject to focus his mind on the swinging device to the exclusion of everything else, until his will is paralyzed.

This has been roughly the Kremlin's technique, too. The pendulum swung by Khrushchev, as by Stalin before him, takes the form of a periodic crisis. The free world is so overwhelmed by an acute immediate danger in one spot that it is apt to forget the larger, continuous, and worldwide danger. This leaves the Communists free to operate everywhere else with a minimum of hindrance from our side.

RED HAND IS QUICKER THAN THE EYE

In varying measure, such penetration is taking place in several strategically located African and Asian countries. Without benefit of a real issue or crisis, the Red tourniquet is being tightened around these vital regions.

Free world statesmen have been too frantically occupied with fears, hopes, and debates around the crisis of the month to give more than cursory attention to these slower boring-from-within processes elsewhere.

As long as we deal with the fundamental challenge of world communism on a crisis-to-crisis basis, rather than on a systematic and continuous global scale, the hypnotist's pendulum will continue to work its Red magic. Africa, Asia and even Latin America will continue to be pilfered under our unseeing eyes in the pattern of pillage that has already enslaved a third of the human race.

These facts are especially pertinent today. NATO needs an immediate reappraisal of its role, its scope, its tools. For NATO, in the eyes of the Communist axis, is the symbol of free-world power in the aggregate.

NEED FOR NATO ENORMOUSLY ENHANCED

"The basic reasons which led to the signature of the North Atlantic Treaty in 1949," the NATO Council said in its communique after its anniversary session in Washington, "remain valid today." This is the understatement of the decade. Actually the threat to what remains of freedom on this planet is vastly greater than it was 10 years ago. The enemy's military might has been expanded year by year, and the conquest of China has given him colossal new potentials of penetration and intimidation. The role of NATO today is therefore far larger than anyone envisaged at its birth.

To play it effectively, NATO must be rapidly strengthened and expanded in terms of physical power, political and moral authority.

Though NATO is an Atlantic enterprise, the communique rightly stressed that the challenge is worldwide. The organization, as one writer put it, "is going to have to adopt a less Atlantic and more global look."

NATO urgently needs more power to protect more of the free world than its members had foreseen in the original concept of the alliance. Whatever the merits of the specific proposals along these lines by France under President de Gaulle, there is no doubt of the validity of the principle—the need, that is, for a realistic widening of the geographical commitments. The planned aggressions of Russia and China are our daily warnings that for the Communists, the target is the world.

Above all, what is called for is unity of the free world—not merely legalistic unity but a unity of spirit in a common dedication, unity in depth and in breadth.

TYRANNY AND TERROR UNITE THE COMMUNISTS

The Soviet bloc is a monolithic entity. The free allies are at best a loose collection of strong-willed individual countries and governments. In order to cope with the life-

and-death menace posed by the Red monolith, we have no alternative but to provide a voluntary unity to match. Only by pooling more of its resources, brains and skills and facing up to the need for sacrifice—including the sacrifice of some types of national sovereignty—can the free world hope to thwart the Soviet pattern of pillage.

In his splendid book, "What's Wrong With U.S. Foreign Policy," Mr. Cyrus L. Sulzberger cites the lessons of an alliance, some 2,500 years ago, resembling NATO. It was the first Delian League, in which Greek city-states led by Athens banded together for common defense against Persian aggression.

As fear of Persia receded, Mr. Sulzberger points out, the League's vitality ebbed. Its strength was also sapped by bickering and by an increasing tendency of Athens to ignore the will of lesser allies. On the basis of this ancient experience, Mr. Sulzberger concludes about NATO: "We must seek new methods to invigorate the psychological will to common effort."

Certainly there has been no decline of fear in our world. The tasks facing the free world are costly, long-lasting and exhausting. Fatigue and the human weakness for wishful thinking encourage illusions of easy solutions, of cures with unguents of good will bearing labels like "coexistence."

These debilitating delusions, feeding on our failure to see the pattern of the Communist menace in all its global varieties, must be overcome if freedom is to survive. An enormously invigorated and expanded NATO would be both symbol and substance of our commitment to victory.

The National Guard

EXTENSION OF REMARKS
OF

HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. DORN. Mr. Speaker, I commend to the attention of the Congress the following excellent and timely speech delivered by Maj. Gen. Frank D. Pinckney, the adjutant general of South Carolina, on the occasion of the dedication of the Belton, S.C., Armory, April 2:

THE NATIONAL GUARD

Ladies and gentlemen, I would like to tell you, briefly, something about your National Guard and its mission. This outstanding unit, 116th Signal Company, which we have here in Belton, is one of over 5,000 Army and Air National Guard units located in over 2,500 cities and communities throughout this great country of ours. The National Guard is organized in every State and territory and the strength of its Army and Air Force units totals nearly a half million men.

These units are all organized in accordance with the plans prescribed by the Department of Defense and each has a definite mission in the overall defense of our country and consequently is an integral part of America's defense team.

Here in South Carolina we have 110 such units located in 76 cities and towns with a total strength in excess of 10,500 patriotic citizen soldiers. These young men, all volunteers, come from every walk of life—the farms, the mills, stores, offices, businesses of every kind. They are your neighbors, your friends, citizens of your community, your State, giving of their time to train in order to be ready to defend you, your loved ones, your communities and your country in the event of an attack or any emergency or national catastrophe.

They meet once a week to train. They sacrifice their annual vacations with their families in order to attend the summer field training periods—not to become seasoned soldiers with the urge to fight or kill, but citizen soldiers, able to protect themselves and to help preserve the peace. Furthermore, the lessons they learn in obedience, loyalty, preservation, protection of life and property, all add up to the development of better citizens and the creation of a keener sense of duty and responsibility to both State and Nation.

The existence of these military forces in this State is a highly important security factor. They are instantly available for either of their missions and yet due to the Federal support of arms, pay and equipment, they place a very small tax burden on the State.

The equipment which our guard units in South Carolina have today with which to train range from jeeps to jets, from rifles to radars, from machineguns to missile-firing artillery, with a total value in excess of $50 million. We receive each year in Federal funds to support our guard units over $8 million, of which better than 85 percent is spent within our State borders. This unit alone here in Belton brings into your community about $60,000 per year, a right sizable monthly payroll.

Where do all the funds come from? They come from the taxes you pay the Federal Government, but every tax dollar spent on the National Guard does double duty—it buys two vital bodies of organized manpower for the price of one. The military organization trained to defend our country in time of emergency and a local organization ready for immediate action if and when a disaster should strike.

The history of the National Guard is an integral part of the history of this great country in peace and in war. The National Guard, or militia as it was called then, was active when America was merely a series of small, struggling colonies. It has been utilized during every period of national emergency and has provided a State security force during the intervals between wars.

Let me briefly touch on the role of these citizen-soldiers since the founding of our country. Dressed in buckskins and armed with the old fintlock, they drove the Indians and Spaniards from our doorsteps in the Colonial Wars of 1670.

During the Revolutionary War, our militiamen, gallant sons of Carolina fought under the able leadership of other noble Carolinians, such as Christopher Gadsden, William Moultrie, Thomas Sumter and others. Of course, you all remember the deeds of Sergeant Jasper and Francis Marion of this period. During this era there came into being such militia units as the Beaufort Artillery, Charleston Light Infantry, Kershaw Guards, Volunteer Grenadiers, Charleston Artillery, German Fusilliers, and Irish Volunteers.

In the War of 1812 they responded to the call in resisting the English and French aggressions. It was during this early period that we find the beginning of other militia units such as the Volunteer Cadet Infantry, Independent Greens, Washington Rangers, Washington Light Infantry, and the Jackson Guards, later renamed the Sumter Guards.

It was the Mexican War of 1846–48 that gave birth to our famous Palmetto Regiment, the crest of which is worn honorably by guardsmen in our infantry units today, a regiment composed of the citizen soldiers of our State led by a distinguished South Carolinian, Pierce Mason Butler. It was this regiment that so ably and gallantly distinguished itself in several severe engagements in Mexico, and in particular at the gates of Mexico City itself. It was a lieutenant from this very regiment who scaled the walls of the city to place the Palmetto Flag thereon, thus this flag became the first American flag to fly over any part of Mexico City.

Then there are those chivalrous sons of Carolina who participated in that great struggle, the War Between the States, which centennial we celebrate this year. Time will not permit, nor is it necessary for me to dwell on the exploits of the South Carolina citizen soldiers of this period, for the pages of history are filled with deeds of valor and patriotism displayed by the noble sons of this great State.

Our citizen-soldiers again responded to the call in the Spanish-American War with such units as the Darlington Guards, Sumter Light Infantry, Edistor Rifles, Manning Guards and many others furnished elements during this short period.

Two regiments of infantry and a troop of cavalry from our Guard were sent to the Mexican border to protect our borders from the depredations of Mexican bandits in 1916.

This campaign was followed almost immediately by the first great war for democracy, the war that was intended to end all wars—World War I. It was during this great struggle that all our guardsmen experienced the hardships and perils of combat, many of them distinguishing themselves and thus bringing great honor and glory to our State.

Then, unfortunately came World War II wherein the guard was again called to defend our Nation's liberty and freedoms. Many men who served are still active in our guard today.

On the placque to the left of the entrance to this building are nine figures depicting these citizen-soldiers that I have referred to, dressed in the authentic uniform of each period.

So you see, our guardsmen, young men like we have here today and 10,000 others throughout our Palmetto State, have the responsibility to uphold and carry on in these established traditions—a heritage of shining examples of sacrifice and courage established by other patriotic sons of South Carolina in the cause of liberty, freedom and justice.

I have tried to point out the importance of maintaining a strong National Guard and the major role it occupies today as a part of our Nation's defense team, part of our power in being the great deterrent force that is so necessary to maintain in order to protect our freedoms, and too, the ideals and examples of patriotic service established by other citizen soldiers of our great State.

I would be amiss, though, in my remarks this afternoon if I failed to leave a word of caution to everyone present within this hall. I sincerely trust that you too will carry this message to your friends and your associates, for ladies and gentlemen, we are faced with a serious situation. We are engaged in a mortal conflict with communism. This conflict is an economic, political, spiritual, power struggle against crafty conniving, ruthless conspirators, proponents of world communism. This insidious enemy of ours, and of the balance of the free world, is employing a strategy of intrigue, infiltration and subversion never before practiced upon the human race. It endangers every segment of our society and threatens the complete annihilation of all the Christian principles upon which this Nation was founded. Call it the cold war, if you please, but hot or cold, the stakes are just as great, for the loss of this war would result in the loss of our freedoms, our liberties, and all that democracy represents, with the only alternative—slavery, dominated by communism.

Time is running out on our side. The next 10 years may prove to be the most momentous in human history. The Communists will try to exploit this period to disarm and divide the West by continuing their undermining and deceptive practices of subterfuge, with the accomplishment of this objective, then their entire effort will be directed towards the subjugation of America.

Yes, indeed, time is running out. It is not too late, though, provided that we all roll up our sleeves and get to work. We must develop the individual will to fight, to win, and to survive in this struggle if we expect to preserve and protect our freedoms and assure the future safety of our children.

Remember, freedom is taken too lightly by too many people. It is not inherent that we continue to enjoy freedom without some effort to maintain it on our part. Freedom must be loved, lived, sacrificed for, fought for, and sometimes died for.

During the past 60 years the insidious atheistic disciples of Communist principles and ideologies have seized one-quarter of the land area of the world and dominate nearly 1 billion people—approximately one-third of the world's population. They have taken over country after country in Europe and in Asia. They are causing the unrest in Africa; they have completely dominated Cuba and today are infiltrating into Central and South American countries, all getting closer and closer to the encirclement of America.

Despite these continuing Communist encroachments and the many articles appearing in our daily papers and magazines warning of these threats, there is unfortunately a disinclination to face up to the harsh reality that the basic aims and objectives of the Communist powers, which are to dominate the entire world, have not changed in the least degree.

People are prone to disregard the fact that we are faced today by an enemy, with agents in our midst, employing the same undermining methods and strategy which they have employed in other countries prior to their enslavement into the Communist orbit. They are without conscience or scruples, ardently intent upon the destruction of our democracy and the enslavement of our people.

The Communist would lead you to believe that the issue is between communism and capitalism, but ladies and gentlemen, the basic issue is between slavery or freedom. America is at the crossroads. If the expansion of communism continues unabated, not only must we face the cold hard fact that we will lose our freedoms but our children and their children will live or die in slavery.

We must be on the alert at all times. These Communists are smooth operators. They are crafty in the arts of conspiracy and deceit. They operate under many false fronts and participate in all phases of American life, duping unsuspecting and easily led individuals, so as to sway American public opinion in favor of Russian propaganda policies, thus softening our resistance.

Let me emphasize this point. Their main target today is the youth of our country—repeat—they are concentrating a major effort in attracting youth to the party and in warping their minds into believing that communism offers the world peace and security, while we are an aggressive, warlike nation, and capitalism cannot survive.

We, therefore, must not only awaken our people to the seriousness of the situation facing our country, but we must expose the fallacies and the nature of communism, while at the same time instill the values, traditions, and ideals of democracy and the American way of life.

These young guardsmen here and over 500,000 others throughout our land of the free and home of the brave are today's up-to-the-minute men, carrying on in the same tradition as the minutemen of 1776 when other periods of danger threatened our freedoms and our liberties. They are doing their part in helping to provide the defense forces so essential in this period of extraordinary danger, but maintaining a powerful military force, a strong National Guard, will not alone save us. The Communist termites are constantly at work trying to undermine our Government, our leaders, our society, our minds, our resistance, and thus we are faced with the grave danger of losing this conflict without a shot or a missile ever being fired. This is the Communist scheme, design, and strategy in which they have conquered country after country.

The threat with which we are faced today requires the combined effort, immediate attention, and urgent action of every able-bodied, red-blooded, patriotic American if we are to survive and preserve for our children the same opportunities, heritage, and true Christian principles of democracy which we inherited. There is a job for everyone. Think it over seriously, be always on the alert, and assume your share of these responsibilities, if you expect to continue enjoying your freedom.

Trained Men, National Resource

EXTENSION OF REMARKS

OF

HON. ROBERT F. ELLSWORTH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. ELLSWORTH. Mr. Speaker, under leave to extend my remarks in RECORD, I include the following editorial from the Fort Scott Tribune of April 17, 1961. This excellent and outstanding editorial is most challenging, and I respectfully call it to the attention of my colleagues—trusting that the thoughts presented in it will receive their most careful consideration:

TRAINED MEN, NATIONAL RESOURCE

The social scientists have been telling us for a long time that ours is an aging population, that even as our total numbers boom upward the proportion of elderly people among them is rising more sharply.

As has been well and often noted, this trend has many important effects on current and future American life, not the least being its impact on the makeup of the country's work force.

With the gradual coming of age of the persons born in the great baby boom of World War II and its aftermath, the expectation is there will be a flood of job demands.

Young people entering the labor market want not only jobs, but opportunities for advancement. For the most talented, the prospect of going all the way to the top must be held out. Without that, many companies and other enterprises could not hope to attract the needed people of ability.

To hold out that prospect, however, businesses often are compelled to institute automatic retirement plans for older workers, otherwise there would be no room for the rising new generation of employees.

Yet, while this has obvious fairness from the viewpoint of the younger people, it frequently works hardship on the older workers. To the extent that they must thereafter be supported by private or public pension, they are also an increasing burden on the economy and the National Treasury.

In many instances there is no escape from this, nor perhaps should there be. But it is tragic that in all too many cases the greatest cost is not in money but in the loss of a man's talent and experience.

All kinds of enterprises—and the country taken as a whole—build vast investments, in the broad sense of that term, in the individuals who comprise the work force. As they advance through life, many become virtual storehouses of skill and knowledge.

To cast them aside, to end their working days automatically and arbitrarily, is to create great waste both ecoonmically and spiritually.

For all its growing numbers, this Nation is not so heavily endowed for the colossal struggle with communism that it can afford to toss away its investment in trained, able people.

We should be trying to do everything imaginable to enlarge, not diminish our reservoir of skills and knowledge. We may need every drop in the great pool.

Reds Will Be Hard Bargainers in Laos

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. WILEY. Mr. President, in Laos, the Reds are stalling on cease-fire negotiations. Basically, why?

To get an iron grip on as much land as possible—to enable them to be tough bargainers at any conference table.

Recently, I was privileged to review major aspects of the Lao situation in a broadcast over radio station WGN, Chicago.

I ask unanimous consent to have excerpts of the address printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SENATOR WILEY WARNS REDS WILL BE HARD BARGAINERS IN LAOS

Senator ALEXANDER WILEY, Republican, of Wisconsin, senior Republican, Foreign Relations Committee, in a weekend broadcast over radio station WGN, Chicago, stressed the need for a "global alert" to halt the many-pronged offensive of the Communists. There follows the text of Senator WILEY's address:

"Today, the free world is faced with an ever-growing threat to its survival; namely, communism.

"Around the globe, an estimated 36 million Reds—operating in about 86 countries—are attempting to: (1) get a firmer grip on people under their domination; and (2) thrust forward to gain control of more lands and people.

"Tactically, they attempt to penetrate new lands through trade, student exchange, or other channels; agitate for rebellion; arm and train Communist forces to gain control of the country; and then establish it as a subsidiary branch of the world conspiracy.

"The ultimate objective—stated again and again from Lenin to Khrushchev—is world domination.

"Unfortunately, the Red offensive already has expanded to control of nearly 1 billion people and vast land, natural, military, industrial, human, and other resources.

"To combat these expansionist efforts, we need a more effective counteroffensive. In my judgment, this should include efforts to maintain a strong military deterrent to massive attack; strengthen our deterrent to war forces; challenge the Reds more quickly in areas where it is obvious they are committing aggression; improve and strengthen the U.N. and other international machinery for dealing with aggression; concentrate more on development of an effective program for penetrating the Iron and Bamboo Curtains. For example, we can no longer allow the Reds to contest for lands outside their orbit, but maintain Red-controlled areas as sacred territory.

"Also, we need to crystallize more effective plans for the triumph of freedom—both in Communist and non-Communist nations—and then devise techniques for accomplishing this objective.

"In the face of this gargantuan menace to freedom, the time has come to challenge the Reds for every foot of Communist-held territory—as well as to protect non-Communist lands from aggression. Unless we do this, the Reds—nibble by nibble—may ultimately gobble up the world.

"IS LAOS LOST?

"Regrettably, Laos stands as a dark example of Red aggression that threatens world peace. Again, we have witnessed Red strategy involving infiltration, agitation for rebellion, creation of a rebel force, supplying of arms and equipment by the Soviet Union, and attempts to take over the country.

"By military action, the Pathet Lao, supported by North Vietnamese troops and armed and equipped by the Soviet Union, have already taken over too much of the country.

"Mr. Khrushchev and his cohorts—by deliberately delaying negotiations—have enabled the Communist-supported rebels to gain and solidify control of more territory.

"Even though the Reds may negotiate, we can expect: That they are not likely to give up any territory under their control, and that they will demand greater voice in the overall policies in the country.

"As in Korea, Red China also has threatened to send troops—if the Western Powers deem it advisable to take military action to halt aggression. This is a dangerous thing. In limited warfare, the Red Chinese present a particular tough enemy. Why? With no respect for human life, they have no qualms about using military manpower—from a population of 650 million people—as cannon fodder in the cause of communism.

"Even if peace talks are carried out, negotiations with the Reds—firmly implanted by military action and backed by the Red Chinese and Soviet Governments—will be difficult.

"MAINTAINING A GLOBAL ALERT

"Although Laos is now a 'hot spot,' we also need to maintain a global alert.

"Tactically, the Reds conduct multipronged offensives. By stirring up trouble in one area, they attempt to divert attention away from other efforts to establish new beachheads on free world territory. Today, the critical areas include—in addition to Laos—the Congo, Cuba, Berlin, Latin America.

"Tomorrow, long-planned subversive efforts to plant the seeds of communism in other countries may explode into revolution—aided and abetted by the Reds.

"This, then, is the great challenge of our times.

"At no time in history has freedom faced such a grave, dangerous, powerful threat to its survival. By experience, we have learned the Communists are fanatically dedicated to world domination.

"The battle for freedom will not be won by wishful thinking—hoping that ultimately the Red ogre will 'go away.' Our task, then, is to mobilize the manpower and resources to defeat the enemy. The battlegrounds will be economic, social, ideological, as well as military. The great hope of the free world is that it possesses the ideas, ideals, respect for human dignity and promise of liberty—common aspirations of almost all of humanity—to enlist the majority of mankind on its side in the struggle.

"Only by a strong, dedicated effort, however, can we hope to win the struggle for survival and, ultimately, peace," Senator WILEY concluded.

United States Still Leads in Sponsoring the Dignity of Individual Man

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, before we are ready to sink completely into the depths of despair at the scientific progress of the Soviet Union, it may be well for us to ponder upon the thought expressed in the following article by William H. Stringer in Saturday's edition of the Christian Science Monitor. In the race to be the first in space, I hope we may never lose sight of the great strength in the moral concepts upon which this Nation was founded, the dignity and the freedom of man. In the final accounting this is the concept which will be victorious. No nation, nor group of nations, failing to recognize man's fundamental mission as a creature of God, can long endure:

LAUNCHING INDIVIDUAL MAN
(By William H. Stringer)

WASHINGTON.—The Soviet Union has successfully launched an astronaut into orbit. It hasn't done much yet about according individual man his proper place in the universe.

This is said in no sense of disparagement at a tremendous feat. The Soviet achievement in placing a man in orbit, and bringing him back safely to earth in 108 minutes, is the result of brilliant progress in a direct line. The United States won't achieve the same for many months.

But it does no harm occasionally to ponder what is the ultimate aim and end of mankind's forward endeavors. If the object is to permit individual man to attain his fullest potential and promise in creation, then the Soviets are only at the launching pad of this soaring into the limitless.

To be sure, Soviet mankind has progressed far from the peasant stage in terms of limited opportunity, limited modest creature comforts, and special favors for the opportunist and sometimes the gifted, in the past 40-odd years. But the space yet to be traveled is evident in the fact that people in some of the newest-freed countries of Asia-Africa enjoy more individual liberty than do citizens of the Soviet Union.

The very conspiracy of silence—the heavy hand of secrecy—which brooded over the Soviet man-in-orbit achievement discloses the Soviet sense of limitation. Three days before the actual Moscow announcement, rumors flew about: that a man was in space—had been brought back—was mentally disturbed.

In a democracy, however fumbling, the facts and the explanation would be out in a few hours. In the case of the Soviet Union we do not know yet whether there was an abortive attempt—the Soviets usually have more than one rocket on the ready in case of failure—or whether the early leak was simply a malfunctioning of the massive Soviet publicity apparatus.

For weeks the new series of nuclear-test-ban negotiations has dragged on at Geneva. The Soviets have done little but insist on a stymying, stalemating veto. They are still fearful about admitting international inspection teams freely into their closed society.

On his American tour, Soviet Premier Nikita S. Khrushchev was surprised at the numerous automobiles, hastening home at night to the housing developments. He said the Soviets soon would have lots of automobiles too, but—they would be for hire, like taxis. Obviously if the state rents out the car it can even control the citizen's joy riding.

Still, the Soviet people have achieved some widening of horizon. Their desire for the better things of life, including housing and consumer goods, has risen rapidly. The next generation of leadership beyond Mr. Khrushchev may have an intellect somewhat pried open by events. The West's policy should be to inject as many freedom-seeking ideas into the Soviet consciousness as possible, through cultural exchange and contacts.

But except in dialogs with some Soviet scientists, one seldom sees evidence that the Soviets are given to pondering such deep concerns as "man's duty to God and to his neighbor," though Britain's Prime Minister Harold Macmillan, when I interviewed him 2 years ago, stated his belief that "in 2 or 3 generations the people of the Soviet Union will be asking themselves these fundamental questions."

The U.S. performance in moving toward launching a man into space has not always been superb. It has been fragmented and delayed. The Soviets have shown how to mobilize all resources for a great state-directed enterprise, as President Kennedy told his press conference.

This is not the whole of life. A Warsaw Marxist philosopher recently remarked that communism stands to lose "the struggle for the mind of man" unless its philosophy faces the problem of the human individual and his destiny.

Indeed, what a commotion in Kremlin circles would be occasioned if Pravda should print, with approval, such a simple yet profound statement as this from the Rockefeller panel reports:

"The power of the democratic idea rests in the belief that only freemen can ever really understand this complex world. Only freemen can manage its complexity, and only freemen can have the opportunity for the spiritual, moral, and intellectual growth that our times require."

There is a shining rocket that Moscow hasn't launched yet.

Bolstering U.S. Economy

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. WILEY, Mr. President, the economy of the Nation—despite serious prob-

lems, including too high unemployment—is now showing signs of an upturn.

Full recovery, however, cannot be accomplished by wishful thinking; rather, it requires effective, creative action.

Recently, the Milwaukee Sentinel published an informative article outlining some recommendations by Elmer L. Winter. The recommendations include a 10-point program by which businessmen can undertake action to combat the recession.

I ask unanimous consent to have the article, supplemented by a statement by myself on ways and means to bolster the economy, printed in the Appendix of the RECORD.

There being no objection, the article and statement were ordered to be printed in the RECORD, as follows:

CITES TEN-POINT PLAN FOR ATTACK ON DIP

Businessmen were offered a 10-point antirecession program Wednesday by Elmer L. Winter, president of Manpower, Inc., Milwaukee-headquartered business service firm.

Winter declared businessmen can apply this program of stepped-up activity on a do-it-yourself basis, and that his own company will put it into effect immediately.

The program, which will be sent to over 5,000 major business leaders, was developed as the result of discussions at Manpower's recent 4-day sales convention here.

"Businessmen can, if they take individual initiative, materially aid in bringing about improved economic conditions which they desire," the Manpower president declared. "We should not rely solely on Government action to help bring us out of the recession.

"To prove that the company means to 'take its own medicine,' we are announcing a substantial budget increase in expenditures for advertising, sales promotion, and public relations; a plan for home office and branch office modernization, and the opening of three new offices a month."

Winter's 10-point program for business:

Expand all sales efforts, abandoning a wait-and-see attitude.

Expand research and development.

Step up advertising, public relations, and sales promotion.

Diversify product and service lines.

"Prepone" capital expenditures. Where plant modernization or equipment replacement is planned, but was postponed due to economic pressures, start these projects now, when availability of labor and money is more favorable.

Accelerate long-range investment and expansion.

Invest in educating tomorrow's experts. Supply scholarship and other financial needs of our institutions of higher learning.

Get into the export market.

Combat waste and extravagance.

Talk about positive factors and plans for action. Help spread attitudes that favor confidence. Back up your confidence with action which will help create employment and confidence.

SENATOR WILEY OUTLINES PROGRAM FOR BOLSTERING ECONOMY

Senator ALEXANDER WILEY, Republican, Wisconsin, today outlined recommendations for bolstering the economy:

"Regrettably, the Nation and Wisconsin are still suffering the plagues of unemployment and business and industrial slowdowns.

"Nationally, the unemployed totals about 5½ million. In Wisconsin, also, there are still too many jobless—amounting to about 117,000, or over 7 percent of the total labor force.

"Throughout the economy, there are serious repercussions, including: severe hardships for the unemployed and their families; economic progress generally is retarded; entire communities of especially high unemployment suffer because of lack of buying power of the jobless; Uncle Sam, too, feels the pinch in reduced revenue, both from the unemployed, and the diminished income of business and industries.

"A successful effort to attain full economic recovery will require local, State, and national cooperation.

"What is being done in Congress?

"Currently, a number of measures are being considered to give a 'shot-in-the-arm' to the economy. These include: stepping up highway construction; expanding housing and home building; extension of unemployment compensation benefits for the jobless whose benefits have expired; special legislation for chronically depressed areas, and other measures.

"In addition, steps have been taken to advance payments to veterans of 1961 dividends on national life insurance policies, and speed up procurement and construction of our Federal agencies.

"The State and local governments, also, could well speed up timetables for procurement and construction of public projects.

"What else can be done?

"Business and industry—as economically feasible—could well move up plans for plants and operational expansion.

"Communities can undertake self-help 'bootstrap' operations to revaluate potential human and natural resources and better utilize these to bolster the economy to meet the needs of the people.

"The creation of multicommunity cooperative programs—for pooling of manpower and natural resources—also can help to resolve problems and improve the economic outlook. The potentials of an area may be neither local nor State, but rather intercommunity or interstate. Pooling such manpower or resources on an area or regional basis often can result in more effective programs.

"We can establish a higher priority for "Buy American" policy in times of national economic distress.

"We can encourage wise investments of private business and public funds and job-creating enterprises. The purpose would be to promote further economic recovery, as well as to 'pay off' economically. Today, there are about $12 billion in financial savings by individuals; $33 billion in corporate pension funds; the total assets of life insurance companies amount to about $114 billion. One of the problems is to encourage the use of such funds in more productive investments; we need a reexamination of our tax system also to provide encouragement and incentive for expansion of job-creating enterprises.

"Can we successfully meet the challenge?

"Yes. Historically, our free enterprise system—a product of American ingenuity—has proved successful in dealing with these and other problems. I believe that we can do it again.

"Today, however, we are faced not only with the task of providing economic health for our people in the country, but also of competing with a powerful Communist bloc which threatens to bury us—this means economically, as well as militarily.

"In the face of this threat, a strong, sound economy is essential, not only for domestic progress, but also for survival," Seneator WILEY concluded.

Clarence F. Pautzke, Commissioner of U.S. Fish and Wildlife Service

---

EXTENSION OF REMARKS

OF

HON. E. L. BARTLETT

OF ALASKA

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. BARTLETT. Mr. President, an appointment of importance to Alaska and to the Nation was made recently by this administration when Mr. Clarence F. Pautzke was designated as Commissioner of the U.S. Fish and Wildlife Service of the Department of the Interior.

The resources of my State are many but historically its fishery and wildlife resources have been the backbone of our economy. Throughout the years Alaska was an incorporated territory of the United States. Administration of these resources vested in the Federal Government—a procedure without parallel in the history of the country. We in Alaska pleaded and petitioned that this be changed; we felt there was insufficient action at the Federal level with respect to conservation measures. Our cries fell on deaf ears. We watched our magnificent resources, particularly the fishery, dwindle at an alarming rate year by year. Finally with the coming of statehood administration of these resources was turned over to us and we are now faced with the task of restoration.

So we in Alaska are, indeed, fortunate in having Mr. Pautzke placed in a position with the Federal Government which will have the most to do in assisting us in our rehabilitation job. Mr. Pautzke has served for the past few months with our State department of fish and game and has had opportunity to learn and observe right on the scene that which needs to be done. Prior to coming to Alaska Mr. Pautzke was associated for many years with the Washington State Department of Game and Fisheries.

Alaskans would have been happy to have had Mr. Pautzke remain with the State government but we realize his Washington assignment will be even more rewarding.

The Pacific Fisherman noted its enthusiastic endorsement of Mr. Pautzke's new assignment in its lead editorial in the April 1961 issue. The editorial points out so clearly many of the qualifications which Mr. Pautzke brings to his new task that I ask that the editorial in full text be reproduced here.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Pacific Fisherman, April 1961]

PAUTZKE APPOINTMENT SEEN AS U.S. PLEDGE TO ALASKA

National interest in the fishery and wildlife resources of Alaska was confirmed late in March with the appointment of Clarence

F. Pautzke to the position of Commissioner of the U.S. Fish and Wildlife Service.

No action of the White House could more plainly demonstrate the Federal Government's intent to recognize its obligation to Alaska to continue its support of and participation in the rehabilitation of the fisheries which, through the territorial period of Alaska's history, were the responsibility of the U.S. Department of the Interior.

Now, to head its Fish and Wildlife Service, the Department of the Interior reaches out to Alaska and appoints the man who for a year has been Assistant Director of its Department of Fish and Game.

Far better than any other of the several competent individuals who were considered for the FAWS commissionership, Mr. Pautzke will bring to the office firsthand knowledge of the problems of Alaska's fisheries, of the State's needs in coping with those problems, and—most significant of all—an understanding of the value of Alaska's resources to the economy and future not only of the State but of the United States as a whole.

Again, Mr. Pautzke stands high above all others who were under consideration in the balance of his experience and background between commercial fisheries on the one hand and sport fisheries and wildlife on the other. The Federal Service has these two basic departments—and he is well qualified to have both under his supervision.

To his duties he brings approximately 25 years of background as chief fisheries biologist of the Washington Department of Game, where he became nationally known for his work in upbuilding steelhead runs and improving sport fishing by the eradication of coarse fish competitors and predators from sport fishing waters which they had ruined.

To this experience with game fish, and as a naturalist, he added 4 years of service as assistant director of the Washington Department of Fisheries; and then his service in Alaska.

Last summer, during the extraordinary run of red salmon to Bristol Bay, Mr. Pautzke was continuously in the field working with the ADF management team whose handling of the run won, and deserved, the highest praise. It was characteristic of the man that he was in fact only a member of the team, and saw to it that the prime credit went to those with whom he worked.

Mr. Pautzke can be counted upon to meet fully all the requirements of his high office, representing well the United States in matters pertaining to its fisheries and wildlife resources, whether they be in the direct authority of the States, in the national field, or in the international regions of sea and air.

In selecting Clarence Pautzke, an Alaskan, for this responsibility, the National Government would appear to be assuring Alaska that the United States recognizes its responsibilities to Alaskan fish and wildlife resources and will continue to support efforts at their rehabilitation, through the State itself, as well as on the high seas.

Dr. Thomas Dooley

EXTENSION OF REMARKS
OF
HON. PETER H. DOMINICK
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOMINICK. Mr. Speaker, there are now pending before the Congress at least three bills to authorize the awarding of the Congressional Medal of Honor to the late Dr. Thomas Dooley in recognition of his unselfish devotion to human service. Four pending resolutions also would authorize the striking of a gold medal in lasting memory of Dr. Dooley's service to humanity. I wish to state that I, too, support these worthwhile proposals. The memory of Dr. Dooley carved in the hearts of people everywhere is well stated in a letter I recently received, and which I ask unanimous consent to have printed in the Appendix of the RECORD:

SISTERS OF CHRISTIAN DOCTRINE,
New York, N.Y., April 14, 1961.

Hon. PETER H. DOMINICK,
House of Representatives,
Washington, D.C.

DEAR SIR: In the last and present sessions of Congress, bills were introduced to commemorate the gallant and courageous young physician recently lost to us, Dr. Thomas Dooley. His magnificant accomplishments were the result of a challenge willingly accepted, when during naval duty he witnessed the plight of so many refugees fleeing the Communist aggressor. In answer to this challenge, he imposed upon himself a ruthless program of self-dedication to his fellow man. No one who learned of his tireless labors in the Far East, on the very threshhold of the Communist-infested world, could help but marvel at his determination, zeal, initiative, mercy, and compassion. He gave of himself with the recklessness of infatuation, even later when the prospect of an early death by cancer dogged his footsteps. We cannot afford to forget heroism of this kind.

I beg you to do what is in your power to bring these bills to an early acceptance, so that our Nation may pay tribute to one of its heroic and outstanding citizens.

May I hear favorably from you?

Thanking you.

Very sincerely,

SISTER M. LUCILLA.

Curb Is Needed on Rifle Imports

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. CONTE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Springfield Union, Springfield, Mass., of April 18, 1961. The editorial urges hastening of a decision by the Office of Civil and Defense Mobilization on the problem of the importing of surplus military rifles which are rejuvenated and sold in competition with American-made small arms. I have joined with other Congressmen from Massachusetts, New York, and Connecticut in urging a decision on this matter.

The editorial follows:

[From the Springfield Union, Apr. 18, 1961]

CURB IS NEEDED ON RIFLE IMPORTS

New England has long been the center of the American small firearms industry. Now, this industry, which plays a vital role in the region's economy, is threatened by an increasing number of imported surplus military rifles which are "sporterized" to sell for far less than the fine sporting guns manufactured by New England companies.

Over the past decade, hundreds of jobs have been lost because of this competition. Unless action is taken immediately to curb these imports, more workers will be laid off and another blow dealt to a suffering New England economy.

There is another important factor to consider. The arms manufacturers, particularly in Massachusetts and Connecticut, have been one of the mainstays of the Nation's defense. In every national emergency, the industry has provided the nucleus of manpower and engineering skill that made it possible for other industries to mass-produce rifles on a crash basis. The workers laid off by the industry because of the imports are workers with special skills in rifle-making.

For almost 2 years a petition for relief against such imports has been pending at the Office of Civil and Defense Mobilization. Imports numbered 232,000 in 1959. Since then they have increased to 360,000 a year—40 times the rate of 1955. At the same time, domestic production of small arms has dropped 32 percent.

The seriousness of the situation has led a bipartisan group of 15 Senators and Representatives from Massachusetts, Connecticut, and New York to petition the OCDM to put a limitation on these imports. Among the petitioners were Senator LEVERETT SALTONSTALL, Republican, Representative SILVIO O. CONTE, Republican, Representative EDWARD P. BOLAND, Democrat, and Senator BENJAMIN A. SMITH II, Democrat, all of Massachusetts.

The lawmakers assert that surplus imports make no defense contribution, have no defense capacity, contribute nothing to the economies of the exporting nations, and are not important in the nations' balance of payments. Moreover, they argue, surplus military rifles are not part of the normal channel of international trade.

We feel that the only contribution the imports make is to give people an opportunity to buy rifles for a few dollars. This contribution is far outweighed by the threat the imports pose to the New England economy.

One of the companies affected by the imports is Savage Arms Corp. of Westfield. Company officials have become so concerned they have asked employees to write letters supporting their Senators and Congressmen in the petition move.

The OCDM has delayed long enough. It should act immediately to control the flow of these imported rifles into this country.

Criticism of Education

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. PROXMIRE. Mr. President, Adm. Hyman G. Rickover remains one of the most stimulating and challenging figures on the American education scene. His forthright criticism of the state of our education has unquestionably served a great purpose by bringing the entire issue to the forefront of public discussion.

A searching article on Admiral Rickover, written by James D. Koerner, appeared in the Saturday Review of April 15. I ask unanimous consent to have this article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MOVERS AND SHAPERS OF EDUCATION—ADMIRAL RICKOVER: GADFLY

(By James D. Koerner)

Professional educators may not have shared the general enthusiasm accorded the recent action of the Secretary of the Navy—taken at the personal instigation, it is said, of President Kennedy—in retaining Admiral Rickover on active duty beyond the Navy's normal retirement age. For in recent years Vice Adm. Hyman George Rickover, by virtue of his speeches and writings on education, has clearly dislodged Arthur Bestor as the most unloved figure in the eyes of America's educational administrators. They doubtless would like nothing better than to retire him to an obscure island served twice a year by a packet boat.

Even those inured to educational quarrels are often surprised by the venom with which professional educators are apt to deal with Rickover, whose role in education is now so charged with controversy and adhominem argument as to preclude anything like a dispassionate appraisal of him by schoolmen. Take, for example, the public labeling of Rickover, by a Columbia University Teachers College professor, as "a jackass." To many Americans, as well as to visitors from abroad, where Rickover is widely known and highly regarded, there is something more than incongruous in such "professional" behavior. All this is regrettable. Rickover's ideas, though hardly infallible, are interesting and substantial. They are also influential. While he may be anathema to many professionals, his book, "Education and Freedom," which has recently gone into a paperback edition, as well as his other writings, have attracted a large following among the public, the press, and teachers.

If to be a mover and a shaper of education is to bring a first-class mind to the study of this subject for a period of many years, to bring forth viable and original ideas for public discussion, to command a large national audience, to testify before congressional committees considering educational legislation, to create a large and unique educational operation of one's own (which Rickover has done in the schools of the naval reactor program, now enrolling nearly 2,000 students), and to recognize the exigencies of our national welfare and their total dependence upon education—and to speak without compromise to this point, knowing that misinterpretations, distortions, and personal calumnies will follow—if to do these things is to be a mover of American education, Rickover qualifies, whether or not one approves of him.

When asked about his reaction to the professionals' criticisms, Rickover replies: "I never try to answer these people or set the record straight. It's useless, and I haven't time."

It is plain enough that Rickover's manner of writing and speaking invites much of the hostility he encounters. His prose is forthright, blunt, exaggerated on occasions, even inflammatory. It reflects the nature of Rickover and of the job he thinks must be done in education. It may also reflect the fact that he has lived a long time with what one of his closest friends call "a pack of snarling wolves" harassing his every move.

Rickover's hands would seem to be rather full already (10 to 12 hours a day, 7 days a week) with his main job of directing the naval reactor program, the joint enterprise of the Navy and the Atomic Energy Commission that has been so magnificently successful. Why, then, did he embroil himself in the educational controversy?

To Rickover the answer is obvious: It is his duty, as it is that of every American in a position of leadership, to bring the facts of our critical situation to public attention; and that leads inexorably to education.

Central to everything Rickover feels about contemporary education is a passionate conviction that the West is only dimly aware, even after 15 cold war years, of the mortal challenge that confronts it from communism. The response of the free world must, in Rickover's view, be a total one. Thus he sees most problems, especially education, in relation to this ultimate one. Yet the response he sees us offering is chiefly one of apathy. The body politic seems to him fatally corpulent, awash in its own lard, consumer-conscious, pleasure-bent, sharing few worthy purposes, oblivious alike to its own sloth and to approaching disaster.

From this paramount theme, Rickover moves on to others, but always to return to the same concern: education. With an intensity that would warm the heart of Teddy Roosevelt or Gifford Pinchot, he points to the outrageous waste of our nonrenewable natural resources, and to the fact that when they are gone in only a few more years, a jaded consumer public will have to look to its scientists, perhaps with no luck, for substitutes; it will have to look, that is, to education. He points to the dangerously long lead times characteristic of American technology and to the highly unfavorable way in which they compare, and will compare, with Russia's; the only answer for the United States is education. He points to a myriad of ignoramuses that festoon our bureaucracies, that disguise stupidity with pomposity, and that hamstring vital enterprises in numberless ways because they are men without vision or appropriate training, because they are men who do not know, and do not know that they do not know; again, what other answer than education? He points to the conspicuous lack of leadership in high places, to the general fear of the innovator, the outsider, the nonconformist, to the absence of creative energy and original thought in major areas of our national life; the answer is education.

But not just any education. The education Rickover is talking about is as tough-minded and astringent as he himself is. Believing that men now use only a fraction of their intellectual capacities, he wants them trained to make far greater demands upon themselves. His is an education that would subordinate all other functions to the central one of developing the student's mind. It would do this, not by working comfortably within the student's presumed limitations and thus assuring him of success—a pedagogical principle that seems to Rickover as absurd as it is universal—but by a curriculum of basic subjects that goes well beyond the student's grasp, that he can never wholly master, that keeps him stretching and stretching, but that has a built-in system of incentives and rewards for partial success.

He would permit nothing to stand in the way of this kind of education for everybody, except the mentally defective, for it is only by this means that we can hope to raise the level of our national life in every area; and this is the job Rickover believes we must do if we are to survive as a free people. "The business of the school," he says, "can no longer be with social adjustment, emotional security, entertainment, or even with character. Such matters, if they are teachable, belong to the home, the church, or the family doctor. The school has the child only one-sixth of his waking hours in any calendar year. Therefore, let it concentrate on the job it alone can do: develop the intellectual equipment of every child to its maximum point, and let it never underestimate that point."

But what if the home and church and other agencies do not take on these responsibilities? Who will do so if not the school? When asked such questions, Rickover replies: "What if I am born lame, or blind? Or grow up with any of a thousand other handicaps that might come my way merely by being alive? Some problems, in this imperfect world, are still unsolved. The problem of ignorant or irresponsible parents, most of whom, by the way, have now been through our public schools themselves, may be one of them."

Rickover's own education began in Chicago, to which his father, a tailor, had immigrated early in the century. He graduated from the public schools with a decent, though far from ideal, educational foundation, and went to the Naval Academy in 1918, because it afforded him an education he could not otherwise have had. He did 2 years of graduate engineering work in 1927–28, earning a master's degree from Columbia. Between then and the Second World War, he served in various assignments as engineering officer and qualified submariner. During the war he rode herd—rather roughly, so they say—on civilian contractors of naval electronic equipment. In 1946 he spent a year in graduate work in nuclear physics and reactor engineering at Oak Ridge. He was instrumental in setting up the Oak Ridge School of Reactor Technology and in organizing the first course in nuclear engineering at MIT.

Rickover's interest in educational reform dates from about 1947, when he began the long search for technical personnel to join the reactor program. It was a frustrating search, not because he failed to find people with a thorough knowledge of the new fields in which he was working, which was only to be expected, but because of the far more serious failure to find men whose fundamental education and cast of mind were such as to allow them to contribute productively to a new and vital engineering adventure. He was looking for men equipped with what he believes a good educational system ought to provide the Nation in quantity: a restless, probing, critical intelligence of considerable precision operating from a base of solid knowledge of the fundamental fields. Finding few such minds among the thousands of young men he considered for the program, Rickover began to ask questions about our schools, and began a study of them that has occupied most of his spare time for the last dozen years.

In his analysis of American education and how it got where it is, Rickover puts the primary responsibility for its deficiencies where the professional educator is also wont to put it, squarely on the American public. Preoccupied with their creature comforts—so much at conflict with the vein of asceticism that runs through Rickover's make-up—being blessed with an incredibly rich continent to ravish and exploit, and finding that, unlike people in the Old World, they could make money and acquire prestige and power without much formal education, Americans naturally developed a culture based on these values. Where the professional educator failed, and continues to fail, is in offering the public nothing better, in having no more wisdom than the ordinary layman and exhibiting no intellectual leadership, in actively sharing and even encouraging the slovenliness of the public mind. The inevitable result, Rickover feels, is a pervasive educational hedonism that we wallow in today.

In constructing specific proposals for reform, Rickover often gets ideas from his study of European education. He believes we have no choice but to take cognizance of what other advanced nations, particularly Russia, are able to achieve in the basic fields (such as Russia's ability to get half its students through the ten-year school), and either match or surpass it. This is as obvious to Rickover as it is odious to professional educators, who, in his opinion, have deliberately enshrouded the whole subject

of European education in a fog of meaningless verbiage. "Again," he says heatedly, "they quibble and fulminate over trifles while refusing to face the main facts about where we stand in the international marketplace of brains."

On other important questions, Rickover feels, for example, that the greatest barrier to improvement now, aside from the professionals themselves, is the lack of national scholastic standards, which he would like to see established, even if only for voluntary use, in all the basic subjects and for two or three clearly defined levels of high school diplomas. With respect to the recommendations of James Bryant Conant, he feels that, although Conant has possibly done some good for the superior student, he is dead wrong on the comprehensive high school; for Rickover is convinced that its leveling influence socially, which Conant makes much of, is only superficial, while its leveling influence academically is deep and inescapable. On the question of humanistic education in relation to technical, his position is not as one-sided as is widely assumed. He would place great stress on English history, and foreign languages, and even, if possible, on classical studies, though he knows this would be hard to sell. "I have had much experience," he says, "with the narrow specialist that we often produce through our present system of education and am hardly interested in aggravating the situation. Besides, these are not two different kinds of education. The need is not for more of one or less of the other, at least not at the public school level, since together they make up the educational foundation needed by everyone in the present age; the need is for raising the level of every basic subject all along the line."

Everything that Rickover feels we must do in education depends ultimately on the teacher. He knows that the level of teacher candidates, of teacher education, and teacher performance in the classroom would have to go up almost vertically to bring into view the goals he is talking about. Knowing that such improvements are a matter of many years' work, he would make a start in this direction now by pegging the financial incentives of teaching so high, for demonstrated ability, that the ablest people could not afford not to teach. If this turned out to mean paying them more than truckdrivers, rock-'n'-roll singers, or bank presidents, so be it; he would take the money from almost anywhere, especially from the nonacademic expenditures of school systems, but even from the Defense Establishment if necessary.

Moreover, teachers, not administrators, would run education. Rickover reserves his greatest scorn for the ill-educated nonteaching school administrator, whom he finds both endemic and ubiquitous. Having studied the administrative mind in many settings, Rickover believes that its disabilities in education are inherent. It suffers by nature from all the inertia of entrenched orthodoxy and fear of change, is generally insulated from matters upon which it makes crucial decisions, is richly encrusted with many kinds of ignorance, and withal is perhaps the most expendable item in education. One feels that, if he could, Rickover would hitch school administrators to the *Nautilus* and tow them all out to sea, but he contents himself with recommending their displacement by practicing teachers.

In assessing Rickover's opinions on all these matters, one should not confuse vigor with dogmatism, for without a good deal of the former and little of the latter, Rickover could never have achieved what everyone assured him could never be achieved in nuclear power. He insists on his right to make educational judgments, to judge American schools by their results, and to criticize schoolmen, who are public officials paid out of taxes, when they botch their job. He will go right on making judgments, of course, and propounding ideas, for it is a duty he could not well put aside if he would. And it seems clear that an increasing audience, both public and professional, will listen to this rather austere and hopelessly inner-directed man, this Jeremiah whose lamentations preach greater personal responsibility, worthier aims, higher performance at every level, this unadjusted moralist who doesn't own a car, whose sartorial habits would be the despair of any Ivy League haberdasher, who isn't interested in money, who, in directing a crucial defense enterprise spending hundreds of millions of dollars, travels economy fare to save taxpayer dollars, who never accepts money for personal use from his speeches or writings but always assigns it to charities, usually those for children; who in short is a commanding if somewhat raucous voice of urgency and conscience in the land.

The University Presidency in Modern Society

EXTENSION OF REMARKS

OF

HON. F. BRADFORD MORSE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. MORSE. Mr. Speaker, one of the most tantalizing and challenging speeches to cross the academic horizon recently was given by Dr. Fred M. Hechinger, distinguished education editor of the New York Times. The occasion was the Founders' Day banquet in Boston honoring Dr. Harold C. Case on his 10th anniversary as president of Boston University.

Dr. Hechinger's address is well worth sharing with my colleagues. Under leave to extend my remarks, I insert it in the RECORD:

THE UNIVERSITY PRESIDENCY IN MODERN SOCIETY

(By Fred M. Hechinger)

"This may be one of the most important decades of the century. In it, the future trend of mankind on this planet may be determined. The decision is now being made, and the issue is whether the democratic societies have the will and the self-discipline, the creativity and the energy, necessary to do the things required to win for the world a full triumph of the way of independence and freedom."

Ladies and gentlemen, these are not my words, though I wish they were. These are the words of the man I am privileged to help honor tonight. President Case wrote them last year after his return from Africa. Their question and their challenge stand as urgently today, and we must find the answers and the strength to give the answers.

The time we live in is—gloriously perhaps, or perhaps tragically—a time of terrible decisions. Will we be strong enough? Perhaps, if we were less well off materially, perhaps if our society were less affluent and our lives less comfortable, it might in many ways be easier for us to rise to the occasion. It is easy, when you are well off, to think that a little charity is enough when sacrifice is really needed.

And yet—whether we admit it or not—hard and harsh demands confront us. If we fail, everything we cherish, including our comforts, will vanish. And so—it was never more obvious that today that our fate will in large measure be determined by the forcefulness and the honesty of our leadership.

Having said this, I have plainly stated tonight's theme: "The University Presidency in Modern Society." What is the university today, if not the heart and the brain of our efforts? If this had not been clear before last November, it ought to be self-evident now—even to the man in the street who has heard and told the jokes about (if you will pardon the reference) President Pusey's difficulty of competing with the job offers sent out by one of the members of his board of overseers.

Let's not make any mistake about it: the role of the universities in the life of our Nation is no joking matter—and if you look down the whole long roster, it is easy to see that this is not a Harvard monopoly. Perhaps the fact alone that the U.S. Government at present employs more Ph. D's than the 10 leading universities combined tells the most significant story.

Only a few years ago, it was still legitimate to argue whether or not the university ought to be part of the Nation's action programs. There were many who wanted to preserve and protect the academic oasis, or the ivory tower. There were some who thought that the small, preferably secluded ivy-covered campuses, by educating a privileged few, could give the country all the brainpower it needed, all the leadership it sought.

We know today that these are no longer even questions for debate. We know that the commitment of the universities to the Nation's and mankind's future is not an option but a duty. We know that all over the country the skyscrappers of learning will rise as, under President Case's stewardship, they are rising here in Boston.

And we are beginning to realize that, in order to mobilize our academic communities, we must look to academic leadership—and that means the college presidents.

The American people are rediscovering the meaning of, and the need for, leadership. The spectacle of leadership abused, first, by fascism and, then, by communism has misled the American public and even many of the politicians into believing that leadership itself is a dirty word. We have drifted, both in Government and in much of our institutional life, including the universities, into a substitution of Government by committee for Government through genuine leadership.

Recently and rightfully, there has been much criticism of so-called nonbooks, nonplays and, I might add, nonspeeches. These are the books, plays, and speeches which are written, not by authors but by reflectors of public demand. They are not art but artificial. They are not written but pasted up. To them we might add, in the same category but far more dangerous to our future, the nonleaders. Like the nonbooks, they are pasteups. Instead of having their eyes on the future, they have their ear to the ground.

"Committees can do a valuable job to provide facts and evidence—both essential to leadership. The democratic process of voting approval or disapproval needs no defense. But the essentials of leadership are in the courage and decisiveness to use the committees' facts, without hiding behind them, and to take action, without waiting for a vote. The leader worthy of the name acts bodly, with the mandate the voters have given him, and faces the voters boldly, on the basis of his action when his term is up.

"These rules apply to academic leadership as much as they do to politics. It is a misinterpretation of academic realities and of academic freedom to picture the college president as nothing more than a high-class beggar whose job it is to bring home the money while his faculty runs the show. He

is, or ought to be, the institution's leader both to the outside world and on his campus.

"Does that mean the college president tells his faculty what to teach, or how? This is as absurd a deduction as it would be to imply that the political leader tells people how to live or what to say and think. Quite to the contrary, one of the prime functions of the academic leader is to defend his teachers against any intrusion of their freedom to teach, to think, to write and to research. It was during the shameful period of McCarthyism that the academic leaders were put most effectively to the test—the test that separated the leaders from the nonleaders.

"But this does not imply that the college president should only be taken out of the mothballs when there is an attack from the outside to be fought off. The campus is constantly in need of leadership. It is a ludicrously sentimentalized picture that shows the academic community as a harmonious example of idyllic democracy. In fact, the groves of academe more often resemble nothing quite as much as the rank-conscious, backbiting, and protocol-minded life on any army post. One of the priorities of true academic leadership is to transform the atmosphere and the objectives from one of an intellectual barracks into a community of scholars."

Today, as never before, the college president must shape the future of the university. The demands and the offers come from many directions. The Government—from the Pentagon to the Treasury—needs the active cooperation of the universities. The foundations could not hope to accomplish their many vital missions, if they could not call on the researchers, the consultants, the teams, and the laboratories of the universities. Industry would be doomed to obsolescence, if the scholars could not feed the machines—in fact, give birth to them in the first place.

Amid all those demands, what could be more mistaken than the view of the college president as the beggar, hat-in-hand. In modern society, if the universities are to rise to the challenge, the presidential leadership must make it clear that society depends far more on the favors to be bestowed by the universities than vice versa. Today, the Federal Government spends well over a billion dollars in direct contracts—not grants—with the universities.

I repeat—these are not grants, even though they are often so misnamed. They are contracts for indispensable service rendered, and I am willing to guarantee that any industrial or profit-making organization (if it could carry out any of those contracts at all) would charge many times as much for its services. Can you imagine what an industrial organization would get for, say, a Los Alamos or the work produced by a university center of African studies?

It is time for the university presidents to make this unmistakably clear. It is time for them to leave no doubt in anyone's mind that their institutions are giving service, not asking for charity. It is time, too, that they stop giving the impression of being ready to grab whatever dollars might come their way. One of the basic functions of leadership is to make absolutely certain that the image of the institution it leads is enhanced, not cheapened.

This applies to the university presidents' relationship with foundations as much as it applies to Government contracts. In the past, there has been far too much groveling and bootlicking. One of the curses of weak leadership is lack of self-respect and lack of reliance in the strength of the institution. Naturally, that strength must be real. In the negotiations with foundations, the same principle applies as the one made famous, in diplomacy, by Dean Acheson: the negotiating must be done from "positions of strength."

This is not to imply that the foundations are the enemy camp. On the contrary: the foundations—to defend their own purposes and live up to their commitments—must rely heavily on the true quality of the universities with whom they deal. Their money is only as good as the use the university leadership makes of it. And this is why it is more vital than ever for that leadership to approach the foundations proudly, with bold plans and independent proposals.

The charge is often repeated that foundations frequently support insignificant schemes. If this is so, then the fault is with university leadership at least as much as with the foundations. It is the duty of the academic world to map out the roads to the future, not to dream up projects to get around foundation vice presidents. And it is the inescapable duty of college presidents to make certain that their departments and faculties are kept from being kept. Integrity must be both inspired and enforced by the man on top.

At the risk of sounding trite and conventional, I want to say that the university president's task is to be a "spokesman." By this I do not mean to say that he ought to be the kind of creature which modern society too often pictures as a "spokesman." Not the press agent. Not the man who reads a testimonial from a teleprompter. Not the booster nor the apologist. We have too much of all of those, and we have too many academic representatives who are not far from telling us that their college teaches good like a college should.

No—when I ask the college president to be a spokesman, I want him to speak for higher education—not for his institutional interest. I want him to help tell the country what, specifically, must be done if 10 years from now we must educate 6 million college students annually, instead of 3½ million now. I want him to debate the question of how to increase the annual production of only 9,000 Ph. D.'s—without lowering standards, indeed, probably by, at the same time, raising them. I want him to come to grips with the vital educational debates and controversies and not wait until they sneak up on an unsuspecting public.

It is almost impossible today to listen to an academic discussion without some reference to the great and fundamental problem of C. P. Snow's "Two Cultures and the Scientific Revolution." My question is: Why was it necessary to rediscover Sir Charles—very late in the game, indeed—in order to get this devastatingly vital question on the national agenda? Where were the college presidents? This is the kind of question, this is the kind of search for solutions for which we should be able to look to the university presidents.

More than ever before, we must in the future look to the presidents to represent all of higher education, not fragments of it; not special interests but the future of mankind. They must not hide behind the excuse of institutional diversity; they must instead bring into focus the many facets of higher education to make it shine like a diamond rather than splinter into fragments like tinted glass.

These are harsh demands. I would not make them, if I did not hold the importance of the university presidency in high esteem. I would not dare to list these demands here tonight, were we not assembled to honor a man who has, in action, demonstrated what the presidency can be made to mean.

And with everything I have said so far, I have not even hinted at that new and terribly urgent dimension of the presidency: the university's relationship with the rest of the world.

The task of the university president is, or should be, clear. To begin with—before we even look at the active work to be accomplished abroad—here is a terribly urgent example of the need of leadership beyond the individual institutions. How can we stave off defeat and avoid self-destruction, unless the university presidents—as spokesmen of reason and enlightenment, yes, of simple self-preservation, too—will rally all their own colleagues across the Nation to wipe out that madness of racism at home which is certain to haunt and defeat us abroad. I am sufficiently aware of folly and ignorance in all of us to forgive the uneducated for their prejudice and bigotry. I cannot forgive, however, academic leaders, not even in the deepest South, for such ignorance. And I consider it the duty of the academic leadership, everywhere to make it their business to educate not only their own undergraduates but also their distant colleagues.

Only if they do so, will they have the hope to fulfill effectively the vast commitments which American universities now face all over the world. With nearly 40 countries now the recipients of American aid, directly with the International Cooperation Administration, the demand for excellence, service, and devotion has become a worldwide rather than a national challenge for American higher education. This makes the university presidency an office of supreme international importance and responsibility.

I prefaced what I tried to say tonight with President Case's own eloquent words. I should like now to let President Case supply the closing words as well. He wrote them after he saw the desperate need for compassion, understanding, and action on another continent last year. They tell what needs to be told—for the university presidency and for all of us who look to leadership:

"If we can discipline ourselves to do hard work in behalf of mankind's future, to act from principle, not out of the demands of expediency; if we can become known because of our absorption with people, not payola; with issues, not filibusters; then we can make an unprecedented contribution to the underdeveloped countries, and in the process, find our own quality of freedom."

The Peace Corps

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the eighth grade students of Our Lady of Sorrows School in South Orange, N.J., have decided not to wait until they are old enough to enlist in the Peace Corps. They are forming one of their own right now.

A United Press article in the April 17 issue of the Record (Hackensack, N.J.) describes this effort and the part that Representative HUGH ADDONIZIO has had in transmitting the good wishes of the President of the United States to this group.

Representative ADDONIZIO and the good students of Our Lady of Sorrows School are to be congratulated for their direct and immediate response to a people-to-people challenge. I ask unanimous consent to have the article entitled "South Orange Eighth Graders Form a Junior

Peace Corps" inserted in the Appendix of the RECORD.

I also ask, Mr. President, to have printed in the RECORD a portion of a television transcript of April 2. Mr. Sargent Shriver, Director of the Peace Corps, had at that time some very interesting comments about a peace corps on the homefront, too.

There being no objection, the article and transcript were ordered to be printed in the RECORD, as follows:

SOUTH ORANGE EIGHTH GRADERS FORM A JUNIOR PEACE CORPS—PAROCHIAL STUDENTS' PLAN HAS WON THE APPROVAL OF PRESIDENT

SOUTH ORANGE, April 17.—The eighth grade students of Our Lady of Sorrows School have come up with their own version of President Kennedy's Peace Corps—they plan to exchange correspondence with foreign students.

PRESIDENT'S BEST WISHES

The project, which they've tabbed a Junior Peace Corps, has already won the approval of the President himself. Representative HUGH ADDONIZIO Democrat, of New Jersey, this weekend relayed to the students and their faculty President Kennedy's best wishes.

"The President has asked me to thank you for your letter suggesting creation of a Junior Peace Corps composed of American schoolchildren who would exchange correspondence with students in other countries," the Congressman wrote.

"The President was very glad to hear of the interest expressed by your young constituents in furthering good relations abroad and sends his best wishes for the success of their project."

ADDONIZIO said the students, their teacher, Sister Martina, and their principal, Sister Eileen Cecilia, had submitted the letters to his office to be relayed to pen pals of similar age overseas.

ADDONIZIO said he had turned the letters over to Mrs. Martha Archer, chairman of the letterwriting committee of the people-to-people program at the World Affairs Center, University of Minnesota. The program is under the direction of the U.S. Information Agency.

The Congressman said Mrs. Archer will be glad to advise the students and help them get their project under way.

"The students and faculty of Our Lady of Sorrows School have performed an important service in helping focus attention on this means by which American schoolchildren may express goodwill to the other peoples of the world and increase mutual understanding in the Nation's efforts to establish an honorable, just and lasting peace," he added.

Senator WILLIAMS. Len Detlor, do you have a question?

LEN DETLOR. Yes, sir. Up to this point we've been considering the young people working abroad, and I was wondering if you could foresee any possibility of the Peace Corps people being used domestically, perhaps in a problem such as migrant labor.

Senator WILLIAMS. The President has suggested that this program of people-to-people assistance with knowledge, information on helping those who need help, could be adapted to some of our domestic problems and some of our domestic hardship. I can see it in the area of migrant labor particularly in the creation of social centers in areas where these folks come in—they're not accepted in the community, they live isolated lives in their very wretched camp towns, you see. There is nothing for them of a wholesome nature to enjoy. I could think of this as a real possibility. I believe Mr. Shriver has addressed himself to this suggesting however that it was not part of this Peace Corps. It is not your program, I mean, it's not being considered in your division, your department—is it?

Mr. SHRIVER. Not at this time. But the idea, I agree with Senator WILLIAMS, is a good idea and it is under study, I know. Perhaps something good will come out of it, and a definite plan. One thing is, and it would help to answer your question in a sense, because anybody who is willing to do that kind of work here, would be a very good person for the Peace Corps overseas. It would be a very good proof of the sincerity of their purpose.

Senator WILLIAMS. I wonder if I could ask a general question of our students. The first reaction as I saw it in about five or six college campuses to which I went after the President advanced this program, was magnificent. Young people responded. I know at Princeton, 230 seniors were recently asked about the Peace Corps. Eighty-four percent thought it was a fine idea and 20 percent indicated an interest in applying as volunteers in the Peace Corps. What has been the reaction at George Washington and at Smith and at American?

LEN DETLOR. I can answer for my school. I know that there are a great many students who are giving serious and detailed study to this program. They realize, I think, because of the great number of foreign students there that they have contact with, that this is not going to be a vacation and they have showed a real and serious consideration and almost a dedication to this idea.

Teenage Crime Increases

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an important editorial which appeared in the Lawrence Sunday Sun, Lawrence, Mass., on April 16, 1961:

TEENAGE CRIME INCREASES

"Today, youthful criminality poses a critical threat to the future of our Nation. The destiny of America lies in the hands of our young people." These are the solemn words of the one man who should know this threat of serious danger, FBI Director J. Edgar Hoover.

Speaking before the National Forum on Youth Crime, attended by Federal and State police from all over the Nation at New York City a few days ago, the head of the Federal Bureau of Investigation further revealed the startling information that teenagers account for one-half of the burglary and larceny arrests in the United States and nearly two-thirds for auto thefts. And their rate of participation in more serious crimes—assault, robbery, rape, and murder—is steadily rising.

Preoccupied with the pursuit of wealth and pleasures, parents seem to have lost touch with our basic traditions—work, discipline, duty, honor, and faith.

"If this Nation is to survive," warns Hoover, "we must enlighten and train our youngsters to revere more the spiritual concepts which are the real sinews of greatness."

Youths who participated in a panel discussion, following the talks, cited neighborhood environment and bad companionship as two major reasons for youth crime.

In Lawrence, as practically everywhere else, teenage vandalism and more serious crimes such as stealing cars, breaking and entering and robbery have increased greatly in recent years. The willful disregard for public property, damaging school and municipal buildings, city swimming pools, has been demonstrated many times by fractious, errant, irresponsible youngsters.

These acts later lead to more flagrant violations showing an avowed disregard for respect for the law and authority. This is what has been generally classified today as juvenile delinquency. Hoover says: "This is youthful criminality, refer to the gangs in larger cities who commit vicious acts of vandalism, wanton brutality and mounting savagery, which typify today's arrogant teenage gangs."

It presents a serious problem for parents, teachers, clergymen, and citizens in general how to combat this wave of crime and vandalism. Some say, more clubs like youth service centers, boys' clubs, promotion of more sports for youths all season around to get them off the streets * * * to absorb and liquidate their youthful enthusiasm and unbridled energies. This is the matter for service clubs and other agencies to consider and promote. Something must be done to curb the continuing growing teenage crime wave.

National Conference on State Parks Endorses President Kennedy's National Resources Program

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. YARBOROUGH. Mr. President, during a recent meeting here in Washington, the officers and board of directors of the National Conference of State Parks approved President Kennedy's objectives as outlined to the Congress in his special message concerning "Our Natural Resources."

Mr. Frank D. Quinn, of Austin, who is chairman of the board of the National Conference on State Parks, and an official of the Texas State Parks Board, has called to my attention an excellent report on this group's meeting. It was written by Dora A. Padgett, executive secretary of the National Conference on State Parks, and was published in the March 1961 issue of Park Maintenance magazine. It is an excellent report on the work of this group and its interest and work in coordination with the national conservation efforts.

I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "The National Conference on State Parks: Its History and Its Future," by Dora A. Padgett.

There being no objection, the article was ordered to be printed in the RECORD as follows:

THE NATIONAL CONFERENCE ON STATE PARKS: ITS HISTORY, ITS FUTURE

(By Dora A. Padgett)

The National Conference on State Parks is the only national organization devoted exclusively to the promotion of State parks. Its purpose is to foster a broad, bold, nation-

wide movement for proper research, planning, acquistion, development, conservation, and use of State parks and related types of open spaces and nonurban recreation resources—both land and water.

These are accomplished by (1) cooperating with government and private agencies, (2) serving as a clearinghouse for information through publications, conferences, and other educational means, (3) developing professional leadership in the administration of State parks and related areas, and (4) encouraging interpretation of the country's scenic, scientific, and historical features—all to the end that every citizen shall appreciate the value of State parks, recreation areas, and open spaces.

The National Conference on State Parks was organized as a result of a meeting of conservation leaders at Des Moines, Iowa, called at the suggestion of Stephen T. Mather, then Director of the National Park Service. Mather recognized that national parks should be supplemented by State parks and he pledged the cooperation of the National Park Service in a variety of ways.

From the outset Mather, Judge John Barton Payne, Secretary of the Interior, and Col. Richard Lieber, director of the Indiana Department of Conservation, were in accord on the principal objectives of the conference. They guided the conference ship of state through the early years, on the principle that each State should preserve typical State scenery in reservations large enough to provide for their enjoyment by visitors without destruction of the features they were created to protect. To this, Frederick Law Olmsted, Jr., in his California State park survey of 1929, added that they should be sufficiently distinctive and notable to interest people from comparatively distant parts of the State to visit and use them; not merely good enough to attract people from the region in which they are situated and merely because of the absence of more interesting areas within easy reach.

Through the years the annual conferences have reflected the broadening vision of those engaged in State park work. The founders had set a goal above all others in the State park program of conserving natural scenery. However, the growing pressure for outdoor recreation was recognized and the conference has urged that there was a place also for large recreation areas under State management. This objective was recognized in Mr. Olmsted's 1950 report to the California State Park Commission recommending provision of State recreation facilities in relation to needs of the population.

The growth of State park areas is illustrated by statistics over the years. No State parks were reported in 1921 when the conference was established in 29 States. In 1959 there were more than 2,400 State parks, monuments, historic sites and other types of recreation areas throughout all States and used by more than 255 million visitors. Of course the conference is not solely responsible for this great expansion, but the men who have developed the state park systems have been the same men who have directed and supported the conference. It has been almost an interlocking directorate through which the State park officials in the several States have placed their ideas and experience in a common hopper from which State park practices and principles grew.

Officers and members of the board of directors throughout the years have been drawn from outstanding and distinguished park leaders from all over the United States. Judge John Barton Payne first headed the new organization and he was later succeeded by such outstanding conservationists as Stephen Mather, Maj. William A. Welch, Howard B. Bloomer, Col. Richard Lieber, Tom Wallace, Harold S. Wagner, Harold W. Lathrop, James F. Evans, Thomas W. Morse, Frank D. Quinn, Victor W. Flickinger, Charles A. DeTurk, Kenneth R. Cougill, William G. Wells, and currently, Arthur C. Elmer.

The conference established the office of chairman of the board to carry on with the president and other officers. Present officers are: Frank D. Quinn, chairman of the board; Arthur Elmer, president; Earl P. Hanson and John Vanderzicht, vice presidents; Ben H. Thompson, treasurer; and Mrs. Dora A. Padget, executive secretary. Those who have served as chairmen of the board are Colonel Lieber, Tom Wallace and Horace M. Albright.

During the first 7 years of the conference, Miss Beatrice M. Ward, later Mrs. Wilbur Nelson, served as executive secretary. Herbert Evison was executive secretary from 1929 to 1933. In 1935 the National Conference on State Parks asked the American Planning and Civic Association to act as a secretariat under a plan to share publications and simplify administration; however, to maintain its separate board of directors and hold separate annual meetings. The two organizations share headquarters at 901 Union Trust Building, Washington, D.C. Miss Harlean James served as executive secretary under this cooperative arrangement until her retirement in 1959. Since 1959 Mrs. Dora A. Padgett has served as executive secretary under the same administrative setup.

The quarterly, Planning and Civic Comment, is the joint publication of the conference and the American Planning and Civic Association. It presents in each issue articles on State park subjects and general information concerning developments in the State park field.

Over the years the conference has issued a succession of valuable publications. In 1926 it issued a volume on "State Parks and Recreational Uses of State Forests in the United States," by Raymond Torrey; in 1928, a 448-page book on "State Recreation, Parks, Forests, and Game Preserves," by Beatrice Ward Nelson; and in 1930, a "State Park Anthology," edited by Herbert Evison. From 1927 to 1933 a magazine called State Recreation was issued. In 1935 Planning and Civic Comment became successor to that publication, combined with Civic Comment and City Planning. In 1942 the conference took over from the National Park Service the "Year Book on Park and Recreation Progress," issued every 2 or 3 years. The last issue was in 1955.

The chief publication of the conference at the present time is Park Practice, which has an international list of subscribers. This was first suggested at the annual meeting of the national conference on state parks held in Bastrop State Park, Tex., in 1950. The primary purpose was to furnish a means of exchanging information on design and construction of parks and recreation facilities at all levels of Government.

The program was initiated the following year under a Park Practice committee. At the biennial National Park Service conference held in Great Smoky Mountains National Park in 1955, Director Conrad L. Wirth entertained recommendations made by two working committees that some means be provided for making the benefits of experiences of park personnel available to all units of the national park system. The following week he concluded an agreement with the board of directors of the national conference on state park at its annual meeting held in Stowe, Vt., to cooperate in an expanded and enlarged Park Practice program.

In March 1956 National Park Service participation was effected by establishing a park practice section with Ira B. Lykes serving as chief. Under the new program, material is issued under three categories: design, drawings and photographs of park structures and facilities that have been constructed and proven successful; Guideline, material in text form on a variety of subjects such as policy and planning, administration, protection, development, interpretation, maintenance, and concessions; and Grist, an eight-page illustrated bi-monthly information letter aimed primarily at the field operating level and presenting proven labor and money-saving devices, tricks of the trade, and other appropriate information. Park Practice is a nonprofit, mutual program operated by park and recreation-area people for the benefit of park and recreation-area people.

Periodically special publications have been issued such as "Digest of Laws Relating to State Parks," $3; "Revenue Bonds for State Park and Recreation Area Development," $1; "Suggested Policy Statements for State Parks," 10 cents; and "Suggested Criteria for Evaluating Areas Proposed for Inclusion in the State Park Systems," 10 cents.

The proceedings of the 40 annual meetings have been published over the years, later incorporated in the "American Planning and Civic Annual" and sometimes as separate issues. For the past two years, the proceedings have been issued as a supplement to the December issue of the quarterly, "Planning and Civic Comment." These proceedings constitute a body of reference material on the subject and pending problems which have been important in conference activities, such as park standards of acquisition, State park methods of dealing with legislation, appropriations, maintenance, development and use, and the far-reaching results of committee research into the fields of policy statements relating to the development, use and operation of State parks.

Last year a special committee of the conference took a serious look at the job ahead for both the conference and the challenge to State parks growing out of the intense interest in outdoor recreation. As a result of deliberations, a new statement of object and objectives for the conference was adopted in 1960. The State park programs have a growing responsibility and opportunity to serve the recreational needs of the people of the United States. The conference, through its annual conferences and program, has conducted over the years an examination of State park methods and procedures which has had far-reaching results.

As the organization looks to the future, it proposes to enlarge its program. It will foster a broad national movement for research, planning, acquisition and development of State parks and related areas, with a strong program of public education through a central clearing house of information. The future role of the conference will emphasize the continued expansion of its program for a well-balanced organization of citizen and professional members to carry out its aims and to constantly reappraise its leadership and activities to keep pace with the rapid changes of the changing era in which we live.

Business Week's Bell Finds Excessive Taxes, Government Spending To Get Money in Circulation Ridiculous

EXTENSION OF REMARKS

OF

HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. CURTIS of Missouri. Mr. Speaker, Elliott V. Bell, editor and publisher of Business Week, spoke recently before the Wine and Spirits Wholesalers' annual meeting in Honolulu, calling for a

reformation of America's tax system to meet the problems of unemployment and sustaining economic growth in America. I believe that Mr. Bell's remarks deserve the very close attention and study of every member of the Congress. They are not necessarily the final answer in that which is discussed, but they are the well presented thoughts of a man interested and knowing in the field of the American economy. Under leave to extend my remarks, I include Mr. Bell's remarks at this point in the RECORD:

THE ECONOMIC OUTLOOK ON THE NEW FRONTIER

(An address by Elliott V. Bell, editor and publisher, Business Week magazine, before Wine and Spirits Wholesalers of America, Inc., Honolulu, Hawaii, April 19, 1961)

My purpose today is to examine with you the current state of business, the Kennedy administration as revealed in its first 3 months in office, and some of the major economic problems that will confront our Nation in the years immediately ahead.

We need not spend too much time on the current recession. It has been in progress for about a year. It has been exceedingly mild. It has followed, to a remarkable degree, the precise pattern that most experts foresaw from the start. It is now clear that we are already at, or very close to, the bottom of the downturn.

Signs of recovery are multiplying. Business has begun to reduce the rate at which inventories are being liquidated. Spending on new plant and equipment, which had been cut back $2½ billion in the past 12 months, is scheduled for at least a moderate improvement later this year.

Expenditures by Federal, State, and local governments are rising. All Government spending on goods and services, incidentally, this year will exceed $100 billion, which is equal to one-fifth of the value of all we produce. Construction is feeling the lift of spring. Good weather, after a rough winter, is bringing cheer to the hearts of auto dealers and producers of durable goods. The stock market, fulfilling its classic role of harbinger of things to come, has been forecasting, ever since the election, either a dramatic business recovery or a great inflation or both.

There are, of course, still many soft spots, but the plus signs exceed the minuses.

I think we can safely say the turn has come; recovery is underway. The big question, of course, is how vigorous and sustained a recovery it will be. On this point there is considerable difference of opinion.

At the first meeting, last month, of the President's Labor-Management Committee, President Kennedy told us he would not be surprised to see a recovery of business this summer but a continuation of 6 or 7 percent unemployment in the fall.

On the other hand some business and university economists—probably a minority at this point—think the recovery will be sharp, vigorous and sustained.

My own view is the recession will have clearly passed its turning point within the next month. By June the forces of recovery will be obvious to all; and by late autumn the revival will be vigorous with gross national product running at a rate of $520 billion or better, compared with a scant $500 billion in the first quarter. On the record, 1962 will almost certainly be the most prosperous year in our history thus far. For the moment let's leave it there, while we have a happy thought to hold.

But before we throw our hats in the air, it should be noted that the recession of 1960–61, even when it has ended, will leave behind a haunting legacy of doubt and worry.

The thing that has been really disturbing about this recession is that it followed so soon after the 1957–58 decline. We are apt to think of the business cycle as comprising a complete wave—from a peak of prosperity to a pit of recession and back to a new and even higher peak of prosperity. Indeed, our earlier postwar business cycles did have this neat, orderly and rather reassuring appearance. Not so the recessions of 1957–58 and 1960–61. These two were not only closely bunched together but were actually interdependent.

The fact is we never really achieved full recovery from the recession of 1958. Even in the most prosperous period of 1959 unemployment remained substantial. It is possible that we should think of the entire period extending from the middle of 1957 to the present as a period of quasi-depression analogous to, though happly much less severe than, the great depression of the 1930's when we had several up and down oscillations of the business curve but could not escape from the curse of massive unemployment.

The haunting question is: Do these recent years reflect merely the ending of the postwar era with its pent-up demands, inflated credit and inadequate productive capacity; or, are we witnessing a return of the dilemma of the prewar years when chronic unemployment persisted right up to the onset of war?

I want to return to this subject after a bit but first I should like you to look with me briefly at life on the New Frontier under the leadership of our young President from Harvard.

Mr. Kennedy has brought to Washington a surprisingly mixed, but on the whole, admirable team. He has put together a sort of coalition Cabinet, with the sensitive posts of Treasury and Defense going to Republicans. For Secretary of State, he picked Dean Rusk, a Rhodes scholar, quiet, scholarly, greatly respected by those who know him. Then he has bracketed the Secretary by two eminent Democratic politicians—Adlai Stevenson and Chester Bowles—each of whom was thought to have coveted the top job. Is this genius or expediency? For Secretary of Labor he picked the smartest labor lawyer in the country, Arthur Goldberg, whose pronouncements and actions since taking office have left some labor leaders a trifle baffled and caused others to call him the "Mr. Republican" of this administration.

Moving with the drive and energy of youth—in obvious contrast to the measured, energy-saving pace of his predecessor—Mr. Kennedy has made a strongly favorable impression on most people. In the course of a brief, highly unscientific taxicab poll I took in Washington recently, I learned that "everyone feels much better." "They feel like a lot of things that need to be done are going to get done."

That may not be very precise but it's important. Mr. Kennedy has had a salutary effect on public sentiment.

The remarkable thing is that thus far there is very little of a tangible character to support the widespread impression of bold, new action.

In fact, young President Kennedy has met the recession of 1961 almost precisely the way old President Eisenhower met the recession of 1958. There have been no dramatic or drastic measures. On both occasions the White House has turned a deaf ear to recommendations for a temporary tax cut. On both occasions the response was identical. Like Eisenhower, Kennedy said: "We'll wait until April to see whether things improve."

On both occasions April brought the wellnigh inevitable improvement, and a tax cut, whether or not it would have been a good idea earlier, had clearly become outdated by April. Meantime, the prospects are that spending will increase and deficits will rise, although there is as yet no sign that Mr. Kennedy will achieve in fiscal 1962 a deficit as large as the nearly $13 billion-one Mr. Eisenhower piled up in fiscal 1959.

Actually, Mr. Kennedy has turned out thus far to be very much of a conservative. He is obviously aware that the label of big spending and the threat of inflation are political liabilities especially dangerous to Democrats. So he has talked boldly but moved cautiously.

Here's how a Washington wit summed up the administration's performance thus far. He said it reminded him of that dazzling basketball team—the Harlem Globetrotters. The New Frontier team has been passing the ball forward, behind, sidewise and underneath—a brilliant display—but thus far nobody has scored a basket.

The cautious course the President has steered reflects, no doubt, his own normal inclination. It reflects also his appreciation of the fiscal conservatism of Congress, and a recognition that the narrow margin of his election gave him no sweeping or unchallengeable mandate.

Not all of his advisers have been quite happy with Mr. Kennedy's moves to stimulate recovery. One of the most distinguished of them, Prof. Paul Samuelson of Massachusetts Institute of Technology, has called the President's recovery program a "placebo program"—a pill that makes the patient think he is being treated although in fact the pill has nothing but a little sugar in it.

For the coming fiscal year, Mr. Kennedy has budgeted for only about $3 billion more than Mr. Eisenhower had planned. He is budgeting a deficit of only $2¾ billion.

Some of the President's brilliant young braintrusters are concerned whether deficit spending of such modest proportions will give the economy the forward lift they think it needs.

Certainly thus far, and prospectively for 1962, the President's program for stimulating recovery and growth is more modest and conservative than most people realize—a good deal more conservative than the stock market's ebullience would suggest.

Now, it may well be that the President, proceeding by political intuition, may turn out to have been a better—or at least a luckier—economist than his advisers. If this recovery should indeed prove vigorous, if it should carry the economy back to reasonably full employment faster than is now anticipated, then, of course, it will be all for the best not to have overstimulated the economy by rapid and massive increases in Government spending on the one hand, or sizable tax reductions on the other. Either course would tend to revive the inflationary pressures that are now suspended, and a renewal of inflation, or even fear of inflation, would aggravate our dangerous balance of payments position.

This brings me in one easy motion to the third phase of my talk—the interlocking complex of major economic problems which confront our Nation and for which thus far we have found no workable solution.

I have already mentioned one of these problems—the failure of our economy, even at the peak of the last recovery period, to provide enough jobs to employ our full labor force.

You know, there has been a fascinating paradox about the latest recession. Every month for the past year or more the total of employed persons has reached a record high for that month. Thus employment in January was the highest for any January in our history. The same was true of February, and March, and will, I have no doubt, be true for April, May, and June, and so on.

Yet, in each of these months of record high employment, unemployment also rose. The total by February had reached 5,700,000 workers, largest in number for almost 20 years. Moreover, many of these unemployed had been out of work for a long time and had exhausted their unemployment benefits.

Now, of course, some of this unemployment has been due to cyclical factors—the circumstance that we have been in a recession. But a good part appears to be due to what economists call "structural" factors.

Structural unemployment is just another name for what we used to call technological unemployment, except that it has a broader meaning. It means not merely the unemployment that results when, for example, a textile plant is fitted out with laborsaving machinery, and handworkers are displaced by automation. It also means what happens when the old textile plant in New England is abandoned, and the new automated plant is erected in North Carolina. It means what happens when homes and factories switch from coal to oil. Coal miners in West Virginia or Pennsylvania lose their jobs. Even if there are unfilled jobs elsewhere, the miners may not be able or willing to move away and learn new skills.

Several easy answers have been suggested for this problem. Certain labor leaders say: Just cut the working week from 40 hours to 30 hours—this will create more jobs overnight. Certain management men have an equally easy answer. Business, they say, has been forced to automate because of high labor costs. Just let labor agree to take a pay cut and there will be more jobs. Well you don't have to be a politician to figure that these "solutions" are not as simple as they sound.

This particular problem of structural unemployment is inextricably interlocked with others. There is, for example, the broad question of economic growth. There is also the question of whether American goods can remain competitive in the world market. Can we hold our own against the rebuilt, modern industry of Western Europe and Japan with their relatively cheap labor?

This brings us again to the tough nut of our balance of payments. For some years now the total payments that we make abroad—for goods and services, for travel, for investment, for military operations, and for foreign aid—have exceeded the payments foreigners make to us. In the years 1958, 1959, and 1960, we paid out $11 billion more than we took in. This situation became so alarming last year that people began to talk about possible devaluation of the dollar, and gold flowed out of the country in large amounts.

President Kennedy, it should be said, has shown himself acutely aware of the balance of payments problem. He gets high marks for making it perfectly clear both during the campaign and after taking office that he means to defend the integrity of the dollar at its present exchange rate with all the resources at his command.

Those resources are still very considerable. Including our gold stock and our rights to draw credit from the International Monetary Fund, they amount to some $22 billion.

The President's strong statements had an immediate effect in stopping the run on the dollar that had started last fall. Losses of gold diminished, and last month we began to regain a little gold.

We have a breathing spell—but we have as yet not solved the problem. We have merely gained a little time to try to find a way out of this and related problems—including technological change, structural unemployment, economic growth, high production costs, and inflation.

It is for this reason that the President has established the Advisory Committee on Labor-Management Policy on which I am privileged to serve.

It is, of course, too early to say whether the 21 members of this Committee will be able to make any important or practical contributions to the solution of this complex web of problems to which the President has asked us to address ourselves.

All of us will bring with us a certain freight of ideas, some of which I am sure we will have to throw into the sea before the long voyage is over. Accordingly, I should like the views I am about to give you to be regarded as preliminary and tentative, rather than hard and fast.

The President has set as his target a reduction in unemployment to not more than 4 percent of the labor force. This seems to me reasonable. It is a goal that should not put undue strain on the labor market, or tend to generate new inflationary wage-price spirals. It is also a rate that should permit some flexibility in our system and leave incentive for productive effort on the job. Reasonable as this goal is, we have not achieved it except momentarily since 1953.

The question of how much our unemployment is due to structural factors versus cyclical factors is fundamental to the problem of policy formulation and in no sense a merely academic question. The lag in job formation is, I believe, a consequence of both slow overall growth and rapid technological change. To deal with it we shall need several kinds of weapons in our arsenal.

I would be disposed to put primary emphasis on fiscal and monetary policies to insure that we have sufficient demand to keep our existing resources employed at relatively high rates. Because the balance-of-payments problem hampers the use of monetary policy on which we formerly relied as our main instrument, this means that more reliance must be put on fiscal policy in insuring that the economy operates at high and stable levels of employment—a condition that is essential to regaining a more rapid rate of growth.

"Fiscal policy" is a term that is often used and seldom defined. By it I mean all of the taxing, spending, and borrowing operations that the Government conducts—all of the ways in which the Federal establishment puts money into the national economy or takes money out of it.

I am impressed by the arguments advanced by a number of economists to show that the fiscal policy we have been following has created a "deflationary gap" that represents a constant drag on the economy. What this means in plain English is that our tax system is taking such a heavy bite out of total demand that economic recovery loses its drive before a condition of full employment can be achieved. It is estimated that if the country should achieve full production and employment the tax system would generate a surplus of something like $12 billion over present levels of expenditures. But the tax system is so oppressive that it keeps us from achieving full production. It nips off recovery short of the peak, as happened in 1960, and slows down the Nation's rate of growth.

In theory, there are two ways that this "deflationary gap" could be closed. One would be to cut taxes. The other would be to increase spending.

Some spending increases obviously are on the way. And this fact seems to have restrained President Kennedy from asking for any reduction in taxes at this time. I am inclined to agree that it is too late now for a temporary tax cut to aid recovery, but I hope this will not mean indefinite postponement of long-range tax legislation.

To achieve longrun growth and maximum utilization of our economic resources, I believe it is essential to undertake a thoroughgoing reform of our tax system, coupled with some reduction in the level of tax rates. And I believe that this task should be commenced at once, without waiting for the economy to go through another frustrating cycle of partial recovery, aborted boom, and recession.

It seems clear to me that it would be both unnecessary and unwise to try to close the deflationary gap by thrusting bigger and bigger spending programs at Congress. Let us spend what we must. But let us not put ourselves in the ridiculous position of spending simply to get back into circulation money that an unduly severe tax system has taken away from consumers and investors.

The problem of tax reform is not a new one. But it is an increasingly urgent one. It was a matter of much disappointment to me as a Republican that during 8 years in office my party did not even attempt such an overhaul. Now with the Democrats in control of both the executive and legislative branches, the task ought not to be shirked.

I realize that it is already too late in the current session to expect the Congress to produce a major reform bill (although I regret that this job was not given a high priority at the start of the new administration). Possibly we will have full recovery without action on the tax front. Frankly, I doubt it. I am concerned that without a tax cut and tax reform, we may see a repetition of the 1959–60 performance of the economy. And I believe that we can avoid it if the President and Congress will turn their most serious attention to this major national economic task. I believe it should have an absolutely top priority in the next session of Congress.

Aside from fiscal and monetary measures, there are a number of other things that we can do to promote economic growth and stability.

Consideration should be given, I think, to programs for increasing the mobility of the economy—that would lead available workers to the jobs that are opening up, and out of the job or industries or regions that are contracting.

The prime weapon in any such program must, of course, be education. Better education in our elementary and high schools, our colleges and universities, can spread the knowledge and skills that increase employment opportunities. Through education also the young people entering the labor market each year can be encouraged to seek employment in the service industries and elsewhere, where demand is increasing, instead of looking for work in a declining sector. Existing programs of on-the-job training in industry, apprentice training to give workers new skills, and graduate study programs both for training top new professionals and specialists, and for upgrading people who completed their academic work years ago are needed.

One thing is certain—we must not allow ourselves to get into the way of thinking of technological change as a hazard, or even as merely a problem to be coped with. On the contrary, paradoxical as it may seem, we need more, rather than less, of this accelerated scientific and technological progress in order to produce the faster economic growth we must have.

The discovery of new ideas, and the diffusion of those ideas throughout our system, is the most important source of growth we have. In this area lies the strength of our system. It is on our scientific, intellectual, and technological prowess and progress that the survival of our free political economy now depends.

I have been talking about our major problems largely from a domestic view, but implicit in all we say or do today is the struggle in which we are so deeply engaged between communism and the free world.

The capacity of any country to safeguard its own destiny and to influence nations and

events is dependent upon that country's strength and vigor. Only a country with a vigorous, growing political economy can be independent and give leadership to other countries.

In the affairs of nations as of men, there comes a time of supreme testing where failure can only lead on to ultimate decline and fall. We are facing such a test today and the outcome is by no means certain. Can free man working together in a free system successfully meet the challenge of a system just as tough, resourceful and scientifically skilled as our own, that is closely planned, disciplined and directed with the precise purpose of surpassing us?

If the confident "yes" we give to that question is to be achieved we shall have to improve our ways of working together and still competing with each other, of managing our affairs for the national good without sacrificing the individual's rights. We shall need to bring to these years of troubled peace the same dedication and resolve we achieved in war. For the truth is, of course, we are still at war—a war to assure the survival of all that makes life for us worthwhile.

Mass Transportation Vital to Our Future

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. WILLIAMS of New Jersey. Mr. President, the transit facilities of our Nation are dwindling at precisely the time when we should be making plans for great increases in such facilities. At recent hearings, it was stated that more than 300 municipalities in the United States are now without transit facilities of any kind.

I am impressed, therefore, with the increasing interest now being displayed in this question, and I am gratified by the testimony given for the mass transit bill I introduced earlier this year. Two recent editorials give some indication of reaction in my home State. One is from the Camden Courier Post of April 10. The other is from the Paterson Morning Call of March 29. I ask unanimous consent to have the editorials printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Camden Courier Post, Apr. 10, 1961]

CONSIDERATION FOR MASS TRANSIT

Three days of hearings in Washington on a mass transit bill have, as New Jersey's Senator WILLIAMS observed, "conclusively documented" the need for action in this field.

What is being urged is a broader vision for long-range improvements in mass transportation, which would be coordinated with urban renewal, housing, and community facilities under a Department of Urban Affairs.

There is no question that urban and metropolitan regions of the country are becoming vastly more complicated. The transit bill sponsored by the Democratic Senator is directed, as he claims, as much toward searching for ways to avoid unnecessary transportation as for a search for more efficient rapid mass transportation.

In seeking to place the problem under a single department, WILLIAMS insists that for too long we have been dishing out Federal aid with a dozen different hands and "not a single hand knows what the other 11 hands are doing." This, naturally, leads to waste in public expenditures at all levels of government. Even encouragement of suburban development can compound the mass transportation problem, as WILLIAMS has noted. Coordination of programs seems necessary.

The transit bill, which provides a low-cost revolving loan fund of $250 million for facilities and equipment, as well as a $75-million matching grant program for demonstration projects and comprehensive mass transportation development, was given almost unanimous support during the 3 days of hearings.

In the case of Philadelphia, the bill could make Federal loans available for the purchase of cars and other equipment on commuter lines serving the city. It could make possible the building of the midcity underground hookup between the suburban lines of the Pennsylvania Railroad and the Reading Co.

Mayor Dilworth and James M. Symes, board chairman of the Pennsylvania, have argued Federal aid to mass transportation would spur more than $500 million in new construction in Philadelphia in the next decade, create hundreds of jobs and save a billion-dollar investment in railroad commuter service that is threatened with extinction.

How the proposed transit aid would affect the Camden and surrounding areas of south Jersey directly has not been made clear. Delaware River Port Authority officials proceeding with their plans for a high-speed rail link to Stratford, apparently feel the Federal plan would not materially alter that proposal.

Federal aid to transit could hold vast importance for the future, however. Dilworth already has declared that south Jersey counties must join with Philadelphia and its Pennsylvania suburbs in a regional transportation plan.

Dilworth warns that Philadelphia's transportation system will go downhill unless the city gets help from four surrounding Pennsylvania counties, plus Camden, Gloucester, and Burlington Counties.

The future role of bus companies in the transit picture also is unclear, but they, too, are proceeding with current plans. Public Service has added 10 new deluxe buses on its Haddon Avenue run through Collingswood, Haddon Township, and Haddonfield where the bus versus rail transit dispute still rages, but there probably isn't a chance in a hundred that the buses were added just to gain a talking point against the high-speed plan.

Regional thinking is the coming thing in planning to meet the transit crisis. For example, regional planning experts say now that the chronic ills of commuter rail service in the New Jersey-New York-Connecticut metropolitan region could be cured only by a tristate agency with Federal help. Metropolitan commuter railroads otherwise will continue to deteriorate, they say.

The Port of New York Authority, too, has come around to the point of agreeing to involve itself financially in commuter rail projects after having operated 40 years without doing so.

The projects would be over and above the proposed acquisition of the Hudson and Manhattan Railroad and its properties. The interstate agency, in bills prepared for the New Jersey and New York Legislatures, agrees to devote up to 10 percent of its $70 million general reserve fund annually hereafter to commuter rail improvements.

As the hearings in Washington have indicated clearly, the crying need is not for "panic solutions" but for new thinking about the very nature of transportation in our highly populated areas.

It becomes obvious that we can't superimpose a transit system on an obsolete city and its environs. We can't destroy and rebuild without taking mass transit into basic consideration, and we can't merely preserve what we have or modify old facilities if we have any hope at all of meeting the demands of the future in our metropolitan areas. Urban development must take into consideration the key role that transportation has in that development.

[From the Paterson Morning Call, Mar. 29, 1961]

SENATOR WILLIAMS' BILL—MASS TRANSPORTATION VITAL TO OUR FUTURE

We fully endorse the mass transportation bill which was introduced this year by U.S. Senator HARRISON A. WILLIAMS, together with 18 of his Senate colleagues.

The subject of this vitally needed legislation, in the words of Senator WILLIAMS, "touches upon one of the most important nerve centers of our national, social, and economic life—the movement of people and goods in and around our urban and metropolitan areas."

Action is demanded in this session to keep alive dwindling transit facilities. Without assurance that commuter and goods transportation will continue, not only will this New York-New Jersey region face serious economic loss, but the Nation as a whole will suffer traffic strangulation and all the inconveniences flowing from want of means of adequate transit by bus or train.

To quote Gov. David Lawrence of Pennsylvania "Those of us who have public responsibility have a duty to be extra-sensitive to possible breakdown. We cannot let automobiles be built and sold without providing roads and parking spaces for them. We cannot let these same roads and parking spaces choke our urban areas. We cannot let our cities succumb to urban blight and crumble beneath the burden of overcrowding. We need a strong, firm, national program to get transportation in our cities moving again. We must have Federal legislation of the type now before you. We need the Williams urban mass transportation bill, and I urge that it be passed by Congress without delay."

It is noteworthy that Senator Williams sees the importance of enactment of his mass transportation bill to the many urban renewal programs throughout the country in the development of cities whose residents have opportunity of moving goods and commuting to their places of employment.

On this subject, the following observation is from a report of a series of discussions at a 3-week meeting of leading transportation experts sponsored last year by the National Academy of Sciences:

"The growth of metropolitan areas by irregular spreading of industries and homes from cities into the countryside—often at a rapid pace—makes the provision of adequate transportation for the newcomers as well as the older residents extremely difficult. On the other hand, the pattern of transportation facilities within the metropolitan area and its environs is itself a powerful level determining the form that urban expansion and change will take. Transportation then not only serves but helps to shape urban development."

The Williams bill has as its objective remedying the fast-worsening urban transportation crisis. It looks ahead. It recognizes that it is imperative to bring about an economic solution to a serious problem. It is must legislation and should receive every priority of action in Congress.

Federal Participation in the Encouragement of Performing and Visual Arts

EXTENSION OF REMARKS
OF

HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES

Thursday, April 20, 1961

Mr. JAVITS. Mr. President, the urgency of Federal participation in the encouragement of American culture is emphasized in the correspondence I have received from many parts of the country. Outside of the large metropolitan centers, a cultural desert often exists which is relieved only by a few small private cooperative and university groups. We are about the only major power whose Government makes no substantial effort to help the Nation's cultural treasure in the performing and visual arts.

I ask unanimous consent to print in the RECORD letters from the noted opera singer, Mimi Benzell; from Robert Ackart, member of the board of governors of the American Guild of Musical Artists; and from Delmar E. Solem, chairman, Department of Drama, University of Miami; also a report on Government aid for the theater in West Germany which appeared in the theater publication Back Stage, April 14.

There being no objection, the articles and letters were ordered to be printed in the RECORD, as follows:

[From Back Stage, Apr. 14, 1961]

FORTY MILLION DOLLARS GOVERNMENT SUBSIDY BUILDS 100 NEW THEATERS IN GERMANY

The theater is flourishing in West Germany, where municipalities annually contribute the equivalent of $40 million in subsidies to help maintain their theaters. There are now 200 theaters in 100 West German cities.

While Senator JAVITS is unable to push through a bill in Congress calling for a measly $5 million to encourage culture throughout the 50 States, West Germany, using some of the billions in American aid poured into the country during the past 15 years, has built over 100 new theaters in the last 10 years.

While the Government spends billions subsidizing various industries, from airlines to steamships (it cost the U.S. taxpayer $150 million a year to subsidize the latter) it still refuses to acknowledge that American culture is worthy of support.

West Germany, however, recognizes the value of live theater and has embarked on a huge building campaign. The theater has always occupied a special place in Germany. The human condition, wherever it finds meaningful expression on the stage, is ultimately seen by a vast German audience (20 million in 1959) of all income levels.

Civic pride and the public's support maintain theaters. They play to full houses every evening 10 months in the year. Many of them have permanent acting groups which frequently visit each other's base for guest performances. Each theater alternates nightly the 10 to 12 different plays produced during the year.

Almost anyone in Germany is within 50 miles of a stage with the choice of the world's best dramatic literature. Admission prices are 15 cents (standees) to $2.40. Even the small city audience can expect to see a repertory ranging from the Greek playwrights to Shakespeare, Goethe to Pirandello, Lope de Vega to Sartre, Samuel Beckett to Brecht, O'Neill and Arthur Miller.

ROLE OF THEATERS INTENDANT

The 130 city and state theaters (apart from 70-odd stages operated privately) are autonomous. Each is under the direction of a generalintendant hired by the city or state on a 5-year contract. As executive producer, he selects the plays and retains complete freedom of artistic direction. His staff includes designers, directors, conductor, composer, and musicians, costumers, singers, ballet dancers, lighting experts, a play-reader and adapter, stage crews and theater employees—all of whom are in civil service.

BERLIN THEATERS

Of the 27 theaters in Berlin before the war only 3 came through unscathed. In West Berlin today (population 2,300,000) 8 theaters are playing again and a new opera house will open shortly.

MUENSTER THEATER

The 960-seat Municipal Theater in Muenster, completed in 1956, serves an urban area of 150,000. A university town with some light industry, it was 60 percent destroyed in the war. The theater was built around a remaining wall of the ancient, bombed-out Roemberger Hof. U.S. architect C. E. Kidder-Smith describes the theater as "one of Europe's very finest and unquestionably the most imaginative. The capacious and handsome public circulation areas, ideal for social promenading, are ablaze with light in the evening, producing a lively atmosphere to all who pass by outside." The theater accommodates opera, ballet, concerts, and drama.

GELSENKIRCHEN THEATERS

Pictured on the front page is one of the best examples of the importance of theaters in Germany. In Gelsenkirchen, a coal and steel city of 400,000 in the Ruhr Valley, the city completed its new theater late in 1959. The city contributed the $5 million construction cost. One-fourth of the annual $1,400,000 budget is recovered at the box office. The rest—$1 million—is paid by the city, the equivalent of 2½ percent of the entire city budget.

The threater has 2 stages, a 1,050-seat auditorium for drama, opera, and concerts, and a 450-seat studio for plays demanding more intimate milieu. Sixteen thousand regular subscribers, largely members of civic groups and cultural societies, patronize both theaters during the 10½-month season. Each entertainment has 20 performances. There is rarely an empty seat. Prices average 75 cents for plays.

The architects (Ruhnau, Rave, Deilmann & Von Hausen) have incorporated sculpture and paintings of British, French, and German artists into interiors and exteriors of the theaters.

Gelsenkirchen Theater is planned as integral part of landscape. Set in heart of industrial city, it is core of what eventually will be expansive cultural promenade with open-air cafes in forum style. Architecturally, it is built in a cube 225 feet wide, 60 feet high and 240 feet in depth. In dark night lighting it gives airy diaphonous quality. A six-story annex in rear, houses administration, staff and artistic direction. A twin six-story addition houses costume shops, rehearsal rooms. Carpentry and machine shops are under stage. Large rehearsal stage for drama and ballet is on top floor.

Abstract concrete relief in front measuring 65 by 10 feet, is work of British sculptor Robert Adams. Architect Ruhnau sees it as lending solid base to building, at same time serving as counterweight to all-glass facade.

The Gelsenkirchen Theater seats 1,050 on three levels in amphitheater style. Architects sought here to unify stage, proscenium and audience areas into one whole, bringing audience and performer into close contact with one another. Mobile stage dollies insure extremely rapid scenery changes. Main stage is 60 by 75 feet with wings each 50 by 50.

Flexibility is key concept of stage in Gelsenkirchen's little theater. As conventional proscenium, or peep-show theater, actor faces audience. As arena theater, stage is pushed forward and audience surrounds actors. In third phase, or total-theater, entire orchestra seating area becomes stage, with audience looking on from balconies.

While America continues to talk about the shrinking theater and the "Fabulous Invalid," in Germany, the legitimate theater is thriving, experimenting, forging ahead.

MANHASSET, N.Y., *April 5, 1961.*

Senator JACOB K. JAVITS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR JAVITS: I wish to congratulate you once again on your unfailing support of a greater participation by the Federal Government in the performing arts. As a performing artist who is actively engaged in bringing music and other form of culture to the people throughout the country and the world, I know I speak for many when I say that we are hopeful that your plan to establish a U.S. Arts Foundation will meet with the success that it deserves.

I, for one, shall be most happy to lend my support in whatever manner I can.

Most sincerely,

MIMI BENZELL.

UNIVERSITY OF MIAMI,
Coral Gables, Fla., April 17, 1961.

The Honorable JACOB K. JAVITS,
U.S. Senate,
Washington, D.C.

DEAR SENATOR JAVITS: Thank you for sending me the copy of Senate bill 1250. After a cursory reading of the bill I want to express my satisfaction and the wholehearted endorsement for the U.S. Arts Foundation.

I am certain that this bill will mean a great deal to the welfare of the arts in the United States. I am also certain after having experienced a series of frustrations dealing with Latin American requests for visiting artists, that this bill will ultimately prove itself of international value.

My congratulations and my sincere hopes that S. 1250 be passed by the Senate and House and signed by the President.

If there is anything that I can do to assist you in this worthy enterprise feel free to call on me.

Sincerely yours,

DELMAR E. SOLEM,
Chairman, Department of Drama.

AMERICAN GUILD OF MUSICAL ARTISTS,
New York, N.Y., March 30, 1961.

Senator JACOB K. JAVITS,
Senate Office Building,
Washington, D.C.

DEAR SENATOR JAVITS: The direction being taken by the present administration in Washington is indeed heartening to those of us concerned with the position of the American artist and the place of the performing arts in American life.

As a member of the Board of Governors of AGMA, I would like to congratulate you on your support of various arts bills, and particularly on your own bill to establish a U.S. Arts Foundation (S. 936).

I would like here to express my personal gratitude for the steps you are taking toward the enrichment of American cultural life.

Respectfully yours,

ROBERT ACKART.

How To Catch Pneumonia

EXTENSION OF REMARKS
OF
HON. RALPH HARVEY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. HARVEY of Indiana. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wall Street Journal of April 19, 1961:

HOW TO CATCH PNEUMONIA

In a good many families about the country, the past winter is likely to go down as the year of the deceptive cold. The pattern has been sick abed for a couple of days, back to the office with the cheerful feeling that all is over—and then suddenly the relapse.

As we can testify, a warning from the doctor doesn't do much good. We'll all do what he orders when the cough is heavy and the temperature high, but it's just plain human nature that the minute the aches seem less acute we lose patience with sage advice. Hospitals are populated by people whose downfall was, to put it simply, "up too soon."

This is a human foible not limited to the winter season or the personal sniffles. In fact, it can be seen cropping up this spring among those who have been worriedly watching the pulse of our economic ailments abroad.

Last fall and through the winter this country suffered something very near a crisis in its gold outflow. Officials of the incoming administration, as well as the departing one, went about with haggard faces. The President-elect was worried enough to issue a strong statement about our determination to take care of the ailing dollar, and once in office to propose strong prescriptions to cure it.

But the visitor who these days goes wandering about the corridors of Washington finds a different mood. To be sure, everybody agrees we still have a problem with our balance of payments. Yet the air now is one of almost cheery unconcern. After all, hasn't the gold outflow stopped? Hasn't the speculative fever on the world money markets subsided? The good old dollar is sound as a nut. So now we can relax, return to our accustomed ways and not be so hasty with unpleasant tasting medicines.

Thus there is renewed talk about easing money rates again, there is less restraint than a few months ago in plans for foreign governmental spending, and so on. Chairman Heller of the Council of Economic Advisers, for example, has noted that the absence of a net outflow of gold in the past few weeks now gives us a "cushion"; and elsewhere there are officials who will tell you that "the problem" is just about resolved.

Well, perhaps so. It is certainly true that the dollar is less ailing than it was. The strong assurances against devaluation by President Kennedy, the expressed willingness of the Germans to help us out, the fact that some other currencies (notably the pound sterling) have had their own troubles, all these things have contributed to easing the dollar's immediate pains.

But at the risk of being a killjoy, we think it worth noting that so far only the symptoms have been alleviated. The basic difficulty we face with the dollar is our unfavorable balance of payments; we are simply pouring out of the country more money than we take in.

This is a longstanding situation. The recent crisis that everyone speaks of did not come out of the blue; it flared up because in addition to the chronic drain on the dollar we suffered a speculative fever brought on by the drain of short-term money seeking higher interest rates abroad and by the uneasiness over how the new administration would act.

It is this extra pressure that has been relieved, and that relief has made the immediate aches subside. We are now in the position where we can see recovery ahead for the dollar if we will just practice a little healthy fiscal living.

We only delude ourselves, however, if we think the basic ailment is yet cured, and that we can resume again the regime that laid the dollar low in the first place. The Government itself has got to curb its own huge outpourings of dollars abroad; it has got to avoid the temptations of deficit-financed inflation, of an easy money policy, here at home. It has got to continue to recognize in all its economic policies that the international restraints are still operative.

To forget that is a sure way to worse trouble. For as any doctor can tell you, the relapse from a relatively mild case of the ague can be a whopping case of pneumonia.

War, Peace, or Armistice

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Thursday, April 20, 1961

Mr. THURMOND. Mr. President, the February 1961 issue of the Sudeten Bulletin, a central European review published monthly by the Sudeten German Archive, in Munich, Germany, contains an article entitled "War, Peace, or Armistice," which should be of interest to the Congress. This article was written by Dr. Hans-Christoph Seebohm, German Federal Minister of Transportation and president of the Sudeten German Expellee Association, Bonn, Germany. I ask unanimous consent that the article be printed in the Appendix to the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WAR, PEACE, OR ARMISTICE

(By Dr. Hans-Christoph Seebohm)

Until well into the current century people were convinced that the political climate in which they were living was either war or peace, and that between the two—at best for a brief span—an armistice was possible which allowed time for negotiations for peace, i.e., a period of fluctuation with temporary occupation of certain areas and limitation of self-determination, all of which could at no time become permanent. For the end of each war meant, conjointly, that one of the participants was so severely smitten or even subjugated, that for the period of armistice, at least, and only for said period he was fully at the mercy of his opponent.

Seldom were negotiations for peace conducted while war was still in progress, as happened during the Thirty Years War or after the Russo-Japanese War, when the United States (1905) first successfully assumed its intercessory role among other nations of the world. As late as 1914 war was still solemnly declared. Since then wars have grown out of local conflicts so that their beginning can hardly be associated with a given date.

The Sino-Japanese War that touched off the Second World War in east Asia, began with the disputes over Manchuria many years before the battles of 1938 and 1939 in Europe. The military proceedings at the time of the Anschluss of Austria, before and during the annexation of the Sudetenland, during the establishment of the Protectorate, and with the Anschluss of Memelland, might just as well have unleashed World War II as the annexation of Danzig or Eastern Upper Silesia. The whole affair was the unraveling of a logical chain of events, at every link of which the outbreak of full-scale warfare had to be expected and feared. Finally, and without any conceivable need it exploded on the solution of the Danzig question, inconceivable because here an attempt was made by force, to attain a goal that could have been arrived at on the strength of sound legal claims, had there been but a measure of patience and restraint employed. Actually it triggered World War II which deprived the Czech people of its right of self-determination and forcibly imposed upon them a solution which they would have never chosen of their own free will. The same applies to Slovakia and the resulting territorial measures for Hungary, in the Balkans and the Baltic States: everywhere changes were dictated without regard for the international right of self-determination, creating situations by force instead of justice, even where large segments of the population were prepared to welcome these new conditions.

After World War I periods of armistice followed. These periods, due to the very lax attitude of the victorious powers, permitted in the areas of the conquered peoples, biased solutions of territorial problems motivated solely by force. An example is the founding of Czechoslovakia. The result was that subsequent peace treaties were actually unable to do more than recognize the situation created during the period of armistice. As a matter of fact the Paris peace treaties are, for that reason, not real treaties in the sense of those of Münster and Osnabrück in 1648 or the Peace of Rastatt in 1714, but primarily a crystallization of a situation, for the most part illegally created during the period of armistice. Even if they denied the human right of domicile in but limited areas, and even if, for individual border districts, they acknowledged the right of self-determination, by popular plebiscite, in vast regions of Europe they blacked out the right of self-determination by solutions based on force. In carrying out the treaties, the right of self-determination, promised in various plebiscites, Upper Silesia, for example, was once again perverted by force and replaced by the surrogate of the Geneva minority rights regulations. The fact that the Geneva minority rights provisions were constantly violated by coercion and thus made ineffectual, lay not only with political forces prone to solutions by violence but primarily in the fact, that within those measures the right of the individual to his homeland was inextricably bound up with the community right of the self-determination of peoples and ethnic groups, forming a ball of confusion incapable of being unraveled.

Hence the Paris treaties lack the attributes of genuine peace treaties but assume those of politically expanded, originally militarily conditioned armistice agreements. They could not make peace but only a status quo, i.e., finalize a situation, which purely coercive acts had established at the end of hostilities. They disregarded the right of self-determination just as it was disregarded in 1939, thus creating those imponderable but mighty impulses that led to a new explosion, because nothing had been settled justly, either

by the Paris treaties or by later decisions of the League of Nations or by the coercive solutions as manifested in the Polish treatment of Lithuania (Vilna) prior to 1938 and toward the free city of Danzig (Westerplatte) and above all in the Manchurian conflict.

WAR BUT NOT BY DECLARATION

Between the two World Wars, then, there was no real peace in the sense of the Treaty of Portsmouth (1906) between Japan and Russia. Thus in 1938–39 there was no old style declaration of war, of the kind that ended the peace in Europe in 1914. The declarations of 1939 made by the Western Powers to Germany did not start World War II but were simply the outcome of the war started against Poland, to the outbreak of which Russia's consent—given on August 23, 1939—decisively contributed and for which Germany paid with the surrender of the Baltic States and the right of self-determination of three peoples, the Estonians, Latvians and Lithuanians. Even America's entrance came after the attack on Pearl Harbor and without a declaration of war by the attacker, even as England's and France's entry after the attack on Poland.

It is no more than logical that this Second World War also ended by armistice. Whereas 40 years ago, however, there was still outward semblance of a peace treaty signed by both parties, and lasting on into the future, in 1945 the political finalization of the solutions forcibly created at the close of war and thereafter (e.g., Berlin) was effected by the biased treaty of Potsdam agreed on solely by the victorious powers. The Potsdam Agreement differs from the Paris treaties also by the fact that it not only denies the previously affirmed right of self-determination altogether, but tramples on the right to the homeland, a right grounded by international law in the treaties of Munster and Osnabruck in 1648, and sanctions expulsion from one's native soil.

Like St. Germain, Versailles, and Trianon, it accepted the status quo of settlement by coercion that took place during the period between the cessation of hostilities, over and beyond that, however, it made possible additional solutions by force, characterized by ruthless brutality, by an expansion of the forcibly attained status quo in east and central Europe.

It looks, then, as if it were our destiny, not to have to accept war and peace, but only a state of armistice as a condition of our political life. The 1959 Soviet draft of a so-called peace treaty contains nothing more than the desire to finalize the wrong done by and after the Potsdam Agreement, to retain as accepted the Soviet colonial realm in east and central Europe, created in part against the spirit of the Potsdam Agreement, and thereby to cement the status quo in central and east Europe so that any attempt to change it by negotiation can be branded as a form of aggression.

REAL SOVIET MOTIVES

The consequences of the Paris treaties in no way frighten the Soviets, for at the moment they feel quite secure, believing themselves capable of nipping in the bud any impulse of freedom and justice, not by recourse to an instrument like the Geneva League of Nations but with instruments of force that have been pushed to indescribable limits by means of technical developments. Whether they will always be able to do so, seems not too certain even in their own minds. For that reason they want a period in which to work out their power potential in order to conduct a fight on several fronts: in Europe, against China, and in the Arctic Sea. They also want to offer everything in the way of material aid to attract the underdeveloped countries in Asia and Africa and fully isolate the Anglo-Saxon bloc. Berlin, a symbol of freedom and justice which pricks their conscience and weakens their prestige in the eyes of the conquered peoples, is supposed, according to Soviet desires, to be absorbed by them before the other process begins. That is the only change in the status quo in their favor which they admitted before its finalization.

The West not only has to assume its moral responsibility toward Berlin in this struggle and seek a tolerable but certainly not lasting compromise for the Berliners. It should far rather remain aware that even the slightest weakening of its position in Europe will lower its prestige in the eyes of the underdeveloped countries, further buttress the Soviet position there, thus enabling a future defeat of the West in these decisive areas outside of Europe that are so important to us for the future.

The political forces of the West, still so fully influenced by the mental climate of the Paris treaties, are eagely grasping for a chance to assure further periods of armistice by acceptance of the unjust conditions in central and eastern Europe induced by and after Potsdam. They obviously are blind to coming dangers. They fail to recognize, too, that they are about to betray for a second time the right of self-determination of the peoples of central and east Europe, including the Germans, as the Germans did in 1939. Such a move can only cause them untold moral harm in their relationships with the underdeveloped countries.

Danny Kaye's Remarks Before the Annual Dinner Meeting of the USO National Council, Mayflower Hotel, Washington, D.C., March 14, 1961

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. SCHWENGEL. Mr. Speaker, last month I had the privilege of attending the annual dinner of the National USO Council here in Washington, at which the internationally famous comedian and motion picture star, Danny Kaye, was the principal speaker.

Just this week I received a copy of his remarks, and since I remember them so vividly, I wanted to bring them to the attention of the Members.

Under leave to extend my remarks, I ask that Danny Kaye's speech at the USO dinner appear in the Appendix of the RECORD.

DANNY KAYE'S REMARKS BEFORE THE ANNUAL DINNER MEETING OF THE USO NATIONAL COUNCIL, MAYFLOWER HOTEL, WASHINGTON, D.C., MARCH 14, 1961

Ladies and gentlemen, lest you labor under the misapprehension that I am a man of extraordinary courage because I performed for the troops under a shelter of protecting aircraft, let me hasten to assure you that I would much rather face 18,000 soldiers—hostile or friendly—than be standing up here to talk for even 5 minutes.

I must say I am feeling an enormous range of emotions here this evening. I am torn. I am both delighted to be here, and at the same time I suffer from an enormous amount of discouragement. Because suddenly I have come to realize that all that glittered in the dim past, all the envy of youth and the resilience of youth, has suddenly disappeared.

There I was in the lobby today and a gentleman came over to me—he looked about 67—and he said, "Hi."

I said hello and he said, "We were together in Korea." He said, "I remember you were over there and you were entertaining the 7th Marine Division of the Marine Corps, and there were all these fellows on a hill, and the crowds, and boy I sure am glad to see you again. Well, if you'll excuse me now my ambulance is outside and I've gotta go."

Another man came by with a hearing aid and he said, "Weren't you the fellow who came to Japan in 1945?" I said yes, and suddenly the naked, bald truth assailed me with violent force.

Ladies and gentlemen, we are all a "hell-uva" lot older!

Well, maybe you're older, not me.

I am quite loath to assume the role of spokesman for the entertainment industry here tonight. It's usually a job that requires considerably more eloquence than I can represent. But I must say that in the last 20 years a tremendous contribution by people from all walks of life has been made to America in this very strange world of ours, and particularly in those areas of interest which your organization represents.

Some of us receive the kudos and the blessings because we have seen fit to travel overseas to afford some entertainment for our Armed Forces. I would merely like to tell you that the situation should be reversed. We receive acclaim and good wishes and heartfelt sympathy because we leave our families and our homes to travel in God-forsaken places to bring moments of pleasure to the Armed Forces overseas. I can only tell you that what people like myself have given has been returned a thousandfold. I can only tell you that the sympathy which we received should go to the thousands upon thousands of people who, although far less known than some of the stars that you have, have devoted their lives and their energies and their emotions to the USO cause. They are the ones who have shown much more dedication than some of us who get a great deal in return.

Twenty years have gone by since USO came into being, and memories become rosy in 20 years, rather faulty. The things we like to think about that have afforded us so much pleasure and joy and a feeling of great contribution have dimmed somewhat.

The USO used to be a great sign of people all banded together to make life easier for the boys overseas. It was a beacon—a light that reached all of us, you in your way, me in mine, thousands upon thousands of other people in theirs.

Twenty years have gone by and we run a terrible risk. We run the terrible risk in this so-called peace we are living in now of overlooking the boy who has been torn from his family and of rationalizing that "Isn't it a wonderful thing for a young man to be sent overseas at the age of 18 or 19?

"Isn't it great for him to go over now when he can learn and see the whole world unfold before him? Isn't it wonderful that nobody is shooting at him now? If I had a boy, by George, I would want him to go overseas because that's the place where a boy will really develop."

All true.

But how many of you are mothers and fathers who have taken your boy to the train—not because he's going overseas, but because he is going away to college? He is going perhaps to some northern corner of your State or the southern corner of your State, but there is the usual tearful farewell.

"My boy, my boy. Only yesterday I cradled him in my arms. Now he's a grown man and he's leaving me."

He's only going to be gone for a week, you know; he's coming home for the weekend.

With all the eagerness of a young man who might be leaving for an oversea duty station, your boy climbs on the train and heads for a strange new school only 40 or so miles from home. But suddenly, even that brief leavetaking assumes a heartrending kind of loneliness.

Now magnify that feeling a hundred times over and imagine a boy from Kansas or Georgia or Wisconsin who is sent to Korea or Japan or the Philippines. Not 40 miles away, but thousands of miles away. And suddenly, despite the so-called advantages of oversea service in developing mature adults, you realize that he is still being deprived of his family, that is, still saying goodbye to his home. Under much better circumstances than if he had to go out and engage in a hot war, true, but the same emotional insecurities exist. He is leaving his home, and he won't be coming back for a visit next weekend.

Over a period of 20 years, the USO has done an incredible job of remembering. Remembering that these boys have to be looked after, thought about, and taken care of. Not from the standpoint of any great physical need—the military takes care of their bodies very well—but rather from the point of view that it's vitally important that their links with home are always strong and secure.

Leo Durocher and I traveled together in a number of areas overseas. Boys there were delighted simply to see somebody they could discuss baseball with. They were delighted to see somebody they had seen on their movie screens back home. They were delighted to be able to sit down and talk about the weather in Texas, or speculate about the Dodgers and the fact they were having a tough year.

It could have been me who went, it could have been you, it could have been anybody—so long as that person represented the very vital link with home that is such an important factor in any boy's maturation.

Twenty years is a long time and I implore all of you now to remember that in time of crisis spirits run high of their own accord and sacrifices are made without stopping to think about oneself. But the moment the hostilities cease, in spite of the fact that, in order to continue to defend our country boys must be stationed throughout the world, there is suddenly a remarkable lack of that patriotic fire which is so evident in wartime.

And this is one thing you have to do in order to demonstrate what USO has done, is doing, will do—ever, ever continuing to remember. You have to keep on rekindling the fire.

Twenty years is a long time to remember, and I am justifiably proud of members of my profession who have stood by every single day, every single month, every single year. It's true that you continue to hear of Mr. Hope and Mr. Benny and Mr. Skelton—all the people whose names are familiar to you. But I would like you to remember also that there are thousands upon thousands of people who are not well known, and who have continued this work for 20 years.

I was talking to somebody at a press conference this afternoon and a newspaperwoman said to me, "Well, how do we go about getting people to remember?"

And I said you and others like you can do our country a great service through your newspapers and magazines and radio broadcasts by constantly reminding people that the USO is still functioning just as powerfully as it ever did before—that there are people ever ready, standing by to go and do their bit.

And I would like to say to you, ladies and gentlemen, that you have earned a great deal of respect and admiration because it is you who have kept the spirit of USO alive. I take a deep bow to you, because without the organizational spirit of people like you, who are really interested, we in the entertainment industry cannot properly do our part. And I say to you now—all you have to do is to designate where and how you need us, and I pledge to you—for my profession—we will respond to any command with a salute.

USO is a remarkable organization to keep alive.

So, why don't we grow old together? Continue this work together until we can't any more.

Wouldn't that be fun.

United States-China Policy

EXTENSION OF REMARKS

OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following speech was delivered before the Chinese Student Service Club of Washington, D.C. a few weeks ago by Dr. Stanley K. Hornbeck.

Dr. Hornbeck speaks as one having authority, especially on the question of the offshore islands of Quemoy and Matsu. As this matter is extremely timely at the present juncture in world affairs I am calling it to the attention of the Members of House.

UNITED STATES-CHINA POLICY

(Speech by Hon. Stanley K. Hornbeck, U.S. top specialist and veteran diplomat on Far Eastern Affairs, before the Chinese Student Service Club of Greater Washington, Washington, D.C.)

Mr. President, ladies and gentlemen, I gave a talk in Cincinnati a few days ago. I covered a lot of ground and I talked on no less than 20 subjects. I am going to talk today about only three subjects and to focus on one. I am going to ask of you, when I finish, to ask questions.

I have been thinking about the fundamentals, when it comes to policy, particularly when it comes to foreign policy. What is the framework in which, the background against which and the foundation on which, the people and the Government of the United States make foreign policy? I shall say some things rather categorically, because there isn't time to elaborate.

I've come to the conclusion that to understand and usefully evaluate U.S. policy in regard to any given foreign countries or to any particular situations abroad, one should first take into account certain fundamentals in the political organization of the United States and the political feelings, believings and reasonings of most of our people, and then the overall and abiding problems with which this country has been and is confronted in the formulation and implementation of its overall foreign policy.

The United States is essentially and comparatively speaking a democracy. The people of this country have believed in and have tried to have freedom, liberty, self-determination and security. Our overall foreign policy has been and is a policy of defense. Our attitude was well expressed in the Monroe Doctrine. There we gave a warning against aggression and we declared that we ourselves would not engage in aggression. We addressed that to European powers; but it has applied in reference to the whole world. The concept was "live and let live." During the decade since 1914, we have been forced to enlarge upon the principle of live and let live and our efforts now include measures to help live; but our posture and our policy remains defensive. In terms of safeguarding our own security we realize that now to make ourselves secure, we must help toward making other peoples secure. So, objecting to procedures of aggression and now menace by aggressors, we support resistance to perpetrators of aggression. However, our thought is still "live and let live."

Lincoln spoke of freedom and of its survival. Wilson spoke of democracy and of making the world safe for it. Now in our overall policy, our first and greatest concern is that freedom and democracy not be destroyed. The essence of the conflict between the United States and the Communist world is that the Communists intend to conquer and toward that end, they are making war; we intend that we shall not be conquered and, along with us that other people shall not be conquered. The Communists are on the offensive and we are on the defensive.

I am constantly surprised at finding people who should know better who fail to discern the pitfalls of the current Soviet campaign of "coexistence," "competitive coexistence," and in particular "peaceful coexistence." Coexistence of course we have. Competitive coexistence we have. But peaceful coexistence we cannot have as long as Moscow and Peking persevere in their policy of conquering and we in ours of opposition and resistance. Moscow's talk of peaceful coexistence is a political opium. The purpose is to tranquilize us while they proceed with their plan and effort to conquer. The Communists need time. They need accumulation of weapons, including economic; and Chairman Khrushchev is playing for time. Peking is impatient. Both Mao and Khrushchev may be having troubles at home. In fact, we know they have some troubles, each of them, at home. But the Peking contention is more honest than the Moscow profession. Both Khrushchev and Mao know that to make the world safe for themselves and their systems, they must persevere in a common effort to enlarge the Communist domain. In other words, they have to go on trying to conquer. They know that communism has achieved its conquest so far, and that it exists, by procedures of aggression, and that for it and them to survive, they must work toward universal prevalence of their system. Both of them intend to bury their opponents. Their difference is that Mr. K. is affirming that big guns, big threats and cold war will suffice, whereas Mao contends these are not and will not be enough and there will have to be a hot war. Neither of them believes in peaceful coexistence. Their ideas, and in fact their definitions, of peace and peacefulness are different from our definitions. When they say "peace," they do not mean what we connote by that term, and in their concept coexistence cannot be permanent. For, when you bury an intended victim, you no longer coexist with him.

The Communists, since 1917, have buried politically one-third of the people of the world. The greatest of their victories is that which they have achieved in the conquest of the Chinese mainland. There, they have buried politically 600 million Chinese. There, they have declared most resoundingly their hostility to us and their intention to do us in. There, more than anywhere else except in Berlin, they show their purpose and ours to be in obvious conflict.

For 10 years now, there have been conflicts between Communist China and the

United States over various issues—among which, diplomatic recognition, seating in the United Nations, Korea, Formosa and the offshore islands. That one of those to which attention was drawn, unfortunately, in the course of our recent presidential campaign is that of Quemoy and Matsu, and the question of our interest and our policy regarding defense of those islands keeps bobbing up.

In that context we come upon the error in believing or affirming, or both, that the offshore islands are indefensible and worthless and that support by the United States of the Nationalist defense of those islands is of no use to us and is a disservice to the course of peace.

Those islands, the Quemoy and Matsu, are indeed small islands territorially and they have small populations. But they lie across the entrances to the harbor of Amoy and the harbor of Foochow. Amoy and Foochow are among the most important strategically and economically of China's ports. And they are the nearest to Formosa.

Whatever else, all of these offshore islands are part of the actual domain—legal, political and physical—of the National Government. Historically, they have been a part of China. The National Government's jurisdiction over them was gained by inheritance and has been continuous. That Government has not taken them away from the Communist domain on the mainland. It simply has held and defended them as part of what remains of its own erstwhile nationwide domain.

All of the Nationalist-held islands need to be considered in terms not of geography (place where) or of arithmetic (that is, size, number of population and economic values) but far more to the point, of their place in the struggle in China and in the global struggle in which freemen and men wishing to be free, are, along with us, on the defensive.

In all cases of testimony, the time when and the circumstances under which an affirmation has been or is made need to be taken into account. Capability is a matter of will plus military commitment. Value is a matter of tangibles plus intangibles. In the eyes of both of the Nationalists and the Communists, Quemoy and Matsu do have substantial values. In major part, possession of them weighs heavily in the calculations of the Nationalists for defending Formosa and those of the Communists for an attack on Formosa.

The purpose of the Communists to take Formosa can no longer be doubted, and in that context, the offshore islands serve, in the hands of the Nationalists, as an obstacle to the launching of an attack. Capture of them or transfer of them to the Communists would remove that obstacle, would enlarge the capabilities of their Amoy and Foochow bases and would serve for them as a staging point or forward bases for the attack. To the Nationalists, the loss of Quemoy and Matsu, whether by force of arms or by diplomatic pressure would be a terrific blow. In combination, it would bring the Communists nearer physically to Formosa and, far more important, it would be destructive to the morale of the defending armed forces on Formosa and the supporters overseas and around the world of the Nationalist cause. To the Communists, acquisition of Quemoy and Matsu would be highly encouraging. It would be helpful to them in connection with consolidating their position among the people who now live on the mainland and it would greatly facilitate carrying out their plans for conquest of Formosa and points further east, north, south, and west.

The offshore islands are thus important tangibly in terms of military strategy and they are very important intangibly in terms of psychological warfare.

By 1954, American policymaking opinion had arrived at a conclusion that support by the United States of China's National Government in the defense of Formosa was appropriate. This based on calculation of our own interest in the western Pacific, the idea being that we could not afford to let Formosa fall into the hands of the Communists. Prompted in part by a renewed assault by the Communist regime on the offshore islands, the U.S. Government negotiated in 1954 and concluded in early 1955, a treaty with the National Government, a mutual defense treaty, in which the United States became formally committed to support of the Nationalists in defense expressly of Formosa and the Pescadores. Then, in connection with this, the Congress expressly authorized the President in the event of an attack on the offshore islands and that a conclusion on his part the attack was preliminary to an attack on Formosa, to include support of the Nationalists in defense of the offshore islands.

When, in 1958, the Communists subjected the offshore islands to heavy bombardment, the United States gave the Nationalists defense substantial support. The Communists did not see fit to attempt an assault or make war on the United States. Since then the Communists have continued their bombarding of the islands and their loud proclaiming of their intention to take Formosa, and the Nationalists and the United States have continued their cooperation in measures for the strengthening of the defense establishments both on Formosa and on the offshore islands.

Let it not be the thought or be said that the support of defense of Formosa and the support of defense of Matsu are separate problems, or that they differ greatly as regards risk of war by the Communists on the United States. Let it rather be realized that the issue between the Communist China and the United States is more than a local issue, is in broad dimension that of Communist expansion by procedures of conquest and subjugation.

Fundamentally, we believe in the right of nations to self-determination and the right of law-abiding man and nations to freedom and security. Throughout our history, the people of the United States have been opposed in principles to policies and practices which have involved in effect denials of those rights and indulgence in procedures of aggression. Generally speaking, we have been opposed to imperialism because its practices have involved such denials and such results. In the Far East, we have opposed practices of aggression when directed against China, when directed against Japan, when manifested by relations between Japan and China and when manifested in Korea and in Indochina. In the World Wars and in the operations in Korea, our participation came of German, of Japanese, and of Russian imperialism and our opposition thereto.

Now, war between the United States and Communist China, if it were to come, would come not because of support by us of China's Nationalists' defense of Quemoy and Matsu or of Formosa, but because of, on the one hand, Communist perseverance in its policy and programs of expansion by procedures of aggression and, on the other hand, our perseverance and our opposition to such procedures. It would come perhaps in the guise of a local conflict but because of conflicting major purposes in a global struggle. The choice, then, for the United States, in regard to the defense of the offshore islands is not between a course involving risk of a Communist attack on us and a course not involving such risk. Risk of such attack is actual. We already have it.

None of us without warrant can predict that the Communist Chinese rulers will or will not sooner or later attack the United States. But all observers and discussants should make note of the fact that thus far, in their course of conquest, communism's strategists have chosen not to attack at points where there are both substantial defensive strength and obviously firm purpose to resist. Communists attack at points of weakness, not at points of strength.

What may be their next move can only be conjectured and what the United States may do if and when confronted with a new development can be surmised only in the light of what has been thought, said and done, first under the Truman administration and since then under the Eisenhower administration. It was President Truman who first declared, "I believe that it must be the policy of the United States to support free people who are resisting attempted subjugation by armed minorities or outside pressure." It was President Truman, in a Democratic administration, who 10 years ago placed the 7th Fleet in the Strait of Formosa.

They who think that there should be or will be a sudden change in the attitude and the policy that have developed as those of the United States in relation to the problem of keeping Formosa out of Communist hands may well be asked to consider the advice of Robert Frost: "Do not take down a fence without first knowing why it was put up."

I thank you.

The Occasion of the 60th Anniversary of the Washington County Free Library

EXTENSION OF REMARKS

OF

HON. CHARLES McC. MATHIAS, JR.

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. MATHIAS. Mr. Speaker, the free public library is a uniquely American institution. I say this not only because it was originated in America by Benjamin Franklin, but because of its entirely voluntary character. We may go to a library or we may stay home. When we go, we may browse until we find some book that fills our need for enlightenment or entertainment.

In this second half of the 20th century we are often preoccupied by that portion of organized knowledge which we call science. When we are daily confronted by either the military, diplomatic or propaganda effect of the scientific success of a powerful competitor, we naturally concentrate much of our intellectual effort on science. Aside from any competitive aspect, we know that we must excel in both pure and applied science if we are to attain the goals that we have set for ourselves.

The free public libraries of America can, however, fill a peculiarly valuable function in this highly charged atmosphere. They can, of course, be a tool for the continuing education of those who dedicate themselves to science.

But equally important, the free public library can provide a balance in our intellectual life. The people of America have access here to all the wealth and mellow splendor of the humanities. We

read history, biography, geography, the arts and the languages of the globe. And these are the areas of knowledge that are necessary to the wisdom and maturity to exploit and enjoy the victories of science.

The Washington County Free Library merits the praise that is being conferred upon it tonight. It has played and will continue to play a role in the community which is more significant than might be recognized by the casual observer.

For all that the Washington County Free Library offered the people that it serves, I wish it well upon the occasion of commencing its 70th year of service.

Let Us Not Fear Obstacles

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PHILBIN. Mr. Speaker, I ask unanimous consent to revise and extend my remarks and include therein some recent excerpts from Andre Maurois which contain an interesting and realistic philosophy quite pertinent to some phases of contemporary American life.

Beset as we are these days by problems of all kinds, it is well for us to recognize that it is through work, faith, and hope that we will be able to solve the great problems of the present and the future, and we must never take a pessimistic attitude toward them, nor should we lack faith in our ability to do everything possible that has to be done to safeguard our precious liberties.

The article follows:

ANDRE MAUROIS SAYS: THERE IS NO EARTHLY PARADISE

There are people who naively believe they would be happier if they had lived in a Garden of Eden, free from all trouble. What an illusion. Trouble and struggle are an essential part of life. You could no more live without trouble of some kind than you could live without food.

If you bring up an animal in an asceptic atmosphere, you make it susceptible to all diseases. Should it be later sent into the wide world around, it would be unable to defend himself. To live is to fight. Who forgets that soon perishes. Laboratory rats can no more live outside the laboratory. A tame lion would die of starvation.

The same is true of men. Those who were brought up the hard way are the successful ones in later life. They develop a resistance to hardship of all sorts and a thick skin that will protect them.

A child who has been accustomed to think that everything will be done for him by indulgent parents and that pocket money is one of the rights of man, will become soft as butter. The day he will have to earn his life in the jungle of a large town, he will lack toughness and courage.

Alexander Fleming, the great scientist, inventor of penicillin, was a farmer's son, born in Scotland, who as a child used to walk every morning four miles to school under rain and snow. He used to say in later life that those early years had given him health and tenacity. Comfort softens men; strife strengthens them.

That does not mean children should be treated harshly; it means they should not be taught life is the Garden of Eden because that is not true. Tomorrow as yesterday, in spite of automation, nobody will succeed without work. And so much the better. For if, by some incredible miracle, the lives of men suddenly were easy and leisurely, then boredom would become unbearable and mental diseases would creep in from all sides.

Of course, there is a limit to the difficulties man can put up with, but a reasonable dose of worries does no harm to anyone. On the contrary. Let us not complain if we have a boss hard to please, an exacting husband or wife. Small quarrels, if not too frequent, are beneficial. They wake us up and compel us to reconsider the situation. To mount a fiery horse is more amusing than to drive a hack.

So let us not fear obstacles. Let us face them and jump them gaily. For human life is not the Garden of Eden; nor is it the valley of despondency; it is the sanctuary of work.

Resolution Honoring Kyle Palmer

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. LIPSCOMB. Mr. Speaker, the California State Assembly on April 14 paid a richly deserved tribute to Mr. Kyle Palmer, who retired several months ago as political editor of the Los Angeles Times.

The Assembly honored Mr. Palmer through adopting by unanimous vote a resolution citing him as "deserving the highest commendation and congratulations for his truly significant contributions to public affairs." The measure had 68 coauthors from both political parties.

Kyle Palmer has won respect and admiration not only in Los Angeles and the State of California but throughout the Nation for his many years of conscientious public service. I heartily concur in the action taken by the State Assembly.

Under leave to extend my remarks, I submit the resolution for inclusion in the RECORD:

Whereas, after many years as a correspondent and political writer with and since 1939 as political editor of the Los Angeles Times, Kyle Dulaney Palmer has retired from this active career; and

Whereas he has played a highly significant role in helping to mold public opinion through his writing and thus contributing to the policies of Government; and

Whereas, while a person who genuinely liked politics, Kyle Palmer has been on numerous occasions a no-holds-barred critic of the policies and performances of both major political parties and their leaders; and

Whereas his talents have been utilized for varying periods of time in such capacities as a public-relations adviser to the Motion Picture Producers' Association, as a war correspondent in World War II, and as a special escort for Japan's Crown Prince Akihito; and

Whereas Kyle Palmer's national stature as an influence and expert on the political scene is evidenced by his many articles appearing in nationally circulated magazines and as an editorial consultant for newspapers other than the Times: Now, therefore, be it

Resolved by the Assembly of the State of California, That Kyle Dulaney Palmer is deserving the highest commendation and congratulations for his truly significant contributions to public affairs, and it is deemed most fitting that such recognition should come to such a man from the Assembly of the State of California, whose activities have long been one of the major sources of Kyle Palmer's interest.

Quiet Disciple of Principle

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. ABBITT. Mr. Speaker, Young Americans for Freedom, a national nonpartisan conservative youth organization, was founded in September of 1960. Since then it has quickly expanded and now represents more than 21,000 students and young people in 250 college and other chapters.

One of the founders of Young Americans for Freedom, who also serves on the board of directors, is George W. Gaines, 22, of New Iberia, La. George has served as a page in the 85th Congress and graduated from the Capitol Page School. Since then he has been active in politics and has studied at Tulane University.

In the April edition of New Guard, the official publication of Young Americans for Freedom, George has written an article concerning my colleague from Louisiana, Hon. HAROLD B. MCSWEEN. I would like to call this to the attention of the Members of the House.

The article follows:

QUIET DISCIPLE OF PRINCIPLE

(By George Gaines)

To farm-State Representatives the bill was most attractive. It breezed through Congress according to schedule: 60–27 in the Senate, 254–131 in the House. Ike promptly vetoed it, exercising that right for the first time in the Democratic 86th Congress.

With the help of 6 farm-bloc-minded Republicans, the Senate overrode the veto 64–29 with 2 votes to spare. By the time the burning issue reached the floor of the House, the pressure was enough to crack the House Chamber walls. HAROLD MCSWEEN, a member of the Agriculture Committee and a Congressman from a predominantly rural district, felt that pressure as much as, if not more than, anyone else.

As the House vote was tallied it became apparent it was going to be a real cliffhanger. At the end, the two-thirds needed to override the veto was short by 4 votes, 146–280. Among four Democrats who voted to sustain President Eisenhower's veto was freshman MCSWEEN.

"No," admitted the Louisiana legislator, "I didn't know how close it was going to be. And I had no idea that I would receive as much publicity as I did on the basis of that one vote. I certainly didn't vote 'Nay' to make the front pages. I just voted that way because the REA had been doing a good job under the present setup and I didn't see any reason why its administration should be changed."

McSWEEN attended Louisiana State University and received a LL.B. from that same university in 1950. Always interested in politics, he first ran for State office in 1956 for a post on the Louisiana State Board of Election. His opponent: Earl Long's sister. He won.

"I think I'm making progress," the young Democrat mused. "I'm picking up support as I go along, but frankly I don't know whether the trend of civilization is sympathetic to free government."

The Congressman, however, leaves little doubt where he stands. He has declared his intention to oppose Federal aid to education, the use of social security funds for aid to the aged, and the common situs picketing bill. Last year he publicly supported the Connally reservation.

His attention was called to a recent editorial in the New Orleans Times-Picayune which stated: "The real hope for maintaining conservative principles in the Nation lies mainly in congressional and State legislative contests and not necessarily in who fills the executive department."

"Yes," McSWEEN replied, "I agree with that generally. But the whole problem would be so much easier if conservatives would learn how to translate their theories into political power. Too much energy is wasted on unrealistic causes—like abolishing the U.N., or fluoridation, or impeaching Earl Warren. Too many conservatives don't want to talk about the minimum wage or social security.

"As for the 'coalition'," remarked the young Democrat, "I don't worry about it. The 'conservative coalition' in Congress reflects the people and nobody ever has to apologize for representing the people."

Intelligent, educated, purposeful, HAROLD B. McSWEEN goes quitely about his business of building support for his political philosophy. He is young and unperturbed about the possibility of defeat. There are many like him in the U.S. House of Representatives.

What's Wrong With Our Critics?

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. AVERY. Mr. Speaker, since the quiz show scandal of 1958 there has been a clamor on the part of some Members of Congress and spokesmen of some special interest groups to impose controls and regulations over radio and television programing. As a former member of the Interstate and Foreign Commerce Committee I have conscientiously studied all proposals and proported justification for such control. The reasoning behind such proposals is that the airwaves are a part of the public domain and since the use of the airwaves can be obtained only by consent from the Federal Government, it logically follows that the program broadcast over these same airwaves are subject to regulation.

Every knowledgeable person concedes that the broad guidelines set out in the Federal Communications Commission Act of 1934 are in the public interest. Namely, that obscene language should not be broadcast, lotteries or games of chance not permitted, and that if broadcast facilities or time are made available to a political candidate the same consideration should also be made available to his opponent. Beyond this basic framework, the scheduling of daily and weekly programs has been historically left to the licensee and I have felt very strongly that the responsibility for this programing should remain with the licensee and not be controlled directly or indirectly by any Federal agency. This philosophy seemed to be generally accepted until recently. Since then there has been an increasing tendency on the part of the Federal Communications Commission to intervene into radio and television programing. I do not believe this intervention by the Federal Communications Commission is a result of pressure or influence from the viewing public. Rather, I believe it is a result of pressure from special interest groups and from some influence by a few Members of Congress both in the House and the Senate.

With the New Frontier came an increasing influence toward greater Federal control in every field of jurisdiction of the Federal Government. Nearly every proposal that has come to Capitol Hill from President Kennedy has reflected his philosophy that there should be increasing control by the Federal Government in virtually every field of our economy as well as public welfare. This philosophy has been further evidenced in this instance through statements made by the new Chairman of the Federal Communications, the Honorable Newton N. Minow. He frankly states, and I admire him for his frankness, that it is his belief that the Federal Communications Commission should become increasingly concerned with programing for broadcasts.

I would like to call to the attention of the Members of the House an article by Max Wylie which appeared in a recent issue of Television Age. The introduction of Mr. Wylie that follows was also taken from the same publication. I hope every Member who is concerned over the control of programing for broadcasts will read the comment by Mr. Wylie. Although I am not in complete agreement with every position and statement contained in the article, I think he persuasively points out the absurdity of attempting to define what is in good taste, what is in the public interest, and what objectives should be established by any agency, committee or administrator attempting such regulation:

WHAT'S WRONG WITH OUR CRITICS?

(By Max Wylie)

(Mr. Wylie, novelist, playwright, scriptwriter, teacher, and lecturer, is perhaps best known in the television business for his book, "Clear Channels," which was, in his words, "a deliberate effort to answer all the misinformed criticism about television that has been circulated." A supervisor of TV programs, New York, for Lennen & Newell, Inc., he continues to feel that TV critics, "obliged to criticize stuff that wasn't intended to entertain them, miss the whole point: people who are looking at 'Gunslinger' never even heard of John Crosby." On these pages Television Age publishes excerpts from a rather lengthy lecture Mr. Wylie made on this very point at Pasadena City College early this year. The author is in a position to know the rights and wrongs of TV and of TV criticism. With CBS for many years, he was a writer, producer, script director and executive editor. A cofounder of the Columbia Workshop, Mr. Wylie has been associated with such programs as "Wide Wide World" and "Omnibus." Mr. Wylie began his career teaching the history of the English novel at India's Punjab University. After his first novel was published he moved to the writing staff of Time magazine and then to CBS. A new novel, "Never the Twain," based on his experiences in India, will be published next month.)

For educated people, Americans in the mass are quite uninformed.

If you were presented, for example, with an outline map that had these countries appearing on it—Austria, Bulgaria, England, France, Poland, Roumania, Spain, and Yugoslavia—could you put your finger correctly on each one? If you could, you're a very special person. The average is three out of eight. College graduates get only four out of eight. Twenty-three percent of us cannot get one single country right in an outline map. This is bad. But what is worse, for some years now our chief ally in the cold war with Russia has been, as you know, England. One American in every three does not know where England is and cannot point to where it is on an outline map.

This survey was made by the editor-in-chief of the Des Moines Register and Tribune.

I have some other revealing and depressing statistics before we get into the good news. What and how much do we read? We number 105 million adults, two-thirds of us have attended high school or college. In England those who have had formal schooling after the age of 15 are less than three percent. Now, if you rang a doorbell and asked an American if he were reading a book, any book at all, 21 percent of the Americans would say yes. If you did the same in England, 35 percent would be reading a book. Vance Packard, who doesn't seem to like anything that's going on, has reported that 30 percent can't remember reading any book ever.

Just in passing, I'm going to list the names of four books that we all read, books that we grew up on: "Heidi," "Black Beauty," "The Scarlet Pimpernel," "Swiss Family Robinson." No one can name the authors of any of those books.

Only 14 percent of our adult population can identify the following quote: "The world must be made safe for democracy." But 61 percent can remember who said, "Come up and see me sometime."

EVEN WORSE NEWS

I have worse news than this. Sixty-four percent of American adults do not know what Marconi invented; 75 percent cannot tell you what country the Parthenon is in. The above findings have recently been released by the Institute of Public Opinion, Princeton, N.J.

As we go on, it will be more and more apparent that television does not address itself to an audience that has seen, heard, and cherished all that is permanent and beautiful, or significant.

At the same time, to keep the discussion fair, are there not serious faults within the structure of the industry? And if there are, what are they and what are the remedies, if there are such?

I believe there are some faults. I have been an official of a network. I'm employed by an advertising agency. I don't feel that anyone is looking over my shoulder as I write this; I don't have any sense of editorial abridgement. I think that the following evils of television exist and are important. And that they should be acknowledged.

1. I believe top executives should see more of the finished product.

2. I believe top executives should read more of the finished product.

3. I believe that there are too many packagers who don't create anything.

4. I believe that lawyers who believe they are producers are an evil.

5. I believe that there is a problem of the independent producer, making good money but with a poor product, with no way to force him to improve it and himself unwilling to try.

6. Networks carry too much that they cannot sufficiently control or modify in terms of quality.

7. There is no effective machinery to stop poor stories at the source.

8. Advertising agencies can reject material only on grounds of taste or policy. They can never reject material because of its poverty of inspiration.

9. The subordinate position of the editor is calamitous. The fact that a script is a dreadful bore cannot keep it off the air if some producer wants it to go on. Sponsors, from time to time, find themselves paying heavily for entertainment of which they strongly disapproved.

The misunderstanding and mishandling of writers and writing—the average television executive's inability to understand writing, the basic materials upon which his whole empire stands—this, to me, is the most serious weakness in television today and the biggest waste.

In the same season when Fred Coe gave us the unforgettable excitement of "A Plot to Kill Stalin," and J. P. Miller's great story on alcoholism, "Days of Wine and Roses"; in the same season when Herb Brodkin gave us "In Lonely Expectation" and the unforgettable "Child of Our Time," and when John Houseman gave us Henry James' "Wings of the Dove," and Howard Brown's exciting "Seven Against the Wall," it's enough to make a sensitive man weep to think that for a lack of editorial control these "Playhouse 90" beauties and those impassioned human experiences are no more.

At the same time, you can't ram culture at people. You can't change anybody's background. Beauty can never be forced. It must be wooed like a woman. Yet critics assume that television can create a cultural epidemic that would, in fact, turn every American into a college graduate, poetry lover of art-gallery habitué overnight. Critics say that television should do this. Here is my answer:

RIGHT FOR RIGHT NOW

What television is doing right now is about right for right now. Television is changing all the tme. That's because we are changing all the time. Television will always be (as I feel radio was before it): an honest projection of what America is like, is interested in, is doing; what America wants to hear about, or object to, or support.

Here is an interesting illumination of American culture for those who insist that television is downgrading America's taste:

In the 66 years from 1895 to now, the top 15 bestsellers included 3 inspirational books, 2 cookbooks, 1 book on baby care, and 9 novels. The baby book, of course, is the one that you know, "Dr. Spock." You're familiar with two of the inspirational books. Dale Carnegie's "How To Win Friends" and Charles Sheldon's "In His Steps." Of the novels, "God's Little Acre" by Erskine Caldwell was a dirty book. "Peyton Place" was a dirty book. Those are two of the nine. The remaining seven novels among the bestsellers of the past 66 years were all written by the same man—and his name is Mickey Spillane.

Television critics hate to have to take this unhappy truth into account.

ENDLESS DIVERSIFICATION

Most of what will entertain a well-educated man can't be expected to entertain a poorly educated man. Most critics don't realize that there is an endless diversification between all of us—that most Americans fall between two extremes, and that, therefore, most of television's output and time is directed toward them.

There is nothing wrong with mediocrity if you are mediocre. Mediocrity is exactly right. Most TV critics never take this into account.

Moving now from the sociological to the practical and perhaps to the physical: most television is looked at when viewers have been active all day long and are tired. I don't believe this has ever been brought out before. Husbands who have been in offices and stores and garages; wives who have been banging around in a supermarket; kids who have been doing their homework or trying to avoid doing it. And when I say tired, I mean tired.

Why do television critics hate us so? Well, there are a good many reasons. Hating us makes better copy. They can't be caught. We can't retaliate. Hating television is fashionable. Destructive writing is a lot more fun to read. There's nothing dramatic about purity. There's nothing vivid about goodness. Most television critics, however, have to look at hundreds of hours of TV, very little of which was created for them. The critic doesn't react to it as a creation for the audience it is reaching. He wouldn't select it, yet he had to look at it and to comment on it. Of course he scorns it.

I'm going to quote a few things of John Crosby, a fellow I know well and like a great deal. He uncorked what I thought was his most absurd diatribe in McCall's magazine last November. An unthinking and irresponsible piece. Maybe he needed the money. At any rate, he said that the artistry of some of our best writers is smudged or blunted by interference from advertising agencies and sponsors. He has a solution for this. It is a program advisory board.

Who would be on the board? Herbert Hoover, Harry Truman, Pearl Buck, Mrs. Millicent McIntosh, Mary Lord, Walter Lippmann, Arthur Schlesinger, Jr., Nathan Pusey, Clare Booth Luce, William Benton, Leonard Bernstein, Adlai Stevenson, and Harry Sherman (chairman of the board of the Book-of-the-Month Club).

All I can say is that John Crosby has got to be kidding. If you ever got these people in the same room, some of them, and I can name them, would kill each other.

IMPRACTICAL ADVISERS

There is an almost militant piety about John Crosby that's beginning to amount to a psychiatric disorientation. There are other things the matter with his advisory board. Those people are too busy. They don't have 1,000 hours to spend—two or three hours a day for a full year—looking at television to see what the public is really getting. Mr. Crosby says they don't need it. How much time does he say they do need? "This matter can be taken care of two hours once a year," he says. And fix up television.

I would like to say that I think this is a little nutty.

Mr. Crosby is asking a lot of famous people who don't know anything about television programs to take charge of them. I know a few of these people. Just as an example, Leonard Bernstein would leave the room if Harry Truman ever approached the piano. Yet this is the very way Mr. Crosby would impose culture on us. His culture.

There have been a couple of published opinions as to what happens to a crash program in culture. I like the colloquial theory of Stanley Edgar Hyman, who has formulated what he calls the Law of Raspberry Jam: the wider you spread it, the thinner it gets.

Walter Lippmann, so continuously and flatteringly referred to by John Crosby as to suggest that the latter is getting a cut of his pay, has offered something as noble as Mr. Crosby's board of antiseptic celebrities. Instead of a board, Mr. Lippmann envisions (and I quote him) "one network for public service with a criterion not of what is popular but what is good."

That is a very devout sentence. Then he admits this would not attract the largest mass audience. However, he goes on, and I am again quoting him, "If it enlisted the great talents which are available in the industry but that are now throttled and frustrated by present policies, it might well attract an audience that would make up in influence what it lacked in numbers."

I'm interested in those "great talents" to which Mr. Lippmann refers—talents available in the industry but now "throttled and frustrated by present policy."

IMAGINARY TALENT POOL

I formally charge that Walter Lippmann in this matter of television does not know what he is talking about. And this is a very unfamiliar posture for him. I challenge him to name those talents now immobilized by these present policies. I will tell you what I I think. That he will never answer this, not because I am an unimportant person but because Walter Lippmann's talent pool is imaginary.

Mr. Crosby likes the idea of Mr. Lippmann's network. The present networks have "lost the Nation's top 5 percent on a cultural level," Mr. Crosby says, and these are the 5 percent of the people "who write all the books and plays that are worthwhile, who publish and edit all the newspapers, own most of the banks and industry, and largely run the country." The loss of this 5 percent, he says, "is a terrible one."

Now that is a very dangerous piece of journalism. His own copy would have benefited by some of the editing he claims is stifling television.

If it is true that television has lost all the men who own the banks, run American industry and largely run the country, how does Mr. Crosby reconcile that idiot sentence with the fact that these are the same men who sponsor television? These are the men who foot the bill for television and make it possible for people to get it for free.

EGGHEADED BUT CHEAP

This eggheaded network of Mr. Crosby's isn't to cost anything either. Because "it would take very little money." Mr. Crosby said that. This is his exact sentence. What does he propose specifically? "We would take the 47 existing educational stations and tie them together into a national network where 'Don Giovanni' the Mozart opera, could be heard without being interrupted by Mother's Day commercials," and again he says, "this would cost very little." One production of "Don Giovanni" would cost television $250,000 minimum. Does John Crosby know that? No. Does he care? No. Why not? Money's no problem. Why isn't it? Because it isn't his money. It's your money. For this national network will be subsidized. That means you will pay for it out of your income tax.

Now, may I comment on Mr. Crosby's charge that TV is creating juvenile delinquents? Violence of the most extreme kind, tortures of the most diabolical have the instant endorsement of Mr. Crosby's purity league the instant these villainies are committed by a sweating tenor in a pair of tight pants singing in French. That's quite all right because it's opera. But it's all wrong for these villainies to be committed in a pair of tight levis and in English because then it's a western.

Opera doesn't kid around with small, uninspired collisions like saloon fights and shoot-outs. Opera audiences are so used to violence they can sit through almost any suicide or stabbing and yawn or leave. Do you remember what happens in "Andrea

Chenier"? The guillotine? Or the floods and the collapsing buildings in "Gotterdaemmerung," or the boiling in oil in "La Juive," or being suffocated in "Othello," or entombed while still living in "Aida"? Do you remember how Rigoletto found his daughter? The condition she was in? Well, she had been stabbed a good deal and sewn up in a sack, and when Rigoletto found her, ready to be dumped in the river, she was still breathing. This little girl was almost as hard to kill as Rasputin.

Here is the point: A small percentage of the population of Europe and America enormously enjoys this kind of story, especially when it's embellished by great singing and a large orchestra. And it's called grand opera. Most people can't afford it in that form. Yet most people like that kind of story. On television the story of Don Giovanni will appear in such a series as "The Untouchables" or "Peter Gunn." "The Untouchables" and "Peter Gunn" will have a jazz background instead of a symphony orchestra. One is an opera, another is a western. Both belong in television. Any man who claims that the extent of his culture or the empyrean level he has attained makes it impossible for him to enjoy anything in television is either a hypocrite or an eccentric.

FOGGY CELESTIAL PLACES

One usually finds that these celestial attitudes are pretty foggy places, chilly too, with practically nobody around but Sacheverel Sitwell, Mr. Crosby himself peeking in at the window, Mr. Lippmann shuddering by the radiator, Robert Maynard Hutchens blowing on his fingers.

Madison Avenue is accused every day of violence. I'd like to spend a few minutes on violence. I want to set up a hypothetical person. Try to set aside your prejudice and remember your childhood. Let us set up an average man of 1920; let us say he was 20 in 1920. And let's see what he's read, heard, looked at, been required to memorize, in the course of a normal education.

Before he could read, he could recite 30 or 40 Mother Goose rhymes, in which he found an old man who wouldn't say his prayers, and, being a well-brought-up young fellow, he did the only thing that was possible—he took that old man by the left leg and threw him down the stairs. He saw a spider frighten Miss Muffet off her tuffet. He saw some babes who were lost in the woods. They sobbed and they cried and they lay down and died.

THE WORLD OF ALARMS

Learning to read fiction does not introduce our young fellow to the world that exists. It introduces him to the world of Poe and Hawthorne, Thomas Hardy, Ambrose Bierce, Jack London, Joseph Conrad, Wells, Kipling, Scott, and Dickens. The world of alarms and shipwreck, murder in the dark, of beheadings, trials, insanity, of grave-robbing, infidelity and cannibalism, war, thirst, and suicide.

When only 16, our young friend is obliged to memorize great sections of a story which, rephrased in today's vernacular, might read like this:

"Joe's girl, a gun moll, suspects that he's too soft for the killing he's got to undertake. So the next night she pours liquor into the victim's bodyguards and gets them drunk, takes their guns, gives them to Joe and tells him to go in and do the killings. Which he does. But the next night there's good reason to kill the gang leader's lieutenant. Joe is so scared that he pays a couple of local boys to do the job with clubs. By this time Joe keeps seeing the lieutenant in a hallucination. His nerves are shot. He decides that if he doesn't kill everybody in his way, they'll kill him. But the mob turns on him, kills him and, just to make sure, cuts off his entire head."

Now I paraphrase the story because I wish to conceal its authorship. Many of you already know what the story is. I consider it a story of violence. A yarn not far removed, in its main features, from the kind of thing for which we are being lambasted all over the networks. Nobody knows who wrote the story that I paraphrased. Some say Hollinshead, some say George Buchanan. It doesn't matter at all. What does matter is that an extremely versatile, busy-minded Englishman stumbled on it, was fascinated by it, rewrote it—and called it "Macbeth."

May I take a stage direction from something else? "She takes the staff in her mouth and guides it with her stumps and writes." Now who was she, and why did she do this? Well, she was Lavinia, and she couldn't speak because the men who had raped her didn't want the fact to be known, so they cut out her tongue. Just to make sure she couldn't write a report of what they had done, they chopped off her hands. This is "Titus Andronicus," of course. The date of this composition: 1592.

VIOLENCE FOREVERMORE

I want to mention an interesting note by George Lyman Kittridge. At the bottom of the page of the Shakespeare that I have, Kittridge notes that some readers feel "Titus Andronicus" was really too horrible even for Shakespeare. And he has written this: "Shakespeare was always prone to try experiments, and it would be strange if he had not written one out-and-out tragedy of blood when Thomas Kydd had shown him how powerfully such things appeal to playgoers." May I repeat those seven words: "how powerfully such things appeal to playgoers."

Here is television's point: violence, at all levels, has been with us a long time. And will continue. And should. There is no drama without it.

Blueprint for the Sixties

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. MULTER. Mr. Speaker, it is my pleasure to commend to the attention of our colleagues the following editorial from the New York Times of April 10, 1961. This expansion program planned on the part of the Yeshiva University is highly commendable and illustrates the initiative that is necessary for our people to raise the educational standards of America:

BLUEPRINT FOR THE SIXTIES

Private institutions of learning, especially in urban centers, are faced with difficult problems in meeting the expected doubling of college enrollment by 1970. For them, both the expansion of teaching staffs and the increasing of physical facilities are musts. In addition, considerable rebuilding will be required for existing facilities that soon will be outdated.

Because of this situation it is a pleasure to endorse the dynamic "Blueprint for the Sixties," of Yeshiva University, Amsterdam Avenue and 186th Street, New York 33. This is an ambitious development program which will seek to raise $30 million in the next 10 years for Yeshiva University and $27 million in the same period for Yeshiva's Albert Einstein College of Medicine.

Under one phase of the university's $30 million program there will be an expansion of facilities at the institution's main center on Washington Heights. A second phase calls for developing an entirely new campus as part of the Riverside-Amsterdam slum clearance project on the West Side. Generous gifts will enable Yeshiva University to carry out its ambitious plans to continue and expand its great service to the community.

The Pulse of a Nation

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. PUCINSKI. Mr. Speaker, Miss Janet McHale, a student at Marymount High School in Arlington, Va., is one of our younger citizens. It will be several years before she is eligible to vote. Yet her eloquent appraisal of that American ideal which is at once an illusion and a reality is most inspiring.

In these days when it seems to be fashionable to ridicule America and Americans; when we, ourselves, seek some tangible image of perfection to display to the world, this young lady's clear faith in our history is reassuring indeed.

Miss McHale's trust in the principles of our particularly American democracy is unshakable. Her trust is based on the profound fact that our system has evolved by incorporating the very best of each of our ethnic groups, combining them, and calling them American. Miss McHale feels that a better political philosophy exists nowhere else on the face of the earth and she has the strength of character to say so.

I trust my colleagues will find, after reading this essay, that the slings and arrows of America's would-be detractors are not always reasons for wholesale despair. Our Founding Fathers had complete faith in the generations which would follow them. We owe them the serious obligation to have faith in ourselves.

Mr. Speaker, Miss McHale's essay follows. It is at once a tribute to her deep sense of patriotism and a reassuring reflection on the high academic standards pursued by the nuns and lay teachers at Marymount High School.

THE PULSE OF A NATION

(By Miss Janet McHale)

A fearful silence prevails. Some call it the silence before the storm. The day is July 4, the place, the emergency room of a metropolitan hospital. Sam Smith is on the operating table. The white-shrouded surgeon bowed in concentration is laboring in the silence to prevent a disastrous storm, one that will silence the dying man forever. The heads and hearts of the doctors and nurses are pounding in the deathlike vacuum, but their hands are skilled and steady. Their ears are tuned to but two sounds, the faint heartbeat of the critical patient and the force of his breath on the small plastic bag. Then comes the silence. No longer is heard the faint heartbeat or the pressure of warm breath. Panic begins to write its story on the faces of the people

working feverishly to save Sam's life. After a moment's hesitation, the surgeon opens the patient's chest and massages his heart until its reassuring beat slowly resumes. Due to his knowledge the storm after the silence does not destroy life and property but rather restores them.

On another July 4, another man named Sam was also in critical condition on a white table in Philadelphia. His name was Uncle Sam. The skilled men who were trained to save his life stood by anxiously and expectantly. They knew that the lives of millions depended upon the skill with which they used their instruments. Before that turning point of history came a silence, a silence that rocked the world. And the storm was kind. It showered its blessings on millions who felt and have felt the drops of freedom. The dying man and faint heartbeat were revived. Those statesmen and learned men, gathered in 1776, used their pens to write a declaration which gave a new life to America. The heart of this country began to pulse with life on that day and for 185 years its pulse beat has shaken the world.

But America has become more than just a declaration of freedom. In five generations, it has grown in body, spirit, and strength. America has produced a certain kind of human being and a certain type of mind. It has raised a nation of freedom loving individuals who never tire of boring the world with their praise of democracy. It has welcomed millions who have searched to find a land of real opportunity and chance and found that land on our shores. It has infused its ideals, spirit, and imagination into a world which in 1800 believed that the height of progress had already been reached. It has drawn masses who have broken away from old ties and old races to make a new world and a new race.

And what actually is the pulse of this Nation, America? It is its people. It is a combination of all religions, races, and nationalities which have contributed some of their heritage to the national product. In contributing, our ancestors have strengthened America for they realized this thought of Robert Frost, "Something we were withholding made us weak, until we found it was ourselves we were withholding from the land of living, and forthwith found salvation in surrender."

America is not a melting pot of lost identities. It is a mural made up of Americans who have kept their identities while contributing to their homeland. That mural of old, new, white, brown, and yellow pieces, built by people with a dream, is a picture of life in the United States. It is a picture of Hollywood glamor, of a small New England village, of the bustling streets of New York, and the ageless majesty of snow-covered Rockies. In it you can find Eskimos driving their dogs through a blizzard or Hawaiian native girls dancing under a palm tree at a luau. You can see a Georgia farmer looking with pride at his tobacco crop, a lumberjack in Oregon chopping down a giant redwood, or a model posing for the front cover of Vogue. There are the small-town grocery shops and the million-dollar shopping centers. You'll see a university with 15,000 students and the Humpty Dumpty Kindergarten around the corner from your house. You can find just about anything because this is a land where you can dare to be different. You can campaign for the candidate you wish to win an election and you can spend your lifetime studying butterflies. Because that decision is up to the individual, not the state or a dictator. America has grown into a land where there is initiative and imagination, the forces which have sustained the pulse of people and brought countless souls to our land.

You live in a country which is not something negative. It is positive. America is not a region, a locality, or a place. America is an atmosphere, an ideal, a vision. As our forefathers worked to give life to that vision, we must work to keep that pulse beat strong and steady. From day to day, our lives should keep on strengthening the ideal of democracy and reshaping it if the ideal is ever distorted. In the words of President John F. Kennedy:

"We dare not forget that we are heirs of that first revolution. Let the word go forth from this time and place that the torch has been passed to a new generation of Americans, unwilling to witness or permit the slow undoing of those human rights to which this Nation has always been committed today, at home and around the world."

If we meet this challenge, it will be not only America for Americans, but Americans for America and America for the world. The pulse and heart of America will be signs of its surging life carrying hope and opportunity. It is a beat that must not stop, for if it stops there will be silence. And perhaps after the storm, none will be left to rekindle the life of our America.

An Eye for 6 Million Eyes

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 10, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include an editorial on the trial of Adolf Eichmann, which appeared in the Boston Herald on April 18, 1961:

AN EYE FOR 6 MILLION EYES

The special court set up to try Adolf Eichmann has now solemnly affirmed its own competence, and the trial can proceed.

The court's ruling was a foregone conclusion, of course. This is not a judicial proceeding in the ordinary sense. It is a political trial. The prisoner's terrible guilt has already been proved out of his own mouth, out of the history of the ghastly era he helped to make. So what follows will be only a show.

Yet we cannot help feeling that the court would have done Israel and justice a good turn if it had had the fortitude to accept the defense's challenge and end the trial before it began.

Not that Eichmann should go free. He should, of course, be tried and punished for the monstrous things he has done. But he should be tried by an international tribunal, or by Argentina, where he was captured, or by Germany, where he committed his crimes. He should be tried anywhere, in fact, except in Israel, which claims that it alone has the right.

For Israel is conducting the Eichmann trial as an act of national and racial piety. The trial is a conscious and deliberate vindication of the 6 million Jewish people who died in Eichmann's extermination camps. It is both a demonstration that the Jewish people have not forgotten and a plea that the world should not forget. This is worthy. But is it wise?

Is it wise for a young nation, which is hopefully building a new life, to throw itself suddenly back into the past, to open old wounds, to live again the agonizing days when bitterness and hatred were the chief sustenance of Jewry in much of the world? Can Israel mount a posthumous attack on nazism without rousing general anti-German feelings which are harmful to relations with a democratic Germany now trying to make amends?

Israel, in little more than a decade of statehood, has won the admiration of the world for its progressiveness, its modernity, its forward look. The Eichmann case is at best a full stop, at worst a step backward.

What a magnificent gesture it would have been, if the Israelis, having discovered Eichmann's hiding place, had simply announced to the world, "Here is the hangman. We have found him for you. Let the proper authorities take over. We are busy with more important matters." Eichmann would have been tried. Germany, for one, would certainly have accepted the responsibility. And Tel Aviv need not have dirtied its hands.

It would still have been a magnificent gesture, if the Israeli court, having examined the pertinent law, had declined jurisdiction this week.

But it hasn't happened that way, and, human nature being what it is, probably couldn't have happened that way. Too many Israeli citizens suffered too many indignities, either personally or through their families, at the hands of Eichmann and his kind. They will have at least one eye for the many that have been destroyed.

We can only hope that Adolf Eichmann, in facing judgment at last, will not inflict another grievous wound on the Jewish people.

The Price You Pay

EXTENSION OF REMARKS
OF
HON. DONALD C. BRUCE
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. BRUCE. Mr. Speaker, I wish to draw the attention of the House to an editorial which appeared in the Indianapolis News concerning the income tax.

At a time when most of us have just completed filing our Federal taxes, this editorial, entitled "The Price You Pay" takes on special meaning.

Therefore, I wish to insert it in the RECORD today. It expresses my feelings quite well on the matter of confiscatory taxes. I am sure it also expresses the sentiments of the vast majority of my constituents in the 11th District of Indiana.

THE PRICE YOU PAY

Monday midnight is the deadline for paying your 1960 income tax. Chances are that you are just finishing a complicated wrangle with your tax form, and are groaning over the huge bite the Federal Government takes from your annual salary.

No matter where you stand in the income scale, the bite is substantial. In fact, unless your pay has skyrocketed in recent years, the Government's take may have left you worse off this year than ever before. Since 1939, Government's encroachment on personal income—through taxes and inflation—has more than doubled across the board.

For example, if you earned $3,000 a year in 1939, you would have to earn $7,270 a year now—just to have the same purchasing power.

If you made $5,000, your income now would have to be $12,510. And to equal the purchasing power of $10,000 in 1939 coin, you would have to be making $26,476.

In the past 20 years, Federal tax rates have shot out of sight. The average citizen now has to work more than 11 hours out of every week just to pay his taxes. And while the tax collector has taken more and more of your dollars, the upsurge in prices has reduced the buying power of those you have left. The dollar is now worth less than half of its 1939 value.

What is the reason for all this? The answer is simple: Government in the United States has become too big. It is engaging in wasteful spending at a rate of $80 billion a year; it is disbursing billions annually in foreign aid, and in vast programs of Federal handouts. It now proposes to subsidize whole cities and industries, under a so-called "depressed areas" bill.

All of this is advertised as coming from the "public sector." Proponents of big spending speak of their projects as if they were to be paid for out of some mythical checkbook in Washington, and will therefore cost nothing. What they ignore, and what is painfully apparent on income tax day, is that the "public sector" is you. There can be no spending on farms, depressed areas, Federal aid, foreign aid, or on anything else, unless the money is taken away from you, the taxpayer, first.

Take, as an example, the national debt, amounting to $285 billion. This obligation has been incurred by deficit spending. The Government had to borrow money because it was spending more than it took in. The spenders tell us not to worry about the debt, because we owe it to ourselves. But what are the facts? First of all, the debt has helped increase the volume of money and credit in the economy, without increasing the supply of goods. That is the cause of inflation. This obligation we owe to ourselves" is responsible for slicing in half the value of your dollars.

It is also responsible for increasing your tax burden. The interest on the debt amounts to $9 billion a year. This involves an annual tax bite of approximately $50 for every man, woman, and child in the United States. If you are an average wage earner, married with two children, you are paying $200 a year just for interest on this debt we owe to ourselves.

That is a sample of where the taxes you are paying are going. And if further spending programs are launched, and further deficits incurred, the problem is going to get worse instead of better.

Having paid your 1960 income tax, this would be a good time to make up your mind to correct this situation. If you are tired of turning over 20 percent, 30 percent, or more of your income to the bureaucracy in Washington, now is the time to do something about it. Why not throw your weight behind the effort to curtail new Federal spending programs? And, beyond that, why not enlist in the campaign to cut back, and ultimately to abolish, the Federal income tax? After all, it's your money they're spending.

The Hadassah and Henrietta Szold

EXTENSION OF REMARKS
OF
HON. SAMUEL N. FRIEDEL
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. FRIEDEL. Mr. Speaker, in the 327 years since the founding of Maryland, we of the Free State have been proud of the contributions to the development of the Nation which our sons and daughters have made.

The first colonists gave to the New World the basic principle of religious freedom. Charles Carroll, Samuel Chase, William Paca, and Thomas Stone are Marylanders whose names are forever hallowed as signators to the immortal Declaration of Independence. From the hills of Frederick County to the harbor of Baltimore came young Francis Scott Key, there to write the ballad of freedom, now heard all around the world, "The Star-Spangled Banner." To American jurisprudence, Maryland has presented Chief Justice Roger Brooke Taney, to education, Johns Hopkins and to the arts, George Peabody.

Yes, Mr. Speaker, Marylanders have always been dedicated to the establishment and development of those spiritual and material causes which make for a better world. However, we of the State from whence came the blue and the gray to fight for that which both considered just, are marking not only the centennary of that tragic struggle between the States.

Also, quite appropriately, the year 1961 marks the 100th anniversary of the ordination as a priest, of James Gibbons of Baltimore, commemorating in addition, the seventh anniversary of the elevation of this world famous Maryland churchman to the exalted position of becoming the first Roman Catholic Cardinal in the United States.

In that same year—1861, there was born in Baltimore, Henrietta Szold, daughter of Benjamin Szold, first Rabbi of the Oheb Shalom Congregation. It was 50 years ago, that the tremendous heart and brilliant mind of Henrietta Szold first recognized the need for the establishment of a program of health for all, regardless of race or religion, who resided in the then barren land of Palestine and contiguous territories.

This dedicated woman appealed to her fellow American women of Jewish faith for their personal as well as financial aid. Slowly but surely, her noble plan took root and more and more American Jewish women gave of their time in raising money and accumulating other materials needed to alleviate human suffering and disease among both Arabs and Jews in the Middle East.

The ideals and vision of Miss Szold resulted in the establishment of an organization of American Jewish women, known as Hadassah. Its sole purpose was to raise the standards of health and sanitation in Palestine.

Today, as it celebrates its golden jubilee, Hadassah has a membership of over 320,000 women, scattered throughout the 50 States of our Union. Under the leadership of Henrietta Szold and through the untiring, unceasing financial and other assistance of the American Hadassah organization, there arose in Palestine infant welfare centers, a nurses' training school, clinics, and eventually the first Hadassah hospital and medical center, which was built atop Mount Scopus, overlooking ancient Jerusalem. Some years ago, due to the vicissitudes of war and politics, the women of Hadassah were forced to abandon this center. Undaunted by this loss, they built a still greater project. In fact, the new hospital and medical center will start operations officially this year on June 6. This latest achievement by these noble women to the cause of international peace and understanding will probably become one of the greatest undertakings of its kind in all the world. Yes; this symbolic pillar of American good will in the ancient Holy Land of Israel may well be likened to our own great Statue of Liberty. Both offer the key of health and happiness to those who enter their sacred portals.

In closing, Mr. Speaker, may I point out that while these words present only a thumbnail sketch of Henrietta Szold and her living monument, Hadassah, the surface has not even been scratched. Nevertheless, the complete story of this organization of American Jewish women will not go unrecorded.

I am proud and privileged to announce that another outstanding Marylander, the nationally famous author, lecturer, and commentator, Ian Ross MacFarlane, of Baltimore, is now in the process of compiling an intimate history down to the most minute detail of the 50 years of sacrifice and progress by the women of Hadassah. No one is better qualified to prepare this manuscript than Mr. MacFarlane, for he was the first non-Jew to live and work as an actual member of the original Jewish agricultural colonies in Palestine. He has also lived long and intimately among the peoples and problems which have confronted the political, educational, and spiritual metamorphosis of the Jewish people from their days as colonists under the Palestine mandate to that of free citizens of the great new Republic of Israel.

We of Maryland welcome to our State's honor roll the ever-to-be-lamented and honored Henrietta Szold, and one of our modern contemporaries, Ian Ross MacFarlane.

Address of the Prime Minister of Greece, Constantine G. Caramanlis, National Press Club, April 19, 1961

EXTENSION OF REMARKS
OF
HON. JOHN BRADEMAS
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. BRADEMAS. Mr. Speaker, as the first native American of Greek origin elected to the Congress of the United States, I felt a particular sense of pride on Tuesday, April 18, when the distinguished Prime Minister of Greece, the Honorable Constantine G. Caramanlis, addressed Members of the House of Representatives during his visit to our country this week.

Prime Minister Caramanlis was accompanied to the House by his lovely wife; by the Minister of Foreign Affairs of Greece, the Honorable Evanghelos Averoff; by the distinguished Ambassador of Greece to the United States, the Honorable Alexis S. Liatis and Mrs. Liatis, as well as by other high officials of the Government of Greece.

Mr. Speaker, Greece, which gave the idea of democracy to the world, is today a valiant ally of the United States in maintaining democracy in the world.

I believe that the splendid address which I was privileged to hear Prime Minister Caramanlis deliver on April 19 to the National Press Club in Washington describes eloquently the contribution which the people of Greece are making to the security of free nations and the strength of free political institutions.

I am pleased at this point in the RECORD **to insert the text of the Prime Minister's address:**

ADDRESS DELIVERED BY THE PRIME MINISTER OF GREECE, CONSTANTINE G. CARAMANLIS, AT THE NATIONAL PRESS CLUB, APRIL 19, 1961

Mr. President and gentlemen, let me first thank you, Mr. President, for your warm words in introducing me.

I would like, gentlemen, to seize this opportunity to express through you my deepest gratitude to the American press and the American people for the feelings of sincere friendship and sympathy which, on the occasion of my visit, they have shown to Greece. I wish to assure you that the spontaneous response which I have met everywhere, and especially during my talks with your young and dynamic President, has been for me a source of inspiration and faith in the future of Greek-American relations.

The role of Greece has been decisive for the destinies of the free world. Lying, as she does, at the extreme southeastern point of Europe, at the crossroads of two worlds and three continents, Greece has always been a responsible factor of control of the great spiritual and military currents of history, whether from the West or the East.

VICTIM OF TOTALITARIANISM

In these circumstances it is natural that she should have sustained the full impact of the political and ideological conflict which has rocked and is still rocking our age. Greece, which had fought for freedom against fascism and nazism, became right after the war the object of repeated cruel armed attacks from still another totalitarian ideology—communism.

It is not perhaps a mere matter of chance that both these forms of totalitarianism were inflicted in that land where for the first time grew the concept of freedom and democracy. History repeats itself. It has been the historic fate of the people who first conceived the notions of balance and measure to find themselves always in the vanguard of the defense of democracy against all forms of extremism.

On the significance and consequences of the victorious Greek resistance I would like you to judge for yourselves. Imagine for a moment Greece under the heel of communism. Turkey would have been cut off, Italy outflanked. The independence of Yugoslavia would be at stake as she would have been submitted on three sides to Soviet influence. Finally, Soviet presence and dynamic intrusion into the eastern Mediterranean would have sealed off the fate of the entire vital area of the Middle East.

Instead of this, Greece is today a factor of peace and stability in the Balkans. Her membership in the North Atlantic Alliance insures the continuity of Western defense from the shores of the Atlantic to the shores of the Caucasus.

A GOOD NEIGHBOR

Our relations with Turkey—since the solution of the Cyprus problem—are excellent. In close and fruitful collaboration with Yugoslavia, Greece is showing in practice that the difference of social regimes is not an overwhelming obstacle to the peaceful relations between peoples.

Greece is showing that she regards peace in a positive sense and, that free of prejudice, she aims at maintaining good relations with all, subject to international law and obligations, the mutual respect of internal order and the independence of each country.

All this, naturally, has not been attained without a heavy toll of blood and property. At a time when more fortunate countries were actively tending the wounds of war, Greece alone was forced to carry out the fight. The cost has indeed been huge. I want to mention only that the losses of Greece in repelling Communist aggression exceeded the losses of the American Army in Korea, and that the material damage left in the wake of the Communist typhoon was larger even than the terrible devastation in my country during World War II.

GRATEFUL FOR AMERICAN AID

At this point I wish to stress how valuable and decisive was the help given by your great country. The Greek people are well aware of it and keep a sense of gratitude for the timely proclamation of the Truman doctrine and its effective application. Nevertheless, the Greek people also feel pride and satisfaction at having blocked the expansionist plans of communism. The Greek people know that although material help was received they had to fight it out. Unlike other parts of the world, in Greece the solution was definitive and victory complete. Greek blood alone paid the cost for such achievement.

It is easy to imagine the internal political and economic situation that confronted Greece when, in 1950, at the end of an almost uninterrupted 10-year war, she was finally able to direct her undivided attention to the work of peace. In an atmosphere of political instability and passion, with a shattered administrative machine, no means of communication, no funds, Greece not only had to tackle the tough job of actual survival but also had to create conditions for a normal development of the country in the future and for the prosperity of her people. It is to her credit that, equal to the circumstances, she applied herself wholeheartedly to the task of peaceful development and progress with the same enthusiasm and determination that she showed throughout the war. Thanks to a successful use of the economic and technical aid of the United States, and the untiring labor and the political sense of her people, Greece was able to overcome the difficulties of the first moment and enter for good on the road to economic development. The political stability of the last years, which Greece has known for the first time, permits us to envisage creatively and plan for the future of the country's economy. I do not wish to tire you with figures. However, I would omit an elementary duty if I did not mention some of the data illustrating the progress achieved.

ECONOMY IMPROVING

Thus, in the last 5 years, the per capita income of the population rose from $214 to $295. The merchant marine, which was almost wiped out during the war, now exceeds 5 million tons, while Greek ownership as a whole rates third in the world, right after the American and the British. Industrial production, including electric power, has increased by 41 percent as compared to 1955. Thanks to the policy of monetary stability, to which we unswervingly abide, trust in Greek currency was restored, deposits in banks increased, and conditions now prevail for more easy financing of the national economy.

Does all this mean that our economic problem is solved, or that there is no need of further international economic aid to Greece? The answer is that today, more than ever before, the continuation of such aid is necessary. There is no doubt that the economic situation has greatly improved. But this is an improvement as compared to the chaos inherited after the war, the occupation of the country, and the Communist-guerrilla war. Much has been achieved, but there is still much more to be done. What we have achieved must be made secure, the overall job must be completed. Were we not to finish the task, there would be the risk of endangering what has been so far achieved.

PROBLEMS AHEAD

We do not underestimate the existing difficulties. Nor do we overlook our lack in professional and technical development. For this reason precisely, my Government has drawn up and since last year has been applying a 5-year plan for economic development. Such planning is being attempted for the first time in Greece. It, therefore, has at the same time the value of a new start. The central idea of the plan is, through combined public and private investment, to insure conditions whereby the national income will reach a point beyond which a further rise can develop independently ($400 approximately per capita is our first objective), to eliminate unemployment and underemployment, and to make the Greek economy sound and internationally competitive. We aim at this result without deviating from the modern healthy principles of a liberal economy. The contribution of the State is limited to the essential sectors and our own and foreign spirit of enterprise is encouraged.

Many might perhaps think that the large goal set for ourselves is ambitious. We know that this does not lie outside reality. We are convinced that we shall not be left alone in our efforts, because we must not be alone.

Financing of our plan depends, to a considerable extent, on various foreign sources: regular air, loans, transfers of capital, etc. If these sources were to be cut off, our efforts would be endangered, and along with them, the fruits we have reaped so far with so much blood and toil.

Gentlemen, I would like you to know that in Greece at this time an experiment is being carried out, the results of which will have immediate repercussions in the whole area of the eastern Mediterranean and the Balkans.

If it is true that peace is a contest with peaceful arms, if we accept that international communism has not abandoned its aims but merely changed its methods, if finally we are convinced that it is the ardent desire of all people to be free, by whatever means, of the specter of poverty and privation, if all this is true, then we shall have to recognize that it is of the utmost political importance to prove that totalitarianism is not indispensable for the development of a poor economy. From the example of Greece will depend, in a large measure, the answer to the question of whether or not it is possible to seek prosperity in freedom and dignity.

I am sure that with the help of God and all of you the reply will be affirmative.

Did Yuri Do It—Or Is It a Hoax?

EXTENSION OF REMARKS

OF

HON. ROMAN C. PUCINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. PUCINSKI. Mr. Speaker, several days ago I suggested that the House Committee on Science and Astronautics

conduct an exhaustive investigation into Soviet Russia's claim that it launched a man into space.

My own investigation of this entire subject begins to indicate more and more that much remains to be disclosed by the Soviet Union before the world can accept the veracity of the Communists' assertion.

I should like to call to the attention of my colleagues an excellent article written by Peter Reich, aviation editor of Chicago's American, which I think makes a significant contribution to this entire subject.

Mr. Reich's rich experience in the entire field of space exploration is reflected in this article, in which he raises some pertinent questions which indeed justify the investigation which I proposed.

Mr. Reich's article follows:

DID YURI DO IT—OR IS IT A HOAX?

(By Peter Reich)

A week after the Soviets say Yuri Gagarin became history's first man in space, certain vital questions remain unanswered.

In some quarters this lack is interpreted as an indication that the "orbital flight" may have been the greatest hoax in history.

Yuri, say these quarters, never may have entered space.

You can make up your mind after considering apparent contradictions cited by space experts.

Report: Yuri said he could see the earth "very well" from orbit—"The shores on the continents, islands, important rivers, great water surfaces, wrinkles and localities were clearly distinguishable. I saw perfectly great squares of collective farms. It was possible to distinguish between plowed and grassland."

Fact 1: Photographs taken at great altitude indicate that very little can be determined on earth from the altitude (109 to 187 miles) at which Yuri supposedly rode.

Fact 2: A. A. Blagonravov of the Soviet Academy of Science, told newsmen in Florence, Italy, that Yuri's spacecraft had no windows or portholes. (Later at a news conference, Soviet scientists said some Soviet spaceships have windows.) When Blagonravov was pressed as to how Yuri could see from a windowless ship, the scientist said, "by radio."

Report: Yuri said he "floated" inside the spaceship due to zero gravity and that other objects floated around him. Yet he said he "ate and drank, and everything was like on earth."

Fact: Eating and drinking in the weightless state, American experts have demonstrated, are difficult. Liquids vaporize. Even when squeezed into the mouth from sealed containers, liquids tend to balloon, making swallowing difficult. Solids tend to float above one's soft palate, making one choke.

Report: Yuri was said to have been blasted off at nearly 25,000 miles per hour, then settled into orbit under 18,000 miles per hour.

Fact 1: An object shot into orbit enters orbit at close to its top speed.

Fact 2: The stresses of acceleration on a body attaining 25,000 miles per hour within 187 miles up and the few minutes that Yuri had, are tremendous. Yet Yuri made no mention of these awesome forces in his report. Not a word about how he was flattened, had difficulty breathing, or the like.

Report: Yuri said he sang the song "The Homeland Hears, the Homeland Knows" as he was coming down.

Fact: During the terrible period of reentry, when the deceleration forces are as bad (if not worse) that the acceleration forces on the upward flight, a human being would have a hard time singing. This writer experienced about 5½ g.'s (forces of gravity) in a jet fighter, and my chest felt as though it were caving in. Estimates are that during reentry, a spaceman coming back from orbit will experience from 10 to 20 g.'s—hardly a state in which to sing.

Report: Yuri said everything in the weightless state became easier to do.

Fact: All the American astronauts in training have reported that tasks in the weightless state become more difficult to perform. Humans tend to lose a frame of reference under zero g., scientists have determined.

Report: Tass, the official Soviet news agency, said "the cosmonaut landed by parachute." Tass did not say his vehicle returned by parachute, it said he landed this way.

Fact: Ejecting from a space capsule does not seem a reasonable way of returning from orbit, scientists believe. However, the Tass report may have been incomplete or garbled in translation.

These are the major discrepancies in the Soviet reports. To them must be added these curious facts:

The Soviets announced that their astronaut was in orbit at the time he was aloft. Why would they take this unnecessary chance? The hardest part of the flight—reentry and recovery—still was ahead.

The Russians hadn't told newsmen about the launching in advance. Why, then, would they risk the biggest fiasco in news history—a nonreturned, or dead, astronaut—with a premature announcement? It doesn't make sense.

Again, our administration in Washington has withheld usually available details on our tracking of a Soviet spacecraft this time. Why? Did we really track their manned satellite—or was there nothing to track?

BUILDUP AND LETDOWN

The big buildup preceding the Soviet announcement of their man in orbit was unusual, too. As was the subsequent letdown. The London Daily Worker, you'll recall, finally broke a story—which it attributed to private sources in Russia—to the effect that the son of a prominent Russian airplane designer had been shot into orbit.

Yet, when the astronaut finally was identified—a full day after the Worker broke its story—he turned out to be an unknown air force officer.

Is it possible that the son of the famed designer—a logical choice for history's first man in space—had been lost in space? Or that he had landed with his brains scrambled from the terrible stresses he had had to endure?

Is it possible that Yuri was palmed off as the first cosmonaut without ever having gone aloft?

Nor have any pictures of Yuri's space capsule been released. Nor any of Yuri inside the space capsule.

MONKEY'S FATE

Is it reasonable to assume that the real astronaut the Russians sent up suffered brain damage? Yes, indeed.

It is a well-kept secret that the first monkey—Gordo—that we sent into space in 1958 in the nose cone of a Jupiter missile was not simply lost at sea as reported.

And the monkey was dead long before the nose cone burned up, killed by the horrible strain imposed by the wild gyrations of his vehicle. He was, literally, shaken to death.

Something similar may have happened to a real Russian astronaut.

Why would the Russians—masters of propaganda—risk such a giant hoax?

They would have ample reason to take the chance.

Putting the first man in space is a tremendous propaganda victory.

The Russians are well aware that the United States stands on the threshold of putting a man in space—not into orbit, just 115 miles up, and back down. But, still, space.

The Russians desperately wanted their own cosmonaut up first. A first by the United States would have meant our country would have regained all the prestige we lost when the Russians put up the first manned satellite, Sputnik I.

The Soviets could not permit this to happen.

Did they gamble? Did they shoot a man up before they were really ready to do so? Did they fail to bring him back, or was he terribly hurt—and did word of a man-in-space launch leak out, so that the Russians had to produce a hale and hearty cosmonaut, even one who never had been in space, in order to cover their attempt?

We can't prove this is what happened.

But to those who know space flight and its problems, the hypothesis makes sense.

An American astronaut may yet be the first man to return safely from space.

H.R. 10, Voluntary Pension Plan for the Self-Employed

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by J. E. McMahon, distinguished financial reporter for the New York Times and which appeared in the New York Times on Sunday, February 19, 1961:

[From the New York Times, Feb. 19, 1961]

PENSION BILL BACKED FOR SELF-EMPLOYED

(By J. E. McMahon)

Self-employed persons, who for many years have sought to obtain from Congress tax benefits for setting up their retirement programs similar to those extended to corporate employees, seem to have a better chance of attaining their goal this year, proponents of such legislation believe.

The latest bill for that purpose, H.R. 10, introduced in the House by Representative EUGENE J. KEOGH, Democrat, of Brooklyn, on January 3, is a much modified version of older bills. And it has been fashioned to meet some of the objections that proved stumbling blocks to the passage of such measures in previous years. It is because of these modifications and the more widespread support for self-employed pensioning, even by President Kennedy last year as a Senator, that backers of such legislation feel more confident of success this year.

The fact that the administration expects a budget deficit of $1 billion for the fiscal year ending on June 30 and possibly a $2 billion deficit in the next fiscal year could have a bearing on the outlook for the legislation. The loss of tax revenues has been one of the big obstacles to passage of such bills in other years.

On this matter, Representative KEOGH said last week that instead of an estimated loss of $365 million a year in revenues that the 1959 bill would have entailed, the new measure might result in a loss of $100 million to $150 million a year. Furthermore, he added, provisions of the new bill will cover some 17 million persons, instead of 9 million under the older measure.

While the 10 percent of earnings formula is retained in the 1961 bill, the amount that can be set aside by the self-employed for pensions is limited to $2,500 a year, compared with $7,500 under previous bills. Moreover, while the older bills were designed to cover only the employer, the new bill would cover also his employes, if "they are more than three in number."

A résumé of the new bill said that the "newest version of the Keogh bill—officially titled the Self-Employed Individuals Retirement Act—embraces a somewhat different approach than in prior Congresses. Instead of allowing the self-employed a limited tax deduction for amounts voluntarily set aside for their retirement either in restricted trusts or insurance or annuity policies, the present H.R. 10 adopts the general form of the Senate Finance Committee bill of the 86th Congress, which would have brought self-employed persons under existing legislation relating to non-discriminatory, tax-favored private retirement plans by allowing them to be treated as their own employers and employes."

It also was said that many important changes had been made in the new bill as compared with a Senate version. Among these were:

The elimination of all proposed restrictions on corporate pension plans covering so-called owner-employes.

The bill does not require a self-employed person to include his employes under the plan unless they are more than three in number, excluding part-time or seasonal employes.

The bill modifies the severe limitations of the Senate bill on the amount of contributions that can be made on behalf of owner-employes, that is, sole proprietors and partners having more than a 10 percent interest in the business.

The bill bases the self-employed individual's contribution on the amount of his "self-employment earnings" rather than on his "earned income" from the business.

BILLS INTRODUCED

Since the opening of the 87th Congress, seven bills have been introduced in the House to aid the self-employed with their pension problems. Three bills have been introduced in the Senate, with one by Senator GEORGE A. SMATHERS, Democrat, of Florida, receiving considerable attention. It differs significantly from the bills introduced in the House.

In reviewing the long history of such proposed legislation, Mr. KEOGH said last week that the first discussions on the subject took place in 1945 by a group of New York lawyers. Five years later the American Bar Association appointed a committee to look into the problem. The New York State Bar Association played a prominent role in this study, he said. In 1951, Mr. Keogh added, he introduced the first bill on the subject, with Daniel Reed, Republican, of New York, a cosponsor, Representative Thomas Jenkins, Republican, of Ohio, in later years was a cosponsor of the legislation with Mr. Keogh until 1958, when Representative Richard M. Simpson, Republican, of Pennsylvania, was cosponsor of the H.R. 10 bill.

In January 1960, in answer to an inquiry as to his position on the then Simpson-Keogh bill Senator John F. Kennedy, Democrat, of Massachusetts, said:

"I am myself disposed to support the type of provisions which are contained in the Simpson-Keogh bill. I personally feel that there has been ample testimony from many sources over a long period of time in both Houses and that it is time to take floor action on this legislation. * * * I hope that it will be acted upon favorably during this Congress."

When the self-employed pension bill was being considered by the House Ways and Means Committee in 1959, David A. Lindsay, Assistant to the Secretary of the Treasury, wrote that "the Treasury Department recognizes that present law does not give self-employed people tax treatment for their retirement savings comparable to that now accorded to employees covered by employer-financed pension plans * * *."

Representative KEOGH said last week that the present bill was much better than those introduced in the past and that he was encouraged by support in Congress from some of those who had opposed such legislation in the past.

Constitutional Money

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 12, 1961

Mr. REUSS. Mr. Speaker, this week an incisive speech, entitled "Constitutional Money," was made by the distinguished gentleman from Texas [Mr. PATMAN]. It was made on the occasion of the 70th Continental Congress of the National Society, Daughters of the American Revolution. The full text of the speech follows:

CONSTITUTIONAL MONEY

(An address by WRIGHT PATMAN, First Congressional District of Texas, before the 70th Continental Congress of the National Society, Daughters of the American Revolution, at Constitution Hall, Washington, D.C., April 19, 1961)

It is a solemn honor to address the 70th Continental Congress of the Daughters of the American Revolution. I know of no organization more dedicated to the principles of our Constitution than the Daughters of the American Revolution. Next to the Supreme Court of the United States, I know of no group which concerns itself more with these principles.

It is also a great pleasure, and a great challenge, to talk to women about money. You handle most of it; you control most of it; and you should know most about it.

What is money?

Different societies have at different times used many different things as money. These include: Sea shells, whales' teeth, boars' tusks, stones, feathers, bricks, coconuts, cocoa beans, iron rings, salt, beaver pelts, blankets, bronze axes, and wheels.

At one time, the natives of some of the islands of the South Pacific used great stone wheels as money; and in Ireland, during St. Patrick's time, they used slave girls as money.

Of course those were the days when the men handled all the money. It took a man to handle those great stone wheels.

In our own country, we have used such things as wampum, woodpecker scalps, beaver pelts, blankets, tobacco, whiskey, pepper, all kinds of script, and a variety of other things, real and imaginary.

Wampum, you know, was strings of beads made of clam shells. A Massachusetts law, enacted in 1637, fixed the value of black clam shells at twice the value of white clam shells, and it also fixed the exchange value with English money.

Wampum was, of course, the money of the native Indians and the first settlers adopted it because it was most convenient for trading with the Indians.

Wampum continued to be the chief currency of New York until as late as 1672. And as late as 1693, the ferry fare between New York and Brooklyn was still payable in wampum.

Since the Constitution was adopted, however, our principal money has been essentially the same as that in use today. This is a form of credit money. A small part of this is created by the Federal Government, but most of it is created by the private commercial banks. This form of money is both old and new. It is old in the sense that we inherited the method of money creation—by private bankers—from the goldsmith bankers who operated in western Europe in the 16th and 17th centuries. It is new in the sense that bitter experiences have from time to time forced the Nation to adopt improvements and safeguards, through new laws and banking regulations. To realize that the money system is in almost constant state of change, we need only note that the Federal Reserve Act, passed in 1913, has been amended at an average rate of two amendments per year.

The human experience with money suggests that no particular substance has been divinely chosen to be money; and no natural order designs and regulates money. Money is, in short, not wealth, but claims to wealth. Money is not a substance, but a social system sanctioned by tribal custom, law, or constitution.

A good money system is not only a mark of highly advanced and a highly productive society, a good money system is also essential to the development of such a society. Money functions as a free society's bookkeeping system—a system wherein each individual is credited for what he contributes to the society, and is debited for what he receives from the society. A good money system permits a free society to organize its economic efforts efficiently, and to devote a large part of its current efforts to building tools, plants, and know-how for production in the future.

You see, under a barter system we could not have any taxes, to speak of, so you can imagine how horrible that would be. People in my line of work would receive their pay in copies of speeches, old laws, and so on.

Since money is a social system, a nation must either design, improve, and manage its money system wisely or risk the consequences of disaster. The graveyard of history is littered with the bones of nations that neglected their money systems, or confused money with the nation's wealth.

You perhaps know that one of the theories as to what happened to the Roman Empire is that the Empire ran out of money. The Empire depended heavily on silver for money, and the belief is that certain of the Spanish mines which had supplied the silver ran dry. In any case, the record indicates that the Roman money system tended to break down, and there was a decline in trade and a general deterioration of both economic organization and political unity which paved the way for the ultimate fall.

It would be distressing to think that Western civilization entered into the dark ages—to emerge only after a thousand years—merely because a highly intelligent society mistook a particular metal, silver, as essential to producing and dividing wealth.

Despite the clear importance of our own money system and the public's stake in the way the Federal Government manages our money system, it appears that these are subjects on which the general public has been peculiarly ignorant or misinformed.

In 1787, John Adams wrote to Thomas Jefferson saying:

"All the perplexities, confusions, and distresses in America arise, not from defects in the Constitution or confederation, not from want of honor or virtue, so much as from downright ignorance of the nature of coin, credit, and circulation." [1]

Thomas Jefferson, of course, expressed some rather harsh views on the nature of the confusion, and he had a number of suggestions to make for improving the money system. I would hesitate to quote him, however, for fear some of our contemporary bankers might think I was applying some unflattering epithets to them. Jefferson would have placed what he called a Constitutional veto [2] on private banks creating money; and he was given to saying such things as "banking establishments are more dangerous than standing armies." [3]

Few of us would agree today that the banking system, as presently organized, is more dangerous than standing armies. On the other hand, a reasonably close examination of the Government's present way of managing the system discloses several practices which are very peculiar, and very costly to the taxpayers. There are also one or two aspects of this management which are such that prudent citizens would call them dangerous to our national survival.

The Articles of Confederation failed, as we know, largely for the reason that they gave the Continental Congress no money powers. Of course, the Continental Congress issued paper notes, called continentals. But in time these came not to be worth a continental, because the Continental Congress had no power to declare its money legal tender—that is, make it good for the payment of debts and taxes.

The continentals had to circulate in competition with the money of the individual States, which did have this power, as well as the power to tax, and the continental became worthless.

In drafting the Constitution, the Founding Fathers corrected this fatal deficiency. They placed all of the money powers and duties in the Federal Government and—specifically—in the Congress. I must observe that, although I am myself jealous of States' rights, the Constitution leaves no States' rights whatever in matters of issuing money, regulating the value of money, or in determining what shall be legal-tender money. These are all powers and duties of the Congress.

True, the Constitution speaks of Congress' having the power "to coin money" and regulate the value thereof. But it has long since been settled that our Founding Fathers were not so un-astute as to think that they could create a national sovereignty by giving the Federal Government control merely over the nickels, dimes, and quarters. This was settled by the Supreme Court in the Legal Tender cases of the 1870's and again in the Gold Clause cases of the 1930's.

What, then, has Congress done with its money powers?

The answer is that Congress has delegated these powers, in one way or another, and it has not always been vigilant to learn how these powers were being used after delegating them.

In the period between President Jackson's successful fight on the Second Bank of the United States and President Lincoln's administration, these powers were delegated, in effect, to the States. In truth, the money powers were used exclusively by private commercial banks, under such laws and regulations as the States care to impose. In this period, State banks issued bank notes, or what we call currency, or "folding" money. They also created money in the form of bank deposits, just as the commercial banks do today. But bank deposits, or "checkbook" money, was not then nearly so popular as it is today.

Before Jackson's time, the money powers were officially delegated, for the most part, to the exclusive use of a single, privately-owned bank. There were, however, a number of State banks operating then and issuing notes. Jackson's fight on the Second Bank of the United States was, of course, a fight against what he expected to become a private monopoly control of the money powers; and, as he saw the matter, it was better to have the money in the hands of free-wheeling, uncoordinated State banks than in the hands of a private monopoly.

President Lincoln's problems were of a different kind, and a much more difficult kind. By the time he took office the country was in need of a national currency—a system under which a dollar issued in one part of the country would be accepted as a dollar in any other part of the country. In order to have such a currency, it was necesary to have a single, national authority to regulate and safeguard the banks issuing the currency. More than this, President Lincoln took office at a time when the country was suffering from an acute money shortage. With the beginning of the war, hard money was moved to Europe, and the banks had to suspend specie payment. Added to all this, there was the tremendous problem of providing money to fight the war.

It was for these reasons that the national bank system was established. National banks are, of course, privately owned banks, but they are chartered by the Federal Government, and are under Federal law and regulation.

President Lincoln knew more about monetary principles of any President up until his time—and probably since. He had been a lifelong student of the subject and had made profound speeches on the matter as early as 1832, in his first race for the Illinois Legislature.

But, as you perhaps know, President Lincoln's views on money were quite similar to those of Thomas Jefferson, and these were not, I am afraid, very popular with the bankers of his day. He had some sort of idea that if the private banks could issue non-interest-bearing notes, so could the Federal Government.

In fact, early in his first term he did have the Government issue some non-interest-bearing notes—then called "greenbacks"—thus setting off one of the greatest furors of all times. Some $347 million of these greenbacks were issued before Congress was persuaded to put a stop to the matter.

Incidentally, some $305 million of these Lincoln notes are still in circulation today. If you happen to have in your pocket a bill which is labeled "United States Note," this is one of them.

Last year I wrote to the Treasury and asked them to tell me what the accrued interest cost to the taxpayers would have been if this $305 million had been issued in the usual way, as interest-bearing notes, paying interest at 5 percent. The Treasury wrote me that the accrued interest charge, at a rate of 5 percent, compounded semi-annually, would have been approximately $44 billion by last year. In other words, the accrued interest to date would have been 127 times the amount of the money which was issued.

President Lincoln succeeded in getting the National Bank Act passed, but it was on some terms not to his liking. The arrangement was this: The Government issued a special series of interest-bearing bonds which the national banks could acquire and use as the basis for issuing non-interest-bearing banknotes. In other words, the privately owned national banks received interest from the Government for the money they issued; and they also received interest on the loans and investments, including other Government bonds, which they acquired in exchange for the money they issued.

This system whereby the Government paid interest to the banks on bank reserves was dropped, however, with the passage of the Federal Reserve Act in 1913.

Under the new arrangement, the Federal Reserve creates whatever amount of reserves it wishes the private banks to have, without any interest-cost to the Government. In fact, in this process, the Federal Reserve itself acquires, from the open market, an amount of Government bonds equal to the amount of bank reserves it creates, and the interest payments on these bonds are returned to the Federal Treasury. The Federal Reserve pays its salaries and other operating expenses out of this interest income first, but most of the income goes back to the Treasury.

This does not mean that the private banks are no longer privileged to create any money. On the contrary, they still create most of the money. In the Federal Reserve Act, Congress delegated its money-creating powers in part to the Federal Reserve and in part to the private commercial banks. It also delegated to the Federal Reserve the responsibility for determining how the parts are divided—within wide limits specified in the law. At the present time, the Federal Reserve permits the member banks of the System to create about $10 for each dollar which the Federal Reserve creates in the form of bank reserves. The private banks may create money at this rate of 10 to 1 to make loans to business and consumers, or to invest in securities, including corporate securities and the securities of the Federal, State, and local governments.

As of George Washington's last birthday, the Federal Reserve had issued and outstanding $44 billion of money, $27 billion of which was in currency and $17 billion in bank reserves. In the process of issuing $44 billion in money, and also from interest on its investments, the Federal Reserve had acquired $49 billion of assets, including $27 billion of interest-paying U.S. Government securities.

The amount of money which the private commercial banks had created and outstanding was more than four times as large. Specifically, it was $204 billion, as compared to the Federal Reserve's $46 billion. And as compared to the Federal Reserve's ownership of $27 billion of U.S. Government securities, the private commercial banks owned $62 billion.

In one case, the interest paid on these securities goes back into the Federal Treasury, and in the other case the interest payments go into bank profits and thus come out of the taxpayers' pockets. In both cases, the securities have been acquired with money created for the purpose.

If any of you are not familiar with the way commercial banks create money, let me amplify a bit. Certainly you must have wondered where money comes from. We know it was not here when the first settlers arrived, and we know that the amount of money in existence increases almost every year. In fact, the money supply has increased over the years at approximately the same rate at which the production of goods and services has increased.

Today, only about 10 percent of the money available to business and consumers is in the form of coins and currency. The other 90 percent is in the form of deposits in the commercial banks—sometimes called "checkbook" money—which the commercial banks have created.

This is the way it is done:

When a commercial bank on Main Street or on Wall Street makes John Jones a loan

---

Footnote at end of speech.

of, say, $1,000, it does not take the thousand dollars out of my checking account or out of your checking account. It simply creates a credit of $1,000 in John Jones' checking account. This means that the money supply of the country is increased by $1,000. An additional $1,000 of money is available for spending—simply by writing of checks. When a private commercial bank buys a $1,000 Government bond, the same thing happens. The bank simply creates the money to buy the Government bond.

The fact that money is created in this way will come as a surprise to some people, particularly those who imagine that in the "good old days" every dollar was backed by a dollar's worth of gold. Yet this method of creating money is essentially the same as private bankers in the Western World have been using for several centuries. And at no time have these bankers, or those nations in which they have operated, had enough gold—or enough of any other single commodity—to redeem more than a small fraction of the money in circulation at the time.

In truth, in all these centuries, money has never been created against just gold. It has been created against pledges of all kinds of valuable assets. And we must agree, I think, that on the whole this has been a pretty good system. Certainly if we judge the system by the economic accomplishments—the production of real wealth in the Western nations—we cannot find another system which has performed as well. While we sometimes think that money should represent claims to an equal amount of gold, the fact is it must represent claims to all kinds of real wealth, which, in fact, our money does.

We still cling, however, to certain ancient ideas about gold, which it seems to me, are likely to get us into trouble. So far, there are no signs that the space age will make any very heavy requirements on gold. Yet, despite the fact that the governments of the Western nations have vast quantities of this metal stored away in underground vaults, they continue to buy up billions more, each year, and at a tremendously high price which we ourselves fix and maintain at an artificial level. In this process, the governments of the Western nations are buying Russian gold, which means that we are sending into Russia and Red China vast quantities of food and machinery which the slave world desperately needs, and cannot produce in sufficient quantities, in exchange for a metal which we do not need.

The indiscriminate way in which the Western World now handles its monetary reserves makes it inevitable that these reserves will be contaminated by Communist gold. The Communists feed this gold into the gray markets of Europe, and from there it infiltrates our banking system. I think we ought to reexamine this matter very thoughtfully and ask ourselves whether it is really wise policy for the Western World to continue subsidizing a buildup of Russia's and Red China's industrial and military capabilities. It may be that we and our allies ought to consider some step to sterilize our monetary gold, such as putting it in the safekeeping of the International Monetary Fund here in Washington. If this were done, then at least we would know we would have the gold in case some scientific or industrial need for it ever develops.

I hope, also, that here at home we can give some careful attention to our money system and continue to make improvements. Tremendous improvements have, of course, been made. In the so-called good old days of the 19th century, when some of us imagine we had a gold dollar, the money system was, in reality, a source of chronic disorder in the economic system. In those days there were periodic money panics, bank crises, wholesale bank failures, widespread bankruptcies, and severe depressions, all arising from malfunctioning of the money system. Fortunately, the American people have been intelligent enough to learn from experience and make improvements.

The establishment of the Federal Reserve System in 1914 has been, no doubt, our greatest single achievement in providing a good money system. But other improvements can be made, and there have been some backward steps in the years since the Federal Reserve Act was passed. New practices have grown up in the Federal Reserve and in the private banking system which were not intended by the Federal Reserve Act. Furthermore, Congress has amended this act a number of times, particularly in the early New Deal period, without, I am afraid, always fully understanding what was being done. If I might suggest for your consideration improvements which now might be made they would be these:

First, a change in the assignment of responsibility for determining what interest rates business and consumers must pay for the use of money.

When the Federal Reserve Act was passed, in 1913, the responsibility for determining interest rates was placed in the Board of Governors of the Federal Reserve System. The Board members are what we might call the public members. They are appointed by the President and confirmed by the Senate. They are appointed for long terms—14 years—and to keep his job a Board member is not dependent upon the wishes of the private bankers.

At the time the Federal Reserve Act was being worked out, some of the bankers felt that they should be on whatever board or committee was to determine interest rates. Carter Glass took a delegation of such bankers to see President Wilson on this very question. Carter Glass reports that President Wilson said to them that private bankers have no more right to be on a board or committee to help fix interest rates than the railroad owners have a right to be on the ICC, to help fix freight rates.

In the early 1930's, however, the act was amended in a way which shifted the practical powers of determining interest rates to a committee within the Federal Reserve System. This is the so-called Federal Open Market Committee and its membership includes not only the members of the Board, but also the Federal Reserve bank presidents. The Federal Reserve bank presidents are not selected by the President or the Congress or the general public. They are selected by the directors of the Federal Reserve banks, and these directors are elected by the private banks. In other words, the private banks now have representatives on the committee which determines interest rates, precisely contrary to President Wilson's intention and the intention of the original law. This seems to me a bad principle, although I say this without disrespect to any individual who has served as a Federal Reserve bank president.

Second, the original Federal Reserve Act was founded on the principle of an elastic money supply, to be automatically regulated. In other words, the money supply was to increase and decrease automatically with increases and decreases in economic activity. The amount of economic activity taking place was thus to determine the money supply. In recent years, however, Federal Reserve officials have been deliberately and consciously fixing and changing the money supply, in an effort to control the amount of economic activity taking place. It is my considered view that money used for this purpose is unconstitutional money. The Congress has never delegated to the Federal Reserve any authority to restrict or limit the volume of economic activity which may take place in this country.

Third, I would not go so far as Jefferson and Lincoln are said to have wanted to go, which was to have the Government create all the money. I believe that money created for private borrowers can best be created by private banks. A private lender, operating on profitmaking standards, is the best agency for discriminating between those persons who are to have credit and those who are not to have credit. On the other hand, I have great difficulty understanding why the Government should let the banks use its money-creating power, free of charge, to create money for the purpose of lending it to the Government at an interest charge.

This much seems clear: Since both the Federal Reserve and the private banks can create money with which to buy Government bonds, the Federal Reserve ought to buy a great deal more of these bonds and thus permit the private banks to buy correspondingly less of these bonds. The Federal Reserve can do this and still maintain the same money supply it would maintain anyway. In other words, the question of inflation does not enter into this suggestion one way or the other. The only question is whether or not billions of dollars of interest payments are taken out of the taxpayers' pockets each year and put into bank profits.

Fourth, the original Federal Reserve Act provided eligible paper as the means by which the private banks could obtain credit from the Federal Reserve. This meant that a private bank could obtain such credit only after it had used up its lending powers in extending credit to business, farmers, and other borrowers in the local community. But the act has also been amended on this point, also, so that now the banks can obtain Federal Reserve credit on Government bonds. The result, it seems to me, is that too many banks have become little more than Government bondholders and bond brokers. These banks are not using the privileges they have been given to help their local communities, which is the purpose for which the privileges were given.

Fifth, there is now taking place a tremendous wave of bank mergers and consolidations, and a tendency for banking to become monopolized. This is a dangerous trend. If the banking system becomes monopolized, this will surely lead to socialism or fascism.

Sixth, the Federal Reserve bank stock should be retired. The Federal Reserve is, I believe, the only Government agency in which private persons are permitted to own stock. In this case, the stock cannot be owned by just any private person; it is owned only by private banks. The banks do not own the Federal Reserve System; and they have no proprietary interest in the system whatever. They are, however, paid a yearly 6 percent interest on the money they have invested in the system; and this means that the system is paying out to the banks about $27 million a year in funds which would otherwise be returned to the Federal Treasury. This is a completely unnecessary expense to the taxpayers.

Finally, may I suggest, there should be more public interest in the money system and better understanding of what the Federal Government is doing in this field.

You know, it has long been popular for a Member of Congress to say that all he knows about money is that he doesn't have enough of it.

I have no doubt that if such a tremendously influential and public-spirited organization as the Daughters of the American Revolution should think well of the idea of more public interest and understanding, the result would, indeed, be more public interest and understanding, both in and out of Congress. I have no doubt that Congress would be willing to make a thorough study of the ways in which its constitutional powers and responsibilities are being used, and how these uses might be improved. The Federal Government spends billions investigating

the ocean floors, probing outer space, and so on. But it has been more than 50 years since we have had an official public study of our money system. Private corporations and foundations occasionally find it worthwhile to spend millions of dollars for monetary commissions set up to make private studies of this subject, which leads me to think the subject must be worthy of study in public bodies.

Historic Remarks by Chief Justice Warren

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Pittsburgh Legal Journal:

REMARKS OF CHIEF JUSTICE EARL WARREN

On the occasion of the luncheon of Chancellor and Mrs. Edward H. Litchfield at the University of Pittsburgh on Wednesday afternoon, April 5, 1961, following the honors convocation, presentation of honor students, and the conferring of the honorary degree of doctor of civil laws upon the Chief Justice.

(EDITOR'S NOTE.—We are indebted to Congressman JAMES G. FULTON for granting our request for a copy of the following notes which he made while attending the luncheon referred to above. Mr. FULTON, a member of the bar of Allegheny County and a newspaper publisher, told this editor that "The remarks of Chief Justice Warren are historic—and we living today in our rush and pressures often fail to realize history is being made now, just as it always has been made.")

The remarks of the Chief Justice were made in response to the introductory questions of Chancellor Edward H. Litchfield, inquiring on the point of bravery or courage in the preparing of decisions that profoundly affect basic rights under the U.S. Constitution. Chancellor Litchfield referred particularly to far-reaching questions of emotional content and human interest as well as prejudice, such as the segregation issue, which Chancellor Litchfield stated in the future could be referred to by historians as "the basic decision of the 20th century."

Chief Justice Warren responded: "That is the kind of question that any way you answer it, it is wrong. But that is our lot on the Supreme Court.

"Look at these young fine people today in what they are doing. These young people have no weaknesses that cannot be traced to us in the older generation.

"It takes less courage to make decisions upon issues that are emotional the farther the person making the decision gets away from the public itself.

"I have had personal experience in community responsibilities of many levels, district attorney, State attorney general, and Governor of California. I know how hard these necessary community decisions are to make when you are right at home, living among the people in the community.

"I want to say out of the depth of my heart, the greatest courage is necessary when issues are right on your doorstep, in the towns and communities where you live and work. As you remove yourself from those pressures, it takes less and less courage to make basic decisions on principles, even momentous as they might be.

"Our Court thought about the issue of desegregation a long time. Our Court was most conscious of the responsibility that was placed on the trial courts and the courts of appeal in this country, who had the original jurisdiction.

"When we on the U.S. Supreme Court made the decision in segregation cases that local courts should decide all the issues before these cases came to us—that put a great burden on the district judges, because of the localities where the cases arose and the community pressures upon these judges. As an example of this situation, a district judge in New Orleans had to meet a great responsibility under local and community pressures.

"Decision by the U.S. Supreme Court requires not one ounce more courage for decision than is required of any judge on any level in this land.

"We Justices of the U.S. Supreme Court are entitled to no sympathy for making final decisions on major issues. All we are entitled to is that we be given credit that we are doing the best we can to keep our American jurisprudence in the kind of order that the American people will know the law from one end of the land to the other, and that they will respect our decisions."

Foreign Textile Imports

SPEECH
OF
HON. CHARLES E. BENNETT
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. BENNETT of Florida. Mr. Speaker, I wish to congratulate my beloved and distinguished colleague from Georgia, the Honorable CARL VINSON, for his statement on the need for restrictions on foreign textile imports at this time. He has proposed a quota system, by country and category, and has explained why the President would be justified in using his powers under the national security provisions of the Trade Agreements Act to establish such a system.

It is significant that this proposal comes from one who has supported reciprocal trade legislation and is aware of the impact of our trade policy on foreign countries like Japan, which must export to live. I also have favored the reciprocal trade program and hope that it will be continued. But I agree with the gentleman from Georgia that if America is to foster the free world's economic growth, it is essential that American industries be healthy and growing, in order that we may aid the orderly industrial development of other free people.

It would be most ill advised to allow foreign textile imports to bring ruin to more of our own producers and thus worsen the present unfavorable trade balance in textiles, increase the drain on our gold, and hurt our economy when already it is showing certain structural weaknesses. My hope is for a strong, vigorous American economy enabling us not only to be good neighbors in the world trade community but to continue helping emerging nations find a better life for their people.

Justice Department Policies on Merger Laws

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an Iron Age interview with Attorney General Robert F. Kennedy, which appeared in the Iron Age magazine, April 13, 1961. In this interview the Attorney General presents his views on the enforcement of antimerger and antitrust laws. The article follows:

JUSTICE DEPARTMENT POLICIES ON MERGER LAWS

(Few matters are more vital to metalworking companies planning to merge, buy, or sell out than the attitude of the Justice Department toward such moves.

(In this straightforward interview, Attorney General Kennedy presents his views on the enforcement of antimerger and antitrust laws.)

(By E. C. Beaudet)

Question. Mr. Kennedy, the recent convictions involving the electrical manufacturing companies have focused attention on antitrust laws. Of course, prosecution of these cases originated under the previous administration. Will the present administration be less tough, or tougher on antitrust violations?

Answer. We expect to be extremely interested in merger, as well as price-fixing, violations of antitrust laws. The Celler-Kefauver Antimerger Act will be enforced vigorously. I don't care to compare administrations. I prefer to let the record speak for itself.

Question. More recently, you asked the Federal Trade Commission to find out if companies previously convicted of antitrust violations were living up to court orders. You also expressed hope of a new era of Justice Department-FTC cooperation. Can this be regarded as a warning to business of your intention to pursue a vigorous antitrust policy?

Answer. Yes. There are indications which lead us to believe that as many as 50 past defendants have not taken sufficient action to comply with court orders.

Question. Does this include past convictions in the merger area?

Answer. It does. We believe some companies may have retained stock interests in other companies which they were ordered to give up. We believe there is a need for a thorough reinvestigation of these and other past cases.

Question. What is the Justice Department's objective in enforcing antimerger laws?

Answer. Our purpose is to make sure that no enterprise has the chance to dominate or control an industry, or to start on a course that might lead in that direction. We plan

to prevent monopoly and, where necessary, undo monopoly control. Our main objective is to protect the American system of free enterprise.

We look upon our antitrust enforcement policies as being probusiness—to protect the businessman as well as the consumer.

Question. Do you view the steadily growing number of mergers as a threat to free enterprise?

Answer. Mergers in themselves do not represent a danger to free enterprise. We aim to protect the small and middle businessmen who, I believe, are the backbone of our economy. In some cases, mergers can help competition rather than affect it adversely.

Question. In what kind of cases?

Answer. Well, for example, take the case of two weak companies within an industry. They may not be able to make it alone against stronger competitors. By joining together they may become stronger themselves and bring about more competition in the industry.

Question. But what about the consumer? Might not mergers of large companies bring about more efficiency and as a result, lower prices?

Answer. Yes. Heavy concentration of economic power might be of temporary assistance to consumers. But there is no assurance that this would continue. If competition were not present, there's nothing to say that prices would not be raised arbitrarily in the future. This would then work against the consumer. Our job is to see that this is not allowed to happen.

Question. Do you plan to put more emphasis on opposing mergers whose chief aim is diversification?

Answer. Each case must be looked at individually. Any type of merger that lessens competition and tends to create monopolies will be scrutinized. In all aspects of antimerger enforcement, the Department of Justice will do what it is legally authorized to do.

Question. There have been many mergers in the metalworking industry and, undoubtedly, more will take place. Briefly how can companies best obtain clearances for proposed mergers?

Answer. By submitting, along with a clearance request to the Antitrust Division, as much pertinent information about the merger as possible. Also, by giving prompt and complete answers to questions the Antitrust Division might ask about the proposed merger.

Question. How long might companies expect to wait for approval or disapproval of the Antitrust Division?

Answer. This depends on how long it takes to secure all the information the Antitrust Division feels necessary to grant a clearance. After all the desired information is in, some expression of its view can be expected within 2 to 4 weeks. This, of course, depends on the workload of the Division at the time.

Question. It has been said that competitive information contained in premerger notifications has been leaked. Are greater safeguards needed?

Answer. As you know, the Department of Justice through its investigations receives a good deal of confidential information of all kinds. Most of it concerns individuals. We have much less adverse information about companies. But as best as we can tell, no confidential information regarding individuals, mergers, or anything else has been leaked from the Justice Department. Information like this occasionally does reach the public press from other sources.

Our attitude concerning the premerger notifications is that they are no one's business but the Justice Department's and the companies involved. This information will not be furnished to a company's competitor, or anyone else. I would terminate the employment of any Justice Department employee who gave out confidential information.

Question. What are some of the factors the Department of Justice considers in approving or disapproving premerger notifications?

Answer. There can be no fixed set of standards which would bring automatic approval or disapproval from the Antitrust Division. We are guided exclusively by antitrust laws. Generally, the main legal points revolve around the relative market positions of merging companies and, as far as can be seen, the probable effect of a proposed merger upon competition.

Question. What is your viewpoint on Senator KEFAUVER's bill making premerger notifications, under certain conditions, a matter of law?

Answer. In principle, I support it. However, I am not thoroughly familiar with all of its provisions.

Question. Suppose one company acquires another without first clearing the merger with the Department of Justice? Is there a time period after which the company can feel the acquisition won't be challenged?

Answer. Regardless of the time elapsed, there is no statute of limitations which bars the Justice Department from challenging a merger. Mergers will be challenged whenever we believe such action is in the public interest in line with the principles of the Celler-Kefauver Act.

Question. If a merger is found to be illegal, are the selling companies and their stockholders subject to any penalty?

Answer. Not ordinarily. The remedy for violation of the Celler-Kefauver Act is divestiture of stock and assets acquired illegally. The Du Pont-General Motors case now before the U.S. Supreme Court may bring forth some principles which point the way to potential remedies in these situations.

Question. How do you view the formation by competing companies of a new corporation to engage in activities related to those of the competitors?

Answer. Again, this depends on the particular case. I would like to point out, however, that by forming a common subsidiary, competing companies cannot do indirectly what they are forbidden by law to do directly. We are likely to inquire into such matters.

Certain special considerations, though, are involved with respect to foreign commerce. For example, under the Webb-Pomerene Act, competing companies can form an export association as long as they abide by the provisions of the act.

Question. Are American corporations bound by U.S. antitrust laws when they buy or merge with foreign companies?

Answer. Generally speaking American corporations are bound by U.S. antitrust laws regardless of the nationality of the companies they buy or merge with.

But the question is far more complex than this. Foreign mergers differ from domestic mergers because of their possible effect on the national welfare. Foreign trade and international policies must come first. Each case, however, is decided on its own merits.

Question. In the above two questions, does it make any difference if underdeveloped nations are involved?

Answer. That would be one of the factors that would have to be taken into consideration.

Question. We've heard a lot about the "failing company doctrine" which is said to permit mergers which otherwise might violate antitrust laws. Will you please explain what this means?

Answer. The failing company doctrine is a popular term for the principle which holds that a company, because of financial losses, might go out of business if it did not merge. In such a case the merger would not appear to have anticompetitive effects.

Keep in mind, however, that, just because a company is or has been losing money, this does not necessarily mean that it is a failing company, unless it is in bankruptcy or able to prove it is on the verge of it. Remember, also, that even though a company is a failing one, if the merger has anticompetitive effects, it cannot take place legally if another purchaser is available.

Question. Does the Department of Justice contemplate future antitrust actions against labor unions?

Answer. Where unions and management join together to kill competition or fix prices, we will prosecute. Action would be taken against both. We are looking into several cases of this kind right now.

Question. Presently, could action be taken against unions alone?

Answer. No. Under the law and court decisions there has to be a conspiracy between the two.

Question. Do you believe there is a need for legislation to curb monopolistic practices of labor unions and safeguard rights of union members?

Answer. Not at this time. The Landrum-Griffin bill was passed only in 1959. There should be more time to determine how effective its provisions will be.

Question. What about trade association memberships? Need companies be concerned about the risk of possible antitrust prosecution because of membership?

Answer. There's nothing wrong with companies within an industry getting together to promote the best interests of the industry and themselves. If they don't take part in illegal activities, there's nothing to be concerned about. If they meet to fix prices, or otherwise violate antitrust laws, that is another matter.

Question. But what about those companies which are unaware of or don't join in illegal activities within a trade association?

Answer. I doubt if there are many situations like this. Regardless, it is important that each company makes sure it knows what it is getting into.

Question. Mr. Kennedy, earlier, you said you looked upon antitrust enforcement policies as being probusiness. How might business help in carrying out these policies?

Answer. If business realizes that the Justice Department truly wants to be of assistance, there are several things it can do.

First of all, it must recognize that nothing hurts business competitors more than other competitors who get together to thwart competition, fix prices, or engage in other illegal activities.

Secondly, business should be more willing to assist the Justice Department in carrying out antitrust enforcement policies. We are here to help, but we have had little help from business.

When I was a member of the Senate subcommittee investigating rackets in the labor-management field, I was amazed at the unwillingness of business to help us and come forward with information. Businessmen seem willing to complain about unjust union practices but don't seem willing to do anything about them. Nor have I noticed that business groups, to any great degree, have expressed disapproval publicly of the recent price-fixing scandals.

This may come from the idea of minding one's own business. All too often, business' attitude is to let well enough alone if profits are good. However, business should make the Government aware of those instances where mergers are stifling an industry, where there is reason to suspect price fixing, or where management is joining with unions to freeze our competition.

I feel that business has a responsibility to its community, to its State and to its country. It should be willing to help its Government. If it's not going to help it, then business should stop complaining about it.

The Osteopathic Profession Celebrates a Notable Anniversary

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. ANFUSO. Mr. Speaker, on Wednesday, May 10, Mrs. Robert F. Wagner, wife of the mayor of the city of New York, will be host at a reception at Gracie Mansion honoring the New York State Osteopathic Society and the Osteopathic Society of the City of New York, two respected professional groups which have made notable contributions in easing suffering and combating disease.

I am privileged to serve as an honorary chairman of this significant event, which will be a highlight in the 52d anniversary celebration of the OSCNY. In this regard, I wish to express my personal felicitation to the society and its officials, Dr. Elias Kaggen, president; Dr. Max L. Kamen, president-elect; Dr. D. Leonard Vigderman, vice president; Dr. Harold E. Klinger, secretary; Dr. Viola Kruener, treasurer; Dr. John F. Conlon, sergeant at arms, and Dr. William D. Miller, Dr. David Bachrach and Dr. Aaron Weintraub, the board of directors.

In directing the activities of the OSCNY, these dedicated osteopathic physicians are performing a valuable service to the community. Through a series of public health forums, and related events, the society seeks to dramatically demonstrate the pressing need for proper health care.

The New York State Osteopathic Society, numbering hundreds of osteopathic physicians and surgeons throughout the State, has also devoted its energies in an effort to create widespread awareness of the need to maintain good health practices.

I should like to pay special tribute to the officials of the State society; Dr. William E. Kaufmann, of Syracuse, president; Dr. Francis J. Beall, Jr. of Syracuse, vice president; Dr. C. Fred Peckham, of Oswego, secretary; and Dr. C. Gorham Beckwith, of Hudson, treasurer; and its board of directors, comprised of Dr. Wendell F. Bizzozero, of Niagara Falls; Dr. Philip E. Greenman, of Kenmore, Dr. Alexander Levitt, of Brooklyn; Dr. Jacob G. Sheetz, of Brooklyn, and Dr. Hewett W. Strever, of Rochester.

I believe it is significant to note that the officials of these two societies, and the entire membership are firm in their belief that a physician's duty to the community does not end at his front door.

Countless osteopathic physicians and surgeons play a vigorous role in community activities, participating in the work of local clinics, serving as school physicians, and directing their talents in a variety of ways.

Serving with me as honorary chairmen of the May 10 reception at Gracie Mansion are a distinguished group of Americans, including Dr. Herman E. Hilleboe, New York State Health Commissioner, Congressmen Abraham J. Multer, Emanuel Celler, John J. Rooney, and Brooklyn Borough President John Cashmore. Also, New York State Assemblymen Alfred A. Lama, Max M. Turshen, Alfred D. Lerner, Irwin Brownstein, Aileen B. Ryan, State Senator Frank J. Pino, New York City Tax Commissioner Ross J. DiLorenzo, and New York State Comptroller Arthur Levitt.

In light of the important milestone being celebrated by the OSCNY, I would like to commend the following article, which appeared in the American Journal of Nursing, to my colleagues:

OSTEOPATHY

(By Dr. True B. Eveleth)

By establishing high educational standards, enforcing its strict code of ethics, and producing well-trained, dedicated physicians, the osteopathic profession has not only gained the acceptance of the American people but it has won the respect of individuals, groups, and agencies whose primary concern is quality health care.

Today osteopathic physicians work with and maintain representation in the Nation's major health agencies including the U.S. Public Health Service and the National Health Council. Under Federal laws, doctors of osteopathy and doctors of medicine have almost an identical status. Doctors of osteopathy, D.O.'s, serve as medical officers in the U.S. Public Health Service and the Department of Medicine and Surgery of the Veterans' Administration. They are eligible (by Federal law) for commission as medical officers in the Armed Forces. However, no such appointments have yet been made.

A goodly number also serve as examiners for insurance plans, as coroners, school and county physicians, on boards of medical examiners, State hospital licensing boards, and on State, county, and city boards of health.

Doctors of osteopathy are licensed to practice in all States. In most States and the District of Columbia, D.O.'s have unlimited privileges to practice medicine and surgery in all its branches.

However, 92 percent of the doctors of osteopathy practice in unlimited license States and many of those residing and practicing in limited license States hold an unlimited license in States other than where they are located.

Licensing boards, created by State legislatures, are composed of various types of practitioners. For example in Delaware, M.D.'s make up the entire board; in Ohio the board is a combination of D.O.'s and M.D.'s and in Kansas there are D.O.'s, M.D.'s, and chiropractors in the examining group.

The American Osteopathic Hospital Association is the official national membership organization of the hospitals, but the registration or approval program for these hospitals is maintained by the AOA through its committee on hospitals which is the osteopathic counterpart of the hospitals' and the medical profession's joint commission on hospital accreditation.

Approximately 400 osteopathic hospitals located in 22 States provide an estimated 14,000 hospital beds.

These hospitals are expanding rapidly through additions to existing facilities or through new construction. In 1954, Los Angeles County voters approved a bond issue of more than $9 million for a new 500-bed osteopathic hospital—a unit of Los Angeles County General Hospital dedicated last December. Numerous osteopathic hospitals have received large Federal grants-in-aid to assist in their construction.

Osteopathy continues as on of the only two recognized schools of medicine—not as a contestant and not as a separatist—but as a contributor of a valid medical concept. The profession's most important contribution to the health sciences is the recognition of the role of the musculoskeletal system as a factor in health and disease.

The osteopathic physician finds this recognition of the musculoskeletal system entirely consistent with other scientific approaches he learns as part of osteopathic education. Along with drugs, radiation, and surgery, he adds to the arsenal of medicine the use of manipulative therapy.

Independence implies responsibility. The osteopathic profession is quite aware of this basic fact. It knows it has a responsibility for high standards of accreditation of its hospitals and schools of osteopathic medicine, a responsibility for the ethical practices of its physicians and surgeons, and a continuous responsibility for the public health.

The profession has demonstrated its willingness to serve on the health team. It asks nothing more than equal recognition for its services and contributions to the American people and medical science.

A Tribute to the Cuban Patriots

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. PELLY. Mr. Speaker, I hope my colleagues in the House will join with me in paying tribute to the small but gallant band of beleaguered Cuban patriots who seek the restoration of freedom for themselves and their fellow countrymen.

That the present effort has apparently failed in no way diminishes the gallantry of the attempt. Sometimes, unfortunately and understandably, impatience overrules sound military judgment, in this case resulting in precipitating the invasion effort prematurely.

However, let it be noted by freedom-loving people everywhere that the bell has tolled for the Bearded Butcher of the Caribbean and his ruthless Communists cohorts. The string is indeed running out for Fidel Castro and his atheistic pro-Communist totalitarian government.

Let this modern-day buccaneer take warning—the American people cannot and will not longer tolerate the establishment of this first Communist beachhead on the American Continent.

Speaking as one Member of the U.S. House of Representatives to the Cuban freedom defenders, let me say: Be not discouraged and be not of faint heart. The cause for which many of you have already given "the last full measure of devotion" is not lost and I promise you the people of the United States, in the American tradition, cannot forsake you. Freedom never dies; it lives forever in the hearts of God-fearing men of good faith.

Paraphrasing the words of the martyred Lincoln, "Your honored dead have not died in vain" and from these dead you will rededicate yourselves to

the cause of freedom until the last fanatical adherent of the Communist ideology is driven from your shores. Again I say, be of stout heart and by your courage you will shame those among us of faint heart, whose overly cautious counsel again recommends the policy of "too little and too late."

Mr. Speaker, I urge the Members of this House to support positive action by the President, directed toward the overthrow of Fidel Castro and all he represents. Let us not again selfishly betray our Founding Fathers by denying aid to enslaved people, which to our everlasting shame was done in Hungary. We cannot afford to longer speak softly and carry a swagger stick. Fifty years ago American lives and property were sacred everywhere in the world and by our action in this crisis we can again alert the world that this Nation will not tolerate oppression and to all nations on earth let us say "We hope you will like us, but respect us you must."

Tenth Anniversary of Boston University's President, Harold C. Case

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. MORSE. Mr. Speaker, as an alumnus of Boston University and as a former law instructor at this great school, it is with a glow of affection and pride that I insert the following statement, issued by the university on the occasion of the 10th anniversary of the presidency of Dr. Harold C. Case, who has contributed so mightily to my alma mater:

TENTH ANNIVERSARY OF PRESIDENT HAROLD C. CASE AT BOSTON UNIVERSITY

Dr. Harold C. Case is now celebrating his 10th anniversary as president of Boston University. On March 1, 1951, he took charge of New England's largest institution for higher learning and accepted the inheritance, as well as the challenges, of the dynamic Daniel L. Marsh expansion era of university history.

Since then, his influence has accelerated the consolidation of the university's 15 schools and colleges on the centralized Charles River campus, has projected the imaginative $60 million long-range development program, and, most important, has raised Boston University's academic standards to new levels of excellence.

The greatest guarantee that President Case could never be forgotten at Boston University or for his impact upon higher education generally is not in the impressive array of new buildings, including the unfolding high-rise structures, that now or in the future will dominate the Charles. Rather it lies in the president's ability to attract first-class faculty and administrative talent to the fold. Salaries have risen to new high levels at Boston University and compare favorably to those on the most highly sought after campuses. Few faculties anywhere can boast the combination of talent, diversity and adventurous spirit that exists among the professors at Boston University.

Students are the principal beneficiaries of this but they, too, nurtured by improving and now rigorous admissions policies, are establishing their own brand of high standards.

In 1951, Boston University's scattered schools still sprawled throughout Back Bay and reached into Cambridge. Then moves came for the pioneer school of public relations and communications, the school of fine and applied arts, Sargent College, and the college of industrial technology into splendid quarters on the campus.

Twelve of the university's fifteen colleges are now located there, with two others scheduled to join them in the near future. One, the school of medicine, will remain between its affiliated hospitals, the Massachusetts Memorial Hospital and Boston City Hospital, in Boston's South End where a great medical center is rapidly being shaped. New and some beautifully renovated dormitories have arisen. Others are planned for the future.

Internally, the university has also been reorganized. The college of practical arts and letters was incorporated for business education into the college of business administration and for art education into the school of fine and applied arts. The college of general education became a division of the college of liberal arts, and the junior college, an impressive educational experiment, is now known as the college of basic studies.

Other significant achievements under Dr. Case were the establishment of the university's African studies program, the human relations center, and the pioneer law-medicine research institute. Recognizing the vital future of Africa, the African studies program was created in 1953 to contribute more profoundly to the knowledge of this fast-developing continent. It is recognized internationally for its accomplishments.

This coming September, a 6-year program for the training of physicians will be initiated jointly by the school of medicine and the college of liberal arts. The unified program will eliminate 2 full years from the traditional 8-year undergraduate and graduate education of the M.D. In addition to educating more doctors in less time, it will improve the quality of their education through the extensive use of personal and small group instruction, and other means.

The university acquired Boston University Field (formerly Braves Field), which is utilized as the center of its intercollegiate and intramural athletic program. The field is in the process of modernization, with a new stadium now completed. A full-sized, professional theater, serving as a workshop for dramatic arts students and a stage for their productions, was also established opposite Symphony Hall.

In another significant project, the university equipped a 20,000-watt student operated radio station, WBUR–FM, with a 50-mile broadcast radius.

Today Boston University is actually composed of 15 small to middle-sized colleges, with full-time enrollments in each college ranging from 100 to 2,160 students. The average full-time enrollment in each college is approximately 700, although there are more than 10,000 full-time students in the university and double that number on a part-time basis. In these schools and colleges more New England students are educated than in any other university. Furthermore, more than 800 foreign students from some 80 countries are receiving their education at Boston University. Every State in the Union is represented in the student body.

In 1958, for the first time, more new names of Boston University graduates appeared in "Who's Who" than the names of graduates from any other New England university or college.

The pace of development under Dr. Case is quickening. This coming spring groundbreaking is scheduled on the Charles River campus for a new $4,400,000 university union building. Then the new law center-education building, first of five highrise towers, will be built. A great central library is also in the planning stages. Scientific centers are being improved and rebuilt. Improved parking facilities, including a garage which will be constructed shortly, are also priority items on the university's agenda.

It is hard to divorce the institution from the man. Yet much must be added about Dr. Case himself in moments when he can break away from his laborious daily tasks at the university.

Last winter the president toured many countries in Africa in the interests of higher education, and today he pleads eloquently across the land for better educational exchanges and understanding between America and Africa. His voice has been influential and constant. Before this, as one of three New Englanders on President Eisenhower's Committee on Education Beyond the High School, Dr. Case was able to assist in alerting the Nation to the impending educational crisis, when the number of competently prepared students desiring to enter our colleges will more than double within the decade in the face of woefully inadequate funds, resources, and facilities.

Dr. Case is also chairman of the Massachusetts State advisory committee to the U.S. Commission on Civil Rights. Last spring, Dr. Case went to Denver as a delegate to the Methodist Church's quadrennial general conference, and there he received national attention when he launched a strenuous drive, as the Associated Press reported it, to abolish segregation in the church wherever it still existed.

At the age of 58, President Case has many miles to go before he can close his desk at the university. As a result, the 10th anniversary of the Case era at Boston University has a happy connotation, both retrospectively and prospectively.

Relieve Impact of Cheap Imports

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PHILBIN. Mr. Speaker, not long ago I communicated with President Kennedy and his Cabinet Committee asking for relief for the textile industry and other industries feeling the impact of cheaply produced foreign goods.

I am pleased indeed that in response to these intercessions I have been advised by the White House that the President has directed his Cabinet Committee, appointed to look into these questions and report back to the President, to submit its recommendations as quickly as possible so that action can be taken, and I am very hopeful that favorable action may soon be taken.

In addition, the distinguished Secretary of Commerce, the Honorable Luther A. Hodges, Chairman of the Cabinet Committee to whom I also appealed, has assured me that his Committee must make its report to the President in the near future and in the interim will study

all measures of relief as thoroughly as possible.

As I have pointed out many times, cheaply produced foreign goods are undermining American industrial prosperity in many industries and causing widespread unemployment and depressed conditions.

This exceedingly dangerous situation has been allowed to drift altogether too long. Congress, as well as the executive branch, must accept full responsibility for the most unfortunate, deplorable conditions that have developed in our economy as the result of cheap, low-standard institutions of many kinds affecting many American industries. Some of our industries, like textiles, are truly facing extreme alternatives, indeed many textile mills have been forced to close their doors; more of them are facing liquidation.

This affliction has been spreading rapidly to many other industries, the list of which is very extensive and includes, steel, its fabricated products, rubber, shoes, plastics, woodworking and electronics to mention but a few. I am firmly convinced that unless this situation is dealt with soon by Congress, or by the executive department, or by both legislative and executive departments working together, that further, more aggravated, dire results will ensue.

Certainly there is no time to lose in pressing for remedial action, and I urge that nothing be left undone by every branch of Government involved to tackle this vexing and most serious problem with real vigor and a full determination to take action that will prevent the further depression and liquidation of American industries and unemployment of our fellow citizens.

U.S. Constitution, Connally Amendment, World Court

EXTENSION OF REMARKS
OF

HON. JOHN R. PILLION

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. PILLION. Mr. Speaker, I have noted with a great deal of pride the continuing efforts by members of the legal profession to uphold the basic tenets of our U.S. Constitution. Mr. E. F. W. Wildermuth, of the Queens County Bar Association, is deserving of commendation for his work in this direction. I am pleased to include in the RECORD at this time the text of an article written by Mr. Wildermuth and published in the April 1961 edition of the Queens Bar Bulletin. The article is entitled "Shall the United States of America Surrender to the World Court?"

Mr. Wildermuth has performed a distinct public service by alerting us to the real and imminent dangers of international infringement upon the sovereign powers of the United States.

Mr. Wildermuth is to be commended for his clear analysis of the dangers of submission to the World Court. The content of his critique is a powerful antidote for the forces who seek to weaken, stultify, and eventually destroy the noble purposes of the U.S. Constitution.

The text of the article follows:

SHALL THE UNITED STATES OF AMERICA SURRENDER TO THE WORLD COURT?

(By E. F. W. Wildermuth)

In September 1796, George Washington, America's No. 1 patriot, implored Americans as follows:

"In one word, be a nation, be Americans, and be true to yourselves."

One hundred and thirty-one years later, on February 18, 1927, the joint conference of the commanders in chief of the five large veterans organizations, meeting in Washington, D.C., undoubtedly inspired by our first President's dedication to this Nation, expressed Americanism as follows:

"Americanism is an unfailing love of country; loyalty to its institutions and ideals; eagerness to defend it against all enemies; undivided allegiance to the flag; and a desire to secure the blessings of liberty to ourselves and posterity."

About one-third of a century later, at a recent conclave of American ecclesiastics, it was proclaimed, as reported by the Associated Press:

"The United States may soon have to subordinate its will to that of the United Nations. Citizens must be prepared to take it."

In further pursuit of the subordination of all Americans to the will of the U.N., it was admonished:

"We believe citizens should prepare themselves for such eventuality. It would not then be an undue shock to public opinion, since people would have a more mature view, better able to interpret democracy at work on a world scale, with the benefit as well as the risk that the extension of democracy always entails."

If these exhortations by clerics are not sheer euphemistic evasions, then the Ten Commandments already have been offered upon the sacrificial altar of international crucifixion. By the same token and for the same reason, it becomes crystal clear that a large segment of the American clergy is in dire need of guidance and deliverance from the influence which inspired such exhortations, made obviously in difiance of the praxeological knowledge with which all Americans are endowed in varying degrees. However, these gentlemen are not out of step with other advocates of world government, who likewise are without shame in proposing that Americans sacrifice their rights and freedoms as guaranteed by the Constitution and subordinate themselves to the will of the U.N.

Such behavior is incomprehensible. It eloquently evidences an urgent need for schooling in the American system of government contemplated by the Founding Fathers.

The civilization of this world (at the moment it seems highly uncivilized) is precisely what the schools have made it. Little of the shocking truth is generally known about our schools and colleges. For instance, it is apparent that a conspiracy of worldwide magnitude has long been at work against thorough courses in our own history, and especially constitutional history * * * the history of liberty.

The manifest indifferences of Americans to the constitutional doctrines of their country is appalling. The indefensible proposals and practices against the plainest limitations on power contained in the Constitution do not appear to evoke objection from any quarter, not even from the organized bar.

Is it not shocking that for more than a quarter of a century, no great debate on a constitutional subject has been heard in either House of Congress?

The principles of constitutional government are not outmoded as is proclaimed by the proponents and advocates of world government and by the profusion of anti-American propaganda which fouls the very air we breathe. These principles are as immutable as those of mathematics.

The constitutional system of the United States is the first that fallible man was able to formulate for the one purpose of controlling those in power and every American should know it as he knows the alphabet.

For more than several generations we have failed and neglected to indoctrinate each new generation with a knowledge of the superiority of the philosophy of the American system. We have also failed and neglected to combat alien dogma and propaganda designed to destroy constitutional government in the United States. The net result is that many Americans have been "taken in" with the false promises made by proponents of world government and a large number of Americans have been misled into believing that public officials and sundry self-certified persons are endowed with superior wisdom and knowledge at Washington and at the U.N. and will solve all the problems of the world, as well as the personal problems of all Americans.

The underminers of the Constitution have long been plying their nefarious occupation, and it is pertinent to recall Daniel Webster's warning that the constitutional system of the United States "is the last hope of the world."

The problems of Americans would be much simpler if the United States were predominantly populated by citizens motivated by the ideas and ideals which inspired the Founding Fathers and the countless other patriots who, at great personal sacrifice, contributed to the making of this Nation, at one time, the envy of the world.

It is probable that the law schools of this Nation are in a large measure at fault for the deafening silence on the part of the organized Bar while alien ideas are introduced in government in violation of the Constitution. Some years ago, the American Bar Association made a survey of the law schools in 25 of the leading universities and found that only 8 of them made a knowledge of the Constitution a requisite to a degree. This dearth of knowledge with respect to constitutional government persists, and there are times when it appears that both Americanism and the American system of government have become unfashionable in the United States and throughout the world.

THE CONNALLY RESERVATION

On July 25, 1946, Senate Resolution 196 was adopted. It provided for the unconditional acceptance by the United States of compulsory jurisdiction by the International Court of Justice, better known as the World Court.

Before becoming effective on August 14, 1946, by reason of President Truman's declaration for the United States accepting compulsory jurisdiction of the International Court of Justice, a reservation was adopted which provided that the acceptance by the United States of jurisdiction by the World Court "shall not apply to disputes with regard to matters which are essentially within the jurisdiction of the United States, as determined by the United States of America."

Having been offered by the then Senator Connally, of Texas, this reservation became known as the Connally reservation.

The proponents and advocates of world government are most unhappy with this extremely important protective reservation. Accordingly, they propose its repeal and so great is their pressure in this regard that they succeeded in obtaining a plank in the 1960 Democratic platform pledging repeal of the Connally reservation. Similar pressure groups are effectively active in the other major political party.

Briefly, the repeal of the Connally reservation will subject the United States irrevocably to the jurisdiction of the World Court in every matter with respect to which the World Court decides that it has jurisdiction.

The World Court, unlike courts in the American system of jurisprudence, is a court of first and final jurisdiction. There can be no appeal to a higher court from its determination that it has acquired jurisdiction and there can be no appeal to a higher court from its adjudication on the merits, no matter how corrupt, illogical, unlawful, or unjust may be such adjudication.

It is not generally known that the World Court is in no way bound or guided by any definite rules or system of law, such as the common law or the American system of constitutional law. The World Court is free to improvise and to make up its own rules and render any judgment its members agree on, as influenced by each judge's own peculiar legal concepts * * * and, as influenced by his national pride or interest. There are no juries in the World Court.

We have witnessed our own lifetime-appointed Supreme Court exercise absolute and unrestrained power; nullify acts of Congress; usurp legislative powers and apply its legislation to past transactions, not to mention its having decreed itself to be the supreme law of the land, the Constitution of the United States to the contrary notwithstanding * * * all with absolute impunity.

It will be recalled that in 1952, Chief Justice Vinson and Associate Justices Minton and Reed, in a dissenting opinion, held that the U.N. Charter superseded the U.S. Constitution when they voted to uphold President Truman's seizure of the Nation's steel industry, on the ground that the U.N. Charter obligated the United States to resist aggression in Korea and therefore authorized him to take any steps he deemed necessary in the prosecution of the war.

In view of this strange behavior by the dissenters, what guarantee do Americans have that a majority of the Supreme Court may not one day succeed in subordinating our Constitution to the U.N. Charter or to any other treaty? Also, if the dissenting opinion in the Steel Seizure case had been the majority opinion, is it likely that anyone would be free to publish this article or that you would be free to read it?

If we are powerless and helpless, as apparently we are, to prevent our Supreme Court from decreeing itself to be the supreme law of the land in defiance of the Constitution and attempting to subordinate the Constitution to the U.N. Charter, how can we assume or believe that the World Court will not decree, even in the face of the prohibition contained in the Connally reservation, that our Constitution is subordinate to the U.N. Charter?

Precisely, what could Americans do, short of war, to restore the sovereignty of the United States if the World Court decreed that the U.N. Charter, to which it owes its sole allegiance, supplanted and superseded the Constitution of the United States?

What guarantee do Americans have that the World Court judges from nations in which the people are denied free government, are not biased and prejudiced against American constitutional government?

The present World Court is composed of 15 members, selected and elected for terms of 9 years each by the U.N. General Assembly and the Security Council of the United Nations. Only 3 jurists are from common law countries; 4 are Latin Americans; 2 are from Moslem countries; 2 are Communists; one Chinese; and one each from Greece, France, and Norway. None of the nominees is subject to our Presidential, Senatorial or State Department approval. It is not required that they be lawyers or have judicial experience.

Recently, Dr. Philip C. Jessup, an American, was elected to the World Court by the U.N., to succeed Hon. Green Haywood Hackworth, who urged that he not be considered for reappointment.

Hon. John R. Pillion of Buffalo, a distinguished Member of the House of Representatives, sent telegrams to the President and the President-elect in an effort to bar Dr. Jessup's election, charging that his career "has consistently been one of appeasement, retreat and surrender to pro-Communist causes."

The New York Times expressed itself editorially on November 16, 1960, with respect to Dr. Jessup's selection for the World Court, as follows:

"It is hard to conceive of a better selection than that of Philip C. Jessup for the International Court of Justice at the Hague, made by vote of the United Nations General Assembly on Wednesday."

It will be recalled that Dr. Jessup testified as a character witness for Alger Hiss and that after Hiss was found guilty of perjury by a jury, in accordance with American jurisprudence, Dr. Jessup had "no reasons whatever to change his opinion about Hiss veracity, loyalty, and integrity."

Although other member nations of the U.N. have reservations similar to our Connally reservation, the promotors of world government have concentrated their attack on the United States and Americans. Quite obviously, those member nations are self-respecting sovereignties which refuse to permit meddling in their internal affairs by the World Court, and the advocates of world government consider it the better part of wisdom to refrain from attempting to stampede those nations into repealing their protective reservations.

No valid or substantial reason has been offered and none exists requiring the repeal of the Connally reservation. Its repeal would actually constitute an invitation to the World Court to meddle in our internal affairs and, having been invited, the invitation will be accepted at the first opportunity.

The repeal of the Connally reservation will vest the World Court with the sole power to finally determine that the United States is not blessed with domestic or internal matters and then it will be free to proceed with reckless abandon and malice to meddle in our internal affairs, at the whim and caprice of any member nation which chooses to hail the United States before the World Court under any pretext.

The World Court has no jurisdiction over the internal affairs of a member nation. Simple as this statement of fact sounds, it has no meaning until it is applied in a particular case. For example, France claims that shooting Algerians is solely an internal affair of France and Russia claims that shooting Hungarians is solely an internal affair of Russia. What is an internal affair? The answer, without the Connally reservation, would come only from the World Court. In 1950 our own State Department declared that there is no longer any real difference between domestic and foreign affairs.

The U.N. Charter fails to define "internal affairs" and the reason for this omission is manifest. No two nations can agree as to what constitutes "internal affairs." If there could be agreement, it is probable that the need for a World Court, as claimed by advocates of world government, would not exist.

In an apparent effort to coerce the United States into endowing the World Court with power and authority irrevocably to make those final decisions affecting Americans in all disputes or controversies with regard to matters pertaining to their domestic or internal interest and concern, the Connally reservation is damned as being "self-judging."

To so damn the Connally reservation is also unjustly to imply that evil self-interest prevents our performance of some inferred legal and moral duty to so empower the World Court.

If it be self-judging to take the precaution afforded by the Connally reservation, self-judging in this instance is a virtue to be preserved at all costs, as the last bastion of defense against those who would so use the Constitution as to make hostages of Americans.

Officials, sworn to uphold and defend the Constitution, but who fail to uphold their oaths of office by advocating and promoting the repeal of the Connally reservation or who, in any other manner, aid in the surrender of the United States to the irrevocable jurisdiction of the World Court, should be impeached and removed from their positions of public trust.

It is difficult to understand why any patriotic and loyal American would propose or advocate the irrevocable surrender of the United States to the unrestricted powers of the World Court, or even so much as suggest the repeal of the Connally reservation.

CONCLUSION

It appears that there is much room for the improvement of scholastic standards in the schools of the various States of this Nation and particularly with respect to education in matters pertaining to superiority of the philosophy of the American system of government.

Accordingly, it is proposed and urged that the organized bar, through the membership of its respective associations in the United States of America, promptly adopt resolutions urging the legislatures of their respective States to forthwith enact legislation requiring all schools from the seventh grade up, and all colleges and universities to give thorough courses in all subjects pertaining to constitutional government, and prohibiting a degree of graduation to all students until a rigid examination has been passed under appropriate and effective supervision; and urging Congress to retain the Connally reservation in its present form.

Last year the House adopted a joint resolution favoring repeal of the Connally reservation, which the author believes to be null and void and the House should be so informed.

If the organized bar in the United States of America does not promptly adopt and vigorously pursue its appropriate role of leadership in government, based upon constitutional principles, it will stand convicted by public opinion of having failed to justify its existence should the American system of government fail.

Gamble That May Pay Off

EXTENSION OF REMARKS

OF

HON. NEAL SMITH

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. SMITH of Iowa. Mr. Speaker, farmers in the livestock feed production areas of our Nation are demonstrating a constructive interest in the new feed

grains program that indicates the Congress took a big step in the right direction with its adoption.

In my home State of Iowa attendance at county and community meetings called for discussion of the program is reminiscent of the turnouts in early New Deal years. Long lines of producers, waiting their turns to sign up as participants, have become familiar sights at ASC offices.

The recognition that this program offers hope for the revival of the total economy in rural areas is evident from the fact that in some instances chambers of commerce are sponsoring explanation and question-and-answer sessions related to it.

While many newspaper and magazine articles on farmer reaction to the program emphasize its pocketbook appeal, my mail and conversations with farmers reveal other and perhaps even more significant reasons for participation intentions.

For example, some who see no immediate personal financial gain will participate because they are concerned by the regularly repeated assertions that "farmers really don't want a program" and wish to make it clear that continued cooperation of farmer and government is essential in bringing equality and stability to the agricultural economy. Still others will participate simply because they see the program as an avenue toward realistic, effective management of our abundant feed grain supplies.

Pointing out that "the Kennedy administration's first effort to crack the farm surplus problem is getting a lot of support from farmers," the April 24 issue of U.S. News & World Report carries the following on-the-scene report datelined Iowa Falls, Iowa:

GAMBLE THAT MAY PAY OFF—IN THE CORN BELT

(The Kennedy administration's first effort to crack the farm-surplus problem is getting a lot of support from farmers. They find it profitable to participate in the plan to retire some corn acreage from production and collect higher price supports on the rest. For Mr. Kennedy, a venture may be paying off.)

IOWA FALLS, IOWA.—Out here where the tall corn soon will be growing, Orville Freeman, President Kennedy's Secretary of Agriculture, is taking a big gamble.

Freeman and Kennedy are gambling on a new plan to get the Nation's increasing surplus of corn under control. The gamble is that they can induce at least half of the country's corngrowers to sign a contract to reduce the acreage planted to that crop.

The feel of the situation here in the Corn Belt is that the new administration has an excellent chance of winning its gamble. The reason for this outlook is that corn farmers are finding a strong pocketbook appeal in the Freeman-Kennedy proposal.

Not since the first years of the New Deal, back in the 1930's, have farmers shown as much interest in a Government program as in the one now presented. Hundreds turn out for meetings to discuss it. In almost every farm home, pencil and paper are out figuring the dollars-and-cents meaning—the result in terms of money in the bank—of what the Government is offering.

A staff member of U.S. News & World Report, on the ground, finds interest lively and growing throughout the Corn Belt States of Iowa, Illinois, and Indiana. A sample of what is happening elsewhere can be seen here in Hardin County in north-central Iowa.

THE SIGNUP

For days, the county Agricultural Stabilization and Conservation office (ASC) in Iowa Falls has been jammed. Farmers stream in for information, or to sign up, or both.

Usually the office opens at 8 a.m., but officials have been arriving as early as 7:30. Even then, they find a knot of farmers waiting. On good days, the line stretches half a block up the street.

Hundreds have attended evening meetings in schoolhouses and elsewhere. At these sessions, as you see in the accompanying pictures [not printed in the RECORD], they listen intently when the new program is outlined. Usually farmers tend to doze at evening meetings. But not at these. Too much is involved.

At the ASC office in Hamilton County, the crowd of waiting farmers sometimes reaches such size that each is given a number and waits in a big basement room. While waiting, he is asked to draw a map of his farm, to expedite later discussion of his situation.

WHY THEY JOIN

Farmers and officials talk of various reasons for joining in the program.

"It took the votes of a lot of city Congressmen to pass this program, so let's show them we appreciate it," says one official.

Some farmers talk of the urgency of reducing the corn surplus. But there is general agreement, among officials and farmers alike, that the principal inducement is financial.

In terms of dollars and cents, here is what the plan would do:

A farmer who reduces his corn acreage by 20 percent—as compared with his average of the last 2 years—is assured a support price based on a national average of $1.20 a bushel. This price varies from county to county depending on the freight rates. In Hardin County it is $1.14 a bushel.

For acreage taken out of production, the farmer receives a payment based on 50 percent of the average yield of the land retired. In Hardin County the average per acre will be $42.13.

If the farmer wishes, he may retire up to an additional 20 percent of his corn acreage. For this he receives 60 percent of the estimated yield of the land in terms of support prices. At this rate, the county average is $50.55 per acre.

The farmer who "stays out" may grow as much corn or other feed grain as he wishes. But there are no price supports for his output. He is at the mercy of the free market.

And, where the free market is concerned, the plan gives Mr. Freeman a tool for holding the price down—selling corn from the Government-held surplus. He is expected to keep the free-market price at about a dollar a bushel, low enough to make it more attractive for the farmer to sign up.

So pencils and adding machines have been busy as each farmer figured out what the plan would mean to his operation.

ONE FARMER'S FIGURES

An example is that of Don Williams, who owns 160 acres southeast of Williams, Iowa. He figures it this way:

His basic, 2-year average in corn is 73 acres. Under the program he may retire 40 percent of this, or 29.2 acres. In return, he would receive a Government payment of $1,401.01. To this he adds estimated receipts from the corn to be grown and from other crops. Then he subtracts $562—the cost of seed and fertilizer.

The final calculation shows an expected crop income of about $7,300 for Mr. Williams and his 160 acres.

If he stayed out of the program, Mr. Williams calculates that he would gross about $400 less from his crops. Meanwhile his expenses would be some $500 higher, because he would be seeding and fertilizing a larger acreage.

Thus, there is about $900 more in it for him if he enters the plan than if he stays out. Mr. Williams is signing up.

CREDITOR URGINGS

Talk to the men in rural communities who do business with the farmers, especially those who extend them credit, and you find another reason for the size of the sign-up.

For the most part, these men agree that the program will put more money in their farmer-customer's pockets. So, naturally, they too, are for it. Typically, Leo C. Jorgensen, president of the Citizens State Bank of Iowa Falls, says:

"We are certainly trying to encourage people to go into this program. We feel our customers need the money. It will take some of the pressure off their demands for credit for operating funds this spring, because they will get a payment on the land taken out of production."

In another county, an ASC official reports a grain-elevator operator is urging clients to enter the plan.

"Grain storage is only a part of his business," the ASC man says. "He sells seed, fertilizer and other things to farmers. He's been having trouble collecting his accounts."

A surprising number of livestock feeders—farmers who feed all or most of the corn they grow to cattle and hogs—appear to be ready to join the program. They, too, have been busy with pencil and paper.

WINNING PROGRAM?

The feed-grain program is the Kennedy administration's first effort to crack the expensive, perennial, and politically touchy, farm problem.

At the outset, Mr. Freeman found the Government holding some 2.7 billion bushels valued at about $4 billion. Another big corn crop was in prospect for 1961.

Original estimates were that if 50 to 60 percent of the corn farmers entered the program, it would be a success, save the Government $500 to $700 million, and cut the production of surplus feed grains by something like 10 percent.

Now, informed officials are expecting a 75-percent participation in the program in Iowa and 70 to 75 percent in Illinois, with similar figures from other areas.

As you travel through the corn belt, you sense a feeling of apprehension among farmers and rural businessmen. It appears to stem from the fact that it's becoming harder and harder for farmers to meet bills and replace machinery. And over all hangs the shadow of great and growing corn surpluses, pushing prices down, threatening to break livestock markets.

The new feed-grain program, in the minds of both farmers and businessmen, holds a promise of reversing the trends of recent years. In the main, they seem willing to give it a whirl in numbers that are turning out to be a surprise to many people.

I had previously sent a questionnaire to 12,000 bona fide Iowa farmers. Following are the results of the parts that can be computed mathematically:

(a) Do you favor passage of this legislation? Yes, 89 percent.

Farm Bureau members: yes, 88 percent.

National Farmers Organization members: yes, 95 percent.

Farmers Union members: yes, 100 percent.

No organization: yes, 89 percent.

More than one organization: yes, 98 percent.

A few had views that were not really either for or against.

(b) If this program becomes law, do you intend to comply for a 20-percent reduction? Yes, 73 percent. An additional 20 perecnt? Yes, 23 percent.

I also asked their planting intentions if no bill was passed as compared to their intentions if the House bill was passed and soybean supports were increased to $2.30. The following are my conclusions as a result of these questions and some followup interviews which were necessary to clarify the reasons behind their positions:

First. They intended to increase acreage of soybeans in the neighborhood of 10 percent.

Second. Almost none of this acreage was to be shifted from corn to soybeans. Almost all of this acreage would have been in meadow or oat land under normal rotation practices. They would have increased soybean acreage even if prices were still bad because they are so pinched for money that they must shift to a crop that will bring more income.

Third. Almost the only farmer who was not going to put in more corn was the one who had his farm completely in corn last year. I think they intended an average increase of 10 percent and perhaps even more.

Fourth. Under the new law they intend about an 11-percent decrease in corn acreage although the 73 percent that comply will decrease their acreage an average total of about 25 percent. The ones who are not complying are going to increase acreage and reduce the effectiveness.

Sister Mary Annunciata, R.S.M.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. FLOOD. Mr. Speaker, Mrs. Flood and I lost a very dear friend last week with the passing of Sister Mary Annunciata, R.S.M. When Mrs. Flood attended College Misericordia, at Dallas, Pa., Sister Annunciata was the dean of that fine institution and it was during this period that Mrs. Flood came to know Sister Annunciata well as a teacher, friend, administrator, and counselor. This close friendship continued through the years that have intervened and it was with a heavy heart and great regret that we received the news of her passing.

Sister Annunciata was a lady of enormous ability. She did many things, and all of them well. As the editorial from the Wilkes-Barre Times-Leader of Saturday, April 15, 1961, states:

Thousands of young men and women, many now parents and grandparents, were influenced by the high standard of intellectual and cultural achievement she insisted on in the conscientious discharge of her duties. Her interest in the students was not limited to the periods they came under her supervision, but continued after graduation as they took their places in the professions, government service, business, and the home. Evidence of the appreciation of her former pupils and others for the practical assistance she gave them beyond the call of duty was provided during her illness when she received more than 1,000 messages and scores of floral tributes and gifts.

Mrs. Flood and I concur wholeheartedly with those fine sentiments which accurately reflect the life of such a wonderful person. We who knew her are greatly saddened by her passing but we take comfort in the knowledge that her everlasting reward will be a happy and joyous one.

As a further extension of my remarks, I include the excellent editorial previously referred to from the Times-Leader:

SISTER MARY ANNUNCIATA

To a religious, death is not an end, but a beginning; not a misfortune, but a reward; not a cause for distress, but an experience to be accepted with equanimity, based on sublime faith and full compliance with the divine will. A dedicated woman like Sister Mary Annunciata, R.S.M., daughter of Mr. and Mrs. James Merrick, of Avoca, and niece of Msgr. J. J. Curran, late pastor of St. Mary's Church of the Immaculate Conception, Wilkes-Barre, obviously was no exception to the rule.

For almost a half century, Sister Annunciata, a doctor of philosophy and a leading educator in the community, held such important posts as supervisor of schools conducted by the Sisters of Mercy in the Roman Catholic diocese of Scranton, dean of College Misericordia at Dallas, and principal of St. Mary's High School, city. It would be difficult to place an accurate estimate on the value of her contribution to education and to the area by virtue of her service and activities, but it was considerable.

Thousands of young men and women, many now parents and grandparents, were influenced by the high standard of intellectual and cultural achievement she insisted on in the conscientious discharge of her duties. Her interest in the students was not limited to the periods they came under her supervision, but continued after graduation as they took their places in the professions, Government service, business, and the home.

Evidence of the appreciation of her former pupils and others for the practical assistance she gave them beyond the call of duty was provided during her illness when she received more than 1,000 messages and scores of floral tributes and gifts.

Endowed with a brilliant mind, exceptional administrative ability, and a seemingly inexhaustible supply of energy, she not only met the challenges of the five hectic decades through which she labored so successfully, but she appeared to have her finger on the pulse of education, so she was able to anticipate trends and formulate her plans accordingly. The progress Misericordia made during her administration, spanning 12 years in an executive capacity and 11 years as a member of the faculty, was an indication of the scope of her talents.

Sister Annunciata enhanced a family tradition of service to God and man, not only meeting her obligations under her vows in full, but serving as a stimulating example of zeal and unselfishness.

Finland—Nation of Integrity

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PHILBIN. Mr. Speaker, because of the large number of persons of Finnish descent living within my district, it was of particular interest to me to see the splendid special section which the New York Times issued recently under the title, "Finland—Nation of Integrity." The pictures and articles do a magnificent job of bringing a meaningful message about the freedom-loving country of Finland to the people of America.

I feel that this magazine supplement reflects very accurately both the progressive attitude and industry of the Finnish people. All of the articles were excellent and three of them were of special interest to me. They are entitled "Finland's Expanding Industrial Production," "Wood: Finland's Richest Natural Resource," and "Helsinki Trade Center." I request unanimous consent to have these short articles printed in the CONGRESSIONAL RECORD.

FINLAND'S EXPANDING INDUSTRIAL PRODUCTION

Among the leading industries of Finland, the metalworking industry developed strongly during World War II, and during the postwar years. In the 1950's this industry continued to increase its exports. Finnish ships, paper machines, tractors, cables, and other metal products have become widely known both in the West and in the East. The metalworking industry has thus become Finland's biggest industrial employer. Of a total of approximately 380,000 regular industrial wage earners, the metalworking industry employs over 100,000.

Another expanding industrial branch is the textile industry which previously sold only to domestic consumers. Now Finnish textiles such as cotton, wool, and knitwear have conquered foreign markets and their high quality and beautiful design are well known in many countries and particularly in the United States.

Finland's vigorous industrialization and the consequent concentration of population in towns and densely populated areas has given an impetus to the rapid growth of the food industry. Today, Finland's big flour mills, bread, biscuits, macaroni, sweets, and other special food products come well up to modern international standards.

To complete the brief account of the present position of Finland's so-called home market industry it may be mentioned further that her glass and ceramic industries enjoy international fame especially in the fields of art glass and pottery, and in the last 15 years, her chemical industry has made great strides forward.

The future will call for greater efforts. Internally the question is to create employment for the age groups born after World War II. Another big task is to adapt modern methods to meet the severe external competition which is to be expected as the result of European economic integration.

Finland has taken her place among the industrial countries and her industry hopes that during the current decade it can go on increasing its contribution to domestic and international prosperity.

WOOD: FINLAND'S RICHEST NATURAL RESOURCE

Just as "beauty is in the eye of the beholder," the forest can conjure up a host of images for a variety of people. For the child, the forest will be the source of his next Christmas tree. A poet will see in it the cradle of his country's mythology; a soldier will view the forest as the place for military ambush; and a young married couple will go to the forest as the ideal site for a picnic.

But for the 4½ million people, who comprise the nation of Finland, the forest can have but one compelling and overriding meaning; it is the perennial and inexhaustible source of the nation's livelihood, their country's most versatile and useful natural resource. And, because over 70 percent of Finland's extensive terrain is heavily invested with growing forest land, Finns have grown accustomed to call it Finland's "green gold."

The "green gold" of Finland's forests is the single most important and enduring basis of the economy of the nation, otherwise deficient in some of the natural resources of modern industry. Three-quarters of the cash value of Finland's exports is based on forestry products, and these exports enable Finland to buy back from the rest of the world the raw goods, services, and materials which are needed for the full development of her highly diversified and modern economy. Thus, although the mechanical, engineering, industrial, textile, and other branches of Finnish economy are today making great strides, the wood processing industries continue to set the pace for the entire country.

Industrial exploitation of forest resources has followed two principal lines. Modern paper, pulp, and chemical production which today forms the principal export resources, is the junior industry and its antecedents run back only a century in Finnish development. Lumber production has a historical basis in the 16th century.

In both fields, Finland has achieved a world marketing position which is unique for a country which is physically remote from the highways of world trade. Finland's exports, at present, supply 12 percent of the world demand for coniferous sawn wood; 22 percent of world demand for plywood; 18 percent of world demand for newsprint and 9 percent of world demand for chemical wood pulp.

Since Europe is her principal market, Finland's forest products supply an even higher ratio of the total consumption of wood, paper, pulp in the European area.

By any accepted standard the Finnish industry is "big industry"—and is growing bigger. Within 3 years, the pulp and paper production capacity will increase by 45 percent. And expansion plans are already on the board for the ensuing decade. Finland's wood-processing industries have reached a level of technical development second to none in the world.

Consumption of paper products is continuously rising in the whole world but more particularly in western Europe. Because of ecological factors, high-quality Scandinavian production of these products, synchronized to western European demands, will ultimately become the major supplier of paper for Europe. But it is equally obvious that Finnish pulp and paper can also be exported to the United States, and to the Western Hemisphere, on the principle that a good product will always find a market.

HELSINKI TRADE FAIR CENTER

The Finnish Fair Association was founded in 1919, not long after Finland gained her independence, to promote trade by organizing fairs and exhibitions in this country. Since its first trade fair in 1920, the Finnish Fair has organized over 50 fairs and exhibitions, general as well as specialized ones. Prominent among the former are the quinquennial Finnish Industries Fairs, in which all branches of the country's industry participate. The latter include the smaller annual spring fairs, mainly devoted to certain branches of production, and several other special exhibitions.

Situated right in the center of Helsinki, the Finnish Fair has two permanent exhibition halls totalling 130,000 square feet in area, and makes use of a large outdoor site on which light temporary halls totalling up to 200,000 square feet in area can be erected when needed. Several foreign trade fairs, e.g. those of Western Germany, England, France, and Soviet Union, have also been held on the same premises. The first non-European country to exhibit here will be the United States of America, with its "America Today" exhibition scheduled for May 26–June 11, 1961.

A large number of Finnish industrial enterprises and organizations are themselves members of the Finnish Fair. For this reason it is natural that the Finnish Fair has also been entrusted with the arrangements for Finnish official participation in trade fairs and exhibitions abroad as well as for independent export exhibitions. Thus Finnish products have been exhibited in many countries throughout the world, such as the United States of America. This year's program includes Finland's participation in the Chicago International Trade Fair, for which some 4,000 square feet have been reserved.

The foreseen collaboration of Finland with the Outer Seven (EFTA) and especially the increasing interest that foreign countries have shown in Finnish markets has given rise to the question of organizing international exhibitions in Finland. In fact, the Finnish Fair is planning to hold the first event of this kind in 1962.

For What Avail—If Freedom Fail

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. ALFORD. Mr. Speaker, yesterday afternoon, at the convocation of the National Society, Daughters of the American Revolution, Miss Sandra Smith, of Little Rock, Ark., the lovely daughter of Dr. and Mrs. John McCollough Smith, was named winner of the national essay contest sponsored by the DAR. As the winner, she received the National Good Citizen Award.

I commend her essay to the reading of Americans everywhere, and under leave to extend my remarks, I include this essay in the RECORD, as follows:

FOR WHAT AVAIL—IF FREEDOM FAIL

(By Sandra Smith)

"For what avail the plough or sail,
Or land or life, if freedom fail?"
—*Ralph Waldo Emerson, "Boston."*

Of what avail the strong wings of the eagle if he be not free to soar into the unknown? So be it with man. What matter if he have the heritage of Washington and Jefferson and a faultless democracy, if his individual freedoms disappear? What matter if ours be "the land of the free and the home of the brave" if our people witness the constant overpowering force of Government. Should this prevail, who would dare predict our Nation's future.

In order to preserve our freedoms, we should rededicate ourselves to the ideals for which our forefathers fought the Revolutionary War and about which Thomas Jefferson wrote in the Declaration of Independence—the ideals which emphasize the importance of the individual. Many people today feel that the Government should underwrite everything we do, but when a government, which ultimately is the people themselves, overshadows the power of the individual, then freedoms disappear. If America is to be free, we must individually feel a personal responsibility for her freedoms. We must have greater incentives to do necessary tasks ourselves rather than letting them be undertaken for us by the Government. We must develop appreciation for the value of work and a sense of pride in a job well done.

It is true that communism is a challenge to America's freedoms, but with more emphasis placed on individual worth this threat will fade. I have confidence in the American people and believe they will work to protect the precious freedoms established by their forefathers. Individuals made America, and only individuals can insure our American heritage. Emerson gave a watchword to posterity when he wrote: "For what avail—if freedom fail?"

Letter Relating to Present Operation of Public Law 78 in California

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. COAD. Mr. Speaker, in my remarks on March 30, of this year in connection with the introduction of my bill H.R. 6032, I stated that Public Law 78, originally enacted to meet Korean war needs, has created a program which feeds on poverty and unemployment in Mexico and increases poverty and unemployment at home. By means of this program approximately 316,000 Mexican braceros were imported for work on U.S. farms during 1960. In my study of the effects of this program I have uncovered case upon case of economic hardships in many of our rural areas which can be traced directly to the operation of this program.

At a time when the extension of Public Law 78 is again coming up for consideration, I introduced H.R. 6032, which if enacted would amend this law to provide, in connection with the employment of workers from Mexico, protection for the employment opportunities of agricultural workers in the United States. I believe that through the amendments contained in my bill there could be enacted into law a program which would go far toward the elimination of the serious moral, social, and economic conditions which hang over communities and entire counties like a shroud and grim reminder of the inexcusable neglect in this field of domestic policy. Mr. Speaker, I hope that all the Members take a few minutes of their time to read this letter to Secretary of Labor Goldberg from a small businessman which

tells of the disastrous impact the present operation of Public Law 78 has had in an agricultural community in California. The letter follows:

IMPERIAL BARGAIN STORE,
Brawley, Calif., April 1, 1961.

Mr. ARTHUR GOLDBERG,
Secretary of Labor,
Washington, D.C.

DEAR MR. GOLDBERG: I am an independent owner of a small clothing store located at 934 East Main Street, Brawley, Calif. I have been in business here for about 16 years and have worked very hard to build my establishment. A few years ago I tried to expand to other towns in the Imperial Valley in hopes of maintaining a sufficient volume of business to protect my hard-earned investment in this farming area. In the process during these past 5 years I have lost $40,000 to $50,000.

The solution for this peculiar economic situation which has caused this seems nowhere in sight for the merchants whether they be small or large, whether they be independent or chain. The plight of many businesses, which exist here in Imperial Valley, is very grave and should receive prompt attention in order that a solution can be found while still a little time remains. Many businesses have closed their doors and many will close unless prompt action is taken to correct the serious blow to our economy.

The economy of Imperial Valley is dependent on agriculture. During the last several years there has been an exodus of people who are dependent directly or indirectly on agriculture for employment. Many jobs have been eliminated by mechanization—others have been eliminated by a few large farming interests becoming larger and absorbing small farmers. I reluctantly admit that some of this is unavoidable—but the extremely serious blow to us merchants of Imperial Valley is the bracero program as it now stands—Public Law 78. The original intent of importing Mexican nationals was a very necessary action—but it has outlived its need. It has created a situation which is benefiting a few greatly to the detriment of many—which will spell financial disaster to those struggling to stay in business.

Regardless of the general feeling among many of our farming interests—there is a great and very serious need for merchants of an area to be prosperous. The many conveniences and necessities provided for a community from which the farming interests also benefit are to a considerable degree attained as a result of taxes derived from commercial investments within the city. Commercial investments cannot be attractive unless they provide a reasonably good return on the investments. A reasonably good return is not possible unless the occupants, namely merchants, prosper. The number of vacant buildings in the Imperial Valley is mute evidence of this fact.

The use of braceros has displaced many local American citizens who are very much in need of employment. In turn, we merchants are deprived of the business which would result from the use of employees who are permanent residents. These permanent residents have their families here and the local business establishments would benefit from the purchases of the entire family. Farm interests argue that local citizens would not do the work braceros would do. There are arguments, pro and con, on this point. We, by all means, should give our people an opportunity to prove that they can do the work. At the same time one must consider that the importation of workers from other nations—who displace the local American workers—creates a steady flow of dollars to their home countries. These dollars are sorely needed in the areas which provide them with this income. A very small percentage of the money they earn is spent here. The problem is even greater here in the Imperial Valley because we are only within one-half hour drive from the border town of Mexicali, Baja California, Mexico. In addition to this braceros are housed and boarded in the camps and charged $1.75 per day. This is deducted from their paychecks whether they eat at the camps or not. In some cases the men choose to eat in town or buy their own food, but board of $1.75 per day is still deducted from their checks. One only has to converse with some of the braceros to find that they are being exploited. Greater numbers are usually brought into this area than there is work available. The camp owners thus benefit in that the hours each bracero receives is generally sufficient only to cover their weekly board.

We should first be concerned about our local American citizens having the employment the agricultural interests could provide them to support their families. If all efforts to remove their bracero program fail—the least that should be done is to require that the braceros should not be allowed to cross the border for the duration of their contract and that they should be provided with free housing and allowed to board as they choose. This would tend to curb the flow of a certain percentage of the dollars from here and this will aid limitedly the economy of this area.

In my opinion, this is one of the most neglected parts of our Nation. I am sure this view is shared by many others. An impartial investigation of each and every business in the Imperial Valley—whether a barbershop, clothing store—whether large or small—chain or independent will prove this to be so.

An aid to the merchants of the area which would be timely and extremely beneficial—at least until a solution can be worked out—is to have a representative of the Small Business Administration come to the Imperial Valley to extend loans to business establishments. Many are in need of financial assistance which at times local banks are reluctant to extend for other than short periods of time.

It is no secret that farming interests have powerful lobbyists—which represent them and which they can well afford. We merchants cannot afford lobbyist representation and I appeal to you to investigate this condition which exists here in Imperial Valley for it is extremely serious.

Very truly yours,

ANDRU ROSE,
Proprietor.

The State of the Congress

EXTENSION OF REMARKS
OF

HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mrs. ST. GEORGE. Mr. Speaker, the following editorial appeared in the Wall Street Journal of April 19. It points out very clearly and truthfully the steady decline of the power and prestige of the Congress of the United States. This, of course, is true not only of the Congress here at home but of parliamentary governments all over the world. In fact, in the last 4 years six nations have had to withdraw, as members of the Inter-Parliamentary Union, for the very simple reason that they no longer had parliaments.

The executive branch of Government is taking over more and more, both at home and abroad, and the reason is simply because we of the legislative branch are giving up our responsibilities and duties. The fault is ours, not the Executive's. The article follows:

THE STATE OF THE CONGRESS—WITH EXECUTIVE STRONG, IT GROWS INCREASINGLY PAROCHIAL

(By Robert D. Novak)

WASHINGTON.—President John F. Kennedy undeniably has brought a sense of excitement and vitality to almost every official corner of this city with one notable exception—Capitol Hill.

By no means does the congressional lassitude stem from any unexpected turn of events. Rather, the Democratic majority is now tasting the bitter strain it well knew would accompany the sweet delight of once more dealing with a Democrat in the White House. For President Kennedy's emphatic desire to uplift the executive branch—as demonstrated by many of his early proposals and actions—is accentuating what has been a long-term erosion of legislative branch power, an erosion partially obscured during the past 6 years of Government divided between a Democratic Congress and Republican President.

As a result, the atmosphere hangs heavy in the halls of Congress. Lawmakers wade through Mr. Kennedy's avalanche of legislative proposals with lethargy and dreariness. Their top aides, who play such a large part in setting the tone of Congress, feel left out of the main stream of power.

To be sure, Congress is no Supreme Soviet serving as a handmaiden of the Kremlin's bureaucracy. Nor is it a British Parliament where legislative action is dictated by the Cabinet. Indeed, the lawmakers can be expected to constrict such key New Frontier leigslative proposals as Federal aid to education and minimum wage liberalization. Other measures, including Mr. Kennedy's priority request that medical care for the aged be financed via the social security system, may be rejected flatly. Congress is expected to slice away, as usual, at foreign aid spending requests. In fact, the casual reader of newspaper accounts reporting the fate of the Kennedy program on Capitol Hill might surmise that Congress is calling the tune in Washington today.

A NEGATIVE BASIS

Yet, this could be no further from the truth. For the congressional power, such as it is, evolves from the negative base of obstructionism rather than from a positive ability to initiate Government policy. During the Eisenhower era, the Democratic Congress set its own timetable for domestic legislation and generally kept its own counsel about what measures would be finally approved—although many of these measures eventually were scuttled by Presidential vetoes. Not so today; it is the White House that has the leading voice in determining the congressional program of action.

Mr. Kennedy's preference for executive branch dominance is reflected not only by his intrusion into day-to-day congressional processes on a scope never contemplated by Mr. Eisenhower, but, even more dramatically, in some of his legislative proposals. His recommendation that foreign economic aid be authorized on a long-term basis would strip from Congress its power of close annual review over much of the multibillion dollar program. The President's farm program would transfer the responsibility for writing agricultural legislation from Congress to the farmers themselves, working with the Agriculture Secretary.

Congress might well demur at such self-inflicted damage. But Mr. Kennedy can tear away at congressional authority in ways that do not require the sanction of Congress, most notably in his bid for White House suzerainty over the independent regulatory agencies.

The new administration's most significant impact on the balance of power between the executive and legislative branches, however, has not been so much a matter of accelerating congressional decline but of disclosing just how far the decline has progressed.

Although a few constitutional theorists still talk of coequal legislative and executive branches, the historical reality is that one branch almost always sits higher in its saddle than the other. Congressional supremacy was at its zenith from the end of the Civil War until the Cleveland administration; the executive ascendancy began around 1900 and a trio of dominant Presidents—the two Roosevelts and Woodrow Wilson—established precedents not easily wiped away.

But apart from personalities, the decline of congressional power has been roughly proportionate to greater U.S. involvement in world affairs and greater dangers of war. Not only does the Constitution vest primary responsibility for foreign affairs and defense in the Executive, but the complexities of present-day international politics and military preparedness have shrunk the secondary roles in these areas assigned to the lawmakers.

Now that the Presidency is back in Democratic hands, even the illusion of congressional power is fading. Mr. Kennedy's deft handling of news media means he can outshout Congress. And there isn't much shouting from the Democratic majority in Congress these days anyway—partly attributable to the honeymoon atmosphere usually prevailing at the outset of any administration, but a situation that Kennedy lieutenants hope can be extended through careful tending of cordial relations with Congress.

Mr. Eisenhower's cutback of B–70 bomber production brought screams of anguish from Capitol Hill; an almost identical position by Mr. Kennedy has generated only a few grumbles. Democratic civil rights champions who denounced Mr. Eisenhower for submitting inadequate civil rights legislation scarcely complain that Mr. Kennedy has drafted no bill at all. Many Democratic Congressmen are apprehensive over the President's forays into the regulatory agency field, but few say anything about it publicly.

WHITE HOUSE AGENTS

Lawmakers with carefully constructed reputations for independence now appear in the roles of White House agents. Oregon's Senator MORSE, who last year insisted that loans for parochial schools should be attached to any general aid-to-education program, has joined administration opposition to such a move. Senator MCNAMARA, of Michigan, who in the past opposed then-Senator Kennedy's tendency to compromise on labor legislation, has cooperated with the administration in twice watering down minimum-wage proposals this year and may agree to still more compromises.

When it comes to foreign relations, the growing inclination by Congress to leave decision making to the President even extends to the Republican minority. The most partisan GOP lawmaker, facing the confused tangle of contradictions that comprise Cuba and Laos, hesitates about challenging Mr. Kennedy's moves in an area that could mean war or peace—a sharp contrast to the Congress of 60 years ago.

Consider the current status of the Senate Foreign Relations Committee, most prestigious of all committees. Senators still claw each other for a seat on the committee. But despite the efforts of its intellectually astute chairman, J. WILLIAM FULBRIGHT, the impact of the committee on the Nation's foreign policy remains in a state of steady decline.

"Our problem is ignorance," laments one unusally candid member of the committee. Backing up this admission was the committee's recent approach to the treaty for U.S. participation in the 20-nation Organization for Economic Cooperation and Development; initial suspicions about the treaty existed within the committee primarily because most members didn't bother to read it.

Thus, the committee's principal significance now lies in its potentiality for obstructionism. It can eviscerate a foreign aid program, refuse to ratify treaties and decline to confirm ambassadorial appointments. And so State Department officials cannot be blamed if they look upon the committee as a band of possible saboteurs to be pampered rather than as trusted counselors.

A SEQUESTERED WORLD

While Mr. Kennedy is fostering further executive branch inroads into congressional power, the lawmakers seem to respond by sinking deeper into parochialism. Plagued by requests from constitutents, Congressmen often are more concerned about the fate of a voter's pension check than cold war issues. Moreover, they often seem to live in a sequestered world virtually unintelligible to outsiders. When the Laotian crisis burst during the first of the current congressional sessions, the Senate Democratic caucus was otherwise engaged in esoteric contemplation of the makeup of the Senate Democratic policy committee—a group who functions are cloudy and whose importance is debatable.

Liberal-inclined students of government do not lament the decline of Congress, pointing to the "bad" government prevailing during the post-Civil War years of congressional supremacy. But conservatives yearn for a return to the ascendancy of Congress—minus the corruption, of course—on the assumption that Congress tends to be more conservative than the White House.

At any rate, no real resurgence in the power of Congress, be it liberal or conservative, seems possible in the foreseeable future. Rather, the record of Mr. Kennedy is only likely to further entrench executive dominance.

James Alfred Whalley, Fine American of Windber, Pa.

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. FULTON. Mr. Speaker, I rise to make a permanent record of the good citizenship and outstanding civic dedication of a friendly man, James Alfred Whalley, of Windber, Pa., brother of my good friend, Congressman IRVING WHALLEY of Pennsylvania:

[From the Windber Era, Apr. 13, 1961]

J. A. WHALLEY, WELL-KNOWN CITIZEN, DIES

James Alfred "Alf" Whalley, one of the most widely known men in this coal-producing area, died at 3:30 p.m. Thursday, April 6, in Temple University Hospital, Philadelphia. Mr. Whalley had been a surgical patient there for approximately 4 weeks.

Mr. Whalley, 55, a resident of 702 11th Street, was chief clerk and personnel manager of the Berwind-White Coal Mining Co. In addition to those posts, he was assistant to the general manager in public relations work for various Berwind-White enterprises. Mr. Whalley was treasurer of the Windber Era.

Active in community work, Mr. Whalley was an honorary member and former secretary of Windber No. 1 Fire Company and a charter member and one of the organizers of Windber Council, Holmes Safety Association. He served as council secretary for many years.

Mr. Whalley, a resident of Windber since 1914, was a native of Barnesboro, Cambria County, where he was born December 7, 1905, son of the late James and Isabella Whalley.

He was married to the former Miss Margaret Goodhart, who survives, along with a son, Scott, at home. Other survivors are a brother, Representative J. IRVING WHALLEY, of the 18th Congressional District, and two sisters, Miss Mary Whalley and Mrs. James Fyfe, all of Windber.

Mr. Whalley's career with Berwind-White began on October 28, 1925, as a clerk. He became payroll clerk at No. 36 Mine in 1926 and 2 years later was transferred to the personnel office as mine superintendent clerk.

On April 29, 1943, Mr. Whalley enlisted in the U.S. Navy and after undergoing indoctrination at Sampson (N.Y.) Training Center was promoted to a specialist first class in classification work. He then was assigned to the Navy personnel processing center in Hollywood, Fla., and later to Fort Lauderdale, Fla.

Upon his honorable discharge from the Navy on January 1, 1946, Mr. Whalley returned to Berwind-White and in 1951 was named chief clerk and personnel manager.

According to Robert H. Seese, general manager of Berwind-White, Mr. Whalley personally knew every man hired by the coal firm since 1925, practically every one of them on a first-name basis. This was true even when the company employed as many as 4,000 men.

Mr. Whalley was noted for his intense personal interest in the welfare and well-being of the men who worked for Berwind-White and made it a point to see that employees or former employees received all benefits to which each was entitled. He aided the men in securing every available benefit, whether it was unemployment compensation, social security, insurance or any other possible help.

Mr. Whalley's fraternal affiliations included membership in Cambria Lodge 278, Free and Accepted Masons, and in Williamsport Consistory. He attended Windber Presbyterian Church.

Friends were received at the Meek Funeral Home, where services were conducted at 11 a.m. Monday, April 10. Officiating were Rev. Ray D. Gearing, pastor of Windber Presbyterian Church, and Rev. Carl S. Fisher, pastor of First Presbyterian Church, Johnstown.

Interment was in Grandview Cemetery, Johnstown.

[From the Windber Era, Apr. 13, 1961]

JAMES ALFRED WHALLEY

The untimely passing last Thursday of "Alf" Whalley will leave a void which never again may be filled in our community.

Our hearts are saddened because we have lost a friend—a very true and valuable friend in every good sence of the word. A resident of Windber since 1909, "Alf" spent his youth and adult life in doing things for people; trying to make them happy; trying in his own quiet, unassuming way to ease their burdens as best he could.

From the time he first joined the Berwind-White Coal Mining Co., as a clerk on October 28, 1925, "Alf" made it a point to know every man in the organization. And he did, even when Berwind-White employed as many as 4,000 men in its local operations.

He could greet practically each one of them by their first names.

But that was not all, for "Alf" also knew of their joys and sorrows; rejoiced with "his men" and their families in the former; was sympathetic, understanding, and helpful in the latter. He watched hundreds of youths he hired grow into manhood, marry, rear children, and, in many cases, hire those children when they, in turn, grew to youth and manhood.

When "Alf" Whalley, in March 1951, after World War II service with the U.S. Navy, became chief clerk and personnel manager for Berwind-White, he was happy—not so much for himself and his own family, but because he felt he could be of greater service and greater help to his "company family."

Such was the unique personality of "Alf" Whalley, whose touch of quiet humor often helped someone to travel a little easier over a rough spot; whose smile brought a little light into the darkness of unexpected gloom.

Miners work hard, play hard and usually band together against outsiders. Thus, it will be an everlasting tribute to the life of "Alf" Whalley that he had the confidence of those men; that he had their respect and, most of all, their affection.

It was typical of "Alf" Whalley that although he suffered great pain during the last 6 months of his life, very few persons knew of that fact.

And when, about 4 weeks before his passing, "Alf" went to a Philadelphia hospital for what he hoped would be only a checkup, his concern was not for his own well-being. He felt that he should be in Windber Hospital, where "Pete" and "Joe" and "Mike" could drop by and say "Hello."

"Alf" felt he was needed here.

It is certain that "Alf" Whalley will stay in Windber, in the minds and memories of the thousands of men with whom he came into contact; with the hundreds for whom he would see to it that their unemployment compensation, their insurance or their social security benefits were forthcoming; with the thousands who knew "Alf" Whalley and his personal, individual interest in each one of them.

To "Alf" Whalley's family, we extend our deep and sincere sympathy. Perhaps it will ease her sorrow a little to know that "Alf" Whalley will "live" in Windber for many, many years to come.

Israeli Independence Day

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. PUCINSKI. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to Israel on the occasion of the 13th anniversary of its independence:

ISRAELI INDEPENDENCE DAY

On the 13th anniversary of its independence, Israel has proved that the experiment to create a national state has been a total success. For today Israel is truly a national state among the countries of the world. She has taken into her land the lost and homeless refugees of World War II. Her population has almost tripled since 1948, the year of her independence. Her land now supports over 2 million people. In order to build the land to meet the needs of her people, new social forms were developed and combined with the old. In addition to cultivation of private lands, communal agricultural villages were set up to meet the immediate needs of many families. There, the land is owned in common and the community provides for all the needs of its members. The moshav combines collective living with the capitalist system by providing small landholders with an economic community run by the state, the cooperative movement, and trade unions. Thus, there are various economic institutions to provide for the varied needs of the population.

Just as the Israeli people express their resourcefulness and originality in the development of economic institutions, so do they in their culture. Through books and 25 daily newspapers Israel seeks to explain itself and its purposes to the rest of the world. Through its renowned Philharmonic, its Hebrew University, its folk dances and music, and its archeological discoveries, such as the Dead Sea scrolls, we in the United States, and the other peoples of the world, have come to know and respect Israel and its accomplishments in these few years.

Importation of Foreign Textiles Into the United States

EXTENSION OF REMARKS
OF
HON. GEORGE GRANT
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. GRANT. Mr. Speaker, it is well that the plight of our domestic textile industry, due to the growing amount of foreign textiles imported from low-wage countries, has been called to the attention of the membership of this body and of the entire Nation.

The problem is now in the hands of the President's Cabinet-level Textile Advisory Committee; and it is hoped that, when the Committee makes its report to the President, he will direct the effectuation of a plan which will result in the imposition of a fair level of quotas by country and by category. I sympathize with the President in his deliberation over this matter; and I am sure that whatever decision he makes it will, in his opinion, be for the best interest of this Nation. However, I feel sure, too, that if all the facts are before him, he will decide on the solution recommended by the Pastore subcommittee in the Senate; that is, that quotas be established by country and by category. Of all the solutions suggested, it seems that the implementation of this one offers the most satisfactory remedy for all concerned.

It would have been far easier several years ago to have made this decision; for since that time, imports have jumped and jumped because so many nations have found a dumping ground for their goods in the American markets. These nations will, therefore, be much more reluctant now to give up this profitable outlet. It is almost unbelievable that since the 1958 extension of the Reciprocal Trade Agreements Act, cotton imports have increase by 1,400 percent to 14 million pounds; and cotton cloth imports have doubled just in the last year.

A few years ago we were concerned about the Japanese imports; and Japan, recognizing the serious problem created by its exports to this country, voluntarily limited them. However, seeing how easy it was to send in cheap goods, other nations have rushed in until today the condition has gone from bad to worse; and it is now imperative that remedial action be forthcoming. Either, action to control the amount of these imports must be taken; or textile plants over the Nation—I believe in 43 States—will have to close, thereby throwing countless men and women out of work, not to mention the drastic effects upon their families and indirectly our whole economy. One very direct and immediate effect will be more relief lines. The American worker does not want relief but wants a job through which he can earn a living for his family; neither does the American worker feel kind toward the situation when the job is denied him by reason of rapidly increasing imports.

My experience with this serious problem and its countless, adverse byproducts, so to speak, is a firsthand one. My district is composed of nine counties; and each county has one or more cotton mill or textile plant of one kind or another which manufactures pants, pajamas, underwear, shirts, gloves, and other wearing apparel. For several years now, these plants and mills have been suffering from these cheaply made imports, but more recently the pain has grown more acute. Every mail delivery to my office bring letters of deep concern—not only from the owners and employees of the plants and mills—but from businesses, civic organizations, and local citizens who are gravely concerned about the living standards of the employees and of the people who must depend on the purchasing power of such workers for the maintenance of their businesses. Yes, the repercussions are most damaging and are on an extensive scale. Not only is the problem of safeguarding the jobs and investments of Americans from these cheaply made foreign imports a problem in the South where it is true the textile industry plays such an important part in our economy, but as has been pointed out here on this floor by my colleagues from other sections of the country the problem is not a sectional one at all. It adversely affects almost every section of our great country. Of all the examples cited here of similar situations, it is more than obvious that a crisis has been created which threatens the heart of our national economy. In my own district, a continuation of this trend could have serious effects on local manufacturers, who would be forced to close their doors due to a lack of sales, some merchants would be forced out of business due to a lack of customers, people could lose their homes, and on and on go the drastic direct and indirect effects.

Considering the detriment to our national security standing and our national economy with its many victims due to the continued failure to restrict the sales of cheap, foreign-made imports in our country, it is high time for some hard and realistic decisions to be made.

Communism and the House Un-American Activities Committee

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. HIESTAND. Mr. Speaker, the Economic Council Papers recently had an excellent series of articles concerning communism and the House Un-American Activities Committee.

The first, volume XVI, No. 1, appeared February 15, 1961, and should be of interest to my colleagues:

[From the Economic Council Papers, Feb. 15, 1961]

COMMUNISM AND THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE

(By Robert B. Dresser)

PETITION BY BROWN UNIVERSITY PROFESSORS

It was reported in the Journal of January 14 that 87 Brown University professors had signed a petition asking Congress to abolish the House Un-American Activities Committee.

The Bulletin of January 20 contained a letter to the editor by Norman D. MacLeod, criticizing this action. Mr. MacLeod is one of our leading citizens and is unusually well informed on public issues.

An editorial in the Bulletin of January 24, headed "Congress overplays hunt for un-American activities," states: "In our opinion, the Un-American Activities Committee is provoking a lot of unnecessary shouting and, therefore, has run out of a useful purpose for existing."

On January 27 the Bulletin published a letter from Wade Thompson, one of the professors who signed the petition, defending his action and criticizing Mr. MacLeod. I quote from this letter as follows: "Frankly, I abhor the House Un-American Activities Committee, and I don't give a hang whether the Communists like it or not.

* * * * *

"If the HUAC ever pokes its nose in Providence, I personally will be glad to demonstrate against it. And I dare anybody to call me a you-know-what."

The Bulletin of February 1 carried a news report from which I quote as follows:

"The president of Brown University today criticized recent defenders of the House Un-American Activities Committee as 'probably more dangerous than the Communists.'

"Dr. Barnaby C. Keeney, the president, speaking at a university convocation at Sayles Hall, said that such persons 'attack the very fabric of our Constitution and erode mutual trust and freedom of discussion upon which our society depends.'"

Several other letters on this subject have appeared in the Journal or Bulletin, some attacking and some defending the committee.

What are the merits of the controversy?

In my opinion, the House Un-American Activities Committee, from its inception in 1938, has performed a most valuable service and should be continued. It has conducted a great many investigations of communism, and has published numerous reports exposing to public view the subversive activities of Communists and fellow-travelers. It has published lists of subversive organizations and publications running into the hundreds. These reports have been invaluable in the fight against communism.

These subversive organizations, manned principally by non-Communists, who are unwittingly aiding the Communist cause, are commonly referred to as "Communist fronts."

STATEMENTS BY J. EDGAR HOOVER

Let me quote from J. Edgar Hoover's book, "Masters of Deceit" (pp. 228–229):

"Fronts probably represent the party's [Communist] most successful tactic in capturing non-Communist support. Like mass agitation and infiltration, fronts espouse the deceptive party line (hence the term 'front') while actually advancing the real party line. In this way the party is able to influence thousands of non-Communists, collect large sums of money, and reach the minds, pens, and tongues of many high-ranking and distinguished individuals. Moreover, fronts are excellent fields for party recruitment.

"A front is an organization which the Communists openly or secretly control.

* * * * *

"The party has operated hundreds of major fronts in practically every field of party agitation; 'peace,' civil rights, protection of the foreign-born, support for Smith Act 'victims,' abolition of H-bomb tests, exploitation of nationality and minority groups. Some are based on specific appeal, to teachers, writers, lawyers, labor, women, youth."

Quoting further from Mr. Hoover's book (pp. 194–195):

"A primary tactic of the Communist Party is to preserve the legal status of the party. Thus, any organization which has the duty to investigate or expose Communist activity is singled out for attack. For years the party has campaigned against the House Committee on Un-American Activities, the Senate Internal Security Subcommittee, and the Senate Investigating Committee. The Department of Justice and the FBI have not been spared, and we have come to judge our effectiveness by the intensity of Communist attacks.

* * * * *

"Above the surface a gigantic propaganda and agitation campaign is in progress, a campaign that depends for success upon the support of non-Communists. Basic Communist strategy dictates that non-Communist hands, knowingly or unknowingly, under Communist guidance, must further the influence of the Communist world."

Quoting still further from Mr. Hoover's book (p. 93): "A tragedy of the past generation in the United States is that so many persons, including high-ranking statesmen, public officials, educators, ministers of the gospel, professional men, have been duped into helping communism. Communist leaders have proclaimed that communism must be partly built with non-Communist hands, and this, to a large extent, is true."

STATEMENT BY GEORGI DIMITROV

Georgi Dimitrov gave the following advice to the Lenin School of Political Warfare:

"As Soviet power grows, there will be a greater aversion to Communist parties everywhere. So we must practice the techniques of withdrawal. Never appear in the foreground; let our friends do the work. We must always remember that one sympathizer is generally worth more than a dozen militant Communists. A university professor, who without being a party member lends himself to the interests of the Soviet Union, is worth more than a hundred men with party cards. A writer of reputation, or a retired general, are worth more than 500 poor devils who don't know any better than to get themselves beaten up by the police. Every man has his value, his merit. The writer who, without being a party member, defends the Soviet Union, the union leader who is outside our ranks but defends Soviet international policy, is worth more than a thousand party members."

RECOGNITION OF RUSSIA IN 1933 AND ITS EFFECT

On November 17, 1933, President Franklin D. Roosevelt resumed diplomatic relations with Russia, ending a policy of nonrecognition which had prevailed since the overthrow of the Kerensky government in 1917.

This enabled Russia to bring into this country thousands of agents devoted to the job of undermining our government and our system of society, and enabling Russia to conquer the United States by peaceful means, if possible; otherwise by force of arms.

This has been but a part of a movement by Communist Russia to conquer the world.

STATEMENT FROM AMERICAN OPINION SCOREBOARD

Quoting from the magazine, American Opinion, for July-August and September 1960 (p. 2 of "The Scoreboard"): "Basic Communist strategy for conquest of the world, as laid out 35 years ago and relentlessly followed ever since, consisted of three steps: (1) Take eastern Europe; (2) next take the masses of Asia; (3) then take the rest of the world, including the United States. The Communists completed their first step in 1950; the second step is now at least three-fourths accomplished; and they have gone more than one-fourth of the way toward carrying out their third step. Which means that the Communists have now covered well over two-thirds of the total distance to their final goal of worldwide dominion. And the momentum and the speed of their progress ared steadily increasing."

AMERICAN PEOPLE UNAWARE OF COMMUNIST PERIL

Subjugation by Communist Russia is horrifying to contemplate. The great tragedy of the day is the fact that the great mass of the American people appear to be wholly unaware of the peril that confronts them. "Business as usual" is the rule, and little or no heed is given to the warnings of danger.

WARNINGS

Many warnings have been given the American people.

Gen. Carlos P. Romulo, Philippine Ambassador to the United States since 1954, and a wise and loyal friend of this country, has uttered such a warning. In an article in the November issue of Reader's Digest, entitled "America, Wake Up!," an article which everyone should read, he says (pp. 49 and 55):

"America, wake up. Shake off the course of inaction that is giving the forces of evil the right of way in this world. Face up to the blunt fact that you are now engaged in a real war and that it must be fought and won. This is the only alternative to defeat by default.

* * * * *

"At its rate of growth since World War II, the universal Communist police state could come into being in our own lifetime.

* * * * *

"The only possible solution is to wage this protracted conflict twice as hard, twice as effectively, as the Communists are now waging it. We must embark on a massive offensive, turning every Communist trick and stratagem—from propaganda to infiltration—against our mortal enemy. This is the one and only way to win the struggle for survival."

Numerous other warnings have been given, including among others of recent date, warnings by (1) Allen W. Dulles, Director of the Central Intelligence Agency, in the Reader's Digest of December 1960, (2) Charles Stevenson in the Reader's Digest of February 1961, (3) Senator THOMAS J. DODD, of Connecticut, Democratic vice chairman of the Senate's Internal Security Subcommittee, (4) the American Bar Association's Special Committee on Communist Tactics, Strategy, and

Objectives, (5) the House Un-American Activities Committee, (6) the Senate's Internal Security Subcommittee of the Judiciary Committee, and J. Edgar Hoover, Director of the FBI.

STATEMENT BY SENATOR DODD

"The horrible thing is that there is a complete failure to comprehend the menace of communism even among many Members of Congress" (Reader's Digest of February 1961, p. 43).

REPORT OF AMERICAN BAR ASSOCIATION'S COMMITTEE

The American Bar Association's Special Committee on Communist Tactics, Strategy, and Objectives, in its report submitted to the House of Delegates in February 1959, said: "International communism will enslave the peoples of every nation of the free world—including the United States—unless they: Awaken from their apathy and their indifference to the dangers that exist and threaten.

* * * * *

"Remember that subversion—aided by treason and treachery of domestic citizens—has been the most successful tool and tactic of international communism in gaining control of now-enslaved nations or in weakening or dulling the resistance by those nations which remain free.

* * * * *

"Most persons who are informed on communism think our country now faces its greatest danger. The thesis of J. Edgar Hoover's new book, 'Masters of Deceit,' is: 'Communism is the major menace of our time. Today it threatens the very existence of our Western civilization.'

"In his speech to the 1957 National Convention of the American Legion, Mr. Hoover warned: 'To dismiss lightly the existence of the subversive threat in the United States is to deliberately commit national suicide. In some quarters we are surely doing just that.'

* * * * *

"The lawyer-author of the Gaither report to the President on national security recently told our Association: 'Our security is in unprecedented peril. * * * The ultimate objective of international communism is world domination, and the Soviet Union will pursue this objective ruthlessly and relentlessly, employing every possible political, economic, subversive, and military stratagem and tactic.'

* * * * *

"It is now an established fact that every institution, every force and every person actively engaged in the forefront of the defense of our country against the rising menace of communism becomes the target of attack and villification by Communists, Crypto-Communists, fellow-travelers, their stooges and innocent but beguiled persons.

* * * * *

"Notwithstanding some mistakes—fewer than generally charged—the service to our country by the Senate Internal Security Subcommittee and the House Un-American Activities Committee has been incalculable and worthy of far greater praise than has been accorded to them. The Communist and radical propaganda against these committees has never subsided.

* * * * *

"A substantial strength of communism in the United States is the number of non-Communist organizations and individuals who will collaborate with the Communists. For every Communist Party member, there may be 10 non-Communists who will do the work of the Communists.

"The Communists have had hundreds of fronts. In addition, they have 'fronts in front of the fronts.' Making use of their fellow travelers and dupes, plus their 'united front tactic,' the Communists boast they can have 50,000 letters on any issue sent to Capitol Hill or the White House inside of 72 hours.

"The greatest asset the Communists have at the present time is not the hydrogen bomb, certainly not Soviet satellites, but world ignorance of their tactics, strategy and objectives."

STUDENT RIOTS

The success of the Communist movement throughout the world is illustrated by the many student riots which they have been able to stage, including Bogota, Colombia, in 1948, Caracas, Venezuela, in 1958, LaPaz, Bolivia, in 1959, and finally Tokyo in May-June 1960. These were all anti-American.

Besides these there have been the student riots against the Government in Turkey, Havana, and elsewhere.

SAN FRANCISCO STUDENT RIOT

And despite the common belief that "It can't happen here," the Communists staged a student riot in San Francisco in May 1960 against the House Un-American Activities Committee, which was holding a hearing in the San Francisco City Hall. This is one of the most disgraceful episodes in American history.

J. Edgar Hoover, Director of the FBI, has prepared a report on the riot, which everyone should read. I quote from it the following:

"The successful Communist exploitation and manipulation of youth and student groups throughout the world today are a major challenge which free world forces must meet and defeat. Recent world events clearly reveal that world communism has launched a massive campaign to capture and maneuver youth and student groups.

"The vigor and vitality of such groups constitute an explosive force of immense proportions. Channeled into proper outlets, this force can accomplish immeasurable good for a peace-loving world. Manipulated into destructive channels, this force can create chaos.

* * * * *

"It has long been a basic tenet of Communist strategy to control for its own evil purposes the explosive force which youth represents. In the relentless struggle for world domination being waged by them, Communists are dedicated to the Leninist principle that 'youth will decide the issue of the entire struggle—both the student youth and, still more, the working-class youth.'

* * * * *

"The Communist attack on the HCUA (House Committee on Un-American Activities) in San Francisco was in line with a longstanding party aim to destroy not only the HCUA, but also the Senate Internal Security Subcommittee and every other 'enemy' seeking to expose the threat which Communist activities represent to the internal security of this Nation. The party reaffirmed its dedication to this aim at its 17th national convention, held in New York City, December 1959, when it passed a so-called political resolution calling for activity to abolish the 'witch-hunting' HCUA and Senate Internal Security Subcommittee.

"Thus, when the decision of the HCUA to hold hearings May 12–14, 1960, in San Francisco was announced, it was mandatory for Communists to implement the convention resolution by doing everything possible to disrupt the hearings as part of the overall aim to destroy the HCUA.

* * * * *

"The Communist Party, U.S.A., is elated with the success it enjoyed in attempting to make a fiasco of the HCUA San Francisco hearings, which, notwithstanding these attempts at disruption, did develop valuable and needed information concerning the strategy, tactics, and activities of the party in northern California.

* * * * *

"In short, the consensus in the Communist Party was that the riot was the best thing for the party that had occurred in years. Party leaders expressed the opinion that it was especially significant that the party had been able to enlist the support of so many people in all walks of life when the party, itself, was publicly under attack by the HCUA. The feeling was that not only had the party taken a major step toward its goal of abolishing the HCUA, but also it had taken a major step toward playing a greater role on the American scene.

* * * * *

"Throughout the world today, governments are toppling with stunning rapidity. Whether large or small, the role Communists are playing in these events must not be discounted. The growing strength of our Nation over the years has not proven a deterrent to relentless efforts on the part of the Communist Party, U.S.A., to destroy our security and prepare our Nation for a similar fate.

"Looking at the riots and chaos Communists have created in other countries, many Americans point to the strength of our Nation and say 'It can't happen here.' The Communist success in San Francisco in May, 1960, proves that it can happen here.

* * * * *

"It is the duty of all Americans to fully understand the true import of this threat to our heritage, to expose it, and to combat it with every weapon at our command."

MOVING PICTURE OF SAN FRANCISCO RIOT

Fortunately a moving picture of the San Francisco riot was taken.

The Associated Industries of Rhode Island has purchased a copy of the film, and is showing it throughout the State as a public service without charge. It has created such a sensation that there is a great demand for it on the part of various organizations and schools. The association has ordered another copy of the film.

It is an amazing and distressing spectacle.

COMMUNISTS' ATTEMPT TO DISCREDIT FILM

The Communists have been thoroughly frightened by the feeling that is being aroused against them throughout the country by the showing of this film, and they have tried in every way possible to discount the film and to get people to believe that it is not a true picture of what occurred. In this they have been to some extent successful. Various newspapers along the eastern seaboard have accepted this view and widely publicized it.

STATEMENT BY MAYOR OF SAN FRANCISCO

In order to meet this attempt by the Communists to deceive the public, a statement was obtained from the mayor of San Francisco, George Christopher. His office is located directly across the hall from the room in which the hearings of the Un-American Activities Committee were being held and he was an eyewitness to what occurred.

I quote from his statement as follows: "There has been quite some controversy as to the authenticity of the film of the House Un-American Activities Committee meeting in our city. While I believe the pictures of the demonstrators speak for themselves, perhaps a further explanation will be enlightening.

* * * * *

"If these people had not disrupted these meetings—if they had not challenged the police—if they had not violated the law, there would have been no need for police action. Known Communists—and I repeat this emphatically—known Communists were in the lead of this demonstration. The students were dupes who join some of these causes of agitation, believing it is an innocent and harmless expression of civil liberties, not realizing that while they are doing this they are at the same time violating

every precept of the liberties they profess to cherish.

* * * * *

"The pictures, I believe, speak for themselves. They are true. They are authentic. They tell the real story * * *."

HOUSE UN-AMERICAN ACTIVITIES COMMITTEE SHOULD BE CONTINUED

I submit that the evidence establishes beyond a reasonable doubt that the House Un-American Activities Committee has been, and still is, performing a most valuable service to the people of the United States, and that it should be continued, its activities expanded, and the funds needed for this purpose provided by Congress.

CONCLUSION

We are engaged today in the most serious war we have ever fought—a cold war though it may be—and we are losing the war. It is a struggle for our survival as a free Nation. In these circumstances, instead of attacking those who are trying to protect the country, all possible aid should be given to them.

It is no time for captious or petty criticism. It is no time "to fiddle while Rome is burning."

It is no time for people to stand on the sidelines and leave the job to a few. Every man, woman and child should be in this fight to the finish. The American people must wake up and take some part in this battle before it is too late.

What, it may be asked, can one do? There are two things, and only two: (1) work for the cause, and/or (2) contribute money, no matter how small the amount, to some organization that is fighting the battle for you. One should not be deterred by the belief that he can do very little. Each person should do what he can, however small. The power of such collective action would be irresistible.

Remember, this is your fight, and if it is lost it is your fault.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

The House Rules Committee Schedules Hearing on Kearns Gold Resolution for Tuesday, April 25, 1961, After 12-Year Wait—The Governments of Western Nations Are Buying Russian Gold, Which Means We Are Sending Into Russia and Red China Vast Quantities of Food and Machinery, According to Representative Wright Patman

EXTENSION OF REMARKS

OF

HON. CARROLL D. KEARNS

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. KEARNS. Mr. Speaker, the House Rules Committee, after a 12-year wait, has finally scheduled hearings on my House resolution creating a select committee to inspect the gold reserves at Fort Knox and in other Federal depositories.

I introduced this measure, House Resolution 21, in accordance with the views of numerous patriotic organizations, such as the Daughters of the American Revolution, which for a number of years has adopted resolutions on this subject.

The point I have been making is that the only officials who ever see our gold are appointed officials, and even some top appointed officials never see our actual gold reserves.

Former Treasury Secretary John Snyder once told me that he never had seen the gold supply at Fort Knox.

Under article 1, section 7 of the Constitution of the United States all revenue bills must originate in the House of Representatives.

The exact language is as follows:

All bills for raising revenue shall originate in the House of Representatives; but the Senate may propose or concur with amendments as on other bills.

It is high time that the House of Representatives, which originates revenue bills, should have some responsibility in connection with our gold reserves on which our entire monetary system rests.

A select committee of the House of Representatives could very properly conduct a full and complete investigation and study of the monetary system of the United States, including the balance of payments, and the gold reserves of the United States in the Federal depositories at Fort Knox, Philadelphia, Denver, and elsewhere as they affect every citizen of the United States, and report its findings and recommendations to the House of Representatives. I shall amend my resolution to provide this study of our monetary system, and our balance of payments.

In an incisive speech last week before the 70th Continental Congress of the National Society, Daughters of the American Revolution, our distinguished colleague, the gentleman from Texas [Mr. PATMAN] declared that:

We still cling, however, to certain ancient ideas about gold, which it seems to me, are likely to get us into trouble. So far, there are no signs that the spage age will make any very heavy requirements on gold. Yet despite the fact that the governments of the Western nations have vast quantities of this metal stored away in underground vaults, they continue to buy up billions more, each year, and at a tremendously high price which we ourselves fix and maintain at an artificial level. In this process, the governments of the Western nations are buying Russian gold, which means that we are sending into Russia and Red China vast quantities of food and machinery which the slave world desperately needs, and cannot produce in sufficient quantities, in exchange for a metal which we do not need.

The indiscriminate way in which the Western World now handles its monetary reserves makes it inevitable that these reserves will be contaminated by Communist gold. The Communists feed this gold into the grey markets of Europe, and from there it infiltrates our banking system. I think we ought to reexamine this matter very thoughtfully and ask ourselves whether it is really wise policy for the Western World to continue subsdizing a buildup of Russia's and Red China's industrial and military capabilities. It may be that we and our allies ought to consider some step to sterilize our monetary gold, such as putting it in the safekeeping of the International Monetary Fund here in Washington. If this were done, then at least we would know we would have the gold in case some scientific or industrial need for it ever develops.

Finally, may I suggest there should be more public interest in the money system and better understanding of what the Federal Government is doing in this field.

You know, it has long been popular for a Member of Congress to say that all he knows about money is that he doesn't have enough of it.

I have no doubt that if such a tremendously influential and public-spirited organization as the Daughters of the American Revolution should think well of the idea of more public interest and understanding, the result would, indeed, be more public interest and understanding, both in and out of Congress. I have no doubt that Congress would be willing to make a thorough study of the ways in which its constitutional powers and responsibilities are being used, and how these uses might be improved. The Federal Government spends billions in investigating the ocean floors, probing outer space, and so on. But it has been more than 50 years since we have had an official public study of our money system. Private corporations and foundations occasionally find it worthwhile to spend millions of dollars for monetary commissions set up to make private studies of this subject, which leads me to think the subject must be worthy of study in public bodies.

I am pleased to be able to say at this time that a resolution was adopted by the 70th Continental Congress of the National Society, Daughters of the American Revolution, in support of the study of the monetary system of the United States which was proposed by the able and distinguished gentleman from Texas [Mr. PATMAN] in his speech before them last week.

I include as part of my remarks the text of my measure, House Resolution 21, together with an amendment which I will offer to it at the hearings to be held by the Committee on Rules of the House of Representatives on Tuesday, April 25, 1961.

I also include as part of my remarks the texts of letters I have received from Maurice Stans, former Director of the Bureau of the Budget, Executive Office of the President, and from George M. Humphrey, former Secretary of the Treasury:

H. RES. 21

Resolved, That the Speaker of the House of Representatives appoint a committee consisting of seven members of the majority and minority of the House of Representatives, one of which shall be chosen as chairman, to visit the Fort Knox gold reserve and any other places designated where gold deposits are held, to inspect and report to the Congress and the people of the United States their accurate findings on their visitation as to the actual amount of gold bullion, bars, and so forth, held in keeping there by the United States Government, pursuant to article I, section 8, of the Constitution of the United States.

AMENDMENT TO H. RES 21

Strike out all after the resolving clause and insert the following: "That there is hereby created a select committee to be composed of seven Members of the House of Representatives to be appointed by the Speaker, one of whom he shall designate as chairman. Any vacancy occurring in the membership of the committee shall be filled in the same manner in which the original appointment was made.

"The committee is authorized and directed to conduct a full and complete investigation and study of the monetary system of the United States, including the balance of payments, and the gold reserves of the United States in the Federal depositories at Fort Knox, Philadelphia, Denver and elsewhere, as they affect every citizen of the United States.

"For the purpose of carrying out this resolution the committee, or any subcommittee thereof authorized by the committee to hold hearings, is authorized to sit and act during the present Congress at such times and places within the United States, including any Commonwealth or possession thereof, or elsewhere, whether the House is in session, has recessed, or has adjourned, to hold such hearings, and to require, by subpena or otherwise, the attendance and testimony of such witnesses and the production of such books, records, correspondence, memorandums, papers, and documents, as it deems necessary; except that neither the committee nor any subcommittee thereof may sit while the House is meeting unless special leave to sit shall have been obtained from the House. Subpenas may be issued under the signature of the chairman of the com-

mittee or any member of the committee designated by him, and may be served by any person designated by such chairman or member.

"The committee shall report to the House as soon as practicable during the present Congress the results of its investigation and study, together with such recommendations as it deems advisable. Any such report which is made when the House is not in session shall be filed with the Clerk of the House."

EXECUTIVE OFFICE OF THE PRESIDENT,
BUREAU OF THE BUDGET,
Washington, D.C., January 16, 1961.

MY DEAR CARROLL: In your letter of January 7, 1961, you ask my evaluation of the two legislative proposals which you introduced in the House of Representatives on January 3, 1961.

H.R. 26 proposes the coinage of not less than $25 million in $10 gold pieces and not less than $25 million in $5 gold pieces, which would not constitute legal tender, and would establish limitations on personal holdings and penalties for exceeding those limitations. As you know, under our present international gold bullion standard, the dollar is maintained at a parity with gold. Reserves of gold are centralized and are available for use in the national interest. It is the general practice of leading countries to utilize their gold reserves for the settlement of international transactions and not to reduce the funds available for this purpose by releasing gold to their private citizens in exchange for money. A limited number of gold pieces, it has been argued, could lead to hoarding and possibly to speculation in so-called black markets.

House Resolution 21 proposes that a committee consisting of Members of the House of Representatives be appointed to visit Fort Knox and other gold depositories and report on the actual amount of gold held by the U.S. Government. No objection is apparent to such an undertaking if the Congress so desires. However, to determine and verify the amount of gold bullion would require the opening of vaults, removal of several thousands of tons of gold bullion, weighing each bar, drilling each bar for an assay sample to prove the degree of purity, and replacing the bars in the vault under seal. Such a process would be very arduous and time consuming.

You may recall that shortly after the present administration assumed office a quite similar audit was undertaken, on a sample basis, by representatives of the various agencies concerned. At Fort Knox, for example, 3 of 22 sealed gold compartments were opened, 88,000 gold bars were counted, about 9,000 bars were weighed, and 26 bars were assayed to determine the degree of fineness of the metal. The committee reported the contents of the three vaults to be as represented and expressed the opinion that an examination of the remaining vaults would result in a similar report with respect to their contents.

I am sure you will want also to get the views of the Treasury Department on these matters. My own personal views are that there is not sufficient reason to enact H.R. 26, but that if the Congress would feel more secure by the enactment of House Resolution 21, it would certainly not be objectionable.

Thank you for the good wishes conveyed in your letter. My best wishes to you, as well.

Sincerely yours,

MAURICE STANS, *Director.*

DEPARTMENT OF THE TREASURY,
Washington, D.C., May 6, 1953.

Hon. CARROLL D. KEARNS,
House of Representatives,
Washington, D.C.

DEAR MR. KEARNS: I have before me your letter of April 29, concerning the recent inventory of the gold in the various mint institutions. At the outset let me state that the gold was counted not only at Fort Knox, but at the other depositories as well.

After I was designated by President-elect Eisenhower to become Secretary of the Treasury, I met with Secretary Snyder, and one of the problems I discussed with him was the transfer of assets to the incoming administration. It was decided that a committee be appointed to review the procedures relative to safeguarding the assets and that such committee should prescribe the manner in which the inventory should be taken. This committee was composed of W. L. Hemingway, chairman of the executive committee of the Mercantile Trust Co., St. Louis; William Fulton Kutz, chairman of the board, the Pennsylvania Co., Philadelphia; Sidney B. Congdon, president, National City Bank of Cleveland, Cleveland; James L. Robertson, member, Board of Governors, Federal Reserve System, Washington.

The committee met in Washington and spent several days questioning officials relative to the procedures employed in accounting for and protection of the Government's gold, silver, and other assets. The committee then recommended that 10 percent of the compartments in all mint institutions be selected at random for a count of the gold assets and that 10 percent of the gold counted be weighed. Also, bars were to be selected at random for assaying. The committee recommended that this work be done under the supervision of a continuing committee consisting of four members: one to represent me, one to represent Secretary Snyder, and one to represent Mrs. Priest, the Treasurer, and one to represent the General Accounting Office. The General Accounting Office declined the committee arrangement for their representative because they wished to maintain their independent status. Therefore, during the inventorying process the General Accounting Office had representatives present, but they were acting on their own behalf and submitted separate reports on their observations.

Under the supervision of the continuing committee and with the General Accounting Office observing the inventory, the count was carried out and reports submitted stating that the assets were as stated in the Treasury accounts. Upon the basis of this inventory, I am satisfied that all the gold assets are as reported.

You asked to be informed of the amount of gold the Treasury has in its depositories throughout the Nation. Attached is a list of the depositories and the gold that they held on March 31, 1953. All the gold held in such depositories belongs to the U.S. Government. None of it belongs to foreign countries. Any gold held in the United States for foreign countries is held on earmarked account at the Federal Reserve Bank of New York and statistics covering such holdings are reported in total by the Federal Reserve Board in its monthly bulletin.

You speak of the routine check that was made at Fort Knox. From the above you can readily see that the inventory recently made was not in any manner routine. In this connection, I attach copies of three press releases dated January 9, January 31, and April 12, which go into more detail.

I appreciate very much your statement that I am doing an outstanding job. I also appreciate your offer of cooperation.

Sincerely yours,

GEORGE M. HUMPHREY,
Secretary of the Treasury.

Federal Aid to Education

EXTENSION OF REMARKS
OF

HON. LEE METCALF

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Monday, April 24, 1961

Mr. METCALF. Mr. President, in an unprecedented action the National Congress of Parents and Teachers gave full support to S. 1021.

As pointed out in a press release, this is the first time the organization has endorsed specific proposed legislation for Federal support of education.

Mr. President, I ask unanimous consent that the entire press release be printed in the Appendix of the RECORD.

There being no objection, the press release was ordered to be printed in the RECORD, as follows:

NATIONAL CONGRESS URGES PTA'S TO BACK ADMINISTRATION BILLS ON EDUCATION AID

CHICAGO, ILL., April 18.—The National Congress of Parents and Teachers has called on its 47,000 local PTA's to urge their "full support" of the Kennedy administration's proposals for Federal aid to schools.

A special legislative memorandum to local PTA's cited H.R. 4970 and S. 1021, identical bills, as "moderate in both expense and approach" and noted that they would "give protection against Federal interference in the schools, provide additional aid to low-income States, and allow each State to decide for itself how the money will be spent." And they meet other policy requirements of the National Congress of Parents and Teachers. The memo also stresses the need for changes in titles II and III of the bills to provide more adequate funds for federally impacted areas. The memorandum was released by Mrs. Fred L. Bull, of Baltimore, Md., chairman of the National Congress committee on legislation.

As chairman of legislation, Mrs. Bull has also written President Kennedy and the Members of the U.S. Congress pointing out: "Our members, as taxpayers, are willing to pay their fair share of the cost of quality education for their children. They are truly concerned not so much about the high cost of providing a program of excellence as about the tremendously greater cost of not providing it."

Speaking today at national headquarters in Chicago, Mrs. James C. Parker, president of the National Congress of Parents and Teachers, called attention to the plea for decisive action contained in her message in the April issue of the PTA magazine. She reiterated, "Probably no action we take in coming months will have more important consequences for our children and our country than our action on education legislation. It is incumbent upon each of us, as parents, teachers, and citizens to let our Senators and Representatives know our views."

In backing the administration's Federal aid bills, the legislative memorandum suggested that PTA members write to President Kennedy, Secretary of Health, Education, and Welfare Abraham A. Ribicoff, U.S. Commissioner of Education Sterling M. McMurrin, and their own U.S. Congressmen and Senators.

While the National Congress of Parents and Teachers has long advocated legislation in support of education, this is its first specific recommendation for Federal assistance in the current session of the U.S. Congress.

Bar Mitzvah

SPEECH
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mrs. GRIFFITHS. Mr. Speaker, today is Israel's 13th birthday. Born in the midst of turbulence and war this tiny nation proved to itself and to the world that it possessed the strength and determination to win its struggle for existence. Not only did it survive but it continued to thrive and prosper so that today it holds a respected position in the family of nations.

Recent statistics indicate the rapid rate of growth and progress that has been achieved since 1948:

[In thousands]

	1948	1960
Populations	790	2,128
Industrial production	(1)	$1,070,000
Exports	29,680	265,000
Imports	253,120	520,000
Agricultural production	24,700	183,000
Cultivated area	412	1,100
Irrigation (in acres)	62	340
Afforestation	13	64.5
Water usage (in cubic meters)	250,000	1,400,000

[1] Negligible.

In 1948, Israel's 4 ships carried a total of 14,000 tons. In 1960, a fleet of 53 ships handled 445,000 tons of cargo.

Elementary school education increased from 108,844 to 600,000 in this period. Arab students now number 42,700; in 1948 only 6,780 were enrolled. And Israel's teachers grew in numbers from 5,964 in 1948, to 22,400 in 1960.

Israel can be justly proud of this fine record.

The early years of Israel's life were not easy ones. She was faced with the dual task of creating a strong government and a stable economy while at the same time being forced to expend money and manpower in combating the opposition of the countries surrounding her who were hostile to the idea of her very presence in their midst. However, the spirit, dedication, and sacrifice of a people who from the beginning of their history have always faced a threat to their survival, never failed and their country took shape and developed.

As a result Israel enters adulthood confident in the achievement and advancement of her youth yet acutely aware that in the future as in the past there are difficulties that must be met and problems that must be solved before she can enjoy complete peace.

We in the United States have special reason to rejoice with Israel in celebrating her birthday. We were the first nation to recognize her independence in 1948 and we have continued to encourage her development and growth. Our faith and support have been justified for today Israel stands as an oasis of democracy in an area of tumult and chaos.

Oregon Leads Nation in Percentage Completion of Federal Interstate Highway System

EXTENSION OF REMARKS
OF
HON. MAURINE B. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mrs. NEUBERBER. Mr. President, it is indeed a pleasure to report that my State of Oregon has a greater percentage of its mileage under the Federal Interstate and Defense Highways rated adequate for present traffic and opened to daily traffic than any other State in the Union.

In Oregon, 58 percent of the interstate mileage is rated adequate for present standards and open to daily traffic, while nationally slightly more than 25 percent is now open to traffic, according to the Bureau of Public Roads of the Department of Commerce. Over 425 miles of interstate highways are open to daily use by motorists in Oregon, and another 132.5 miles are under construction, with work yet to come on the remaining 173.5 miles. Oregon also ranks fourth nationally in percentage of Interstate System completed to full interstate standards.

Oregon's lead in Interstate Highway completion has been done without toll roads.

I should like to invite the people of our Nation to come and visit Oregon, and use our modern highways and enjoy our scenic beauty, and our delightful summers. A friendly welcome is extended to all.

With a lead such as Oregon enjoys in its interstate highway system, I would like to pay special tribute to the Oregon State Highway Commission and its staff. Mr. M. K. McIver, of Portland, is the commission's able chairman, and the other members are Messrs. Kenneth N. Fridley, of Wasco, and Glenn L. Jackson, of Medford. Mr. W. C. Williams is the capable State highway engineer, who has done so much of the work and planning which has made possible Oregon's lead.

Mr. President, as I am sure everyone understands, good highways cost money, and the price tag for the interstate system as a whole, is $41 billion, and this figure is expected to increase. The system is financed on a sharing basis, with the Federal Government contributing 92 percent of the costs, and the States 8 percent. The Federal costs for the system will total $37 billion.

A special Federal highway trust fund has been established which is supported by special highway user taxes. Highway legislation, so far enacted, provides for about $25.5 billion of Federal funds. Additional funds are needed to make up the total contribution. This need can be met in several ways, by stretching out the entire program beyond the planned terminal date of 1972, increasing highway user taxes, direct appropriations from taxes, and borrowing, or by taking funds which now go into the general treasury from automotive excises, and applying them to the highway trust fund.

Mr. President, I am strongly opposed to stretching out the completion date of the Federal Interstate System beyond 1972. I believe that highway users should understand that the high taxes on gasoline, and other fuels, make possible our modern highway system.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, an article by Mr. W. C. "Dutch" Williams, from the April 1961 issue of the Oregon Motorist, in which Oregon's able State highway engineer describes the interstate system and its planning and financing. The Oregon Motorist is the official publication of the Oregon State Motor Association, and its editor is Mr. Sidney A. King. I also ask unanimous consent that a table, showing how the various States stand in the interstate highway program, which appeared in connection with Mr. Williams' article, be printed in the Appendix of the RECORD.

There being no objection, the article and table were ordered to be printed in the RECORD, as follows:

(By W. C. Williams)

Oregon's Interstate Highway System has a greater percentage of its mileage rated adequate for present traffic and opened to daily traffic than any other State in the Union, according to a recent U.S. Bureau of Public Roads report. In addition to this, Oregon ranks fourth nationally in the percentage of the system completed to full interstate standards, the report states.

A lead like this in the interstate program is not something that developed overnight, but actually had its beginnings in public and legislative foresight as early as 1950 in providing bonds for the building of modern freeways. When a 1956 act by Congress launched most States into building their first interstate highways, Oregon already had 71 miles of its system constructed to standards that were equal to interstate specifications. This was nearly 10 percent of the total mileage of the interstate system in the State.

PROGRAM WELL UNDERWAY

Due to financing provided by the 1956 act and subsequent highway acts, the end of 1960 saw 219 out of a total of 731 miles completed and found contractors at work on an additional 91 miles. It is anticipated that, during 1961, 48 of these 91 miles will be completed and opened to traffic.

It is estimated that new projects totaling $31,500,000 will be placed under contract this season. This will include work in the Grants Pass-Medford-Ashland areas, from Eugene to the Lane-Douglas County line, in the Portland area, east of The Dalles, between Celilo and Rufus, and between Baker and Huntington.

COMPLETION SET FOR 1972

Financially, Oregon had $21,800,000 in construction costs invested in the system at the time of the 1956 act and had upped this to $105 million at the end of 1960. Estimated costs of contracts to be let this year will raise this figure to $137 million, which, coupled with right-of-way costs of approximately $32 million, will find Oregon with $167 million worth of work completed out of a total of $634 million, which is the estimated cost of completing the entire system in this State.

Funds for interstate highways since 1956 have been shared between the State and Federal Government on a 92 percent Federal and 8 percent State basis. Based on funds being provided by Congress and barring unforeseen events such as strikes or serious cutbacks, the Interstate System should be completed by about 1972.

How States stand (adequate for present time)

State	Status	Percent open to traffic
Oregon	1	58.19
New York	2	54.44
Kansas	3	48.77
Connecticut	4	46.64
Arizona	5	44.30
Massachusetts	6	42.65
Washington	7	41.03
Pennsylvania	8	38.69
Oklahoma	9	38.19
Ohio	10	38.11
North Carolina	11	37.10
New Hampshire	12	36.76
Michigan	13	35.39
North Dakota	14	34.69
Maryland	15	34.01
Missouri	16	33.30
Maine	17	33.21
Wisconsin	18	32.27
Illinois	19	31.02
Iowa	20	30.08
Rhode Island	21	29.30
Texas	22	29.09
New Mexico	23	29.05
New Jersey	24	25.06
California	25	24.19
Colorado	26	24.12

Tennessee	50	1.47

Private Peace Corps of the Paderewski Foundation

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. KEATING. Mr. President, several days ago I mentioned the fine work that is already being done by many private organizations in the same area as the much-publicized Peace Corps. I believe that these programs deserve more attention than they have received in the past. They are already in operation, and, by all accounts, the work they are doing is of a high standard. I have already included in the RECORD material on the programs of the Creole Petroleum Co., Literacy village in India, Smith Kline & French Laboratories, and the American Association of Medical Colleges. Another group that has been active in this oversea work is the Paderewski Foundation of New York, which carries on educational and scientific work on four continents.

Mr. President, I ask unanimous consent to include an article on the Paderewski Foundation and its peace corps in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

OUR PEACE CORPS

The cultural and educational work of our foundation extended during the Paderewski Centennial Year over four continents. For the first time Africa was included: the Arabic speaking scholar of Harvard University, Julius Szentendrey, was awarded a grant for study at the University of Cairo. East of Suez, Paderewski scholars are spread over a wide area, from the Irani, speaking Marek Antoni Wasilewski of Warsaw at the University of Teheran, to the Javanese speaking George Gomori of Oxford at the Gadjah Mada University of Jogjakarta, Indonesia. Other teachers and students on our foundation's fellowships and scholarships work in India, Burma, and Pakistan. Many of them have already mastered the local languages. Among the Paderewski scholars are citizens and residents of the United States, refugees from communism, and graduates of Polish universities. The last are now receiving special attention in view of the increased possibilty of cultural and educational exchanges with Poland. Several Polish scholars received grants for studies in Western Europe with emphasis on subjects neglected in Poland. Among them are Miss Halina Biedrzycka of Lublin Catholic University at St. Hilda's College, Oxford; Stanislaw Czuma of Cracow University and Miss Diana Pachlewska of Lublin Catholic University at the Sorbonne.

In the United States and Canada the Foundation continues its interest in the promotion of Polish and other Slavic studies, mainly through the University of Montreal. Students from Poland received educational travel grants within the United States to learn more about this country prior to their return home. In the field of music, Miss Camille Budarz of the Juilliard School received a travel grant to participate in the VI International Chopin Contest in Warsaw, and the winner of the V Contest, Mr. Adam Harasiewicz, performed at our Centennial Concert and was awarded our foundation's gold medal and financial grant.

Two new fellowships were already awarded this year. One went to Dr. Maria Dydynska of the University of Warshaw, now engaged in research work in the Department of Physiology, University College, London; the second went to Miss Krystyna Agnieszka Kowalska, also of the University of Warsaw. Miss Kowalska was an honor guest of the Government of India on the occasion of that country's tenth anniversary of independence in 1959, as the best oriental scholar in Poland. She has now been issued the Polish passport, and will soon be on her way to Visva Bharati University near Calcutta to participate in the Rabindranath Tagore Centennial observances.

The amount of $46,651 was spent by our foundation on educational and cultural assistance in 1960, as compared with $31,749.28 in 1959. We hope that this total will again be exceeded this year with the majority of grants for 1961, 1962 distributed in May and June.

Edward Zwolski of Lublin Catholic University wrote us as follows on August 30, 1960: "I am happy to inform you that I have just obtained the degree of doctor 'in Lettere' at the University of Rome after successfully defending my thesis entitled 'Remarks on the Political System of Argos' prepared under the guidance of Prof. M. Guarducci. My grade 110 with commendation is the highest attainable at this university. I take this opportunity to express my most cordial thanks to the Paderewski Foundation whose invaluable assistance enabled me to complete my studies."

Paderewski scholars in 15 countries and on 4 continents are performing a variety of useful functions in terms of their own education and future career, for the benefit of the less developed countries in which they teach and share their experience, and in promoting the idea of peace in freedom which is inseparably connected with every major aspect of our present-day life.

Ignacy Jan Paderewski was known and admired throughout the civilized world. Although born in Poland and particularly respected in the United States, his adopted country, he can never be associated exclusively with one nation. His life was spent in the service of great ideas and, following his inspiring example, the Paderewski Foundation devotes its entire energy and resources to the promotion of international understanding and cooperation.

Locations of Customshouses in the Large Coastal Cities of the United States

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. HOSMER. Mr. Speaker, the General Services Administration is planning to place a new customshouse for the twin ports of Los Angeles and Long Beach in the downtown Los Angeles Civic Center, 22 miles away from these ports. This proposal seems almost incredible. By way of comparison, here are the locations of the customshouses in the other large coastal cities of the United States:

Baltimore, Md.: Gay, Lombard, and Water Streets, about two blocks away from the basin and the municipal piers—in general vicinity of waterfront.

Boston, Mass.: 2 India Street, difficult to tell where it is located on this street, but India Street only runs a few blocks away from Boston Harbor—very near.

Bridgeport, Conn.: 120 Middle Street, up to two blocks from Pequonnock River, about seven-tenths of a mile from Long Island Sound.

Charleston, S.C.: 200 East Bay Street between Market and Gaillard Streets—on or one block from Cooper River—very near.

Galveston, Tex.: 17th Street and Avenue B, one or two blocks from Galveston Ship Channel—near.

Honolulu, Hawaii: 335 South King Street, two blocks from Honolulu Harbor.

Mobile, Ala.: St. Joseph and St. Louis Streets, four or five blocks—about one-fourth mile—from Mobile River. Blakely Island is between Mobile River and Mobile Bay—2 or 3 miles away, but relatively close.

New Orleans, La.: 423 Canal Street, about five or six blocks from the Mississippi River—pretty close.

New York, N.Y.: Bounded by Whitehall, Bridge, and State Streets, quite close Hudson River—about one-fifth mile—East River—about two blocks—and upper bay—about one-tenth mile—fairly close, but 6 or 8 miles from center of waterfront activity.

Norfolk, Va.: 101 East Main Street, street runs parallel about two blocks from Elizabeth River—Eastern Branch. Not on Chesapeake Bay.

Philadelphia, Pa.: Second and Chestnut Streets, about four blocks away from Delaware River—close to waterfront, but 7 or 8 miles from some centers of waterfront activity.

Portland, Maine: 312 Fore Street, runs parallel about one or two blocks from Portland Harbor.

Portland (Oreg.: 220 Northwest Eighth Avenue, five to eight blocks—less than three-tenths mile—away from Willamette River—downtown, probably 2 or 3 miles.

Providence, R.I.: 24 Weybosset Street; street no more than 3,000 feet from Providence River. If the customhouse is located at Weybosset and Custom House Streets, it is only about one block away.

San Diego, Calif.: State and F Streets, five or six blocks from San Diego Bay—downtown.

San Franciso, Calif.: Washington and Battery Streets, about three-tenths mile from San Francisco Bay—fairly close.

Savannah, Ga.: 1–3 East Bay Street. Bay Street runs parallel to Savannah River, about two to six blocks away—close to river.

Seattle, Wash.: Marion Street, First Avenue, and Madison Street, appears to be right on Elliott Bay, which is off Puget Sound.

Tampa, Fla.: Florida Avenue between Zack and Twiggs Streets, about four blocks from Hillsboro River, no more than about one-half mile from Hillsboro Bay, off Tampa Bay.

Wilmington, N.C.: Princess and Water Streets, on Cape Fear River—very close.

Israel's Birthday

SPEECH
OF
HON. BARRATT O'HARA
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. O'HARA of Illinois. Mr. Speaker, I am thrilled to have the opportunity of joining with my good friend and distinguished colleague, the gentleman from New York [Mr. MULTER], and with my other colleagues in paying tribute to the brave State of Israel on the occasion of its 13th birthday.

No nation in all the long roll of the years that are recorded in history has accomplished as much and against such odds in the same period of time as has Israel. It has conquered nature itself. It has planted trees to bring back to arid land its fertility. It has developed even the smallest of resources to great potentialities. It has set a pattern to all the countries in the Near East and in Africa, a pattern of what can be done when man is dedicated to his task and makes that which he has meet the objective of his dreams.

Today, we in the House of Representatives of the Congress of the United States send to the Government and to the people of the brave State of Israel expression of our deepest affection, our sincerest good wishes and our pledge of a never diminishing, but ever increasing support.

I have said that Israel in the brief period of its national sovereignty has brought fertility to arid acres and literally has made the desert bloom. Let me be specific. I have before me some figures that should be known to the American public.

Cotton was first introduced in Israel on a commercial scale only 7 years ago. This followed 2 or 3 years of intense experimentation. Today the cotton crops of Israel amount to over 5,000 tons and the value of the Israel cotton crop is about $4 million annually, and this does not include the cottonseed used by the oil industry. Cotton picking provides jobs for over 10,000 workers during the 2-month picking season.

Another important industrial crop is that of sugar. In Israel the soil was studied and it was treated so that sugar beets might be grown. Today sugar beets are being supplied to two factories with a capacity of 12,000 and 8,000 tons of sugar a year respectively.

Within the last few years the cultivation of peanuts, of tobacco, and of potatoes has grown tremendously. About 6,000 tons of peanuts are exported annually, and tobacco is grown in quality and in quantity sufficient to maintain a healthy and growing cigarette industry.

So I could go on endlessly. Everywhere in Israel there is the will to do, and the record of accomplishment is written in an economy ever growing stronger and in a political stability that never will be shaken.

What has been the contribution of Israel in the development of the Near East and of Africa? When I visited Africa last December I found everywhere reflections of Israel's contribution. In Ethiopia and in other countries there were missions of help supported by Israel, aid given to help these lands to higher plateaus, aid given by Israel from her own slender treasury. Perhaps the finest hotel in Africa, certainly the hotel most gloriously situated and with the best service, is the new hotel at Monrovia, the capital of Liberia. This hotel was built by money from Israel and it is being run today by Israel nationals.

Liberia is the oldest independent nation in Africa. It was settled years ago by American Negroes. Most of its people today are the descendants of the early American settlers or the descendants of African families into which these early Americans had intermarried. Liberia is very close to the hearts of the people of the United States. It has a future second to that of no country in Africa. As a friend and admirer of the brave State of Israel I was thrilled to learn and to see with my own eyes the contribution that Israel has made to the onward march of the Liberia so close to American hearts and American interests.

Mr. Speaker, I wish to close on a spiritual note. I do not know that it makes too much difference what is a man's religion if that religion is his approach to understanding with the infinite. In Israel are lands holy to the Jew, the Christian, and the Moslem. Israel is a Jewish state, but in its respect for the spirit of religion it has given protection and access to the places that mean so much to men and women of varying religions. Israel is not only an inspiration to all nations in a political and an economic sense, but also it is a pattern in the practice of tolerance and the building of a brotherhood of man.

Let us rejoice today that to the world has been given the brave State of Israel, and let us solemnly pledge to ourselves and to each other that never when Israel needs a friend will the United States be found wanting.

All-Federal Transmission System for Colorado River Storage Project Power

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. CARROLL. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD, a letter and an attached resolution in regard to support for an all-Federal transmission system for the delivery of Colorado River storage project power.

There being no objection, the letter and the resolution were ordered to be printed in the RECORD, as follows:

ARKANSAS VALLEY G. & T., INC.,
Pueblo, Colo., April 17, 1961.

Senator JOHN A. CARROLL,
U.S. Senate,
Washington, D.C.

DEAR SENATOR CARROLL: Enclosed is a copy of a resolution passed at the annual meeting of members of our association in support of the all-Federal transmission system for the delivery of Colorado River storage project power.

We are looking forward to working with you in achieving this objective.

Very truly yours,
ARKANSAS VALLEY G. & T., INC.,
EDWARD GAITHER, *Manager.*

"Whereas the marketing of power from the Colorado River storage project over an all-Federal transmission grid is of the utmost importance to Arkansas Valley G. & T., Inc.; and

"Whereas only a Federal transmission system as recommended by the Department of Interior for the project insures project repayment, including full assistance to participating irrigation projects, delivery of power to preference customers in the defined marketing area at reasonable rates, and the maximum gain from interconnection of

project units and the storage project system with other Federal power systems of the area; and

"Whereas there is a vital need for a continuing program of Federal transmission line construction which will insure adequate capacity in place as project generation becomes available: Now, therefore, be it

"*Resolved*, That Arkansas Valley G. & T., Inc., urge the Colorado congressional delegation and the Department of the Interior to do all things possible in order to secure adequate appropriations for the construction of an all-Federal transmission system for the delivery of Colorado River storage project power."

Textile Industry and Related Industries

SPEECH
OF
HON. ROBERT G. STEPHENS, JR.
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. STEPHENS. Mr. Speaker, a very serious problem in the State of Georgia and in my district is the gradual strangling of the textile, garment, and apparel industries. In our section, without Federal aid, we have established many small industries which have kept our people from living in a depressed area.

Recently, one of the outstanding activities which has saved the economy of a large segment of people in Wilkes County, Ga., had a blow. This was rendered by the Tariff Commission when it declined to give escape clause relief for domestic plastic rainwear producers who have been overwhelmed with imports from Japan. This industry, started in Washington, Ga., by Mr. Alfred Moses, president of Almar Rainwear Corp., has afforded employment and other opportunities for people who had left agricultural pursuits or who would have left Wilkes County and proceeded to add themselves to already highly populated areas, who would have been dislocated from their home communities and might have caused employment problems elsewhere. Mr. Moses stated that only because of diversification in the total business and by going into more expensive fabrics was his plant able to continue to operate as a successful venture. If the actual volume loss in plastic raincoats to domestic manufacturers brought on by imports were totaled up, the figure would be something fantastic.

During my campaign for Congress last summer I ran across a number of startling facts in respect to the small industries that are now the life blood of my district.

Near Elberton, Ga., in a small community which had always been a prosperous farming community, I visited a small, country, general merchandise store. I asked the owner how things were going and he said that because of soil bank activities, acreage limitations on cotton and other factors reducing farming activities, he had lost some trade but that a sewing plant had been established in the neighborhood and it had been a source of local payrolls from which his business had drawn profit. He said the plant across the road had recently slowed down and offered employment for only about three days in a week. He reached up on the line over the counter and took down a small boy's white knit shirt and he said, "I have this shirt and can sell it for $1." He showed me the label was from a country outside of the United States. He then reached over on the counter and showed me another boy's shirt comparable to the one already demonstrated and he said, "I cannot sell this shirt for less than $1.50 and make the same profit as I do on the first one." Then he stated that, surprisingly enough, the more expensive shirt was made across the road from him. His conclusion was also revealing. He said that the same people who worked on the shirt across the road were no different from other people and when they came in to buy items of clothing or other merchandise they bought the one that cost the least.

There is a similar sewing plant in Taliaferro County, Ga., which heretofore was one of our most prosperous farming counties. With the decline in agricultural output and acreage, this county has lost almost half of its population in the last 10 years. It has only one real industry in its confines and that is a branch of a garment plant that operates some 25 miles away. Because of competition from cheap foreign goods, this plant is also, in its parent office and in its branch in Taliaferro County, operating only part time.

These examples can be multiplied over and over again in the 10th District and are commencing to create a serious employment problem.

We have talked in the Congress recently about assisting depressed areas by granting a Federal subsidy of $300 million. In our efforts to assist the textile industry, we are not asking for any Federal outlay of money but merely for a chance for free enterprise to survive because of competitive methods which Americans cannot afford to meet. The reasons advanced for the ability of foreign-made goods to come on American markets at a cheaper price is the low cost of human labor which goes into the cost of the production of these competitive commodities. I would not advocate the reduction of our high standard of living and our high rate of wages so as to compete with substandard conditions and almost slavery conditions in foreign countries.

Therefore, it seems to me that the only remedy is for the Government of the United States, in its executive and legislative branches, to take a hand and provide some regulation in a field which has always been acknowledged as a field in which the Government should operate. We must act before it is too late and thousands of people are put out of work or must move for job opportunities. This is better than to plead later for a subsidy as a depressed area.

Nineteen Hundred and Sixty-one Marks the 150th Anniversary of the Establishment of the Williamsburg, Pa., Post Office

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. VAN ZANDT. Mr. Speaker, "The post office, with its everlasting energy, I look upon as a first measure of civilization."—Ralph Waldo Emerson.

The U.S. post office at Williamsburg, Blair County, Pa., will celebrate its 150th birthday this fall having been established in 1811 while the community was part of Huntingdon County. In 1846 Williamsburg became a part of Blair County when the latter was formed from sections of Huntingdon and Bedford Counties. The Williamsburg Post Office is the second oldest in Blair County, the Hollidaysburg Post Office having been established in 1805.

Since the establishment of the Williamsburg Post Office in 1811 the following postmasters held office:

POSTMASTERS AND DATES OF APPOINTMENT

William W. Harris, October 1, 1811.[1]
William Spear, February 7, 1814.
Samuel Roger, March 28, 1821.
George Davis, March 31, 1825.
Adolphus Patterson, December 23, 1826.
Philip Rees, June 1, 1841.
Joseph S. P. Harris, May 12, 1843.
Philip Rees, February 9, 1844.
Alexander W. Kenny, March 25, 1845.
John Gorley, June 10, 1846.
Joseph Baldridge, April 11, 1849.
William G. Murray, May 13, 1853.
James I. Fay, April 16, 1861.
William J. Spencer, May 4, 1861.
William A. Fluke, August 21, 1866.
Albert J. Weaver, May 4, 1869.
Alexander Rutledge, January 18, 1871.
Joseph F. Rutledge, August 7, 1877.
James Roller, May 17, 1880.
William M. Eichholtz, September 8, 1885.
Alexander Rutledge, July 12, 1889.
Mrs. Sarah Rutledge, December 15, 1891.
Charles A. Patterson, January 20, 1896.
Levi Sparr, October 29, 1900.
Samuel Sparr, January 16, 1906.
T. Dean Ross, July 23, 1909.
J. R. Detwiler, October 30, 1913.
James T. Patterson, June 21, 1922.
James R. Detwiler, March 5, 1934.
James K. Morrison, January 19, 1937.
John G. Butler, June 30, 1956.
Grace E. Miller, acting, June 30, 1959.
Ruth D. Grassmyer, acting, January 17, 1961.

Mr. Speaker, it has often been said that we take for granted many of the rights and privileges enjoyed under the American heritage of liberty and freedom. In this category may be included our seeming lack of appreciation for the finest postal service in the world. As a matter of fact very often it requires a

[1] Date of first return from the Deputy Postmaster to the Postmaster General.

Source: National Archives and Records Service, Washington, D.C.

special occasion such as the dedication of a new post office or the celebration of an anniversary such as is being observed this year by the Williamsburg, Pa., Post Office, to remind us in a telling manner of the phenomenal growth of the U.S. postal service and the fidelity and efficiency displayed by over 500,000 dedicated postal employees.

The sesquicentennial celebration of the Williamsburg, Pa., Post Office affords the opportunity of refreshing our memories by recalling the glorious history of progress achieved by the U.S. postal service which is older than our Nation.

While the original purpose of the postal system was to provide "the best means of establishing posts for conveying letters and intelligence through this continent"—Journals of the Continental Congress, May 27, 1775—the Post Office Department was ultimately enlarged to include several services. Among the more important developments of the postal service, in the order of their establishment or authorization, were: 1775, Benjamin Franklin, first Postmaster General; 1780, Samuel Osgood, first Postmaster General under the Constitution; 1806, first national post road started; 1813, navigable waters declared post roads; 1819, mail carried by steamship; 1938, railroads declared post roads; 1847, adhesive postage stamps introduced; 1855, registered mail; 1858, first street letterboxes; 1861, small parcels of merchandise mailed; 1864, railway mail service; 1864, money-order service; 1867, international money-order service; 1873, postal cards introduced; 1885, special delivery service; 1896, rural free delivery service; 1911, postal-savings system; 1913, parcel post including insurance and collect-on-delivery services; 1918, Government airmail service; 1924, day and night transcontinental airmail service; 1941, highway post offices; 1943, postal delivery zone system; 1945, revised postal note service; and 1955, certified mail.

Benjamin Franklin was appointed postmaster at Philadelphia in 1737 and Co-Deputy Postmaster General of the British Colonies in North America in 1753, and on July 26, 1775, became the first Postmaster General under the Continental Congress at an annual salary of $1,000. He is credited with laying the foundation for the development of the present U.S. postal system.

On September 26, 1789, when Samuel Osgood was appointed the first Postmaster General under the Constitution there were only 75 post offices and the revenues of the Department were around $38,000 annually. From that small beginning the postal service has developed into what is now the largest business in the world. During the fiscal year 1959, according to the 1960–61 edition of the U.S. Government Organization Manual, "the postal service employed more than 500,000 workers and has gross receipts in excess of $3 billion. There are 35,750 post offices in the United States."

In reviewing the early history of the postal service in Pennsylvania it is recorded that during the colonial era, postal service, owing to inadequate transportation facilities, developed slowly. A limited postal service was established by William Penn in 1683 between Philadelphia, Chester, Newcastle, and Trenton. The rates varied from 5 to 9 pence according to the distance, the time of arrival and departure of the mail was posted on the meeting house door. In 1693 the assembly passed a law establishing in Philadelphia a general post office for transmitting letters and packages to all the Colonies, to Europe, and to the West Indies. Andrew Hamilton, who organized the postal service, was authorized to receive postage on all letters conveyed by post. The rates for letters between Philadelphia and New York were 4½ pence; between Philadelphia and Hartford, 9 pence; between Philadelphia and Providence 12 pence; and between Philadelphia and Boston 15 pence. To any place within 80 miles of Philadelphia the rate was 4½ pence. No charge was made for receiving and sending public letters, and the post paid no toll passing over ferries within the province. The rate for all foreign letters was 2 pence. The Moravians established a weekly post between Bethlehem and Philadelphia in 1742. Stage coaches carried mail after the stage lines were established, but previous to that time mail was carried by horseback. A post route was begun between Philadelphia and Boston in 1772. In 1775 the Continental Congress established at Philadelphia a general post office for the Colonies.

In the summer of 1804, 1 year before the establishment of the Hollidaysburg, Pa., post office and 7 years before Williamsburg acquired its post office, the first stage service across the Allegheny Mountains in Pennsylvania was established with Pittsburgh as its terminus. The line was subsidized by the Federal Government, and by December of this same year, the stages ran twice a week, the trip from Philadelphia to Pittsburgh taking from 6 to 7 days.

The Postmaster General wrote to the citizens along the line, that he was "fully disposed to give every reasonable aid to the extension of the line of stages to and beyond Pittsburgh." No other stage lines to, or in, western Pennsylvania, appear to have been established until after 1812.

More than 100 years ago, letters were delivered by carriers in the cities and the larger towns, and postage was collected when delivery was made. Letter carriers, employed at such post offices as the Postmaster General directed, received 2 cents from each person to whom the letter was addressed and delivered. The present free city delivery service was established by act of Congress on January 3, 1887.

The introduction of rural delivery service in 1896, was one of the outstanding improvements in the postal system affecting the farmer and rural residents and those persons residing outside the established delivery service area. In 1945 there were 17 rural routes in Blair County, Pa., Williamsburg having 2 of the 17 routes.

When Blair County was established in 1846, there were 13 post offices within the borders of the county, Williamsburg, established in 1811, being among the lucky 13.

As we survey the constant growth of the U.S. postal system we are reminded that its progress is a fulfillment of Benjamin Franklin's idea that a postal service would unify the New World and aid in its growth.

The history of the U.S. postal service is replete with the names of famous Americans. The list includes George Washington, who personally surveyed many of the original post roads; Paul Revere was one of the first post riders; while William Cody, known as Buffalo Bill, was one of the early riders for the pony express, which began operation April 3, 1860, between St. Joseph, Mo., and Sacramento, Calif., in an effort to give faster mail transportation to and from the Pacific coast. These pony express riders used a total of 75 ponies and that first mail took 10½ days. The fastest time recorded by the pony express was 7 days and 17 hours to deliver the inaugural address of President Lincoln in 1861. The pony express was operated by a private company and not the Federal Government. It charged $5 for each half ounce letter but later reduced the rate to a dollar. In October 1861 the pony express went out of existence, closing one of the most colorful chapters in American history. Truly the pony express riders faced dangerous yet exciting experiences in their role as pioneers in today's faster communications system.

Although the speed of transporting mail has increased tremendously since the days of the post riders many of our smaller post offices still use manual sorting and distributing methods which are virtually identical to those used in Benjamin Franklin's time.

The many new post offices and improved handling facilities which have been added to our postal system under the program inaugurated by former Postmaster General Arthur E. Summerfield exemplify the way the Post Office Department is maintaining the fine traditions founded by Benjamin Franklin.

The official motto for the Post Office, "Neither snow, nor rain, nor heat, nor gloom of night, stays these couriers from swift completion of their appointed rounds" is still the creed of the modern mail service and is proof that the ideals of Benjamin Franklin have been emulated by succeeding postal administrators. The official motto is paraphrased by over 500,000 dedicated postal employees in the well-known slogan—"the mail must go through."

An oversea soldier during World War II paid tribute to the efficiency of the U.S. postal system when he penned these lines—

I can't say where I'll be next, but there's one thing I know, no matter where they send me, I'll be greeted by "Hello." Like a magic carpet it follows me on land or sea. The bugle will sound mail call and they'll pass it on to me.

There have been countless words of praise for the over half million persons comprising the dedicated army of postal employees. Even the often maligned

post office pen and inkwell have been defended by none other than Christopher Morley in his ode:

TO A POST OFFICE INKWELL

How many humble hearts have dipped in you and scrawled their manuscript.
Have shared their secrets, told their cares, their curious and quaint affairs.
Your pools of ink, your scratchy pen, have moved the lives of unborn men.
And watched young people, breathing hard, put heaven on a postal card.

In conclusion the sesquicentennial celebration of the Williamsburg, Pa. Post Office serves to focus attention on the following inscriptions for East and West Parrlions, Post Office, Washington, D.C., composed by Charles Norton Eliot and edited by Woodrow Wilson since the inscriptions summarize in capsule form the extensive role of the U.S. Postal System in domestic and international affairs:

Messenger of sympathy and love
Servant of parted friends
Consoler of the lonely
Bond of the scattered family
Enlarger of the common life
Carrier of news and knowledge
Instrument of trade and industry
Promoter of mutual acquaintance
Of peace and of good will
Among men and Nations.

American Textile Industry

SPEECH
OF
HON. ROY A. TAYLOR
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. TAYLOR. Mr. Speaker, I wish to make known my interests in the American textile industry and indicate my support of its fight to overcome a dangerous and burdening import situation.

I am reliably advised that cotton-cloth imports in the United States in 1960 were more than twice those in 1959. This is alarming, particularly when it appears that our domestic textile output is being so curtailed by import influences as to make it now appear that filling our military needs in an emergency situation would be extremely difficult.

I have received numerous letters and telegrams in recent weeks from genuinely concerned textile and garment manufacturers in my congressional district urging me to assist in placing strong restrictions on textile imports.

I have met and discussed this crisis with other Members of the House of Representatives, and we are in agreement that action in some form is necessary and should be undertaken at the earliest possible date.

I am sincerely convinced that textile imports have created an intolerable competitive situation for our own American producers. There has been no abatement in the sharply rising levels of textile imports from low-wage foreign manufacturers. The domestic result, as we are all now seeing, has been widespread textile shutdowns and layoffs.

This trend must be halted, and I have assured my constituents and other Members of the North Carolina congressional delegation of my anxiousness to help remedy this unfortunate situation.

The trend in the textile industry has been vividly unmistakable. Not only is the import level at a record high, but the rate of increase is such that, if it continues unchecked, foreign production will ultimately destroy our domestic industry.

No one can honestly blame foreign manufacturers for attempting to corner as much of the American market as possible. They are businessmen, too, and are anxious to sell the articles they manufacture.

However, the situation in the textile realm is now close to being out of hand. The Japanese industry is pushing for larger quotas of textile exports to the United States to keep Hong Kong producers from overtaking them in the American market.

Our textile workers deem it most unfair to suffer unemployment and shorter hours while their foreign competitors are supplying so much of the American market.

I therefore wish to make clear my desire to see the import balance improved substantially and rapidly. The solution, I believe, is the establishment of import quotas by country and by category.

Commission to Russia To Verify Claim of Man in Space Is Urged

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, several days ago, I read in the press and subsequently observed in the CONGRESSIONAL RECORD a lengthy letter from my colleague, Hon. ROMAN C. PUCINSKI, of the 11th District of Illinois. Since that time, I have received the original letter through the mail from Mr. PUCINSKI. It urges the Committee on Science and Astronautics to call upon the President to send a commission to Russia to verify the claim of sending a man in orbit around the earth and returning him safely.

Mr. Speaker, I answered my colleague promptly. Under leave to extend my remarks, I hereby include my reply for the attention of the Members of Congress:

APRIL 18, 1961.

Hon. ROMAN C. PUCINSKI,
House of Representatives,
Washington, D.C.

DEAR COLLEAGUE: I have read in the press that you have written a letter to me referring to the recent claims of the Russians that they have placed a man in orbit around the earth and have returned him safely to Soviet territory, as being a hoax. I have not yet received the letter. Pending its receipt, however, I invite you to give to me any and all information which you personally may have in reference to this alleged successful space flight, or to make accessible to the committee any information which you may have. I do not think, however, that we should rely on getting the cooperation of the Russians in this matter since they have denied us this cooperation in the past.

I do not know if the claims of the Soviets to have placed a man in orbit around the earth and to have returned him safely are true or are a hoax. It has been the judgment of many competent persons, however, that the Soviets have had this capability for some time. This ability has not been seriously questioned. Whether or not the alleged event was actually accomplished by the Soviets may be debatable. The important thing is that the Soviets have this capability and we do not have it.

Accordingly, I believe, therefore, that I should proceed on the assumption that the Russians' claim is correct, and try to fashion legislation which will place our country in the same position in the development of the art (or perhaps, superior, to it) as is Russia. Not to do so would tend to continue this country as other than a leader in space and could, in time, seriously jeopardize the security of this Nation.

Again, I suggest you give the Committee on Science and Astronautics, at the earliest possible instance, all available information you have, or have access to.

Sincerely yours,

OVERTON BROOKS,
Chairman.

Eastern Orthodox Church

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES

Monday, April 24, 1961

Mr. CASE of New Jersey. Mr. President, on February 16, I introduced, with Senators KEATING and PELL, Senate Resolution 88, which would grant Eastern Orthodoxy recognition as a major faith in the United States. I would like to have printed in the Appendix of the RECORD a letter I recently received from Prof. Lev E. Dobriansky, chairman of the Ukrainian Congress Committee of America, Inc., in support of such recognition.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

UKRAINIAN CONGRESS COMMITTEE OF AMERICA, INC.,
New York, N.Y., March 1, 1961.

The Honorable CLIFFORD P. CASE,
U.S. Senate,
Washington, D.C.

DEAR SENATOR: It was with great delight and satisfaction that we read in the CONGRESSIONAL RECORD of February 16 your sponsorship of Senate Resolution 88, which calls for the designatiton of the Eastern Orthodox Church as a major faith in the United States. We take this opportunity to express to you and also to your cosponsors, Senators KEATING, of New York, and PELL, of Rhode Island, our heartiest appreciation and thanks for taking the initiative in this important and long overdue matter.

The membership of this committee is heavily represented by Americans of the Eastern Orthodox faith. Many of them who were born in Ukraine enjoy the freedom of practicing this faith here, while their counterparts in Ukraine have suffered the genocide of the Ukrainian Orthodox Church

which Khrushchev has perpetuated to this day. For our members of the Orthodox faith your resolution cannot but sharpen the contrast of religious freedom and recognition that exists between our Nation and Khrushchev's totalitarian Russian Empire.

This committee fully supports Senate Resolution 88 and endorses without qualification the essential reasons and points of explanation which you have offered in behalf of the passage of this resolution. We shall be happy, indeed, to lend our services in any way to further its prompt passage.

With warmest personal regards and best wishes, I am,

Sincerely yours,

LEV E. DOBRIANSKY,
Georgetown University.

Notre Dame Club Names J. L. Rigali Man of the Year

EXTENSION OF REMARKS
OF
HON. ROLAND V. LIBONATI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. LIBONATI. Mr. Speaker, it is with pride that the Italo-American community of metropolitan Chicago learned that one of its most distinguished citizens, Joseph L. Rigali, is being honored tonight by the Notre Dame Club of Chicago, as the Man of the Year. This most coveted award could not have been given to a more celebrated Chicagoan as alumnus of the university. Mr. Rigali represents one of the earliest pioneer families of the Chicago area. As an architect in the ecclesiastical adornments of art, both in plaster and stone—his work is expert and beautiful. His frescoes, arches, and pillared effects adorn hundreds of churches throughout the Nation. The sculpturing of statues, basins, religious pictures, and other objects, represent the finest art work in this field. The Rigali family, for generations, are renowned in their talents and masterful accomplishments in church architecture. They excel, also, in related fields of artistic objects and adornments.

We, the Congressmen of the Illinois delegation, congratulate our fellow Illinoisan, Joseph L. Rigali, and his family, in receiving this high award, and compliment the alumni of the Notre Dame Club of Chicago in his selection.

The Chicago Sun-Times, on Monday, April 24, noticed the event, as follows:

NOTRE DAME CLUB NAMES J. L. RIGALI MAN OF THE YEAR

Joseph L. Rigali of 120 Washington, Oak Park, has been named Man of the Year by the Notre Dame Club of Chicago.

He will receive the award at universal Notre Dame night Monday at the Ambassador West Hotel.

A 1926 architecture school graduate, Rigali played varsity end under Knute Rockne in the era of the Four Horsemen.

He is president of Daprato Studios, a church furnishings business at 766 West Adams.

He is a member of an all-Notre Dame family. His brother and three sons were graduated from the university and a fourth son is now a student.

Interdependence Key to Mutual Welfare of Canada and the United States

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. METCALF. Mr. President, Secretary of the Interior Stewart L. Udall discusses the necessity for continued harmonious relations between the United States and Canada in an article appearing in the spring 1961 issue of Inco, published by the International Nickel Co., Inc. Secretary Udall stresses the interdependence of the two countries in the field of raw material mineral resources. He urges close cooperation in resource development and elimination of trade barriers between the two countries.

I commend the Secretary for his article, and the International Nickel Co. for its publication of the Secretary's views. Mr. President, I ask unanimous consent that the article, entitled "Interdependence Key to Mutual Welfare of Canada and the United States," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERDEPENDENCE KEY TO MUTUAL WELFARE OF CANADA AND THE UNITED STATES

(By Stewart L. Udall, Secretary of the Interior)

During the past several years there has been, on both sides of the border, a welcomed upsurge of concern with United States-Canadian relations. This reflects both some genuine problems and some misunderstandings. Even more important, however, it is an encouraging recognition that our complex interdependence is no longer being taken for granted.

In the United States, this recognition owes a great deal to the historic mission to Canada undertaken by Representatives Brooks Hays and Frank Coffin in 1957. This report of my colleagues made a deep impression in Congress, as well as in the executive branch of our Government.

In the succeeding years some notable steps have been taken. A joint group was formed of Canadian parliamentarians and U.S. Members of Congress, which meets periodically to discuss matters of common interest. A permanent Subcommittee on Canada has been established in the Senate Foreign Relations Committee, and two joint committees composed of top United States and Canadian officials in the executive branch, one dealing with economic affairs and one with defense, now hold regular consultations.

In addition, a new private organization, the Canadian-American Committee, has been formed by business groups of both countries and is contributing an important series of research studies on economic issues. In these and in other ways, Canadians and Americans are evolving out of shared experience the institutions and traditions of a special kind of community.

Thus, the revolution in military technology has confronted us with the common threat of transpolar war. The cold war has challenged our common cultural and political heritage. As a result, our national security programs are more closely linked than ever before in a system of continental defense. From another aspect, the development of regional markets in Europe, and the prospect of other such regional groupings elsewhere have given new importance to our already strong economic ties. It is clear that United States and Canadian economic interdependence must continue to grow The future holds a prospect of continuing and expanding benefits to both countries if we are wise in fostering the growth of our unique community of interests.

The magnitude of this community, in economic terms, is measured in some familiar figures. The United States and Canada are each other's best trade customers. Canada takes 23.6 percent of all U.S. exports and, in turn, sells 61.4 percent of its exports to this country. In 1959, Canadians purchased almost $4 billion (U.S. currency) worth of goods of all kinds from the United States, while U.S. imports totaled about $2.9 billion (Canadian currency) from our northern neighbor.

Underlying the pattern of trade and investment is an important reality—the practical and natural factors that make the economies of the two countries complementary. Anyone who works, as I do, in the area of natural resources, must be particularly aware of these factors. They have been impressively documented in a recent study by the Canadian-American Committee on the Future of Industrial Raw Materials in North America.

By 1980, according to this study, United States and Canadian requirements for raw materials will double. Of 28 key industrial materials, the United States will be deficient in 22, Canada in 8. However, if the resources of the two countries are available to each other—as they naturally and practically should be—the deficits of each country could be reduced substantially.

For both the United States and Canada, pooling of resources in which one or the other is deficient would substantially reduce dependence on other sources of supply, a factor of critical importance to our common national security. Thus Canada can provide the bulk of vital U.S. nickel requirements, and important quantities of lumber and wood products, for example, while herself becoming a valuable customer for American coal and phosphate. Such facts, as the committee pointed out, emphasize "that underlying economic forces are likely to be working powerfully in the direction of greater economic interdependence within North America." They document the assertion by the United States-Canadian Interparliamentary Group of the "intimate and important relations between United States and Canadian production and markets for such commodities as lead and zinc, aluminum, copper, nickel, and uranium."

However important these relations are, and however great their benefits, they will not come automatically and they cannot be taken for granted. Our mutual welfare depends on a spirit of reciprocity and flexibility in adapting to changing circumstances. Generally, this means we must continue to build the institutions within which negotiations and adjustments can take place—institutions like the parliamentary and executive joint groups now functioning, and the countless private relationships on which the substance of our interdependence is founded.

In the area of my own special concern, it is essential that our two countries maintain the closest cooperation in resource development and use. United States and Canadian interests are not always identical. Yet the natural logic of interdependence requires continual recognition of the compelling factors that dictate cooperation.

The St. Lawrence Seaway and the planned joint development of the Columbia River Basin are dramatic examples of such cooperation. It must extend likewise to elimi-

nation of needless tariffs and other trade barriers, to resource planning and development, and to the many other areas in which the future benefits of United States-Canadian cooperation depend.

House Resolution 211, Special Committee on Captive Nations

EXTENSION OF REMARKS
OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, Russian Colonialism and the Necessity of a Special Captive Nations Committee, pages 3286 to 3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel duty-bound to disclose the thoughts and feeling of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of today's RECORD.

POLISH AMERICAN CONGRESS, INC.,
WISCONSIN STATE CHAPTER,
Milwaukee, Wis., April 11, 1961.

Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Wisconsin Chapter of the Polish American Congress, representing a large segment of people of Polish descent living in Wisconsin, herewith wishes to congratulate you on your bold and farsighted move in introducing the resolution calling for the establishment of a permanent Committee on Captive Nations in the House of Representatives. Needless to say, such a committee is long over due. One of the greatest problems confronting our Nation today is the Soviet Union, a prison house of many nations and peoples. These nations, ever eager and wanting to escape Soviet Russian slavery and despotism, constitute perennial weaknesses of the Soviet Union.

A Committee on the Captive Nations would serve as a reservoir of information and data on the various enslaved nations in the U.S.S.R., which information could be made available to the U.S. Government and its various agencies. Its main function, however, would be to inform the American people and the world at large on the state of affairs behind the Iron Curtain and assist the Government in formulating its policies with respect to the captive nations.

We are writing our Congressman CLEMENT ZABLOCKI asking him to support your resolution.

Respectfully yours,
EDMUND BANASIKOWSKI,
Chairman.
ROMAN KAMINSKI,
Chairman of Committee for Political Affairs.

ENGLEWOOD, N.J., *April 6, 1961.*

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: It has come to my attention that you have introduced a resolution creating a Special Committee on Captive Nations, including those within the Soviet Union itself. In my studies of Russian history, I have often wondered why more use was not made in our cold war and propaganda effort of the facts of the captive nations which are part of the Soviet Union. It seems to me that this area of historical fact, along with the Eastern European satellites, provides an opportunity for the United States to take some initiative in winning the cold war.

I would like to express my support for this measure as a constructive step in our struggle with communism.

Very truly yours,
CHARLES O. ROSSOTTI.

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC.,
New York, N.Y., April 12, 1961.

The Honorable DANIEL J. FLOOD,
U.S. Congressman,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: On behalf of the Ukrainian Congress Committee of America, a nationwide American patriotic organization representing over 2 million American citizens of Ukrainian descent and background, we wish to extend to you our heartiest congratulations for the all-important and timely resolution which you introduced in the House of Representatives on March 8, 1961. Your efforts to establish in the House of Representatives a permanent Committee on Captive Nations has met with the unqualified approval and support of all our membership throughout the United States. The Ukrainian Congress Committee of America, since its establishment in 1940, has been a stanch supporter of all such measures of our Congress and our Government which would tend to strengthen the hope and resistance of the enslaved and captive nations behind the Iron Curtain, and thus weaken the force and drive of Communist Russia for world conquest.

It is our considered opinion that your resolution is based on a rational and proper study of the conditions in the U.S.S.R., and conclusively indicates a proper approach to the problem of the Soviet Union, a prison house of many subjugated nations. Such a Committee on Captive Nations in the House of Representatives would be permanently charged with the research and study of the problem of Soviet Russian colonialism and imperialism, and would be a veritable reservoir of unbiased data and information on the enslaved nations in the Soviet Russian prison house of nations. Such a committee would undoubtedly perform a unique task for the benefit of our Government and the free world at large.

We recall with regret that during the session of the XVth General Assembly of the United Nations last fall, our representatives missed many opportunities for tackling the problem of the captive nations held in slavery by Communist Russia, which could be attributed to the fact that our Government was not fully apprised of the situation behind the Iron Curtain. We are witnessing Communist Russia, the greatest colonial power in the world today, successfully hoodwinking the peoples of Africa and Asia by pursuing a spurious liberation policy. For that purpose the Russian Communists have organized the so-called Freedom University in Moscow, where they train hundreds of selected students from Africa, Asia, and Latin America in the art of sabotage, espionage, and Communist penetration.

The United States of America still remains the only hope of the enslaved nations and a true citadel of freedom, with adequate resources which enable it to establish such a committee. Your well-defined purpose and farsighted objective in having such a committee in the House of Representatives underscores a realistic approach to the problem of the Soviet Union. It gives assurance to the American people and to the peoples enslaved by Communist Russia that the United States is sincerely concerned about the captive nations, and the establishment of the Captive Nations Committee in our Congress would be undeniable proof that our desire to help the captive nations is not limited to verbal declarations only, but that we are doing something concrete to bring the liberation of our friends and allies behind the Iron Curtain a reality.

It is true that the Communist would violently denounce such a committee and would accuse you and the entire U.S. Congress of preparing an "aggressive war" against the U.S.S.R. This they are doing in the matter of the Taras Shevchenko statue bill, which was passed by the Congress last year. But the millions of ensalved Ukrainians are gratified and happy over the fact that the United States has recognized their greatest national poet and advocate of the freedom and independence of Ukraine. The same reaction will undoubtedly result from your resolution, and you could expect to be attacked and slandered by Moscow, but the millions of captive people will be eternally grateful for your farsighted and provident measure.

The Ukrainian Congress Committee of America which has 115 branches and member organizations in 38 States of the Union, pledges its full support to your noble initiative in the firm belief that such a Committee on Captive Nations would serve the best interests of the United States of America and the cause of universal freedom.

Respectfully yours,
MATTHEW STACHIW,
Secretary.
IGNATIUS BILLINSKY,
Secretary.

BOSTON, MASS., *April 8, 1961.*

Hon. DANIEL J. FLOOD,
U.S. House of Representatives,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLOOD: Recently it came to my attention that you're planning to sponsor a bill for the establishment of a permanent committee of the House dealing with the problems of the captive nations.

Such a proposal I congratulate you for, as the problems of the captive nations must be brought to the attention of all Americans.

Trusting I may have the pleasure of hearing from you I remain,

Very truly yours,
SAMUEL RYDER.

JACKSON, MISS., *March 22, 1961.*
Representative DANIEL J. FLOOD,
House of Representatives,
U.S. Congress, Washington, D.C.

DEAR REPRESENTATIVE FLOOD: I am exercising my privilege of writing you with regard to the resolution which you recently submitted advocating the establishment in the House of Representatives of a special committee on the Captive Nations. I first became aware of the plight of these nations following the passage of the Captive Nations Week resolution in 1959. The more I contemplated this idea the more certain I became that the exposition of the truths and facts pertaining to the enslaved condition of these peoples was definitely a step in the right direction.

The sooner the citizens of our Nation are brought to realize the importance of these captive nations in forestalling a hot war and advancing the cause of world freedom the closer this country will be to victory in our cold war with Russia. It is a definite step toward the safeguarding of our liberty that we undertake a tireless study into the prevailing conditions in all the captive nations for the purpose of developing new ideas and approaches for securing victory in the cold war.

I have been very much pleased with the reactions and enthusiasm of my fellow workers and friends who I have consulted about their feelings regarding the captive nations. They are all very much in favor of bringing the facts concerning these countries before the Nation and the world. I think the great spirit shown during the observance of Captive Nations Week this past year and the two proclamations made by President Eisenhower are a valuable indication of the wholehearted support such a committee as you have proposed would receive. I sincerely hope President Kennedy will further the progress of this movement by making a proclamation this year in favor of Captive Nations Week.

I am writing another letter at this same time to Representative JOHN BELL WILLIAMS who represents me in this Fourth District in Mississippi. I hope that he will cooperate with you to the fullest in seeing this resolution through Congress and the establishment of the special committee on the Captive Nations as an integral part of the House of Representatives.

Wishing you deepest personal regards and the very greatest success, I am,

Sincerely,

JOE Y. DEHMER, JR.

BLOOMFIELD, CONN.,
March 20, 1961.

The Honorable DANIEL J. FLOOD,
U.S. House of Representatives,
House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLOOD: It was with a great interest and a sense of gratitude that I read about your resolution of March 8, 1961, on the establishment of a permanent Committee on Captive Nations.

Please allow me to commend you on this stand for only concrete actions like yours offer reasons for hope. So far our policy toward the Soviet Union was analogous to a police department negotiating with and attempting to talk bandits into a better behavior.

To solicit more support for your resolution I am sending a copy of this to Senator THOMAS J. DODD.

Very truly yours,

JOHN CHERNYHA.

MILWAUKEE, WIS., *April 8, 1961.*
Hon. DANIEL J. FLOOD,
New House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: On behalf of the Hungarian Veterans' Fraternal Association, Milwaukee, Wis., group, I earnestly thank you for introducing your resolution in the House of Representatives for the establishment of a special permanent Committee on the Captive Nations in the Congress. Your resolution, if enacted, would at last prove that the Congress has some interest in the fate of the captive nations, and not only in their Moscow-controlled puppet governments.

The Captive Nations Committee would greatly benefit the legislative and administrative bodies of the United States in providing accurate and readily accessible information in all related matters. It would benefit the whole Nation, too, by exposing the true nature of communism—both highly needed and desirable activities.

As the president of the Milwaukee group of the Hungarian Veterans' Fraternal Association, I thank you again for introducing your resolution.

Very truly yours,

ZOLTAN AGHY,
President, Hungarian Veterans' Fraternal Association, Milwaukee Group.

HACKENSACK, N.J., *April 4, 1961.*
The Honorable DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: I would like to give my wholehearted approval for your House Resolution 211 and the subsequent establishment of the Special Committee for Captive Nations.

I think that it is time that the American people rally to the cause of the subjugated nations and I see that your bill is the first giant step in the right direction.

I sincerely hope that it will pass through Congress.

Very truly yours,

J. C. DIETSCHE.

THE MOUNT HOLYOKE NEWS,
South Hadley, Mass., April 8, 1961.
Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: I have read about the resolution to establish a special Committee on Captive Nations. I would like to express my support for this measure as a step toward improving our efforts in an area that has often been neglected, but one which should be exploited to the fullest in the cold war.

Very truly yours,

BARBARA JILL MARGULIES,
Editor.

MAYFIELD, PA., *April 9, 1961.*
The Honorable DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: I have found out that you are proposing a bill to establish a committee to aid the captive nations.

I would like to say that I am in full favor of this bill and sincerely hope that it will go into effect, for I have relations in one of the subjugated nations, namely Poland, and I know that they need the help of the United States before Russian domination takes the country over completely. It is therefore necessary that this Committee for Captive Nations becomes an actuality.

Yours very truly,

MRS. WALTER KONISH.

Congressman Harry Sheppard Is Right

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. HOSMER. Mr. Speaker, in connection with the allocation of defense contracts our respected colleague from California [Mr. SHEPPARD] has a theory they should be placed on the basis of ability of the contractor to do the best job with the least cost. In commending him for this commonsense attitude the Long Beach Independent-Press-Telegram recently editorialized as follows:

REPRESENTATIVE SHEPPARD'S REFRESHING VIEW ON MILITARY CONTRACTS

New York politicians recently declared war on California defense manufacturers and pledged an all-out effort to channel more defense contracts into New York's depressed areas.

It is refreshing to hear the comment of Congressman HARRY R. SHEPPARD, of California, on the same subject. Representative SHEPPARD is chairman of the Armed Services Subcommittee of the House Appropriations Committee.

Although as sympathetic as anybody else with the problems of depressed areas, Congressman SHEPPARD stated that he thinks those areas should get relief, but that it should be handled as relief and plainly labeled as such. It should not be done at the possible sacrifice of efficient defense production.

Military productions must be allotted, not primarily on the basis of economic need in any particular area, he said, but on the basis of ability to do the most efficient job possible at the lowest cost to the public.

Naturally, if need and ability happen to coincide in a particular area, that area should get prime consideration for defense contracts.

However, the purpose of military production is not to relieve depressions or recessions, but to protect the national security.

Let's place the contracts where they can be filled swiftly and efficiently—in those areas that have the skilled manpower, the equipment, and the resources necessary to deliver the goods.

Congressman SHEPPARD is right. This is not a fit subject for regional squabbling. It is essentially a question of national survival.

The 13th Anniversary of the State of Israel

SPEECH
OF
HON. CLEMENT J. ZABLOCKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. ZABLOCKI. Mr. Speaker, I want to join my distinguished colleagues in commemorating the 13th anniversary of the State of Israel.

The birth of the State of Israel constituted the fulfillment of the aspirations of persons of Jewish faith and ancestry all over the world. They have dreamed of creating a state which would stand as a beacon of democracy, peace, and progress in an area of the world historically beset by strife and turmoil. In this sense, the establishment of the State of Israel marked the beginning of a new epoch in the history of the Middle East, the cradle of the spiritual heritage of the western civilization.

As we congratulate the State of Israel upon its 13th anniversary, we are mindful of the grave responsibilities and obligations which that country has assumed with its birth. By opening its doors to persons of Jewish faith and an-

cestry, by working hard with its limited resources and help provided by friends abroad, the State of Israel has achieved considerable material progress, and has provided the opportunity for a new life to many, many persons.

But in addition to converting the desert into a garden, the State of Israel has a larger responsibility to mankind itself—the responsibility to promote peace and amity in the Middle East, and to provide a living example of the vitality and endurance of free institutions. Herein lies its test and potentially its greatest contribution to the enlargement of the area of freedom and peace in our troubled world.

As we extend our best wishes to the State of Israel upon this important anniversary, we also wish to express our strong hope that the future may witness the resolution of the complex problems and attitudes which still divide the peoples of the Middle East, so that peace, progress, and freedom may continue to advance in that strategic and vital area of the world.

The American Way

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. LAIRD. Mr. Speaker, I believe the Members of the House of Representatives would be interested in an event I witnessed this past weekend, an event which demonstrated to me that Americanism, the free enterprise system and individual initiative are still very much alive in our country.

Stevens Point, Wis., is a city of 18,000 in the center of my congressional district and, incidentally, in the center of my State. One of the major business firms in Stevens Point is the Copps Co., a grocery wholesaler that sells to 70 retail grocery stores in the surrounding area who are members of the Independent Grocers' Alliance.

Several years ago the Copps Co. had severe growing pains. It had used all available space in its 50-year-old warehouse and office building in the center of the city. Financing a new and larger building offered many problems. The grocery business operates on a slender margin of profit, as you know. The company's financial needs of approximately three-quarters of a million dollars were too large for local bankers to meet, too small to interest the big lending institutions.

The Copps Co., led by President Gordon F. Copps and Executive Vice President Donald W. Copps, devised an imaginative and heartwarming way to raise the necessary capital. They offered long-term debentures, 10 years and 17 years, to their employees and families and even close friends. The debentures were attractive, since they paid 7 percent interest.

Within a few weeks, hundreds of men and women—very few of whom had ever bought a common stock or bond before—invested in the Copps Co. The two debenture offerings, totaling $500,000, were quickly subscribed.

And then an even more remarkable thing happened. The 70 customers of this grocery wholesaling firm, the retail food stores in 14 central and northern Wisconsin counties, heard about the debenture offers and asked if they could take part too.

Another offering was made, this time for $350,000. And it was subscribed within a very short time.

So this past weekend, the Copps Co. dedicated its new warehouse and held a grand opening for the general public, its employees and its customers.

Thousands of men, women and children visited this very modern food supply depot. First, they wanted to see the miracle of food distribution in action, because it is an exciting operation to watch. Second, they wanted to see what they had helped build—a warehouse and office that cost $650,000 to erect, another $200,000 to equip. This total of $850,000 was the amount of money that came out of savings accounts and sugar bowls to invest in the Copps Co.'s future.

The significance to me of this employee, customer, family and friend money-raising is that these people still believe in personal effort, in not going to the State or Federal Government to satisfy every need.

The management of this company, and its employees and customers, are self-reliant people. The company needed money not to survive but to grow. Its own people provided the funds. Its own people will share in the profits realized from this new warehouse and office.

This is the true and treasured American free enterprise system at work. I was very proud of the people in my district and I returned to Washington anxious to share this satisfying experience with you, Mr. Speaker, and with the Members of the House.

The Fryingpan-Arkansas Project

EXTENSION OF REMARKS
OF
HON. JOHN A. CARROLL
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. CARROLL. Madam President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter, addressed to me, and an attached resolution. Both are in support of the Fryingpan-Arkansas project.

There being no objection, the letter and the resolution were ordered to be printed in the RECORD, as follows:

ARKANSAS VALLEY G. & T., INC.,
Pueblo, Colo., April 17, 1961.

Senator JOHN A. CARROLL,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CARROLL: Enclosed is a copy of a resolution passed by the members of our association at annual meeting held March 29, 1961, in support of the Fryingpan-Arkansas project.

We know you agree that this is a worthwhile and needed project, and are looking forward to working with you in achieving its authorization.

Very truly yours,

ED GAITHER, *Manager.*

RESOLUTION

Whereas it appears that now is the time for all Colorado congressional Representatives to pull together to obtain the authorization of the Fryingpan-Arkansas project; and,

Whereas this association is directly affected by the proposed construction of said project which would enhance the economic development of the entire Arkansas River Valley: Now, therefore, be it

Resolved, That Arkansas Valley G. & T. Inc., urge the Congress of the United States to authorize the Fryingpan-Arkansas project in Colorado, together with the necessary Federal transmission systems to provide the maximum in dependable electric service to the preference customers in the area.

I certify that this is a true excerpt from the minutes of the members' meeting held Wednesday, March 29, 1961, in Pueblo, Colo.

JAMES N. MYERS, *President.*

Progress in Building Complete Transportation

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. YOUNGER. Mr. Speaker, much has been written of late about adopting a transportation policy for our Government.

Under leave to extend my remarks in the RECORD, I am happy to insert the following speech by Morris Forgash, president of the U.S. Freight Co., which contains more constructive ideas regarding our transportation system than any recent article which it has been my privilege to read:

PROGRESS IN BUILDING COMPLETE TRANSPORTATION

(By Morris Forgash, president, U.S. Freight Co.)

It is a pleasure and an honor for me to participate in this transportation conference which has been arranged as a preliminary to the 13th annual Salzberg Memorial Lecture. The brilliant and outstanding men who have consistently appeared on this program in the past have made this annual event a challenging and a noteworthy affair.

The spotlight is on the railroads today, but the fact that you have on the program such people as Jim Lyne, Dr. Williams, and me, is proof that the subject is not to be considered in a vacuum of self-analysis. Railroads are a very vital element of our national life, and it behooves us to candidly examine their current posture and critically analyze the direction in which they are going, but we must constantly keep in mind that our real objective is a strong transportation system, not merely a healthy railroad industry.

The significance of transportation to the culture, prosperity, and progress of people is nowhere better illustrated than here in

Syracuse. The history of Syracuse, which can be traced back more than 300 years, is a vertitable saga of American transportation. From Indian village to trading post—from giant salt-producing center to beautiful metropolis—the destiny of Syracuse has been shaped by transportation—Indian travois and packhorse, canalboat and road wagon, railroad, motortruck and airplane.

Syracuse is fortunately situated, transportationwise, but enterprise, not fortune, directs the course of events in transportation and it is a curious fact that among the many modes of transport which serve Syracuse today the coordination and means of interchange are not much better than existed between road and canal in the days when freight was transferred where Clinton Square now stands. True, we are at least beginning to make progress in the direction of complete transportation, but it has been a slow and painful process because of the resistance of apathy, atrophied thinking and entrenched ideas.

The decade of the 1960's which we have set within the scope of our sights for this conference, is the 14th decade of American railroading. In the last month of the year 1830, "The Best Friend of Charleston," pride of the South Carolina Railroad, pulled the first train of cars ever drawn by a steam locomotive upon a track on the American continent. In the next several decades railroads literally mushroomed over the American landscape, and each road was built to its own specifications, with no thought of connection or completeness or interchange. The width of track ranged from 2 feet on the Brighton and Harrison to 6 feet on the Erie. The running and working parts of cars were equally individualistic.

Circumstances ultimately forced standardization of equipment and completeness of service among the various railroad systems, just as coordination and standardization will be forced upon our transportation systems today. The Civil War showed us the folly of having three widths of track between Chicago and New York. After many years and by painful and costly process, we came to standard tracks and cars, and worked out the mechanics of interchange on the rail lines. We have been talking now for a long time about coordination and standardization of the 20th century transportation plant, and we cannot afford to wait for a war to make up our minds that we must do something about it.

For more than half a century the railroad industry functioned without Federal regulation. In the words of the distinguished first Chairman of the Interstate Commerce Commission, Thomas M. Cooley, the railroads "were thus enabled to determine in great measure what rules should govern the transportation of persons and property; rules which intimately concerned the commercial, industrial, and social life of the people."

Then, on February 4, 1887—74 years ago—the act to regulate commerce was approved. The first report of the ICC is an interesting document. There were then an estimated 1,200 railroads, with about 138,000 miles of track. One hundred and eight railroads, operating more than 11,000 miles, were in receivership. The railroads were on the verge of destroying themselves, because they had lost the public confidence, largely because of widespread rebates, drawbacks, and special rates.

Nevertheless, it was not the purpose of the act to restrain or destroy competition. In their first report to Congress, the Commissioners, then five in number, said: "A study of the act to regulate commerce has satisfied the members of the Commission that it was intended in its passage to preserve for the people the benefits of competition as between the several transportation lines of the country." The Commissioners further said—and this is particularly important in the light of recent recommendations that have been urged upon Congress:

"It might possibly be within the competency of legislative power to prescribe for the several interstate railroads equal mileage rates for the whole country; but this, if endorsed, would put an end to competition as a factor in making rates, and to a very large extent deprive the great business centers of the country of their several natural advantages, and also of the benefit of expenditures made by them in creating for themselves new channels of trade."

That interpretation of the intent and meaning of the act has prevailed for three-quarters of a century. It was, in effect, restated by Congress in the Transportation Act of 1958. It is still sound, and I am of the opinion that adherence to those first principles will result in rejection of recent recommendations for a statutory floor under competitive rates, and for severe restrictions on fourth section relief, as well as any other efforts to reverse what Congress did in 1958.

Moving down the corridor of time from the 1st to the 45th annual report of the Interstate Commerce Commission, we find the Commission again commenting about competition—this time a new and different kind of competition—that of the highway hauler whose superiority for certain tasks had been demonstrated by the First World War. In that report, filed in 1931, the Commission said that the railroads "have so many and so great inherent advantages of economy, particularly in the case of the longer hauls and the heavier traffic, that we cannot believe that they will not be able to withstand the competition of the motortrucks."

But, said the Commission, the "service must be provided which the shippers demand and require" and "It is probable that motor service may with advantage be used to supplement or to coordinate with the rail service." Means of making the necessary changes in service, such as "containers, demountable truck bodies, so-called railwagons, and changes in car types" were already appearing on the scene, the Commission pointed out. Finally, the Commission said that the old rate theories "often open a door to effective competition which might well be closed."

It is one of the inexplicable paradoxes of history that in the identical report in which the Commission made these wise and foresighted observations it referred to its decision in the Container case, rendered that same year, which rejected new pricing techniques for this new service, prescribed rates on the old classification basis, and dried up the very service which the Commission advocated for a period of almost 30 years.

When the Commission, in 1931, said that the railroads had many great inherent advantages in the longer hauls, and suggested that motor service might well be used to "supplement or coordinate" with such rail service, it had freshly concluded the most comprehensive investigation of motor service ever undertaken. The decision in this case, docket 18300, rendered in 1928, recommended Federal regulation of motor carriers. At that time the average length of haul of motortruck service ranged from about 20 to about 100 miles, depending on the territory involved. One large truck operator estimated, for the record, that the truckman's advantage over rail in ton-mile cost stopped at a point between 50 and 60 miles.

The kind of coordination the Commission then envisaged and advocated is the only kind that has any meaning—the joining of end-to-end services of differing modes of carriage so that each supplements and complements the other. Each mode must perform within the orbit dictated by its economic and services advantages. I think you will agree with me that this is a most descriptive and concise definition of the term "complete transportation."

It would not have been so formidable a task, back in 1931, to have worked out a plan of coordinated rail and motor service, given men in transportation with the will and the foresight to do so. Motor operations as they then existed were fully within the scope of their economic utility and ideally suited to complement rail service. But we let the golden opportunity pass for lack of initiative and imagination, and as motor service grew and lengthened out to be competitive with the rails for all distances, any idea of effective coordination became vastly more difficult to implement.

However, the picture has not changed to anything like the degree the public has been led to believe. We have long-distance trucking, it is true, but it accounts for only a very small portion of the total service. The average motor common carrier haul per ton in 1959 was 273 miles. Although I have no official figures on the subject, I am confident that at least 90 percent of all intercity motor carrier movements in this country are for distances less than 500 miles.

Coordination or complete transportation based on the irrefutable economic facts that the railroads still are the most efficient medium for moving large quantities of freight over long distances, and that the trucks excel in the shorter hauls, can even now be achieved. In fact, it is being achieved on an increasing scale through the newer forms of piggybacking. But those who fear coordination of a type that will reflect the true economic advantages of the respective participants in any given joint haul have raised such a hue and cry that, to some who are not acquainted with the facts, the picture may seem to be one of contrived confusion.

Controversy and confusion are not limited to the area of piggybacking. The railroad industry, which has received a constantly declining share of the total traffic of the country over a period of 25 years or more—which has seen its employment cut exactly in half in just 30 years—stands accused of driving domestic water carriage to the wall, and of engaging in predatory and unfair raids on the traffic of motor carriers. It is time to examine the facts.

DO WE HAVE MORE SOLUTIONS THAN PROBLEMS IN TRANSPORTATION?

What is the problem in transportation? Certainly we won't find any solutions until we define the problem. We have a competitive struggle, yes, but competition is the essence of free enterprise in a democracy. If we ever eliminate competition we will destroy initiative. Could it be that we have mistaken competitive jockeying and jostling for more basic problems?

Let me take just a moment to recount how we came to be where we are today—using broad brush strokes. This is necessary for proper perspective and direction. In the 1930's competition of a lusty young motor carrier industry had a depressing effect on the railroad rate structure. Then came World War II which strained the resources of all carriers, and virtually destroyed intercoastal and coastwise shipping.

It is a monumental distortion of historical fact to charge either the railroads or the I.C.C. with responsibility for the virtual disappearance of American coastal shipping. When the Government took over many vessels in this trade during World War II the industry was already sick. In the 10-year period immediately preceding the war the industry lost $8 million. The fleet of vessels was literally decimated by wartime activities. Many of the lines never resumed operations after the war. Those that did were beset by spiraling labor costs, incessant

strikes, and astronomically mounting replacement and operating costs. Mr. Ralph E. Casey, president, American Merchant Marine Institute, summed the matter up very well in an address delivered in July 1959, before the annual convention of the International Longshoremen's Association at Miami Beach, when he said:

"You know, as well as I that our once flourishing domestic trades are now dead. It is often said that this is the result of unfair treatment by the Interstate Commerce Commission. That may have played a part, but when they tell me it costs more to load a ship in New York and unload it in San Francisco than it does to bring it 5,000 miles around three coasts, including the transit of the Panama Canal, I question whether the Government is primarily to blame."

We should recognize the truth of what Mr. Casey said and should not require the competitors of the ship lines to subsidize them by holding an umbrella over their rates.

Now the railroads have ultimately heeded the repeated and long-continued admonitions of the regulatory agency and the Congress and are embarking on a vigorous program of self-help. They have introduced not only new pricing techniques but new and improved services based on technological advancements and new ideas. They are reexamining their competitive posture up and down the line in an effort to recapture the traffic which they once indisputably enjoyed but which they lost to other modes of carriage.

The railroads were told to do these things as long ago as 1931 in the Commission's report to which I earlier referred. They were admonished by the Commission in some of the decisions in the ex parte rate cases to employ different rate-making techniques. In its report in ex parte No. 206, decided in 1957, the Commission told the railroads that "the time had probably come when consideration should be given to ways of increasing rates other than by means of horizontal increases." Congress bluntly told the railroads to improve their services and modernize their rate structure when it enacted the Transportation Act of 1958, and it made certain, by enacting section 15a(3), that in doing so they would not be required to hold a rate umbrella over their competitors. But when the railroads at last embarked on a determined program to arrest their declining position in the transportation picture the anguished cries of their competitors were heard across the land.

Again I say, "What is the problem?" Competition took traffic which the railroads once handled and which they perhaps thought, with a trace of complacency, they would always have. Is the problem now to prevent the railroads, by artificial barriers, from getting some of it back if they can do so through the exercise of their inherent advantages and a little initiative? I do not think so.

Congress thoroughly examined all facets of the transportation picture just 2 years ago. The responsible Senate committee heard evidence which now fills 2,300 printed pages in four volumes. The corresponding House committee held thorough but less exhaustive hearings. Weighing all the facts, the committees concluded and the Congress agreed, that the railroad industry was in need of immediate help in several directions.

Among the reasons for the plight of the railroads, the Senate committee found, were Government assistance to their competitors and overregulation of the railroads. But by all odds the most significant finding was that the railroads had not consistently been permitted to assert their inherent advantages in the making of rates. To correct that situation section 15a(3) was enacted.

The purpose of section 15a(3), as plainly stated in the Senate committee report on the 1958 act, was "to encourage competition in transportation." But the statement is insistently made, and repeated again and again: "Yes, Congress intended to insure greater freedom in ratemaking, but it did not intend to permit unfair or destructive competition." The statement is perfectly true, but what is it intended to prove? We must all agree that unfair and destructive competition is prohibited by the law. The Transportation Act of 1958 did not create the prohibition—it merely restated a provision of existing law. Is the repeated statement of the proposition now intended to imply that the ICC is ignoring or misconstruing a fundamental precept of the law, and, if so, that the courts will sustain the Commission in perpetrating unlawfulness? That would be a terrible indictment of our administrators and judges. Every decision on a controverted issue leaves a disgruntled litigant, and each of the basic modes of carriage has been disappointed with one or another of the Commission's decisions under section 15a(3), but the courts, not Congress, are where the issues should be reviewed.

The decisional process with regard to such factual situations as have arisen so far under section 15a(3) has not yet run its course, but there are insistent demands that the section be changed to fit this or that preconceived idea of what the final decisions ought to be. I suggest that Congress and the people knew very well what the policy of section 15a(3) was when it was enacted. The words of the statute are plain. They are reinforced by even plainer language in the committee reports. Only the Interstate Commerce Commission and the courts are vested with the legal authority to apply the language of the law to stated factual situations. We do not write our laws in sand, nor should we erase them with hysteria.

However well intended, I strongly believe that efforts to change the policy laid down by the Transportation Act of 1958 at this time are both premature and unwise. You are familiar with some of the specific proposals for statutory change. The Doyle report would place a statutory floor under competitive rates, based on a statistical formula, and establish "umbrella type" ratemaking by force of statute. Bill S. 1197 would add a great many impossible complicating factors to the presently plain and simple provisions of section 15a(3), and hence would no doubt also result in statutory "umbrella" ratemaking.

These proposals would take us in exactly the opposite direction from the course we so carefully charted in 1958. In fact, they would reverse a policy to which, except for an unfortunate experience with the so-called recapture clause of 1920, we have adhered through the entire history of regulation—careful avoidance of ratemaking by legislative fiat. If we substitute statutory for regulatory ratemaking in the smallest area, it could spread dangerously and rapidly throughout all regulatory law.

Such proposals do not take account of the realities of today nor the potentialities of the future. If they were intended, for example, to aid the motor carriers someone has failed to calculate rightly. They could destroy the motor carrier industry. Ratemaking is not an exact science—it no longer follows a pattern—it reflects the terrific imbalance of traffic, particularly of manufactured products and products of the farm and the forest. The common carrier rate structure has been eroded by the cumulative effect of the contract carrier, the "gypsy" trucker, the "gray area" operator. Yet, we are told that we must be careful not to destroy traditional patterns of ratemaking—that we must protect the integrity of the rate structure. How can you destroy something that no longer exists?

To fill their vehicles and prevent costly empty movement; to meet the irresponsible rates of the unregulated carriers; to fulfill the demands of products that cannot possibly bear their full share of the transportation burden, the carriers make vast numbers of rates that will not meet any formula based on costs.

Statement numbered 4–60, released by the ICC in September 1960, lists 80 commodities moving in rail carload service which do not defray out-of-pocket costs. A similar study would undoubtedly show a larger number moving at submarginal rates in motor service. We are not going to change the factors that cause these commodities to move at below-cost rates: What are we going to do—force the common carriers to give up the traffic, or give the first common carrier in the field squatters' right by refusing to let anyone else meet his rates? I repeat that, whatever alternative we choose, the motor carrier industry may well be the first victim of any scheme of statutory ratemaking or inflexible rate floors. I am, personally, having a great deal of difficulty in visualizing or understanding how any standard of ratemaking in the form of legislative directives to the regulatory agencies can make due provision for these extenuating circumstances and conditions that a carrier encounters almost daily. I have extreme doubt that anyone can produce the appropriate legislative language free of confusion and devastating ambiguity.

Once we embark upon ratemaking by legislative fiat we will have put our feet upon a road that will lead to the ultimate stifling of initiative and stultification of progress. I respectfully commend these observations to the careful consideration of our lawmakers and all others who have a responsibility in the matter.

From what I have said so far you may have gained the impression that I am talking about "roadblocks" rather than "progress" in the building of complete transportation. What I have been trying to do is to clear away some of the confusion so as to arrive at a clear point of departure. And I will ask your indulgence for one more detour because it is important that we understand the factors bearing on the subject if we are to understand the subject itself.

GOOD ADMINISTRATION OF TRANSPORTATION LAW REQUIRES GOOD MEN—SOME WAYS TO SECURE AND KEEP THEM

Since 1940 the national transportation policy of the United States as applied to domestic surface carriers has been directed to three ends—the "developing, coordinating, and preserving" of a national transportation system, by various means, adequate to meet the needs of the commerce and defense of the Nation. We have entrusted the implementation of that policy to 11 men. Unfortunately, we could not vest them with magic wands by which to discharge their fateful task. Sometimes I am afraid we have not vested them with even the least of their due—our complete confidence. Lately I have been more apprehensive on that score.

As I said a little earlier, it has become a popular pastime to make the Commission a scapegoat for everything that is conceived to be wrong in transportation. We should always remember that so long as we adhere to our established principles of Government we must depend on these men who sit on the Commission to interpret and enforce the law, and if we so impair the standing of the agency as to make it impossible any longer to obtain the services of dedicated men of talent and integrity, we will have destroyed one of our greatest legacies. We

will have sold our birthright for a mess of pottage. Maybe it has only an indirect bearing on my subject matter, but I ask you to consider for a few moments some matters relating to the ICC that I consider to be of vital importance.

I am reminded that the then Chief Justice of the Supreme Court, the Honorable Charles Evans Hughes, addressing a meeting of the Association of ICC Practitioners in 1930, said:

"I suppose that no agency of Government has more complicated problems than those which confront the Interstate Commerce Commission, and no intelligent student can fail to realize that the success of this endeavor in a sphere of the highest importance is to a very great extent the measure of our capacity for self-government."

Viewed in that light, to insure the success of the Interstate Commerce Commission in its mission becomes a personal and a demanding obligation of every citizen.

We have been extremely fortunate in the caliber of men who have been attracted to service on the Interstate Commerce Commission throughout its long history. It was Eastman who gave us his famous 12-point Primer on Administrative Tribunals just a few weeks before he died in 1944. The sixth point has been more quoted than any other. It reads:

"The statutes which the tribunal administer should be well, simply, and carefully framed, but the personnal which does the administering is more important than the wording of the statute. Good men can produce better results with a poor law than poor men can produce with a good law."

What has attracted and held the great men who have made careers of service on the ICC? There is an indefinable spark which kindles in men a desire for unselfish public service—we see it in the teaching profession, in the sciences, and in government. Over and beyond that, however, is the fact that the high public esteem in which the ICC has traditionally been held has invested membership on the Commission with an aura of dignity like that surrounding the high Courts, the National Legislature and the Cabinet posts. If that standing and dignity are lost, a great deal of the incentive to men of stature and dedication will disappear.

In view of the absolutely incalculable importance of the proper administration of our transportation laws, we should, instead of maligning and belaboring the Commission, immediately take steps to strengthen it—give it adequate and competent personnel—put it on a healthy financial diet—and insure its ability to continue to attract men of the highest order of intelligence and integrity. What steps can we take?

A good place to start is with the Commission's budget. James M. Landis recently said that "ecenomic rigor, if not parsimony" has characterized the Budget Bureau's attitude toward the agencies for almost a decade. In the last couple of years a little more generosity has been evidenced, but still the budget of the ICC is ridiculously low considering the importance of its mission. Twenty million dollars to regulate in industry that bills us $20 billion a year for its services. Twenty-three hundred people to man an agency that employed 2,600 in 1940. And since 1940 the Commission has acquired jurisdiction over two new agencies of transport—three parts have been added to the act—we have acquired two new States and added numerous new laws to the statutes which the Commission administers.

If the Commission, accustomed to a starvation diet for these many years, is too modest to ask for what it needs in the way of budget and staff, management consultants can be hired to advise Congress. Delays in the functioning of the administrative processes can cost the carriers and the public in a matter of days what we pay to run the ICC a whole year. Is that the way to run any business—or a Government agency?

We get back, of course, to the fact that the essential ingredient of good administration is good administrators, and administrators are people—people with families and responsibilities. We should insure them of more adequate compensation and security. No board of directors of any corporation in America or the world makes more important or far-reaching decisions than the 11 members of the Interstate Commerce Commission. To attract the kind of men that you and I want on the Interstate Commerce Commission I suggest that a salary of $30,000 a year be provided. And with adequate salary should go a reasonable allowance to reimburse agency members for expenses necessarily incurred as an incidence of their position.

Tenure of office is more important than salary to men who value their independence. Until comparatively recent times the vast majority of appointees to the Commission quite evidently accepted the post as a career, and those who distinguished themselves, as a surprising number did, were insured of reappointment regardless of the political party in office. Aitchison set a record of service with 34 years and 9 months—then came Balthasar Meyer with 28 years, Eastman and Clements with 25, Mahaffie with 24, and a long list with 15 to 20 years of service. In contrast, all of the present members of the ICC have been appointed since 1953.

This is not something which reflects unfavorably on the current members of the Commission or on the administration, past or present, but it is a symptom which ought to be arrested before it becomes a chronic condition. How can we have any continuity of policy or attract men who seek public service as a calling, and not a stepping stone, unless we insure them a tenure of office that will permit them to plan ahead and relieve them of tension and pressures? We should provide a statutory term of office for members of the regulatory agencies of 10 years, and allow for reappointment up to the age of 65. Retirement pay should be adequate to insure that no ex-Commissioner would have to go out in industry and seek a job.

We are well aware of the constant pressures to which our agency members are subjected. Why not give them a little insulation against these forces by providing them with a tenure that will extend through two presidential terms and into a third?

Precedent is one of the most important facets of our system of jurisprudence. It gives stability to the law and inspires confidence in the people that they can proceed in a given manner without fear of reprisal. Continuity of service helps to insure stability of policy. One other way to insure such continuity and stability is to follow a custom that seems to have fallen into disuse in recent years of elevating career men to commission membership when career men of stature and ability prove themselves worthy of such appointment.

Perhaps you may think I have unduly emphasized this point, but it is one of the most important issues in transportation today. Crisis has been developing around our independent agencies and, as Chief Justice Hughes said long ago, this is an area so vital to our well-being that its success will measure our capacity for self-government. I have been an advocate of a Department of Transportation for promotional activities and I am convinced that we will ultimately come to that, but the problem of the regulatory agencies is an entirely separate matter. They do not belong in an Executive Department. I have suggested three immediate steps that we should press for, and we can muster the strength to put them through if we really try. They are:

1. Sharply increase the budget of the ICC with authority and direction to hire the necessary personnel at all levels to get the job done, whether in safety, enforcement, or the decisional process.

2. Increase the salaries of the members of the Commission, and provide them with a reasonable allowance and adequate retirement. I would also increase the salaries of the top-level career employees.

3. Provide for statutory tenure of 10 years, with authority to reappoint up to retirement age.

This may not be the complete answer to the problems revolving around our agencies which have given rise to tons of studies and reports in recent years, but it is something concrete. It is a good starting point.

CONTAINERIZATION, STANDARDIZATION, AND SIMPLIFIED PRICING—KEYS TO COMPLETE TRANSPORTATION

I can think of no better way to indicate to you why I have spent so much time leading up to what I shall make a very brief report on progress in building complete transportation—which boils down to progress in containerization and piggybacking—than to quote from the January 1961 issue of Fleet Owner, as follows:

"Month by month piggyback takes on more weight and size than a razorback hog in Arkansas. This consistent growth over the past 2 or 3 years is in spite of a tangled web of rate conditions, a tug-of-war for control between trucks and rails, and a wide range of nonstandard equipment. The reason's simple. Shippers like the lower mileage rates and the convenience."

This innovation in transportation that is growing like a razorback hog cannot be considered in a vacuum. I think, however, that I have discussed enough of the atmosphere in which it exists—now for a brief discussion of the containerization and piggyback movement without which compete transportation is unattainable.

In 1954, in a declaratory judgment proceeding before the ICC, the common carrier truckers vigorously pressed the position that the railroads could not haul highway trailers on flatcars without motor carrier certificates. The Commission brushed this aside, and said that the railroads not only could haul their own freight in their own trailers, but could haul the trailers of shippers, forwarders, and private carriers—but not those of common carrier motor carriers except under joint rates and divisions.

Unfortunately, in my view, the Commission, in its decision in the case I am referring to—and that was in 1954—strained the definition of joint rates beyond all recognition. It gave its blessing to a device that had been employed in a few places, whereby motor carriers forwarded their trailers over the rails rather than pulling them over the highways. This was called substituted service, an apt term. The Commission said the motor carriers could not so forward their trailers and pay the published rates of the railroads, but when the fiction of a joint rate was indulged, and the rate paid by the motor carrier was put in a contract labeled division sheet, the same result was accomplished. The substituted service arrangements came to be known as plan I. When true joint rail-truck rates are entered into we have plan V.

Notice ought to be taken of the fact that the long-distance motor carriers are not satisfied with the two plans of piggybacking which the Commission has said are available to them—plans I and V. They seek authority to use published tariff rates of the railroads, of a type represented by plan III and IV which I will presently describe. Clearly, as the Commission has said, this would make them carriers and shippers at the same time—it would cause them to violate their

permits which specify movements over the "roads, highways, streets, and ways by motor vehicle"—it would require rewriting the definition of a motor carrier and practically the whole of part II of the act. It might even raise constitutional questions.

Plan I—substituted service—has not prospered very well. It has nothing to recommend it to the shipper—he deals only with the motor carrier, pays the regular motor carrier rate, and if any economies accrue from the service they stick to the motor carriers' hands. It is not coordination but substitution.

Plan V piggybacking has had and continues to have a stormy career. As I said, it rests on a true joint-rate and through-route arrangement between railroads and motor carriers—the type contemplated by the statute. But not many such arrangements were ever entered into for the transportation of general freight. In the hauling of new automobiles plan V gained considerable headway, and caused a tremendous furor.

A year or so ago some of the railroads and automobile haulaway carriers—in most cases the short-haul motor carriers—began entering into arrangements for the hauling of new automobiles, in motor trailers loaded on flatcars. A flatcar would hold two such trailers with four or five automobiles each. This improved speed and efficiency and reduced costs and it was an eminently satisfactory arrangement to the railroads and motor carriers involved and to the man who pays the bill—the shipper. But it took some traffic from the long-distance automobile haul away carriers and they cried that they were being driven out of business. A propaganda barrage of unrivaled proportions was mounted against plan V piggybacking, and it still continues.

Oddly enough, advancing technology rendered the original plan V operation practically obsolete before it ever got a good start. Now, instead of loading truck trailers on flatcars the railroads use, very largely, specially designed, lower-level flatcars fitted with trilevel racks which will accommodate 12 standard or 15 compact cars. This still could be termed "piggybacking" and still could rest on a joint rail-truck rate, but it is, in fact, something entirely new in transportation.

Now what crime have the railroads committed in thus initiating a new and complete transportation service? Why, according to widely publicized charges, they are hauling new automobiles at rates generally 50 percent or more under rates offered by the truckaway companies. Think of that. The transportation costs on 5 million new motor vehicles can conceivably be cut in half. What are we to do—ban this innovation which for the first time in 25 years holds forth the hope of halting the continuing upward spiral of freight rates?

But, says truck labor, if you don't stop this it will destroy the jobs of 15,000 truck employees. To this rail labor asks, would it be in order for 450,000 rail employees who have lost their jobs largely because of erosion of rail traffic to send condolences?

The truly phenomenal thing about this innovation which enables the railroads to slice the freight rates on automobiles in half is that it still is only 50 percent as efficient as it could and ought to be. Just as he always has in the case of the automoble haul-away service, the shipper is still required to buy a roundtrip ticket for a one-way ride. The rail equipment, specialized like the motor equipment, has to deadhead back to origin after it delivers each payload. Why? For lack of an idea? No—for lack of initiative.

Equipment that will haul new automobiles in one direction and dry cargo—even liquid cargo—in the other, is already in actual production. Isn't it time that we started to give the poor, long-suffering shipper a break? Why not bring back to him what he consumes and uses in the same car that hauls away what he produces? Everybody will be the beneficiary.

Plans III and IV piggyback, under which shipper-owned trailers, or shipper-owned trailers and flatcars are hauled from ramp-to-ramp at a stated charge per flatcar movement, are now too well known and too well accepted to require detailed description. These plans, too, have come under attack in legal proceedings and by propaganda. The opposition reflects the competitive efficacy of the service.

By these plans the railroads found a way of bringing about coordination through the beverage of economics. By publishing a charge that reflects their own cost advantage for the movement of trailers on flatcars, they can and will make it uneconomical for the shipper to use his own trucks for the long haul. The rail and truck services then will seek their own level with a resultant combination of road-and-rail hauls that is tailored to shippers' needs, not carriers' convenience.

Piggybacking of the type represented by plans III and IV, and automobile hauling, represents the first break the shipper has had in a generation in the matter of freight charges. It constitutes the first simple answer to the equation into which the shipper resolves his transportation problems—time and price. The traffic manager views transportation as a link in the distribution chain and since it is a very expensive link, he buys it with care. He no longer has to take the carriers' word for how much it costs to move his goods from factory to store—he can find out for himself and he will buy his own trucks if he is pushed too far.

But the railroads have not lost their inherent advantages as mass and distance haulers—they simply neglected to exploit them for a while and the parade of progress almost passed them by before they woke up to what was going on. The railroads can beat the private hauler's costs, and better his speeds. They have proved it by plans III and IV piggyback. There is no other development on the horizon that offers any hope of stemming the tide of private carriage. And the key to success of these plans in meeting private carriage is the simplified freight rate—so many dollars per movement—the same basis on which the shipper calculates his cost of doing it himself.

Piggyback service, once it got moving, developed with such startling suddenness that it is still beset by growing pains, not the least of which is the lack of standardization of equipment and method. The problems are being earnestly studied, and, while there will be a certain amount of obsolescence as we experiment or jump the gun without carefully analyzing the situation, in time uniformity will be achieved.

No transportation service in modern history has moved ahead so far so fast as piggybacking since its revival in 1954. In 1960 piggyback flatcar loadings were more than a third greater than in 1959—more than double what they were in 1958—five times greater than in 1955. This means that well over a half a million cars, loaded with more than a million trailers, were handled in 1960. Still accounting for only about 2 percent of all freight car loadings, it is obvious that if the present rate of growth continues piggyback loadings will account for a very substantial portion of rail service within a comparatively short time.

As a matter of fact, many railroad officials today admit that the fate of the boxcar as the predominant factor of rail transportation—a position it has held for more than a century—is sealed. It will not be good business to continue to buy boxcars from which the railroads obtain only 46 miles of service a day when flatcars in TOFC service average 175 miles a day and some perform up to 450 miles. It will be uneconomical to continue to move freight in boxcars with a 40 percent empty return ratio when that empty milage can be cut in half, or more, by piggyback service.

An editorial in the Washington Post on March 21 of this year, dealing thoughtfully with the situation in transportation, said:

"The nub of the transport problem is rapid, technological, urban, and industrial growth and change. It is a problem of rapid adaptation, calling for the closest coordination of all types of common and private carriage."

The editorial does not tell us anything we did not already know, but it is something that should have been said sooner and more often. Industry simply moved away from the railheads. Plans III and IV piggyback are the first practical media the railroads have found for providing the off-track shipper a through service combining the flexibility of the truck with the speed and economy of the railroad.

The shipping public will demand more and more piggyback service—they will demand its speed, its low basic cost at a unit price, its nearly damage-free safety, its predictability and its convenience.

That is, very briefly, a report on progress in building complete transportation as it looks to me today. Rome was not built in a day, so we must have patience and perseverance. On the other hand, we are told that construction of the Tower of Babel stopped instantly when the people were caused to speak different languages. We must understand what we are talking about when we speak of coordination—it is not to be confused with substitution. We must make certain when we talk of transportation problems that we are not speaking simply of somebody's attempt to gain a competitive advantage, or slug a competitor. Our effort should be to produce the best possible transportation for the development of commerce and the defense of our Nation.

Progress in building complete transportation is being achieved despite great turmoil and uncertainty. It is being achieved because some people in transportation, and I am one of them, have faith that when all the shouting has died down we will emerge still holding fast to first principles. It is being achieved because competition is forcing change, stimulating new ideas, putting the spur to enterprise. It will continue so long as we adhere to the principles of regulation first established 74 years ago and consistently followed ever since—a maximum of competition with a minimum of control. Progress will stop when we abandon these principles of free enterprise, for when enterprise ceases to be free it is dead.

This is a time for cool heads and firm resistance to hysteria. Radical changes in basic transportation laws are being urged under the mantle of expediency. We are being importuned to bridle competition with the halter of legislative fiat. Our regulators are being assailed and maligned.

The call now is to statesmanship, in and out of Government. The regulation of transportation, no less than transportation itself, is at a crossroads. Let us remember the truth of what Chief Justice Charles Evans Hughes said long ago—the success of this endeavor in a sphere of the highest importance is to a very great extent the measure of our capacity for self-government. The call is to you and to me, and we cannot afford to remain silent. Our destination is clearly indicated—let us march.

Tax Credit Proposal To Encourage Foreign Exports

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. JOHANSEN. Mr. Speaker, in view of the prevailing and understandable concern regarding Federal tax policies, foreign aid, competition for foreign markets, and related problems, I believe the House will be interested in a proposal for tax credit to encourage exports from the United States which has recently come to my attention.

This proposal originates with an able industrialist, Mr. Robert Abplanalp, president of the Precision Valve Corp., of Yonkers, N.Y.

Under leave to extend and revise my remarks, I include the résumé of Mr. Abplanalp's proposal which I commend to the consideration of my colleagues generally and to the members of the Committee on Ways and Means in particular:

PROPOSED TAX CREDIT TO ENCOURAGE EXPORT FROM THE UNITED STATES

In the postwar period, the U.S. program of foreign aid, supplemented by establishment or expansion of foreign production facilities by numerous U.S. enterprises, has helped to rebuild foreign industry. These factors, the native industry of the people, incentives to produce and export sponsored by foreign governments, etc., have resulted in such a dramatic recovery that foreign industry no longer requires aid. It has in fact become a formidable adversary to U.S. exporters.

Not only is it becoming increasingly difficult for U.S. industry to compete in the foreign market due to differentials in wage rates, overhead and tax rates, but foreign industry is increasingly finding markets for its production in the United States. Of even greater import is the fact that, at a time of considerable unemployment in the United States, American industry is turning increasingly to foreign production thus utilizing vast amounts of foreign produced raw materials and heavily tapping the foreign labor pools.

Clearly a return to high protective tariffs, restrictions on the establishment of foreign factories by U.S. industry or other regulative measures are not desirable, nor suggested. What should be sought are incentives to U.S. industry to increase dollar volume of exports through U.S. production. Should such an incentive at the same time not reduce tax income to the U.S. Government, nor call for direct subsidy, it is doubly desirable.

The plan proposed below provides the following advantages:

1. Encourages U.S. industry to expand its export programs while placing no restrictions on corporate choice of foreign against domestic manufacturing.

2. Insures direct increased employment of U.S. labor and use of U.S.-manufactured raw materials.

3. Costs the U.S. Government and taxpayers nothing in terms of loss of taxes now being collected or in the cost of any subsidy.

4. Promises, through increased domestic employment and production, to increase the amount of corporate and individual taxes collected.

5. Directly attacks the problem of outflow of gold and currency.

The proposed plan would provide a Federal income tax credit based on the increase in export sales of domestic manufacture. The calculation would be made as follows:

1. Determine increase in export sales by comparing export sales for the current fiscal year to average export sales for the 5 preceding years.

2. Obtain the percentage of increase in export sales to total sales (domestic and foreign) for the current fiscal year.

3. Apply this percentage to net taxable income for the current fiscal year. The resulting amount would be exempt from income tax.

For example, assume sales as follows:

	Export	Domestic	Total
1960	$500,000	$9,000,000	$9,500,000
1959	500,000	8,000,000	8,500,000
1958	500,000	8,000,000	8,500,000
1957	400,000	7,500,000	7,900,000
1956	600,000	7,000,000	7,600,000

Thus average export sales for 5 years would be $500,000.

Assume that in the 1961 fiscal year export sales are $1 million; domestic sales $9 million, giving a total of $10 million sales with an assumed net taxable income of $1,500,000.

1. Increase in export sales over previous 5-year average is $500,000.

2. Percentage of increase in export sales to gross sales: $500,000 of $10 million equals 5 percent.

3. Income exempt from tax: 5 percent of $1,500,000 equals $75,000.

Thus the tax saving would be 52 percent of $75,000 or $39,000.

It is thus seen that the tax so forgiven is based only on the income derived from increased exports. A corporation only benefits from an increased volume of dollar exports. Furthermore, unless exports continue to expand beyond the average level for the preceding 5 years, the exporter gains no continuing tax advantage.

In some situations, U.S. manufacturers may export at cost to gain a foothold in a foreign market, etc. In such cases, it might seem that a loss in Federal tax revenue might result. However, this does not follow since the "cost of goods sold" is composed mainly of wages paid and raw materials and components purchased from supplying companies. In the case of the former, the collection of personal income taxes comes into account and in the latter case, the profits of all the supplying companies are subject to regular business taxes and the increases in both types of collections will more than offset the exemption allowed the manufacturer-exporter. Furthermore, nonprofit operations would at best be temporary situations based only on gaining an eventual basis for doing profitable business.

It is expected that there would be little or no increased cost of enforcement on the above in the sense that normal audits by the Internal Revenue agencies could accurately determine the claims.

Recent proposals have been made for tax relief to U.S. corporations with foreign subsidiaries. The question arises as to whether (foreign subsidiaries or domestic production by American labor and our traditional American engineering and business efficiency) is in the best interest of our country. The fact is, that almost any manufacturing corporation operating anywhere leaves more wealth behind it than it can accumulate and take with it by payment of dividends or by actual liquidation.

Considering again the relationship of net profit to the gross dollar volume, the difference between the two being taxes paid to foreign governments, wages paid to foreign labor on which foreign governments again collect taxes, and costs paid to local foreign suppliers of raw materials, components, and services, all of which produce taxable income to support the local governments and distribute wealth to the working populations, it is understandable that the only situations which would really accrue dollar exchange wealth would be those in which net profits after foreign taxes are substantially greater than 50 percent of the total business transacted. These situations are practically nonexistent. Therefore, it seems almost idiotic to encourage domestic corporations to operate manufacturing subsidiaries abroad as opposed to the above which creates a dynamic incentive to permit merchandise made by American workers to take its proper position in world markets.

The Wrong Attitude on Peace Corps

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. MUNDT. Mr. President, South Dakota's distinguished editor of the Daily Argus Leader of Sioux Falls, S. Dak., Fred C. Christopherson, has written a thought-provoking editorial on the Peace Corps proposal. It points up emphatically the need for careful planning and clear thinking if the Peace Corps is to be an asset to America rather than a brood of ugly American ducklings.

To me, this editorial also underscores the essentiality of developing in America a Freedom Academy for the training of Americans serving our country overseas as the necessary prerequisite of any effective functions which can be undertaken by those who might be selected for duty in the Peace Corps.

I ask unanimous consent that the Christopherson editorial may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE WRONG ATTITUDE ON PEACE CORPS

Somewhat strange was the attitude displayed by a group of college students last week in respect to requirements being set up for the Peace Corps.

The students were members of a National Students Association Committee to consider youth service abroad. At their meeting, held in Washington, they reviewed conditions surrounding the establishment of the Peace Corps and came up with two suggestions. One of these was opposition to any loyalty oath as a requirement for service in the Peace Corps and the other was that any security check on applicants by the FBI should be sharply limited.

It seems to us that the students who adopted this attitude disqualified themselves in so doing.

The objection to the loyalty oath may be regarded as incidental and perhaps a matter of slight importance.

But the objection to an exhaustive review by the FBI of the applicants is something else. Certainly the Government has every

right to know all it can find out about students who might seek to represent the Nation in the Peace Corps. It would be remiss in its responsibility, in truth, if it didn't insist on a careful scrutiny of all applicants.

The applicants must be screened for a variety of reasons. One is to check their poise and personalities as well as their tact, diplomacy and understanding. Another is to ascertain their understanding of the American way and their capacity to enunciate it. A third, and by no means the least important, is to block agents whose objective might be to destroy the value of the Peace Corps.

The failure of the committee members to recognize these valid points is sufficiently surprising to induce one to wonder about the basic concepts of those who participated.

Flint Blazes Trail With Schools

EXTENSION OF REMARKS

OF

HON. CHARLES E. CHAMBERLAIN

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. CHAMBERLAIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to include the following article from the Christian Science Monitor, dated April 22, 1961, entitled "Flint Blazes Trail With Schools." The article describes the splendid educational program being carried on in Flint under the direction of the Mott Foundation. The account of the Flint program follows:

FLINT BLAZES TRAIL WITH SCHOOLS

(By Carl I. Brahce)

There is hope for a solution to the financial crisis in American education, without recourse to Federal aid. Such is the conviction of Frank J. Manley, director of the community school program in Flint, Mich., which operates with a substantial grant from the Mott Foundation, of which Charles Stewart Mott is chairman.

"Every community has a potential not even realized by its citizens" asserts the congenial director of the Mott program—Flint Board of Education. "When the doors of public schools are truly opened to the people, the benefits can hardly be imagined. We've been at it 25 years and we're just scratching the surface."

What happens when schools are used to their fullest potential? Education is strengthened in many ways, virtually in all ways, since this gives the taxpayers a "real interest in their schools," says Mr. Manley.

AFTER-SCHOOL ACTIVITIES

"More than 90,000 men, women, and children take part in a great variety of after-school activities during the average week in Flint. The daytime school enrollment is about 40,000. The results of parents, teenagers, adults of all ages returning to school has a beneficial effect in the classroom, teacher-parent relationships, neighborhoods—it's evidenced in the whole revitalized city of Flint."

Industrial Flint, where automobiles zip off the factory assembly lines, has cast off a smudgy, bawdy reputation for one of community pride and achievement. Cooperation is as real to Flint folk now as the sound of the noonday whistle. More than 200 citizens have contributed more than $18 million to build a magnificent college and cultural center—with a theater, art center, planetarium, public library, in addition to a growing community junior college and a branch of the University of Michigan.

A new municipal center, actions to improve the downtown area, and implementation of a master plan for the city point the way to continued growth and development.

INDUSTRY COOPERATES

Cooperation of local industry and businesses with the schools, city government, and agencies has promoted such educational developments as a basic economics program to help adults know more about their society, a successful physical well-being and safety program, a physical fitness program, and a police-counselor liaison team pioneering school-police teamwork to reduce juvenile crime.

Mr. Manley's leadership has inspired the dedication of many individuals who contribute their zeal to the improvement of the Flint community.

"Understanding," Mr. Manley points out, "is the shining hope for our educational system. We are constantly striving to achieve greater understanding among men."

He cites four barriers to this objective: Ignorance, indifference, inertia, and intolerance.

More than 1,000 classes in adult education offered in Flint help accomplish this objective, bringing citizens into the schools. Other classes are designed to improve knowledge and skills and to stimulate an informed public.

Here are teenagers deciding how to use their profit money from the teen club dance to benefit the school; families frolic in swimming pools, whirl around gymnasiums on roller skates, work together in arts and crafts classes. Neighbors share experiences in child study sessions, men's clubs, women's clubs; mothers don aprons to cook school breakfasts for visitors; fathers make teaching aids for classrooms, turn out to convert scrub areas into playground parks, plan school fairs and other community projects.

INTERNATIONAL GAMES

Community school directors, who are members of the school staffs, direct the after-school programs. They continue to serve each neighborhood community during the summer program that is climaxed with 5,000 contestants in the Flint Olympic games. Winners of the sport events vie with athletes from Hamilton, Ontario, in the international CANUSA (Canada-United States) games. This yearround use of the public schools draws overwhelming support from the Flint taxpayers.

During an industrial recession in 1957, voters approved by more than 80 percent a special levy of 2.5 mills to build new community schools. Included was a $4 million high school, now the busy center for a variety of activities. Like the other 41 community schools, this new southwestern community high school is designed with community-type facilities that not only serve the public during after-school hours, but also enrich the regular instructional program.

The Flint Board of Education now receives $1,200,000 of a $20 million budget from the Mott Foundation to provide pilot project funds and support the physical well-being program, adult education program, Mott Camp, and other programs benefiting the community.

RISK MONEY PROVIDED

Since the partnership of Frank J. Manley and industrialist Charles S. Mott began in 1935 to open school doors experimentally to help youth, the Mott Foundation has made possible many programs and improvements in the educational curriculum. Believed to be the only private foundation channeling funds through a board of education, the Mott Foundation has provided risk money until the projects prove successful and can be taken over by tax funds.

"The surprising thing to many is that the entire program could be supported by the average taxpayer for just 2 cents more a day," comments Mr. Manley.

"An average taxpayer with four children pays 24 cents daily, or about a penny a subject for school taxes. I ask you, where else can you get that value for a penny today?"

The extra cents add up to only $6 more a year the taxpayer would pay if the people absorbed the entire program now carried on with $1,200,000 of Mott Foundation funds.

SPECIAL BUILDING UNIT

Another financially bright picture is disclosed in regard to the extra community-type facilities designed into all Flint community schools. These community-type facilities include a large gymnasium auditorium, a community room, office facilities and in some cases, a branch library.

A man who has devoted many years to watching the figures of school construction costs suggested a special building unit that has revolutionized Flint schools.

He is Jack Barrett, former business manager for the school board. A methodical analyzer. Mr. Barrett heard about small buildings for use by early grades in a Texas community. The Flint Board of Education experimented with a primary unit in 1953 to house children in an outlying area.

ARCHITECTURE CONFORMS

"The response was so favorable by parents, teachers and students that more were built," explains Mr. Barrett. "Flint now has 101 primary units, for kindergarten, first, second, and third grades."

The highlight is that by using this practical and successful method of building, Flint has succeeded in providing facilities for the entire community without stretching the educational dollar.

"The primary units are built on individual lots three or four in an area, the architecture conforming to the homes in that location" says Mr. Barrett.

"They provide neighborhood schools close to the homes of young children, offer a homelike atmosphere freedom from the older children, and relief from the more formal routine necessary in a large school building."

The primary units, 28 feet by 40 feet or 1,120 square feet, are built at an average cost of $11,500. This is just about half the cost of a standard elementary school classroom.

GROSS AREAS COMPARED

"Although originally considered for sale as ranch houses when no longer needed as schools, not one unit has been sold in Flint. The construction relieves crowded schools and gives the school board time to determine long-range needs of a particular community before investing in a regular school," Mr. Barrett adds.

Using the gross area per pupil in a fixed class size of 30 pupils as a fair measuring comparison, Mr. Barrett determined that the average gross area per pupil in regular schools built in Michigan in 1958–59 was 62.4 feet.

In the community-type elementary schools constructed in Flint, the gross area per pupil in the main building is 76.8 square feet.

"However," Mr. Barrett says, "when the 67 primary units in the 11 areas served by these schools are included, the gross area per pupil drops to 62 square feet. This is slightly below the Michigan average for 1958–59." (Although Flint has 101 primary units, only 67 are in the areas served by the 11 new elementary schools.)

This has been the method used by the Flint Board of Education to provide community-type facilities at practically the same

cost paid in other cities for conventional school buildings.

Proud of the advances made in such curriculum areas as the talented child program, primary cycle intensives program, superintendent of schools Dr. Spencer W. Myers cites the financial backing of the schools by Flint citizens.

SURVEY UNDERTAKEN

"We have many forward-looking programs, and are working to make further improvements," Dr. Myers points out. "Because the people are involved closely with the schools, they know more about them and are more willing to provide financial support to our educational program."

Principals and teachers are now engaged in a survey to determine all ways the after-school activities program benefits or contributes to the regular classrom instruction.

Other communities are finding that they have resources to initiate community school programs. Towns such as Roseville, Mich., have cooperatively opened their school doors by spirited leadership, gaining financial support of the city council.

In "Developing Community Schools in Michigan," the community school committee of the Michigan Association of School Administrators describes developing programs in 10 communities.

The publication cites the department of public instruction's statement of philosophy: "This relationship between the community and the school that we support has come to be known as the community school concept. Through the development of the community school, education is seen as a continuing factor in the lives of the people as long as they live."

EDUCATORS VIEW PROGRAM

Educators and municipal leaders from more than 40 communities throughout the United States came to Flint in early April to view the Flint community school program.

The Third National Community School Clinic, held April 4–6, was cosponsored by the American Association of Public School Administrators, the American Association of Health, Physical Education, and Recreation, and the Mott program of the Flint Board of Education.

More than 5,000 visitors a year now arrive in Flint for a firsthand look at the open-door policy that provides a hope that communities can support their schools without the philanthropy of a Mr. Mott in their town.

Davy Crockett's Widow Came to Texas To Live

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. YARBOROUGH. Mr. President, almost every school boy and girl knows of the heroic fight to the death by Davy Crockett and other heroes of the Alamo. But not much has been written about other members of Crockett's family, especially his wife, Elizabeth Crockett.

David Crockett went from Tennessee to Texas in 1835 planning to acquire land, buid a home and send for his wife and family. But when he arrived in Texas, Crockett found that the Texans had revolted against Mexico; so he joined the army of independence and gave his life for the ideal of human liberty at the Alamo.

It was many months before Davy Crockett's wife, Elizabeth received word of his death. She remained in her native Tennessee for 18 years and then decided to go to the land where her husband had laid down his life. She made the trip to Texas by covered wagon in 1854 with her son, Robert, and his family. They resided in Ellis County and later in Johnson County—now Hood County—when the State of Texas granted free to Mrs. Crockett a league of land.

Mrs. Crockett died at age 82, in 1860 and her grave in the Acton, Tex., cemetery is marked by a monument erected by the State of Texas in 1913.

The Texas Parade of April 1961, published an excellent article written by Louise Cheney about Mrs. David Crockett. I ask unanimous consent to have the article, entitled "Davy Crockett's Widow" printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

DAVY CROCKETT'S WIDOW

(By Louise Cheney)

(The wife he left behind in Tennessee came to Texas 18 years after Davy's death. A monument stands to her memory.)

Towering toward the wide Texas sky in the Acton Cemetery is a tall monument topped with the life-size statue of a famous pioneer woman, Elizabeth Crockett, wife of the immortal Davy who died for Texas freedom in the Alamo.

The beautiful and pathetic figure of the woman faces the west, one hand shading the eyes, in an attitude of patient waiting for the return of a husband who never came back.

The monument is of Texas granite and was sculptured in Italy. The statue atop the tall shaft resembles Elizabeth Crockett in detail as to features and poise. The State of Texas appropriated funds for the memorial in honor of David Crockett's widow in 1910. Sculptured in 1911, it was erected in 1913. Since the monument was placed in Acton, Elizabeth Crockett's grave has become a public shrine visited by great numbers of people annually. The word, "Crockett," stands in bold relief on the base of the monument. The granite slab covering Mrs. Crockett's grave carries the following words:

"Mrs. Elizabeth Crockett, wife of David Crockett. Born in Buncombe County, N.C., May 22, 1788; married to David Crockett in Lawrence County, Tenn., 1815; died in Johnson County, now Hood County, January 31, 1860. Age 82."

Buried alongside Elizabeth Crockett are her son, Robert Patton Crockett, who died in 1889, and his wife, Matilda Porter Crockett, who passed away in 1864.

When David Crockett left Tennessee for Texas in 1835 his intention was to acquire land, build a home, and send for his wife and family. But came the revolt of Texas against Mexican domination and Crockett joined the army of independence at Nacogdoches that same year. History records how heroically he gave his life in the defense of the Alamo. It was many months before Elizabeth Crockett learned that the husband for whom she was patiently waiting was dead. She remained in Tennessee for 18 years and then decided to go to the land for which Crockett had laid down his life. With her son, Robert, and his wife she made the long, hard trip via covered wagon in 1854. They first settled in Ellis County where they resided for 2 years. The State of Texas patented Mrs. Crockett a league of land in Johnson County (now Hood County). In 1856 the Crocketts moved to their new home where Robert built a log cabin in a group of liveoaks surrounded by hunny, sloping meadows near the Brazos River. He farmed the land for many years and also operated a wooden toll bridge over the river. The modern structure that spans the Brazos today at nearby Grandbury has been dedicated to his memory.

In the old pioneer cemetery at Acton where Elizabeth Crockett rests are a number of graves, dating back to the last century, which are built up of rock and covered with large coffin shaped slabs hewn from solid limestone. These slabs serve as headstones, for the inscriptions are chiseled upon them. These unique rock coffins are found in only one other cemetery in Texas, Old Rock Church, a short distance from nearby Bluff Dale.

Acton Cemetery is located a short distance south of the town of Acton in the eastern part of Hood County (a few miles east of Grandbury). To reach there follow U.S. Highway 377 west of Cresson, turn left at the large granite State marker, and drive south 4 miles. (Cresson is on the Fort Worth-Grandbury highway.)

Our Glorious Flag

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. UTT. Mr. Speaker, under unanimous consent to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I wish to include a poem by Mr. Philip C. Brown, of Fallbrook, Calif. Mr. Brown has dedicated his life to designing and painting flag designs. In a display of flags shown at the San Diego County Fair in 1959, our present 50-star flag was among his 30 designs. In this troubled world, I feel that it is time to place a new value on the flag and its meaning, and this original poem by Mr. Brown should cause us to pause and reflect:

OUR GLORIOUS FLAG

(By Philip C. Brown)

How beautiful against a cloud
To see our colors, flying proud;
Our glorious flag, majestic, grand,
Inspiring sight through all the land.
It stands for liberty, hard bought,
Justice for all, freedom of thought;
Calling for loyalty to truth and right
And equity, not rule of might.
We love this flag with thoughts sublime,
Not just today but for all time.
Of all the flags throughout the world
None has more beauty when unfurled.
And as we take a closer look,
"In God we trust," in Holy Book;
We thankful are through all our days
God's providence directs our ways.
But why, oh why, are there so few
Who own and fly their colors true?
Each home should boast a flag to fly
That, patriotism shall not die.
So fly the flag you call your own,
On every occasion make it known—
Here in this house find loyalty;
We're richer far than royalty.

Serving Country and City in Kansas

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. CARLSON. Mr. President, this is centennial year in my home State of Kansas, and many excellent articles have been written concerning our State, its history, growth, and development.

A very excellent article, written by Maurice Flagg, entitled "Serving Country and City in Kansas," appeared in the April issue of the Red Cross Journal. The article described many of the Red Cross activities that are carried on in our State.

I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SERVING COUNTRY AND CITY IN KANSAS

(By Maurice Flagg)

Kansas, as its centennial seal proclaims, is Midway, U.S.A., and has been since the troubled days 100 years ago when it became the first of the prairie territories to achieve statehood.

The wild west of folklore, movie, radio, and TV fame began in Kansas. All the trails of the Old West started in Kansas, crossed the State, or ended there—the Santa Fe, the California, the Oregon, the Gold Rush, the Chisholm, the pony express, and many others along which passed the people who opened up the West. The legendary towns—Abilene, Newton, Dodge City, Fort Riley, Fort Scott, Leavenworth, Hays, Great Bend, Medicine Lodge—are still there and very much alive; some, in fact, remain partly cow towns where only a little imagination is needed to reconstruct in mind's eye the old days.

But if your eye is for the romance and excitement of today, there is an up-to-date, booming Kansas of infinite variety and fascination to discover during the State's centennial year.

Cattle drives are now a thing of the past; today one man raises steer calves and sells them to another who grazes them to full growth and then sells them to a third who fattens them for the Nation's tables. Plenty of cowboys care for these cattle still, and the many summer rodeos throughout the State are perhaps the main social events for Kansans. The vast prairies—the home of a few Indians and millions of buffalo a hundred years ago—are now planted to mile upon rolling mile of green and golden wheat, and other grains. The skyscraper of virtually every Kansas town is the grain elevator, which may have only 2 bins or more than 200, but is always gleaming white and the most distinctive landmark in view. (Contrary to a widespread belief, Kansas is not flat. Most of the State rolls gently, like the ocean on a calm day. The eastern part of the State, however, is hilly and tree-grown. The greatest change from east to west across Kansas is the gradual disappearance of trees until on the high plains of the west there is only an occasional waterhole or creekside clump of cottonwoods to vary the vastness of earth and sky.)

There is far more going on in Kansas today, however, than agriculture. Wichita has long been one of the Nation's major aircraft building centers. Hutchinson lies atop vast, actively worked salt deposits. Hardly a week goes by without announcement of new oil or natural gas wells brought in; gleaming, futuristic appearing refineries have sprung up.

And, of course, the more there is to do, the more people come to work. The estimated population of Kansas when it entered the Union 100 years ago was 14,000; today, just over 2 million people live and work in the Sunflower State.

HIGH SCHOOL RED CROSS SERVICE

Service activities by high school Red Cross members are as varied as Kansans' interests and community needs. Members volunteer at hospitals, institutions, and in a host of Red Cross chapter services. Youth members are found increasingly on chapter boards and committees, speaking for their fellow youth members and planning with adult members greater opportunities for young people in community service through Red Cross. In school, Red Cross youth members create school chests, albums, records, and paintings. Also carried on in Kansas high school classes are many forms of carefully planned production—clothes and layettes for disaster victims, toys and stuffed animals for children, games and decorations for military and veterans hospital wards and recreation rooms.

IDEAS, IDEAS

The really significant story that high school Red Cross service in Kansas has for members throughout the country is in ideas. For Kansans are independent thinkers who are always turning a thing over to find whether there isn't a better way to do it. Many of their ideas and methods will be of interest to all councils, and some of them will be of special interest to rural high school members, whose unique problems in service program building are often insufficiently realized.

IDEAS FOR COUNCILS

Idea: Sedgwick and Saline County chapters are experimenting with a division of the rural areas into council districts so that the councils of two or more rural high schools within convenient distance of one another can work together on building and carrying out service projects in their respective schools. It's hoped that this plan will help overcome the common situation of the rural school that enrolls but gets little opportunity to serve because of its distance from the headquarters town.

Idea: In addition to regular meetings of the citywide council, presidents of individual school councils in Wichita now meet monthly with the Sedgwick County youth service director and citywide council officers to discuss problems and plan toward coordination of individual school activities. It's hoped that county school council presidents can attend meetings several times a year to bring city and county council activities closer together.

Idea: Labette County, in southeastern Kansas, plans to send county as well as city delegates to the training center held each summer at Wichita.

Idea: Members who attended the Sedgwick County chapter training center have formed themselves into a speakers bureau in the Shawnee County, Labette County, and Sedgwick County chapters. They present the story of Red Cross high school service in classrooms, assemblies, meetings of other youth groups, and meetings of adult organizations in the community. The Labette County member-speakers receive speech class credit for their presentations.

Idea: In Saline County schools, the student and Red Cross councils are one and the same. Service projects through Red Cross thus involve representatives of the entire school.

Idea: The Red Cross council at Wichita's Southeast High School goes to all the school clubs and asks whether they would like the council to arrange for each to serve the community as a group through Red Cross. Among the examples of results are chess club members who go as a group to play chess with hospital patients, medical careers club members serving as aides at the Wichita Regional Blood Center.

Southeast High council members also conceived the idea of making available to all students copies of the project checklist that routinely goes from chapter director to teacher-sponsors each fall for indication of projects to be undertaken during the year in individual schools. The Southwest High council asked students to check the projects they were interested in; those checking a project were then appointed to the committee responsible for carrying it out. This method of building a project and council organization involving large numbers of students has now spread to several other Wichita schools. (Southeast High presented Red Cross-interested students with special challenges. A vast school of over 2,000 students, it has no homerooms. Without the traditional base of council organization, member-leaders in the school had to find new ways of council building.)

Idea: West High School in Wichita features during its enrollment campaign a main-lobby booth at which interested students may sign up to serve on the Red Cross council. Result: The council has grown from 6 to 65 members in 2 years. The council divides itself into large working committees to direct and help carry out specific projects.

Idea: The council at Kapaun High in Wichita is made up of a representative from each club and organization in the school, with each group conducting its service projects through Red Cross.

Idea: In Shawnee County, proposed expenditures from the membership service fund are placed by school councils concerned before the countywide council and must receive the latters' approval.

Idea: The council president and vice president at Wichita's Sacred Heart Academy are required to have attended a training center.

Idea: All Kansas councils and adult leaders with whom the writer talked believe that the basic responsibility for Red Cross service in and through high schools lies with the council, with the teacher-sponsor serving as adult consultant.

SERVICE PROGRAM IDEAS

Idea: The group of 20 Salina High School students who serve as nurse's aids at Schilling Air Force Base Hospital meets each month at the home of a different member wit the hospital gray lady chairman and the hospital nurse sponsor to work out their volunteer service schedule for the coming month, discuss questions and problems, and socialize. (The group, by the way, is entirely made up of teenagers living on the base. Two a day work after school during the week and more serve on weekends; they serve in the women's and pediatrics sections. One of their special values to the hospital, said Chief Nurse Maj. Bernadine Armstrong, is in keeping everything running smoothly when the nurse shifts change.)

Idea: Councils of two junior highs in Parsons (Labette County) joined in planning and putting on a dance—semi-formal, 75 cents the couple, 50 cents stag—whose profit was applied to purchasing the more expensive items in a joint-project school chest.

Idea: At Wichita's Southeast High School, a record of Kansas folk songs is being cut with the narration in Spanish. Work began last year with a boy collecting the songs and a group working out the technical problems of taping the songs and cutting the record.

Idea: Being advanced in Sedgwick County is a disaster preparedness plan that has as its goal the training of two percent of every

high school's students in disaster service skills. All participants receive a general orientation to Red Cross and civil defense functions in disaster. Each then chooses a specialty—first aid, blood service, shelter assistance, canteen service, or disaster area survey work—and receives intensive training in the specialty. Friday afternoon training and practice sessions, as well as giving instruction in the phases of community disaster service, build school teams prepared to provide all phases in disaster emergency.

Idea: Key people at the Sedgwick County training center are the staff assistants—last summer, six of them from Wichita high schools. They serve as resources on chapter Red Cross services and the high school program. With the Sedgwick County chapterwide council, they were largely responsible for planning the center; during the weeklong center sessions, attended by delegates from throughout the State, they conducted alone a daily session on specifics of council and program building in addition to resource duties at other sessions. (The center also features certificate courses in first aid; water safety, and care of the sick and injured.)

Idea: The council at East High in Wichita planned, wrote, produced, and moderated a TV program on enrollment—its whys, hows, and importance to today's high school student.

Idea: The council at St. Mary's High in Wichita last year planned a Valentine's Day party at one of its "adopted" care homes with a difference. Members first surveyed patients' dietary restrictions, then planned, prepared, and served the refreshments around the findings.

Idea: 13 members of an accelerated science class at Wichita's Roosevelt Intermediate High served last year in the blood center laboratory as part of their classwork. Project was suggested by the teacher; details were worked out by the blood center director, youth service director, and the teacher together.

Class members first received a basic explanation of blood program work. A session followed in the laboratory during which health safeguards in laboratory work were pointed out. Members then undertook carefully supervised laboratory activities such as test tube numbering, bottle assembly, test sheet assembly, and washing glassware. During these assignments, they also observed the basic technical work of the lab. Two students a day worked from 8 to 9 a.m. during the week, and three worked 4 hours on Saturday morning.

Students performed no actual laboratory procedures. Asked whether she believed the project feasible for high school students, Chief Technologist Irene Griffith said that the junior high class had been a good choice for the experience because the group could be instructed within the lab's technical restrictions without losing interest.

Idea: Working to reestablish a youth service program, the Shawnee County chapter last summer carried out, as a demonstration of what young people can do, a 38-youth volunteer service program at the Kansas State Neurological Institute in Topeka. Volunteers came from six Topeka area high schools; a number of them were recruited in future nurses clubs.

Idea: Salina High School council members have furnished and supplied two first aid rooms in the school and are now working on a third.

GETTING THE WORD AROUND

Idea: Sedgwick County forms international art program contributions into exhibits that are displayed at schools and community centers during the course of a year. After the year of home display they are sent on for oversea school exhibit.

Idea: At Sacred Heart Academy in Wichita each new issue of the journal is read by council members and teaser announcements written and posted on every homeroom bulletin board. Each council representative is given time to talk in her homeroom about the new issue. Copies are available in the homeroom, the library, or the teacher-sponsor's office. Individual articles are posted on the school's main bulletin board.

Idea: Topeka High School members built and manned a homecoming day parade float emphasizing the unity of youth Red Cross service and schools and community. The camera club at the same school takes all Red Cross youth service pictures as part of its club credit work.

Idea: 10 council members in Labette County readied blood donor booklets for distribution to every student in the country to take home to parents.

NOTES ON PROGRAM BUILDING BY MEMBER-LEADERS

Martha Jane Wendel, Sacred Heart Academy, Wichita; president, chapterwide council; member, Project IV of international study visit program, summer 1960:

"The chapterwide council was the weakest link in an otherwise strong chain of student Red Cross activities and programs.

"Beginning early last summer the council officers met regularly with Miss Norma Gooden, chapter youth service director, to discuss plans for the 1960-61 council. The two major problems that had always hindered the council were student support and interest, and student participation.

"Several suggestions for improvement evolved from our executive meetings and training center:

"1. Delegates at our training center were given in detail the purpose, organization, and functions of a chapterwide council.

"2. Constructive programing and careful planning for council meetings were musts. The officers plan agendas.

"3. The members of the chapterwide council are planning projects that will involve the council as a group.

"4. We are organizing an executive council in which school council presidents will participate. It will provide an opportunity to meet with the director to discuss problems and share experience."

Margaret Weilert, Sacred Heart Academy, Wichita; council president:

"The idea of adopting care homes for the aged was completely new to Sacred Heart Academy council members. After introduction of the idea to the council, it was readily approved by faculty members and students. Through our chapter director, we obtained the names of various care homes in the city which could accept visitors.

"The visiting of the four homes we have adopted involves the work of several committees, one for each home. The committee chairmen are members of the school council. They, in turn, are responsible for contacting student visitors and adults to serve as chaperones, arranging transportation, and providing entertainment and refreshments.

"The satisfaction received by these visits is overwhelming—not only to the students who visit the homes but also to the people who are visited. Most important is the joy of the old people to know that youth love and respect them enough to want to make their often lonely lives a little happier."

Linda Beth Schlueter, West High School, Wichita; council president:

"Wichita High School West's council was a new one compared to others in the city, and had not been successful. Last year, however, a group of sophomores, who had not had a previous opportunity to belong to such a service group, proved interested in high school Red Cross service.

"One of our first and biggest problems was that of obtaining student participation in our projects. We discovered that if students were informed, they were much more likely to respond. How to inform them? Here are some of our ideas:

"Posters: During our enrollment week we plastered the walls of the school with posters. These posters not only stressed the importance of joining, giving, and volunteering, but also gave general information on the projects available.

"Bulletins: A daily bulletin is read to the students over the public address system. We used bulletins and skits to advertise Red Cross youth services.

"Assembly: After our posters and bulletins had been before the students about 3 days, we held an all-school assembly. Immediately after this, members canvassed the classrooms for donations and gave the students a chance to volunteer for service projects on checklists we distributed.

"We make sure our administrators are also well informed. At West we work through an assistant principal, who is in charge of activities. If he understands what, why, and how things are being done, he is usually completely in favor of them."

Tom Jackson, East High School, Wichita, vice president, school and chapterwide councils; delegate to 1960 White House Conference on Children and Youth:

"I am a motor service volunteer at our chapter house. During the summer the motor service chairman and I were talking about ways to save our chapter some money, and we hit on the idea of high school members coming down to the chapter house once a month to wash and wax all motor service cars and trucks. It sounded like a good idea so I took it to our director, who agreed. Then the real job came in—to convince the students. This was done through our council meetings. We made it a council project and set an open date for a convenient Saturday morning. We have presently had one car wash, which was a terrific success."

Ho Hum Hosannas

EXTENSION OF REMARKS
OF
HON. J. ERNEST WHARTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. WHARTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I have asked unanimous consent to include my nomination for the editorial of the week, from the columns of the Poughkeepsie Journal and the title is especially significant:

HO HUM HOSANNAS

Now that Senate and House have passed similar depressed areas bills and agreement is almost a formality, Washington discussions of the measure are strangely unenthusiastic.

Even friends of the measure are admitting that there aren't many new jobs in it, and that it will be quite a while, if ever, before any new jobs will develop. Few deny that the provision for aid to rural areas is unnecessary because the Agriculure Department already has a program in this field.

Some who voted for the bill concede that the emphasis on new plants is misplaced, because in many of the depressed areas satisfactory empty plants are abundant.

In sum, it appears that $400 million is to be spent just to show that Uncle Sam cares, even if the program itself won't help much, if at all.

A Great Man as Chief of the Army Engineers

EXTENSION OF REMARKS
OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein an article from the Mobile Press of Wednesday, April 19, 1961, regarding the appointment by President John F. Kennedy in naming a great man as Chief of the Army Engineers. I am enclosing this story and an editorial about the President's selecting General Wilson for the highest engineering position we have, and it is so gratifying. This article speaks for itself, but I wish everybody could know this great man who has served two stretches in Alabama as resident engineer. He has served practically all over this earth, and if the President and all of us had looked all over this earth, we could never have found a more capable man than our own Gen. "Weary" Wilson.

I remember in the long ago before Gen. Lewis A. Pick went to his reward that he told me that he considered the then Colonel Wilson one of the great engineers of this Nation. It is going to mean much to this administration and this entire Nation and the world to have this man as head of this great Army Engineers, one of the finest groups that has ever served this country since we have had a nation. There has never been one iota of scandal about the Army Engineers. They have done some of the most unusual and practically impossible projects on this earth. Now, after all the years and all the great men who have served in this capacity, now we get one of our own homefolks and you do not know how much the people everywhere I have talked to appreciate what President Kennedy did in appointing this great man to be Chief of the Army Engineers, and I think everybody will appreciate what our Mobile Press Register way down in our beloved Southland has had to say about General Wilson. I wish I could just tell everybody all I know about this man, his wonderful wife and his family. I have worked with him over a quarter of a century and I have never known a greater and a better man.

I remember a little saying that goes something like this:

JUST THINKING

Life is not a treadmill. Life is a beautiful and fascinating field of endeavor and enterprise, with inspiring horizons of newer and greater fields beckoning ever onward. Work and service are blessings to enrich one's life, and make it truly worth living. Blessed is the man who does his work joyfully.

Now, I believe that was by a great writer, Grenville Kleiser, and I found that little quote in Sunshine, a magazine of May 1961. Well, that just fits Gen. "Weary" Wilson, because he is blessed and he does do his work joyfully, and that is the way it should be.

I remember so many things so many great men had to say about the development of our waterways, and I am going to quote here some of them because it says here "The Importance of Waterways Stated by Voices of Wisdom," which is included in "Waterways of the United States," published by the National Association of River and Harbor Contractors. The first was our great President, George Washington, and I quote:

Prompted by actual observations, I could not help taking a more extensive view of the vast inland navigation possibilities of the United States, both from maps and the observations of others as well as myself. I could not but be struck with the immense extent and importance of it, and with the goodness of that providence which has dealt its forces to us in so profuse a hand. Would to God that we may have the wisdom and courage to improve them.

The next was by Abraham Lincoln, and I quote:

No commercial object of Government patronage can be so exclusively general as not to be of some peculiar local advantage; but, on the other hand, nothing is so local as not to be of some general advantage. The Navy, as I understand it, was established, and is maintained at great annual expense, partly for war, when war shall come, but partly also and perhaps chiefly, for protection of our commerce on the high seas. This latter object is, for all I can see, in principle the same as internal improvements. The driving of a pirate from the track of commerce on the broad ocean, and the removal of a snag from its more narrow path in the Mississippi River, cannot, I think, be distinguished in principle.

The next was by Theodore Roosevelt, and I quote:

The development of our inland waterways will have results far beyond the immediate gain to commerce. Deep channels along the Atlantic and Gulf coasts, and from the gulf to the Great Lakes, will have high value for the national defense. A channel is no deeper than its shallowest reach, and to improve rivers short of the point of effective navigability is a sheer waste of all costs. The improvement of our inland waterways can and should be made to pay for itself, so far as practicable, from the incidental proceeds from waterpower and other uses. Navigation should of course be free. But the greatest return will come from the increased commerce, growth, and prosperity of our people.

The next was by Herbert C. Hoover, and I quote:

Modern forms of development have made water carriage the cheapest of all transportation for many types of goods. With greater depths and with improvements in craft, it is possible to restore our waterways. Nor will this jeopardize the prosperity of our railways as some predict. Through the improvement of our waterways, it will be possible to distribute industry and population better, because waterways tend to place many towns and cities upon an equality in transportation.

And, last but not least, by our own President John F. Kennedy, who has done such a good job, and I quote:

Water is unquestionably one of the vital keys to our future security and survival, as well as to our well-being. If this Nation is to end the waste of our water resources, if we are to develop more fully the use of our water for economic growth and the needs of our exploding population, we should—without further delay—greatly accelerate our programs as regards conservation, transportation, power, flood control, and other aspects of our natural water resources.

Mr. Speaker, I agree, and I know you will, with every word that all of these great Presidents have had to say about the development of our waterways, from George Washington, our first President, down to the last President, the present President, John Fitzgerald Kennedy.

J.F.K. NAMES MOBILE MAN

WASHINGTON.—Maj. Gen. Walter King Wilson of Mobile was nominated by President Kennedy Tuesday to be Chief of Army Engineers. The President also nominated Wilson for the rank of lieutenant general.

Wilson is commanding general of the Engineer Center at Fort Belvoir, Va. He will succeed Lt. Gen. Emerson C. Itschner, who is retiring.

Wilson was the Mobile district engineer from June 1949, to September 1952, when he was named South Atlantic division engineer at Atlanta.

He is married to the former Miss Jeanne Herman of Tuscaloosa, Ala.

Wilson was born at Fort Barrancas, near Pensacola, Fla., in 1906. During his period as Mobile district engineer, the district office completed work on the Alatoona Dam, continued construction of the Jim Woodruff Dam, and started work on the Buford and Demopolis Dams.

[From the Mobile (Ala.) Press, Apr. 19, 1961]

WILSON'S SELECTION FOR HIGHEST ENGINEER POSITION IS GRATIFYING

Mobilians undoubtedly are in unanimous accord with action of President Kennedy in nominating Maj. Gen. Walter K. Wilson, Jr., to be Chief of the U.S. Army Corps of Engineers and for promotion to the rank of lieutenant general.

Local gratification, over the development stems from Mobilians' admiration for General Wilson and from their recognition of his outstanding ability. Moreover, since he owns a home here, and married Miss Jeanne Herman while she was a teacher at Leinkauf School, the general has very strong Mobile ties.

General Wilson served the Corps of Engineers twice at Mobile during his career. He came here first after graduating from West Point, and was district engineer here from June 1949 to October 1952.

Since leaving Mobile, he has served as division engineer of the south Atlantic division, with headquarters in Atlanta; division engineer of the Mediterranean division, where he did outstanding work in the construction of Air Force bases in north Africa; commanding general of the 18th Engineer Brigade, Fort Leonard Wood, Mo., and as Assistant Chief of Engineers for Military Construction.

The Wilson's home, to which the couple plan to retire when his Army career ends, is located in Spring Hill.

The general is widely known in Mobile as a result of the active role he played in civic and social life of the community while stationed here.

It will be a decided advantage to the Mobile district to have such a man in the Chief of Engineer's post, since he knows so intimately the conditions and the potential of this district.

A man of his ability, character, and long experience should have no difficulty winning approval by the Senate. It is inconceivable that the Nation could find a better man for the high post.

Crane Potests Seizure of Sea Water Booklets

EXTENSION OF REMARKS
OF

HON. EARL WILSON

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. WILSON of Indiana. Mr. Speaker, I have noted with deep concern an article in the Indianapolis Star, a newspaper published in the capital of my home State, that Federal food and drug inspectors have obtained court authority to seize pamphlets and newspaper articles.

I have seen where Federal drug agents in Ohio have on several occasions seized pamphlets and newspaper articles written by Dr. George W. Crane, a newspaper columnist of some stature.

The pamphlets, some containing reprints of Dr. Crane's newspaper column, were seized, according to the report, because they appeared on the same counter with a display of items such as sea water and salt, sold on the theory that some trace minerals might have an effect on various ailments. These items have no connection with Dr. Crane's column or business.

It was stated that had the pamphlets been on another counter or across the room they would not have been seized.

Mr. Speaker, I feel the medicinal value of sea water and sea salt to be of little concern to the gentlemen in this body. However, I do feel that freedom of the press is a matter to be closely considered by this or any other body.

If the Federal Government wants to take action against a product, such as sea salt or sea water, it should take action against the product and not against the literature. It should be instructed to keep its hands off printed matter or else we may some day see Federal agents confiscating newspapers, magazines, and other pieces of literature because they contain something with which an agency may not agree.

Mr. Speaker, under unanimous consent I wish to include in the RECORD the newspaper article written in the Indianapolis Star by Lester M. Hunt and a copy of Dr. Crane's column on the seizure of the literature:

[From the Indianapolis Star, Mar. 13, 1961]

CRANE PROTESTS SEIZURE OF SEA WATER BOOKLETS

(By Lester M. Hunt)

The right of Federal food and drug inspectors to seize pamphlets and newspaper articles was challenged sharply yesterday by Dr. George W. Crane as "a dictatorial invasion of the right of a free press."

Dr. Crane, whose column "The Worry Clinic" appears regularly in the Indianapolis Star, cited several high-handed actions of the Federal drug agents in Ohio.

In one case, the agents seized several copies of a Crane pamphlet containing two reprints of his columns and a discussion of medicinal value of sea water and sea salt.

The pamphlets, he reported, were impounded because they appeared on the same counter as the sea products.

"Had they been on another counter across the room, they would have been legal," Crane said. "In other words, the Federal bureaucrats attempt to tell people on what counter they can place published material.

"In one place, it is legal. In another place, it is illegal. I am very disturbed over these actions which, if not challenged, will lead to a suppression of all information that a Federal department decrees is to be withheld from the public."

The next step, he pointed out, could be the censorship of newspapers, magazines, and all forms of public information.

One instance Crane cited involved the proprietor of a children's shop in Ohio who became interested in the medicinal properties of sea salt and put some in as a sideline.

The local newspaper in an Ohio town wrote a feature story about it and the proprietor pasted it on her store window.

"The Federal drug inspectors tore it down," the columnist said.

A grocery store in Ohio had similar difficulties.

One Ohio man heard of the possibilities of sea water and drove to the Atlantic coast where he filled a couple of barrels and brought them home.

He transferred it to gallon jugs which he sold for $3.75 each. They were labeled "Sea water" with instructions to boil 10 minutes before using.

The drug agents dumped the whole supply, Crane said.

Defending their action, Wallace Janssen, Information Director for the Federal Drug Administration, said yesterday in Washington that when advertising matter specifying diseases which a product will affect is distributed in connection with a product it constitutes a label.

It does not matter whether the material is attached to the product or not, as long as it is used to promote the sale, Janssen said.

He added that if the product is sold with no claims as to its therapeutic value, there is nothing the FDA can do about it.

The Crane pamphlets mentioned cancer, baldness, epilepsy, allergy, arthritis and schizophrenia among 20 suggested deficiency ailments which might be helped by the 44 trace chemicals reportedly found in sea salt and sea water.

All the ailments are those for which no cures have been found, Janssen said.

Crane mentioned the interest of many physicians in the progress of biochemistry and reported instances where sufferers had obtained remarkable relief after the use of sea water.

But aside from his belief that the ocean chemicals may be of great benefit to health, Crane maintained the public should be permitted to analyze the claims pro and con and reach its own conclusions.

"To arbitrarily seize printed pamphlets and newspaper articles is a dangerous precedent which could lead to such abuses as always occur when dictators gain power," he said.

"The people have a right to know the latest thinking in the fields of health and medicine and this they cannot have if the Government tells them what they can read.

"It is logical to believe that many of these mysterious chemicals will provide a preventive to many of the diseases that now baffle science."

Crane pointed out that 60 years ago the American Medical Association brushed off sea water, claiming it had no benefit whatever.

But now, he added, iodine, one of the ingredients, has been found to prevent goiter and is included in common table salt while another, fluorine, has been found to stop tooth decay and has been added to the water supply of hundreds of cities.

Crane has made no claims of cure for the ingredients of salt water but has merely suggested their value in view of the relief some persons have found in their use.

His position is that certain of the ingredients have been proven valuable and that further research may disclose still more.

[From the Indianapolis Star, Mar. 13, 1961]

THE WORRY CLINIC

(By Dr. George W. Crane)

Case H-458: Vivian V., is a spunky Quaker housewife.

"Dr. Crane," she said, "my husband has been selling sea salt and has been showing people your newspaper booklet about the "Ocean's 44 Trace Chemicals."

"Now a bureaucrat is trying to embargo our salt on the ground that we have no right to show people that newspaper booklet.

"He says that the uneducated public cannot come to their own conclusions.

"So the Government must think for them. Isn't this brainwashing?

"Besides, any newspaper reader who can read your column and booklets must have enough gumption to think for himself.

"My third-grader son is now using a textbook by Dr. H. S. Zim, in which about 40 chemicals are mentioned as vital for good health.

"So I asked this bureaucrat if we could show customers that textbook. He said 'No.'

"How can bureaucrats deny us little people the use of newspaper materials or books in our business?"

"In our Republic," said the late Frank E. Gannett, "the Government should fear the people; not the people, the Government."

Last month I addressed the Indiana Academy of General Practice at Indianapolis, and those 500 family doctors were amazed that any bureaucrat would try to oppose the chemical laws of the Almighty.

God put 44 water-soluble chemicals in our blood.

Yet this bureaucrat says our Government "recognizes only 12."

Dr. James H. Shaw, famous Harvard biochemist, has identified 30 of these chemicals just in tooth enamel, dentine and bone.

But our Government "recognizes only 12."

More than 5,000 doctors have eagerly written for the newspaper booklet named below and many are testing sea salt and ocean water on patients.

They and other biochemists know there must have been some reason why God put 44 water-soluble chemicals in our blood.

Yet the Government "recognizes only 12."

Freedom of the press and free speech are in dire jeopardy when any bureaucrats can try to brainwash our citizens and deny average folks the right to pass newspapers or newspaper booklets around among their neighbors.

Newspapers are your best protection against creeping socialism and dictatorship.

Hitler's secret police also tried to squelch freedom of printed matter. That is the first step on the road to dictatorship, so beware.

Our Government bureaucrats have the billions of our taxes behind them to bankrupt little people when the latter do try to defend themselves in court.

A bureaucrat in Ohio thus dumped a farmer's sea water in a ditch and the farmer hadn't the money to fight this issue of free speech, for how could his limited funds compete with the billions in taxes behind bureaucrats? So your newspaper is the only sure defense average people have left in America.

To Secure a World of Prosperous and Peaceful Free Nations We Need the Cooperation of the German People

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. MOULDER. Mr. Speaker, the future prospects of a stabilized world of free nations of people enjoying a peaceful existence and higher standard of living depends upon the leadership and strength of our great country and other free nations. And one of the most important factors to achieve this objective is the problem of consolidating the great and creative energetic power and courage of the German people to this cause.

In connection with this I call your attention to the annual Sudeten German Day which is going to take place on Whitsuntide, May 20 to 22, 1961, in Cologne, Germany, with several hundreds of thousands participating, the principal speakers being German Chancellor Dr. Konrad Adenauer; German Federal Minister of Traffic, Dr. Ing. Hans-Christoph Seebohm who is the president of the Sudeten German National Union; and other members of the German Federal Government and Parliament.

The Sudeten German expellees, over 2 million of the total number of 13 million expellees and refugees from communism in West Germany, are going to reaffirm their dedication to the cause of freedom, democracy, and peace and their faith that, by peaceful means, the freedom of the enslaved peoples will be restored and their self-determination right returned to them in the future. In this faith the Sudeten German expellees feel united with the Ukrainians, Slovaks, Hungarians, Czechs, Poles, Balts, and all other peoples behind the Iron Curtain.

In the Sudeten bulletin, of volume 9, of January 1961, there appears an article by Anton F. Wuschek entitled "A Policy of Genocide," as follows:

A POLICY OF GENOCIDE
(By Anton F. Wuschek)

After the expulsion of the Sudeten Germans there remained approximately 170,000 to 200,000 Germans in the area that now embraces Czechoslovakia. Many of them are still residing in their old homes in the Sudetenland, others have been transferred to original Czech areas. Along with the Hungarian, Ukrainian, and Polish minorities in the C.S.S.R., the German element is one of the largest ethnic groups that do not belong to the official nation of the State of Czechs and Slovaks.

Little has been said of the existence of this German group within the past years. Not until last year did they become the subject of considerable discussion within Czechoslovak Communist Party circles, when, in connection with the introduction of the new Socialist constitution in the C.S.S.R. the new status of the ethnic minorities was decided on. Whereas the new constitution gives a minimum of cultural rights to the Ukrainian, Hungarian, and Polish minorities, it deprives the German minority every right to an autonomous group life. State President Antonin Novotny justified this fact with the statement that the German question was settled by the expulsion from their homes of some 3 million Sudeten Germans. The remaining Germans would thus no longer be considered as a minority.

The logic of this statement was by no means given unanimous approval. Secretary of the Central Committee of the Communist Party of Czechoslovakia (CPC), Bruno Köhler, took the opportunity to discuss the Sudeten German issue in detail in the official organ of the CPC Zivot strany (No. 16, 1960). Köhler justified the discrepancy in the minorities policy of the CPC with the remark, that according to the teachings of Leninism, a correct solution of the nationalities issue called for application of the principle of adjustment to the current political situations while giving consideration to the interests of communism.

During the first Czechoslovak Republic under Thomas Masaryk (1918–38) the Communists were the greatest proponents of a radical nationalities policy in the CSR, aimed at a destruction of the Czechoslovak State. The Communists with Köhler as their spokesman vehemently condemned the attitude of the German parties in the CSR that were seeking a federative solution of the nationalities question within the scope of the existing State. Köhler criticized this stand on Februray 1, 1931, in an article in Roter Vorwärts (Red Forward), which reads as follows:

"The national demagogy of all these (bourgeois German) parties climaxes in the demand for 'national self-administration and cultural autonomy' for the German people within the Czechoslovak State * * * National autonomy means the recognition of the Czechoslovak State * * * means rejection a priori of the self-determination right of the German people."

Just how much Communist policy sought at that time to make itself an advocate of the interests of the non-Czech ethnic groups in the CSR becomes evident from the address of the Secretary of the Communist International, Dimitri Z. Manuilskij, before the second regular congress of the CPC:

"Since the CPC recognizes the right of national self-determination, including separation from the State, and combats all attempts to keep national minorities within the framework of the present State structure by means of force, it is obligated to support the demands posed by national minorities against national suppression by every possible means."

But times have changed in the meanwhile and the interests of the Communist rulers in the C.S.S.R. are other than they were in Czechoslovakia during the period between the two world wars. The expulsion of the Sudeten Germans and the confiscation of their property were welcome conditions for complete communization of Czechoslovakia. Bruno Köhler even admits this himself when he writes, in the above-mentioned issue of Zivost strany:

"The transfer of the German minority, totalling millions, did not take place without difficulty, particularly for those affected by the shift. * * * The consistent and timely solution of the problem of the German minority proved to be especially advantageous during the glorious days of February 1948 when the workers concentrated all their energies on achieving victory over the reaction, on a victory that finally made the road free for the establishment of socialism in our country."

Today the CPC openly declares that the expulsion of the Sudeten Germans was a prerequisite for the victory of communism in the C.S.S.R. In order to retain the fruits of this victory, the Red regime in Prague resists with all its might every attempt of the Sudeten Germans and the West to revise the expulsion of the rightful inhabitants of the Sudetenland. In trying to make permanent the injustice, the small minority of Germans still living in the C.S.S.R. today—because the authorities deny them permission to emigrate—are disregarded entirely. Not only are they disregarded, but systematic attempts are being made to do away with them altogether. At this point there begins a policy of genocide, a crime against international law. By conscious and deliberate action the Czech state leaders are trying to uproot an entire ethnic group by surrounding them by conditions that make it impossible for them to cultivate and perpetuate their native tongue and cultural attributes.

Although international jurists may differ as to whether the expulsion of the Sudeten Germans as such, which took place in 1945–46, may be classified as genocide—although expulsion measures were aimed at destruction of the entire Sudeten group—there may well be unanimity of opinion as to the new measures in the C.S.S.R. with regard to the total extirpation of the German minority in the C.S.S.R., that this is planned and systematically organized genocide. Bruno Köhler already anticipates the outcome of this policy when, in the above-cited article, he writes:

"Due to the entirely different situation, the question of the German minority had to be solved entirely differently from that of the Magyar, Ukrainian, and Polish minority in the C.S.S.R. This difference is also evident in the formulation of the republic's new constitution, which legally crystallizes all the important social changes we have affected. The constitutional text can contain no stipulation as to something which no longer exists; namely, a German minority in the C.S.S.R."

Peace Corps Volunteers and the Draft

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, April 24, 1961

Mr. ENGLE. Mr. President, in the April issue of the Selective Service System monthly bulletin, Selective Service, Gen. Lewis B. Hershey, Director, discusses the question of deferment from military service for those who wish to serve with the Peace Corps.

I believe that General Hershey's remarks will answer many of the questions that have been raised about the draft status of Peace Corps volunteers. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

PEACE CORPS RELATIONSHIP WITH SSS EXPLAINED
(By Lt. Gen. Lewis B. Hershey)

The Peace Corps has been established by Executive order of the President. Legislation has been requested to continue this organization. The activities of the Peace Corps have been covered rather completely by the press, radio, and television. Its relationship with the Selective Service System has been indicated but a statement of this relationship seems advisable.

The Universal Military Training and Service Act, as amended, is flexible enough to provide deferment for members of the Peace

Corps without amendment of any kind. In other words the relationship of the Selective Service System with registrants who become members of the Peace Corps can be handled administratively.

The power to defer registrants who perform functions in the national health, safety, or interest now exists. The establishment and operation of the Peace Corps is in the national interest. So the classification of registrants in the Peace Corps can be handled as any other registrant engaged in activities in the national health, safety, or interest. They will, of course, enjoy the right of appeal shared by all registrants of the Selective Service System.

These statements presuppose the continuance of the present situation of the United States in relations with other nations of the world.

The question has been raised as to the status of registrants who enroll in the Peace Corps, after their return from this assignment. This requires the assumption as to the situation of this Nation in the world, the age of the registrant when he returns, the physical condition of the registrant with reference to his acceptability for military service, his marital status, and the regulations which apply in existence at the time of his release from the Peace Corps, and whether or not the registrant on his return from service with the Peace Corps engages in an activity which permits him to be deferred in the national health, safety, or interest.

The fact that the registrant has been a member of the Peace Corps will not prevent him from qualifying for further deferment, the same as any other registrant who is engaged in activities vital to the national health, safety, or interest.

Cuba: Fidelismo Without Fidel

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. FLOOD. Mr. Speaker, in the current discussions of our policy toward Cuba, it is vital that we should not blunder into giving a new life to Castroism.

Under leave to extend my remarks, I include a perceptive editorial from South Carolina's most outspoken newspaper, which is commended for reading by all concerned with the formulation of U.S. policy.

The editorial follows:

FIDELISMO WITHOUT FIDEL

The United States should have nothing to do with an organization of Cuban exiles set up in New York last Wednesday under the name of the Revolutionary Council. It is headed by Dr. Miro Cardona, a former Premier of Cuba under Dictator Castro.

This new group, which the New York Times hails as "the equivalent of a unified provisional government" of Cuba, represents leftwing Cubans who want Fidelismo without Fidel.

If the United States backs Miro Cardona and his crowd, it will be acquiring another Cuban headache as bad as Fidel Castro.

The Revolutionary Council wants to continue the leftist revolution started by Castro. The new group represents a merger of the Democratic Revolutionary Front, a moderate organization, and the People's Revolutionary Movement, a group of revolutionary extremists.

It now appears that the extremists have won a victory over the moderates and that the leftists dominate the forces of the center. Nowhere in the new organization is there a place for Cuban conservatives, who are the true friends of the United States.

Head of the revolutionary movement of the people is Manuel Ray, former Minister of Public Works in the Castro government. Another revolution-of-the-people leader is Maj. Raul Chibas, one of Castro's closest associates from the beginning of the revolution.

Last November, the News and Courier warned that Chibas represented dangerous forces. This man was one of the leaders in Cuba throughout the period of the firing squad terror, confiscation of U.S. property and infiltration of Cuba by Communists. He is not to be trusted by the United States or by genuinely anti-Communist Cuban exiles.

The program announced by Miro Cardona is a charter for continuance of the leftist revolution in Cuba. It specifically endorses the so-called "agrarian reform," which means theft of private property. While a promise is made to pay for confiscated lands, it should be remembered that Castro also made such a promise. The fact is Cuba won't have funds to make indemnities at any time in the forseeable future.

The Revolutionary Council's program also states that the government "will definitely nationalize the public utilities of light and power, telephones, aqueducts, and railroads." In other words, one can be sure that this group, if it comes to power in Cuba, will carry on where Castro began.

This consolidation of authority by leftist Cuban exiles is a threat which the United States was recently warned against by Jose I. Rivero, editor in exile of Diario de la Marina, the great Havana newspaper. He warned that leftists in Washington will aid Cuban leftists in exile who want to continue the Castro revolution but without Fidel Castro, whose bad public relations have damaged the radical cause. Mr. Rivero specifically warned against "Fidelistas who have defected, who only yesterday were accomplices in the horrors of Castroism."

The United States should not raise a finger to aid former accomplices of Fidel Castro. Once they gain power they will turn on the American people. One terrible error was committed when Castro was recognized in the first place. The United States can't afford to give a new lease on life to the Fidelista revolution.

Watertown Daily Times Centennial

EXTENSION OF REMARKS
OF
HON. CLARENCE E. KILBURN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. KILBURN. Mr. Speaker, Saturday, April 22, was the 100th anniversary of the Watertown Daily Times, the largest daily newspaper published in northern New York and one of the outstanding newspapers of the country. I want to take this opportunity to pay tribute to the Times, to its editor and publisher, John B. Johnson, and to its capable staff.

Although a paper of less than 50,000 circulation, the Watertown Times has a high sense of public purpose and responsibility. It is one of the few daily papers of any size read regularly by the State Department, and its editorials are frequently quoted by the Voice of America broadcasts overseas. Its fine reputation has extended to the offices of other Members of Congress and the Federal Government, although they do not have direct daily contact with the paper.

The Watertown Times established a full-time Washington bureau in the fall of 1951 to give its readers more news of developments in the Nation's Capital of particular importance to their area. It covers the State and national political conventions of both political parties. It has correspondents covering the Presidential campaign activities. The Times sent its Washington correspondent, Alan S. Emory, to Alaska in 1958 for firsthand reports on what the 49th State was really like. Is assigned Mr. Emory to cover former Vice President Nixon's trip to the Soviet Union and Poland in 1959.

In 1956, feeling that residents of the East did not sufficiently understand issues that stirred the people of the Western States, the Times ran a series of articles by its own correspondent on issues of particular significance to the West.

The Times and I do not always agree, but each respects the other's views, and the newspaper's coverage of the news is scrupulously fair. Its leadership in the battle to make a success of the St. Lawrence Seaway is an established fact.

I take great pleasure in saluting the Watertown Times on the occasion of its 100th birthday and wish to bring this event to the attention of my colleagues in Congress.

"We Don't Have Information; We Do Have Information"—The Department of Agriculture

EXTENSION OF REMARKS
OF
HON. LINDLEY BECKWORTH
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. BECKWORTH. Mr. Speaker, I herewith enclose letters that indicate certain information is not available:

TENNESSEE ASC STATE OFFICE,
Nashville, Tenn., April 11, 1961.
Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington 25, D.C.

DEAR CONGRESSMAN BECKWORTH: We are inclosing herewith tabulations showing participation in the Commodity Credit Corporation loan programs for the years 1958, 1959, and 1960 for barley, corn, grain sorghum, oats, rye, soybeans, and wheat as requested in your letter of March 27, 1961.

We regret that information is not available to us which would show how many of these producers secured loans on more than one commodity. We hope that this information will be satisfactory and will meet your needs.

Very truly yours,

CARL FRY,
Chairman, ASC State Committee.

Tennessee

PARTICIPATION IN THE 1958 CCC LOAN PROGRAM

Commodity	Number producers participated	Amount loaned
Barley	0	0
Corn	58	$178,552
Grain sorghum	4	1,692
Oats	1	1,417
Rye	0	0
Soybeans	1,589	2,078,439
Wheat	166	194,001

PARTICIPATION IN THE 1959 CCC LOAN PROGRAM

Barley	0	0
Corn	113	$308,346
Grain sorghum	1	1,011
Oats	0	0
Rye	0	0
Soybeans	188	410,613
Wheat	370	481,688

PARTICIPATION IN THE 1960 CCC LOAN PROGRAM

Barley	1	$855
Corn	60	138,280
Grain sorghum	1	1,040
Oats	0	0
Rye	0	0
Soybeans	32	79,282
Wheat	213	336,272

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURAL STABILIZATION AND CONSERVATION COMMITTEE,
Syracuse, N.Y., April 14, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BECKWORTH: Enclosed is the information requested concerning Commodity Credit Corporation loans made in New York State for 1958, 1959, and 1960 for barley, corn, grain sorghums, oats, rye, soybeans, and wheat.

You will note that wheat and corn are the important commodities in the State participating in Commodity Credit loan programs.

Without considerable research in county offices we are unable to answer your last question in regard to the number of farmers having two or more of these crops under loan. However, we feel sure the number of these cases would be very small in our State.

If further information is needed, please let us know.

BRYAN LEONARD,
State Administrative Officer for the New York ASC State Committee.

Commodity	Year	Producers participating	Total loaned
Barley	1958	21	$16,711
	1959	3	2,174
	1960	1	885
Corn	1958	134	157,917
	1959	180	266,188
	1960	132	169,128
Grain sorghums: None.			
Oats	1958	67	44,770
	1959	26	23,213
	1960	38	41,067
Rye	1958	16	10,927
	1959	2	1,185
	1960		
Soybeans	1958		
	1959	1	1,420
	1960		
Wheat	1958	1,180	1,999,051
	1959	989	1,564,303
	1960	1,027	1,605,188

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURAL STABILIZATION AND CONSERVATION COMMITTEE,
College Station, Tex., April 11, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BECKWORTH: In compliance with the request contained in your letter dated March 27, 1961, listed below are the number of loans disbursed in Texas on 1958-, 1959-, and 1960-crop barley, corn, grain sorghums, oats, rye, soybeans, and wheat. Also listed are the quantities of these commodities placed under loan and the amounts of loans disbursed:

1958 CROP YEAR

Commodity	Number of loans	Quantity under loans	Amount of loans
Barley	2,094	[1] 2,285,544	$2,156,090
Corn	26	[1] 63,331	69,279
Grain sorghums	43,320	[2] 66,598,679	123,656,913
Oats	5,695	[1] 8,882,504	5,961,075
Rye	62	[1] 50,227	48,621
Soybeans	973	[1] 673,621	1,322,033
Wheat	20,027	[1] 43,480,461	80,676,289

1959 CROP YEAR

Barley	33	[1] 51,658	$38,891
Corn	68	[1] 136,786	163,019
Grain sorghums	16,308	[2] 36,222,198	214,392
Oats	124	[1] 195,967	113,217
Soybeans	19	[1] 38,724	68,997
Wheat	5,532	[1] 3,133,890	23,345,608

1960 CROP YEAR

Barley	159	[1] 261,119	$191,213
Corn	44	[1] 76,694	87,528
Grain sorghums	21,969	[2] 53,717,358	83,362,873
Oats	217	[1] 464,884	269,642
Soybeans	20	[1] 33,292	58,132
Wheat	10,185	[1] 29,764,335	53,383,820

[1] Bushels.
[2] Hundredweight.

We do not have a record of the number of producers who participated in the price support program, as distingiushed from the number of loans disbursed, or the number who obtained loans on more than one commodity. However, it is hoped that the above information will serve your purpose.

If additional information relative to the price support program is desired or if I can be of further service to you, please advise.

Very truly yours,

JACK BRADSHAW,
Acting State Administrative Officer.

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURE STABALIZATION AND CONSERVATION COMMITTEE,
Columbia, Mo., April 11, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BECKWORTH: This acknowledges your letter of March 27, 1961 requesting information on the participation in Commodity Credit Corporation loan programs for the years 1958, 1959, and 1960. We regret the delay in our reply which was occasioned by your letter having been inadvertently forwarded to the director of extension at the University of Missouri.

For your information we attach a listing showing the number of loans and the total amount loaned for each of the years and commodities requested. However, we regret that we are unable to furnish specific information regarding the number of farmers who participated in two, three, and four of these programs, respectively. Our accounting records are not maintained on an individual name basis and therefore, it would be virtually impossible for us to assemble this information. Our experience with these programs would, however, enable us to estimate that 30 percent of the producers participated in two programs, 10 percent participated in three programs and no more than 2 percent participated in four programs in each of the years 1958, 1959, and 1960.

We hope this information is what you desire; if we can be of any further assistance, please do not hesitate to contact us.

Sincerely yours,

CLAUDE BOWLES,
State Administrative Officer.

	1960		1959		1958	
	Number of loans	Loan value	Number of loans	Loan value	Number of loans	Loan value
Barley	31	$26,720	27	$23,193	127	$104,935
Corn	10,923	23,836,596	13,122	27,935,857	5,884	13,117,597
Grain sorghums	1,617	1,790,984	1,364	1,860,116	6,881	8,410,186
Oats	24	12,422	24	12,951	83	58,982
Rye	7	3,456	6	1,836	19	15,524

Mr. Speaker, I herewith enclose statements that indicate the availability of information:

U.S. DEPARTMENT OF AGRICULTURE,
AGRICULTURAL STABILIZATION AND CONSERVATION COMMITTEE,
College Park, Md., April 19, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BECKWORTH: Since furnishing the information pertaining to Maryland participation in price support programs for transmittal to you by Dr. Nystrom, we have received a letter from our area director on this subject, a copy of which is enclosed, and which we believe will be self-explanatory. However, if the Department in Washington should be unable to furnish the information you desire, please let us know.

We are returning the letter from Dr. Nystrom, together with attachments, as you requested in your note.

Sincerely yours,

DUDLEY C. AIST,
Administrative Officer, Maryland ASC State Office.

COOPERATIVE EXTENSION WORK IN AGRICULTURE AND HOME ECONOMICS, STATE OF MARYLAND,
College Park, Md., April 13, 1961.

Hon. LINDLEY BECKWORTH,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN BECKWORTH: I have your thermafax copy of letter addressed to directors concerning grain producers.

I am attaching a copy of letter with attached data received from Mr. Dudley C. Aist, of the Maryland ASC State office. I hope this gives you the information you need. If it does not, I shall be glad to have you write me further.

Very truly yours,
PAUL E. NYSTROM, *Director.*

U.S. DEPARTMENT OF AGRICULTURE,
COMMODITY STABILIZATION SERVICE,
Washington, D.C., April 12, 1961.

To: State administrative officers, northeast area.

From: Harris W. Soul, director, northeast area.

Subject: Requests for grain crop loan information.

It has come to our attention that Congressman BECKWORTH recently asked a number of States for information about grain crop loans in the past 3 years.

The information desired can be furnished by the Department in Washington so it will not be necessary for you to furnish it county by county.

COLLEGE PARK, MD.,
April 11, 1961.

Dr. PAUL E. NYSTROM
Director of Extension, Agriculture,
University of Maryland,
College Park, Md.

DEAR DR. NYSTROM: Attached is a tabulation which will give most of the information requested in Representative BECKWORTH's letter of March 27. The answers to the questions in the final paragraph of Representative BECKWORTH's letter could be obtained only by conducting a survey in each county in the State in which there was loan activity in any of the past 3 years.

Due to the urgency of the work in counties on the new feed-grain program it would be very difficult to conduct such a survey at this time, however, if he should still wish to get these figures we will conduct the survey and furnish the results to him after the feed-grain program has gotten underway. This would be in about a month or 6 weeks.

Very truly yours,
DUDLEY C. AIST,
Administrative Officer,
Maryland ASC State Office.

Participation in commodity loan programs in Maryland

COOPERATIVE EXTENSION WORK IN AGRICULTURE AND HOME ECONOMICS, STATE OF SOUTH CAROLINA,
Clemson, S.C., April 19, 1961.

Hon. LINDLEY BECKWORTH,
Congress of the United States,
Washington, D.C.

DEAR CONGRESSMAN BECKWORTH: Your request for information dated March 27, 1961, on participation of farmers in this State in the Commodity Credit Corporation loan program for several commodities, was referred to Mr. A. R. Crawford, acting State administrative officer, U.S. Department of Agriculture, Agricultural Stabilization and Conservation Committee, Columbia, S.C. Mr. Crawford advised me on the subject as follows:

"We have taken no action to obtain the information requested by Congressman BECKWORTH, since we have just received a letter from our Washington office advising that the information sought by the Congressman covers a number of States and will be furnished at the Washington level."

I trust that you have received through the Washington office of U.S. Department of Agriculture the information you desire.

Sincerely yours,
GEO. B. NUTT, *Director.*

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., April 20, 1961.

Mr. HARRIS W. SOULE,
Commodity Stabilization Service, U.S. Department of Agriculture, Washington, D.C.

DEAR MR. SOULE: Please note the enclosures.

I am sending you a copy of the letter dated March 27, 1961, that I sent each State Director.

Since you state specifically you can furnish the information, I want it immediately and I want all of the information for which I asked in connection with every State. Because you do state you have the information in Washington, I shall expect the information forthwith.

Please return.

Kind regards,
LINDLEY BECKWORTH.

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D.C., March 27, 1961.

DEAR DIRECTOR: For the years 1958, 1959, and 1960 I desire the following information:

How many barley producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many corn producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many grain sorghum producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many oat producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many rye producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many soybean producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many wheat producers participated in the Commodity Credit Corporation loan program? What was the total loaned in your State in each year?

How many farmers participated in the programs of two of these crops? How many farmers participated in the programs of three of these crops? How many farmers participated in the programs of four of these crops?

For this information I shall be grateful.

Regards,
LINDLEY BECKWORTH.

Mr. Speaker, I do hope to have the information soon.

John Francis Killea

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. KILGORE. Mr. Speaker, the Lower Rio Grande Valley Chamber of Commerce of Weslaco, Tex., devotes considerable effort and energy to consistently bettering, on a local basis, the outstanding relations between the United States and Mexico. Because the valley recognizes devoted public servants in the foreign service are necessary to the implementation of our foreign relations, the chamber of commerce honored American Consul General John Francis Killea at Monterrey, Mexico, recently with a dinner at which time they presented him with a resolution of appreciation.

Since the resolution expresses so completely the gratification of the citizens of the Rio Grande Valley of Texas at the dedication of foreign service personnel, I would like to enter it in the RECORD for the information of all interested:

RESOLUTION OF APPRECIATION FROM THE LOWER RIO GRANDE VALLEY CHAMBER OF COMMERCE, ADDRESSED TO JOHN FRANCIS KILLEA, FOR DEVOTED AND DILIGENT WORK AS U.S. CONSUL-GENERAL STATIONED AT MONTERREY, NUEVO LEON, MEXICO

Whereas John Francis Killea is U.S. Consul-General stationed at Monterey, Nuevo Leon, Mexico; and the consular territory for which he is responsible covers most of the northeastern part of that nation; and

Whereas Mr. Killea has devoted himself to the diplomatic service of the United States with unremitting diligence toward furthering the interests of his fellow nationals; and

Whereas while keeping the welfare of the United States always foremost in his mind, he has at the same time won the high regard of the Mexican officials and people with whom he has dealt; and

Whereas Mr. Killea's understanding of the problems relating to international affairs has accrued to the benefit of the Lower Rio Grande Valley of Texas: Now, therefore, be it

Resolved by the Lower Rio Grande Valley Chamber of Commerce, That we extend forformally, on behalf of the entire organization, our sincere thanks and deep appreciation for his unselfish and valuable service to his Nation; and be it further

Resolved, That a copy of this resolution be sent to the Secretary of State of the United States, with the recommendation that it be placed in the permanent files relating to John Francis Killea.

Adopted this 7th day of March A.D. 1961.

BARRY L. TRASK,
President.

Groton Points With Pride to Its Members of the Famous 6th

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. MORSE. Mr. Speaker, the great Commonwealth of Massachusetts, steeped as it is in Revolutionary War history, is rich in its Civil War heritage as well. This is colorfully illustrated in a recent feature story in my hometown paper, the Lowell Sun. Shirley Foley has done a wonderful job in capturing the spirit of those exciting, tragic days a century ago. Under leave to extend my remarks, I am inserting this article in the CONGRESSIONAL RECORD:

[From the Lowell Sun, Apr. 24, 1961]

GROTON POINTS WITH PRIDE TO ITS MEMBERS OF THE FAMOUS "6TH"

(By Shirley Foley)

GROTON.—One can almost hear the muffled sounds of "The Battle Hymn of the Republic" as he enters the Groton public library and is faced with the dramatic and historic relics of the Civil War which went on display this week as part of the town's celebration of National Library Week.

One sees among other things, a dilapidated leather dispatch case which may well have carried General Grant's orders to march on Vicksburg; tarnished medical instruments used aboard the Bohio by Dr. Giles Mosely Pease at New Orleans; and scores of muskets, battle sabres, and cannon balls used when "brother fought brother" in the fierce battles of Bull Run and Gettysburg.

As one examines these poignant reminders of a tragic era in the history of this Nation, his imagination is apt to run free as he recalls the events and episodes of the Civil War and the role these historic momentos might have played.

The exhibit, presented by the library committee under the chairmanship of Mrs. Steven Sabine of Farmers Row, utilizes the theme of the Civil War period since the centennial is currently being marked.

All items on exhibit belonged to early residents of Groton or to relatives and friends of families now residing there. Momentos have been loaned by citizens and organizations of the town and are valuable not only for their historical significance, but also because of the annecdotes connected with them which give a glimpse into the personal lives of those involved as well as the backstage drama of the war.

According to the history of Massachusetts, the 6th Regiment was the most famous organization called to the defense of the National Government. This was the first "to offer its services in the case of need; it was the first to shed its blood and give its lives, and it was the first command armed and equipped for active service to reach the national capital." Many representatives of the 6th were from Groton, and this fact is one of priceless historic value to the citizens of this town and one which gives them the enviable right to be recorded in the history of the country.

A dispatch case belonging to Lt. Col. Charles Hinchman, along with his discharge papers and letters he wrote to his father about the Battle of Chicamauga have been loaned by Richard Hinchman. There is an interesting sidelight attached to a Confederate coat Hinchman possessed. According to the story, the coat belonged to Colonel Russel, a Confederate soldier who was taken prisoner by Hinchman. After the war was over, the colonel wrote to Hinchman to tell him that in appreciation of the fine treatment he had received as a prisoner, he had named his horse "Hinchman."

Comdr. George Cary Sinclair, great grandfather of Dr. Helen Putman, resigned his commission in the U.S. Navy when Virginia joined the Confederacy, and was given the rank of commander in the Confederate States Navy. Among the items belonging to him on exhibit are his coat and the epaulets he wore. Also displayed are a silver creamer and sugar basin. According to the story, the silver was made for his ship but was never used. Commander Sinclair was in England overseeing the outfitting of his ship, the *Texas,* when the war ended.

One particular interesting item is a facsimile of Lincoln's Emancipation Proclamation loaned by the Historical Society. The original was destroyed in the Chicago fire, and there are only 10 extant reproductions in the country today.

Another interesting reproduction is the letter of the century, one of the most famous letters of all times. This is the letter Lincoln wrote to Mrs. Bixby to tell her he was very sorry and deeply moved upon learning the news that her five sons had been killed in the war. This copy belonged to the great-great-grandfather of Norman B. Saunders.

The children in the public schools also participated in the exhibition by submitting essays and displays on some phase of the war. The four essay winners were Cindy Cable who wrote on "Clara Barton; "Teddy Wilkinson who wrote on "The Battle of Bull Run;" Fegina Cappeletti who wrote on "The Battle of Pea Ridge;" and John Ellis who entitled his essay, "Civil War Project."

There are many other Civil War items on display which graphically recall episodes dating from John Brown's historic raid on Harpers Ferry to General Lee's dramatic surrender at Appomattox, there, for the benefit of all townspeople.

Customs Facilities in Ports of Los Angeles and Long Beach Should Be Placed at the Harbor Where They Belong

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. HOSMER. Mr. Speaker, the Los Angeles Customs District is the fastest growing customs district in the Nation. It collected $98,748,713 in the fiscal year ending June 30, 1960. Ninety percent or more of the district's collections come from the twin ports of Long Beach and Los Angeles, according to a foreign trade survey prepared by the Union Bank of Los Angeles. Imports through the twin ports have increased more than 600 percent since 1946.

Yet, importers and exporters shipping through the port of Los Angeles or the port of Long Beach are subject to delays and inconveniences found in no other port in the United States. The Los Angeles Customs District headquarters is located 22 miles from the harbor area, in the traffic-clogged center of Los Angeles. This means that importers and brokers have to break up shipments and send part of their merchandise 22 miles inland for examination and appraisal. This means paperwork has to be shuttled between the coustomhouse and the harbor by messenger and that customs personnel waste time in unnecessary travel.

New customs facilities have been proposed for Los Angeles. Now is the time to eliminate the 22-mile bottleneck, and to establish the Los Angeles Customhouse in the harbor it serves. Yet the General Services Administration and the Customs Service are planning to perpetuate these difficulties and retain the 22-mile bottleneck by placing the new customs facilities in a new Federal building planned for construction at the Civic Center, downtown Los Angeles. This erratic decision should be reversed. The customs facilities should be placed at the harbor where they belong not 22 miles away.

Western Rental Housing Conference

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. CLEM MILLER. Mr. Speaker, the excitement in this year's Western Rental Housing Conference was over condominium which is a relatively new development for homeownership in multiple-dwelling units. Because of the wide interest, and because of the need for information the speech of Jackson Moffett, vice president of the California Pacific Title Insurance Co. is reproduced here:

CONDOMINIUM

Theoretically, there should be no title insurance distinction between applications for insurance of fee interests of a portion of a described piece of real property, regardless of whether that portion be the southeast quarter of the lot or of a described quarter of the building located thereon.

It is a general principle of law that a building permanently fixed to the freehold becomes a part of it, belonging to the owner of the land on which it stands. (*Lycoming Eire Inc. Co.* v. *Haven,* 95 U.S. 252 and *Ingold* v. *Phoenix Assur. Co.,* 52 S.E. 2d 366.) Parts of a building, just as parts of the actual land, may be owned by different people in fee simple, as when an upper floor belongs to one person, and the lower floor to another (*McConnell* v. *Kibbe,* 33 Ill. 75) or separate rooms or even parts of rooms belong to different persons. (*White* v. *White,* 16 N.J.L. 202). A person who owns the entire estate in real property may sell and convey any part of it. It may be divided horizontally, perpendicularly, or in any manner according to the will of the owner, even to the extent of granting a freehold interest in a part of the building (6 AM Jur 443).

In the face of this principle that the building is a part of the land and that parts of that building may be owned by different people in fee simple, and since our policies have been drafted to insure the ownership of any adequately described portion of real property, we should have no hesitancy in insuring the fee title to an apartment conveyed by deed. We have nevertheless accepted requests for this type of insurance with some reluctance, and of those policies issued as a result of such requests, all have contained qualifications limiting the extent of the insurance granted.

Up to this time there seems to have been a reluctance on the part of the lenders and title companies to become involved in condominium because of the failure of the deed to correctly and clearly delineate the nature of the estate being granted, both as to the apartment unit, and to the common portions of the land and building. Now in order to overcome these weaknesses, let us for a moment consider the objections and their solutions.

The courts of our land have been extremely liberal in construing descriptions of real property conveyed by deed, requiring only that it be described with sufficient definiteness and certainly to locate it from other property.

Title insurers have added the further requirement that it not only be sufficient to stand up under legal attack but sufficient without aid of extrinsic evidence, to eliminate the possibility of litigation which might arise by reason of any patent ambiguity. Since neither the fractional part of a lot type description nor the metes and bounds type description lends itself well to the problem of clearly defining an apartment, e.g., on the second floor of a building, use must be made of a reference type description.

It is of course not necessary to the validity of a description that the deed itself set out a complete description of the apartment which is being conveyed. On the principle that that is certain which is capable of being made certain, the apartment is sufficiently described in the deed by reference for identification to a plat in which the apartment is sufficiently described to be identifiable. Such a reference has the effect of incorporating the plat into the description so that which is described will be transferred to the grantee.

Assume that the apartment is conveyed with a description such as:

"A certain apartment consisting of approximately 1,000 square feet, located in the Southeast quarter of the second floor of the building on lot 6, tract 1,000 of said county, now known as apartment No. 200, and so designated on the door of such apartment, and as said apartment is shown on that plat attached hereto and made a part of this deed."

If the attached plat clearly identifies the exact boundaries of the subject apartment, then that portion of the building which is intended to be conveyed has been described with sufficient definiteness to make that real property the proper subject of our title insurance.

The weakness of the description is that the perimeter line is the wall of the apartment. The doctrine that such walls are party walls can only be applicable to inside walls and, in addition, it is not advisable to convey to the purchasers an ownership in severalty of the part thereof which rests on his side of the line, with an easement of support from the other part.

It is the intention of the parties to share equally structural maintenance responsibilities and, consequently, the weakness of the description can be eliminated by requiring the plat to clearly delineate the perimeter line as the inside surface of all walls. Although any dividing wall would still be a party wall, the parties can own such wall as tenants in common, thereby eliminating the cross-easement problem.

Regardless of the sufficiency of the deed as to description and other essential elements, we do not believe insurance of a single apartment ownership is by itself either practical or advisable. Such apartment fee ownership should be acquired concurrently with an undivided factional interest as a tenant in common in the base land and all common portions of the apartment building (the fractional interest being determined by the number of units involved).

In the absence of such a concurrent acquisition of the tenancy in common estate, each of the rights and obligations necessary for the enjoyment of the apartments, such as easements of ingress and egress, for utilities, obligations of support and maintenance of the building and property, would have to be expressed contractually and through cross-easements in each of the deeds of conveyance themselves.

The result of a concurrent conveyance would be to create in each grantee an absolute fee ownership in the specified apartment, and an undivided fractional interest as a tenant in common of the base land and all portions of the building where mutual and shared uses and responsibilities are intended. Since, as a tenant in common, each owner may enjoy all of the common estate in the same manner as if he were the sole owner, subject only to similar rights of his other co-tenants (*Prairie Oil and Gas Co.* v. *Allen*, 2 Fed. 2d 566), the difficult problem of separately setting forth each of the required easements has been eliminated. Such rights are present as an incident of the tenance in common estate acquired.

Such a plan should be acceptable to a purchaser of such an apartment once he understands the incidents of a tenancy in common estate, and particularly since it would simplify his ability to sell or encumber the acquired interests. His right, as is the right of other cotenants to use the co- mon property, cannot be capricious or irresponsible. He must use it with the care of an ordinary prudent user of like property and, in the event of injury to the property, he cannot discharge himself of liability by showing that he used the same care that he uses on his separate property, unless that care is at least equal to the care of a prudent man. He may not alter or change the property to the injury of his cotenants and, since their possessory rights are equal, the burden of defraying necessary expenses incident to the common estate, such as repairs, taxes, etc., is one that devolves equally upon all the coowners in proportion of their respective interests (14 Am Jr. Cotenancy).

It is by this procedure of using a deed clearly defining the two distinct parcels and estates to be conveyed that we are now willing and prepared to insure individual units in a condominium. May I say also at this point, that certain lenders are now ready to make individual mortgage loans to condominium apartment purchasers based on an insured fee simple title for each apartment.

In closing, I feel that the condominium concept will open a vast and scarcely touched field to the builder-developer. It will help to satisfy the homeownership desire of a large portion of the public who, presently, because of land speculation, high building costs, and other economic factors are priced out of the market. I refer specifically to young married couples and retired people on a moderate fixed income. I believe the builder who undertakes condominium projects will be doing his community a real service, not only in providing far better land usage in high density areas, but in supplying the means to fulfill a tremendous ownership demand, be it in the $10,000 bracket or in the so-called ultra-luxury type running from $50,000 on up.

M. Stanton Evans

EXTENSION OF REMARKS
OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. HOSMER. Mr. Speaker, for a while during his swift rising career M. Stanton Evans, who at 26 is editor of one of the Nation's important metropolitan dailies, worked in Washington for Human Events. He has made many friends in the Congress who sincerely respect his ability, integrity, and intelligence. They will be interested in regard the following article concerning him published in the April 1961, issue of the New Guard magazine:

PROFILES IN CONSERVATISM—MERCURY OF THE MIDWEST

(By Carol D. Bauman)

Twenty-six years ago, when Stan Evans was born, the country was in the throes of the great depression. And Stan, along with all the other boys and girls, was taught that the Great Emancipator was not Abraham Lincoln, but Franklin Delano Roosevelt; that the Declaration of Independence did not free us from tyranny, the New Deal did; that there was no national debt, it was owed to ourselves; and that democracy did not mean rule by the people, but government by decree.

M. Stanton Evans, editor, writer, speaker, agitator, and lover of liberty, somehow maintained a sense of incredulity throughout his education, even at Yale. At 26, he is a successful editor of one of the Nation's top metropolitan daily newspapers, the Indianapolis News.

His latest honor comes from the Headliners' Club, a national journalistic society, for consistently outstanding editorial pages.

He was similarly hailed for contributions to Americanism by the Freedoms Foundation, with two awards for editorial writing, one in 1959 and another in 1960. His first book, "Revolt on the Campus," is due for publication in the fall.

A fiery, volatile personality, Stan Evans has been one of the biggest drawing cards for campus forums in recent years. He reminds one of a modern Samuel Johnson, discussing philosophy with eager students far into the night over cups of black coffee. For instance, after an engagement at a large midwestern college, he and his adherents spent most of the night talking politics and world affairs with an admitted Communist. He has probably influenced more students in the field of conservative thinking than he knows, more through personal contact than by his persuasive writing and speaking.

He is best and most fondly remembered by his Washington friends for his 3 years as managing editor of Human Events, the Washington political newsletter which has been the birthplace of many a new career in conservative journalism.

FOUNDING MEMBER

As an undergraduate at Yale, he was a founding member of the Conservative Club, and edited its publication, the Independent. The Calliopean Society was revived in his senior year, and he was the first chairman in its modern form. It had flourished in the 19th century as a Yale debate club, and enjoyed a brief resurrection under William F. Buckley, Jr.

On his graduation from Yale in 1955, Evans made the choice between going with a large corporation, and "saving the coun-

try"—with the result that he plunged into a writing job with the Freeman a month after his graduation. After a short tour of duty as National Review's Louisville editor, Stan joined the staff of Human Events in August 1956.

His prodigious output of literature has graced the Individualist, which he formerly edited. In it he gently chided the National Student Association in an exposé of the student organization's leftist leanings by citing examples of the more obvious misspellings, errors in construction and incorrect syntax in its voluminous publications.

"One gets the idea that if these students spent less time big-wigging and more time studying, they would be making a far greater contribution to education," he wrote.

His wit comes through with distinguished clarity in the occasional book reviews he still does for National Review. Commenting on Marilyn Monroe by Maurice Zolotow, he wrote:

"The marriage of Arthur Miller and Marilyn Monroe was so odd a mixture of libido and liberalism that I have long believed it was invented at an editorial conference of the New York Post."

Though he has retired to the comparative quietude of the Indianapolis News editorial offices, Stan still thrives on the foibles of the opposition. One of his rules for discussing politics with a liberal is to confuse the issue by saying exactly what the liberal thinks the conservative thinks. On Senator McCarthy:

"Personally, I didn't like what McCarthy was trying to do, but I liked his methods." Or,

"I'm not against the principle of Federal Aid to Education, I just think too much education would be dangerous."

But happily for the people of Indianapolis, Stan uses direct, no-nonsense language in his editorials. He leaves no doubt about the issue at hand, and unfailingly supports his Libertarian viewpoint with facts, figures, and cases.

NEW BOOK

In his new book, "Revolt on the Campus," Stan studies the extent of the conservative movement among the Nation's youth. Of this purpose, he says:

"I hope to illustrate not only the scope and power of the conservative movement among young people, but to discuss as well the high intellectual quality of the students and other young people participating in it. The book will have something to say about the philosophical premises of the movement, as well as about its performance in the arena of practical politics.

"When I say the conservative movement is spreading, I don't mean to imply that the majority of the students are conservative. They are not. Most students, I think, are still indifferent to political matters. But the conservative element on the campus is now on the offensive; it is articulate, resourceful, aggressive. It represents the group which, in 15 or 20 years, will be assuming the seats of power in the United States. That is why, in my estimation, it authentically represents the future of the country."

And as one of the Nation's youngest editors, Stan Evans has already begun to assume some of that power and influence. He accepts his position humbly, however, and has not initiated any sweeping changes in News policy.

Eugene Pulliam, recipient of one of YAF's annual awards last month, and owner of the News, knows Stan Evans is a real find for his paper. A conservative, an intelligent (Phi Beta Kappa, cum laude) critic, and a remarkable journalist, Stan's qualities are so well fitted to Pulliam's purposes that he could not resist the desire to hand him the reins of the News, editorially speaking, and say "Godspeed."

Results of Poll Taken in the Sixth Congressional District of Washington State

EXTENSION OF REMARKS

OF

HON. THOR C. TOLLEFSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. TOLLEFSON. Mr. Speaker, I recently mailed questionnaires to 65,000 residents of my congressional district, which includes all of Pierce County and all of Kitsap County with the exception of Bainbridge Island. It contained six questions dealing with issues which the President discussed during the last campaign, and which are now pending before Congress.

The names of the individuals receiving the questionnaires were selected at random from lists which gave no indication of the political leanings of those people. The number of recipients and the number of returns were sufficiently large to give assurance that a good cross section opinion of my constituency would be obtained.

To date there has been a much better than average response, indicating an increased interest on the part of my people in the affairs of Government. I have received thus far responses from 18 percent of the people who received questionnaires. More returns are expected, of course, but a sufficient number have now been received to determine the general views of the people of my area. I am sure that their opinions will be of interest to the other Members of the House.

The results of the poll expressed in terms of percentages are as follows:

[In percent]

	Yes	No	No opinion
1. Should medical and hospital care for the elderly be provided through the Social Security Act under a plan calling for an increase in the payroll tax?	64	33	3
2. Do you favor legislation which would provide Federal financial assistance to depressed areas at a proposed cost of $390,000,000 per year?	55	33	12
3. Do you approve of Federal financial aid for—			
(a) School construction?	55	41	4
(b) Teachers' salaries?	28	65	7
4. Do you believe Congress should enact legislation increasing the minimum wage from $1 to $1.25 per hour and extending its coverage to include several million additional workers?	60	34	6
5. Do you favor new public housing legislation which is anticipated to cost in excess of $1,000,000,000 per year?	31	58	11

A Firsthand Report on Cuba

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. EVINS. Mr. Speaker, the short-lived Cuban invasion certainly has not been pleasant news for the freedom-loving people of Cuba and the citizens of our own country—the gravity of the issue and the intense concern of our Nation has been shown by the President's series of top-level discussions with the leaders of both parties and by the bipartisan support which all have given the President.

Mr. Speaker, there is little doubt in my mind that a large contributing cause for the defeat of freedom forces in this instance was due to the lack of accurate intelligence information.

This story is an old one and has too often been the case. This was true in Suez, in Hungary, in Laos and certainly appears to be all too true in the case of Cuba.

Our intelligence operations, in my opinion, are ineffective—and a review or reappraisal has long been in order—in fact it is overdue. This review and study must be a thorough one and must spare no effort to pinpoint what is wrong with the CIA—and other intelligence operations—and then establish a more effective intelligence agency for our country and for freedom.

The President has acted wisely in recalling Gen. Maxwell Taylor to active duty and giving him a special assignment of making a survey of the organization and capacity of the United States to deal with subversion, counterespionage and guerrilla warfare. The Attorney General, Mr. Robert F. Kennedy, also has been asked by the President to work on this important reevaluation and study of CIA operations.

While our CIA seemingly cannot get the information on the extent of subversion going on in Cuba, visiting reports seem to be able to see and report the picture.

In this connection, I ask unanimous consent to have reproduced in the Appendix of the RECORD excerpts from a report on the details and extent of the Communist takeover in Cuba as reported by Canadian newspaperman, Mr. Eric Greiger and also United States columnist, Mr. Drew Pearson. Excerpts from their articles follow:

A FIRSTHAND REPORT ON CUBA

(By Eric Geiger)

The young official in the Cuban ministry for external affairs shook his head vigorously.

"Anybody who says we are going Communist here is just repeating American propaganda," he said. That was in Havana 2 weeks before the counter-revolutionaries landed.

The same statement was made by more than a score of Government officials whom I questioned about Communist influence in Cuba on my trip there which ended a week before the anti-Castro effort.

And what they said was in complete contrast with what anybody could see there if he has a pair of good eyes.

You don't have to speak Spanish, and you need no guide to see the evidence of Communist infiltration and influence.

All you have to do is stroll through downtown Havana.

It can turn into a frightening experience.

Pictures of Lenin and Khrushchev were prominently displayed in Government-owned store windows; corner newsstands had racks filled with Soviet newspapers and magazines, and there are hundreds of posters proclaiming the friendship between the Cubans and the people of the U.S.S.R., Red China, and other Communist nations.

HAMMER AND SICKLE

The Red hammer and sickle emblem seemed to be almost as prevalent as the picture of bearded Fidel Castro.

Cigar stores were selling lighters with the Communist symbol painted on them, and small boys were running through the streets waving little red flags.

Even more material proof of Castro's close link with the Red world could be found in the waterfront section.

Hundreds of Russian-made military trucks were lined up on the docks, apparently just having been unloaded from ocean vessels.

Warehouse yards were filled to capacity with heavy pieces of all kinds of machinery, the abbreviation CCCP (Soviet Union) clearly visible on some of them.

Near the presidential palace, just off the famed Prada Boulevard, an entire city block has been taken over for a gigantic Communist Chinese exhibition. At night floodlights illuminated a huge sign on top of the building proclaiming the close bond of friendship between the people of Cuba and Communist China.

COMMUNISTS' WREATHS

Large wreaths, bearing the hammer and sickle, have been placed on most of the city's monuments. One such wreath, dedicated by the Communist Workers of Moscow, is at the base of the monument honoring Cuba's national hero, Jose Marti, who led the independence movement in the 19th century.

The ornate lobbies of the big luxury hotels—once the gathering places for international society—are now swarming with somber-looking technicians and "advisors" from Soviet Russia, Red China, North Korea and half a score of satellite countries.

Although none of them is wearing military uniform, many were giving themselves away as military men by their gait and manner.

And then there is the newly established Cuba Institute for the Friendship of All People, an organization whose Communist character is probably more obvious than that of most other Government agencies.

Headed by a young man who hasn't yet reached his 23d birthday the institute operates a luxury hotel for visiting Communists and members of Red front organizations. It maintains a fleet of gleaming U.S.-made limousines for special tours through the country and generally seems to be Cuba's link with Communist and left-wing groups all over the world.

During a 3-hour visit in the institute's big lobby I met a truly international crew of Communists and fellow travelers, all of whom proudly wearing a badge reading "invidado" (guest) which signifies their status as official guests of the Cuban Government.

Some were obviously mere freeloaders who were having a good time posing as sympathizers of the Castro regime, but most of them made no secret of their Communist beliefs.

INVASION OUTLOOK

The invasion of Cuba came as no surprise to the people of the island nation. It had been expected for weeks by Castro followers and foes alike.

When I left Havana a few days before the fuse was lit, the city seemed like a huge powder keg * * * ready to explode any moment.

The sprawling, historic Cuban capital which once attracted fun-loving tourists from all over the world had become a gigantic military camp, bristling with arms and filled with an atmosphere of imminent war * * * and fear.

[From the Washington Post, Apr. 20, 1961]

AN ACCIDENTAL VISIT TO SOVIET CUBA

(By Drew Pearson)

To understand why invaders sought to bring the fight for freedom to a quick climax in Cuba, drop in at the Havana Airport. I did so the other day—by accident.

Because of an airline strike, I found myself on an island-hopping KLM plane taking the roundabout way from South America to Miami. The American consul in Maracaibo at first flatly refused to stamp my passport for transit through Havana, but after considerable soul-searching let me go.

The plane carried 30 Russian technicians, also en route to Havana. The Dutch stewardess told me that KLM had carried about 600 of them in the last 2 months. To avoid New York they took the long way around, south to Curacao, then north to Cuba, which has become a virtual Soviet base 90 miles off the cost of Florida.

The Russian passengers were crowded together in tourist class. When American officials travel, they go in private plane at the taxpayers' expense, or first class. One British passenger, riding first class, went forward and struck up a conversation.

"I say," he asked a Russian, "Why don't you dress better? Why do you fellows always look so frumpish?"

"It is true that we don't dress as well as you," was the reply, "but give us time. We have been concentrating on other things."

OTHER THINGS

At Kingston, Jamaica, a British immigration officer stuck his nose in the door to announce: "No passengers from Iron Curtain countries will be allowed to leave the plane."

The rest of us stretched our legs for 30 minutes.

But at Havana it was different. Here the Iron Curtain passengers were given special treatment. They were ushered into the passport office and health office, while the first-class, better-dressed British and Americans waited in line.

At the plane were three Cuban musicians, serenading all the passengers—the standard Castro reception for all incoming planes. The traditional free Bacardi cocktail was also available. Over the facade of the airport in large letters, however, was plastered this challenge to arriving Americans: "Free Cuba in America."

And all over the airport was the usual propaganda so familiar in Communist countries: "Work for your country, not for yourselves," Cubans were reminded. "Get back to the land," the No. 1 Communist of the cabinet, Che Guevara, asked, enlisting cane cutters for the sugar fields.

Most ticket counters for U.S. airlines were closed. Tourist traffic had evaporated. Few passengers were entering Havana, many leaving. Our Dutch plane was delayed 2 hours while Castro's customs inspectors searched the baggage of outgoing Cubans to make sure they took with them none of the articles made scarce by the American embargo—soap, needles, or dollars.

Security in the Havana airport was nil. Any American in transit could have wandered out of the airport to downtown Havana, with no questions asked.

A COMMUNIST BASE

From that brief visit to Havana, I got a feeling of pleasant, philosophical frustration. From other reliable sources who have been able to penetrate into the heart of Cuba, I learned the following:

More than 3,000 Russians, Czech, and Chinese advisers are in Cuba. They operate the oil refineries, advise on sweeping new formulas for Cuban education, give intensive training to the Cuban military. The Cuban army has the most modern arms which the huge Skoda factory in Czechoslovakia can turn out, many of them more up to date than those of the U.S. Army. Some 30,000 tons of Czech and Russian arms lie uncrated in Havana harbor.

About 300 Cuban pilots are also in Czechoslovakia being trained to fly MIG fighters. When they return they will be able to knock any Cuban refugee bombers that venture over Havana out of the sky.

Soviet-bloc cooperation with Cuba has been stepped up to a point where the island is rapidly becoming a bristling Communist military base—which was the reason for the decision of anti-Castro rebels to strike now before Castro grew stronger.

HAVANA-GO-ROUND

Fidel Castro now sleeps in his office, his bodyguard doubled. He is deathly afraid of assassination. His fears may not be unfounded * * * Castro takes more popularity polls of the Cuban people than Dr. Gallup does of an American election. He is constantly reading and worrying over the polls. His popularity has slipped from about 90 percent when he first took office to about 30 percent now * * * Castro will be a tough man to defeat in guerrilla warfare. He understands it. For instance, his troops occupy the high ground, not the valleys and the towns, as did Batista's troops. It's easy to raid down into the valleys, then escape to the hills. Castro's militia occupy the hills.

The School Boom

EXTENSION OF REMARKS

OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. HALEY. Mr. Speaker, today, we hear much from people who advocate Federal aid to education. They tell us that Federal aid is necessary to provide for needed classrooms and adequate teachers salaries. There are many people who disagree with the proponents of Federal aid to education because they know that without Federal aid some 340,000 classrooms have been added in the past 5 years and over a 10-year period teachers salaries, according to the national average, have increased over 70 percent.

At this time, I wish to include in the CONGRESSIONAL RECORD an editorial from the Wednesday, April 19, 1961, issue of the Sarasota Herald-Tribune, which quotes facts and figures to buttress the conclusion "that it is hard to see any rational case for Federal educational grants-in-aid." Most interesting of these facts and figures is that at the going rate the States and local government can provide more classrooms within the next 10 years, without Federal aid, than the goal set by the White House Conference of 1955. The editorial follows:

THE SCHOOL BOOM

Without Federal aid, the public school system in the last 5 years added 340,000 schoolrooms, only 29,000 short of the goal set by the White House Conference of 1955. The goal for the next 10 years is 610,000 new classrooms. At the present rate, without Federal aid, 680,000 classrooms will be provided in the decade, exceeding new by 70,000.

Ten years ago, the national average of teachers' salaries was $3,126. It is now $5,389, an increase of 72.4 percent. All State expenditures for schools rose from $6.5 billion to $16.4 billion in the last 10 years. The 1970 forecast of $34 billion is not out of the reach of local authorities, whose bonds have found a ready market at rates lower than the Treasury commands.

These facts and figures were gathered by the Saturday Evening Post from the U.S. Office of Education and the Institute for Social Science Research, Washington. They buttress its conclusion that it is hard to see any rational case for Federal educational grants-in-aid.

Red River's Possibilities

EXTENSION OF REMARKS
OF
HON. HAROLD B. McSWEEN
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. McSWEEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

[From the Alexandria (La.) Daily Town Talk, Apr. 19, 1961]

RED RIVER'S POSSIBILITIES

The U.S. Army Corps of Engineers will hold a public hearing in Alexandria Thursday to determine the need for and public sentiment in favor of a thorough study of Red River.

The proposed study would include bank stabilization, channel improvement for navigation, flood control, land conservation, recreational benefits, and water for industrial and commercial use.

This is the sort of comprehensive study that is long overdue. For more than 50 years there have been recommendations for a variety of projects looking toward greater utilization of Red River, but at no time has a survey been made to determine its potentialities and needed improvements covering all uses.

Considerable work has been done in the field of flood control, with the result that flooding along the Red is now negligible by comparison with a generation ago.

But little or nothing has been done to restore water navigation or to improve the quality of the water for industrial use—to name only two neglected areas.

A new wave of interest has been generated by the experiment of a Texas businessman who negotiated the Red at low water last year with a specially built barge and tug. As a result there is a growing number of people along the Red who think navigation on the waterway is feasible.

The need for additional supplies of water for industry and irrigation also has been pointed up in recent years, and threats in the last few days to such recreational areas as Buhlow and Hog lakes have created a new awareness of the need for bank stabilization work along the river.

Certain projects to improve Red River generally are obviously warranted because it is apparent the cost would be low compared with the results.

None can be undertaken, however, until a thorough study has been made to determine what is needed, how it can be accomplished, and what the benefit-to-cost ratio will be.

Accordingly, the Town Talk wholeheartedly supports the proposed comprehensive study of Red River and suggests that all interested individuals and agencies be represented at the hearing in Alexandria tomorrow to add their approval to the proposal.

Sukarno in Washington

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. KOWALSKI. Mr. Speaker, I am pleased to join in extending the hand of welcome to President Sukarno of Indonesia, who arrived in Washington this morning. He has arrived at a time when sober thinking about our relations with the emerging nations of the world is essential, thinking which must be matched by a seriousness on the part of these nations as well.

Fortunately, President Sukarno is indeed in a sober mood, if we may judge by the speech which he delivered in Los Angeles on April 22 before the Council for World Affairs. I am inclined to believe that he is prepared to pay attention to any suggestions we are willing to make to assist in the solution of the problem of West New Guinea and other issues which face his country and the world. At the same time, he would naturally expect sober appraisal from us about the position which his government maintains on these issues.

In his Los Angeles speech, President Sukarno asked for the active sympathy and the active understanding of our Nation. He asserted that Indonesia understood and appreciated our philosophy, and had been inspired by it.

Coming as he does in this frame of mind, I trust that it will be possible for us to make an effort to learn and to understand the position of the new nations and to see how far we can succeed if we challenge them to demonstrate in practice that they are in fact committed to an active, while independent, foreign policy. Let us hope that we can at the same time give deep consideration to how far we can go in carrying out the sentiments expressed in the excellent editorial in the Washington Post this morning, which said:

There is a constructive opportunity, "to exert independent influence for a long-term solution that will comprehend Indonesian claims but also will protect the rights and autonomy of the Papuan people."

I join with the Washington Post in welcoming Dr. Sukarno and his colleagues with good wishes for a fruitful discussion. I urge my colleagues to read the following Post editorial:

SUKARNO IN WASHINGTON

President Sukarno arrives at a time of critical reappraisal in Washington. The Indonesian chief of state is no stranger to this country, but like other leaders he will want to sample the qualities of the new administration. He also will want to present his own views on such issues as West Irian, China, and policy in southeast Asia.

He will find the Kennedy administration taking a fresh look at the need for change in colonial areas, and eager to understand the attitudes and sensitivities of neutral countries. Relations between the United States and Indonesia have improved considerably from the low point of 3 years ago, thanks in part to the overhaul of certain mistaken American assumptions. But it would be unfortunate to conclude that the secret of good relations is automatic endorsement of the Indonesian position.

Thus on the question of West Irian, Netherlands Foreign Minister Luns learned on his recent visit that, American policy will not be merely a tail to the Dutch kite. But this country could not condone an Indonesian effort to seize West Irian. Rather, the constructive opportunity is to exert independent influence for a long-term solution that will comprehend Indonesian claims but also will protect the rights and autonomy of the Papuan people.

More important from a world standpoint is the problem of Communist advance in Asia and the measures needed to strengthen the independence and internal security of the Asian countries. Perhaps Dr. Sukarno has some ideas on this point. He and his colleagues will be welcomed with good wishes for fruitful discussion.

Israel's Birthday

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. PHILBIN. Mr. Speaker, it is a very high privilege indeed for me to join with my very able and distinguished friend, the gentleman from New York [Mr. MULTER], in hailing the independence of Israel and extending my heartiest congratulations and best wishes for the future to this inspiring, young nation and its loyal people.

It is most significant that our own great Nation moved with greatest expedition to recognize the new Government of Israel once it was established. It is also both gratifying and satisfying to realize that since that time our Nation and the American people have solidly supported the aspirations of Israel for self-determination, independence, and membership in the society of free nations.

The whole world admires the tenacity of purpose, zeal, loyalty, and great ability which have marked the brief history of the illustrious nation of Israel. Its problems were many, complex, and extremely difficult. At a time when it was faced with welcoming and caring for large numbers of refugees from war-torn lands who had been driven from pillar to post, so to speak and sought escape from persecution and privation, Israel, with superb spirit of confidence, humanity, and generosity, successfully grappled, not only with these challenging problems, but also with a host of other govern-

mental, social, and economic difficulties entailed in setting up a new, sovereign nation.

The unquestionable zeal for independence and the fierce determination to set up a government for its own people which Israel exemplified, speedily won the admiration, unbounded sympathy, confidence, and support of freedom-loving nations throughout the world. There is a great and moving nobility about Israel's impressive experiences in setting up and implementing a government of its own. Through most bitter sacrifice and travail, its leaders and its loyal people unselfishly labored to achieve their noble ends, and in the intervening years have given truly an unprecedented example of what practical idealism, talented, inspired leadership and dedication can achieve when they are combined with devotion to principles of freedom, are sparked with an indomitable will and are conducted and implemented by highest ambition, purposeful initiative, hard, ungrudging work, and a never-say-die spirit.

The Jews of the world, and especially the Jews of America, who so doggedly and generously moved to support this great experiment in free government are entitled to greatest credit; first, for their heartwarming loyalty to their own people; secondly, for their almost incredible generosity, and finally, for the outstanding, spirited encouragement they have furnished to the gallant leaders and noble people of Israel, a people so determined to establish a homeland and sovereign government of their own where compassion for the afflicted might bind up the wounds of war and persecution and where freedom, in all its brightness and beneficent effects upon the human soul, might dwell.

I am sure that the spirit of dedication and unselfishness which has contributed so greatly to the establishment of Israel will continue to fire its magnificent people with zeal and high purpose, and enable this intrepid, young state to solve its problems and develop its free institutions under the guidance and protection of a constitutional system of government, founded on liberty and consecrated to human freedom. May the good Lord bestow his richest blessings upon the great nation and inspired people of Israel.

Welcome

EXTENSION OF REMARKS
OF
HON. JOE M. KILGORE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. KILGORE. Mr. Speaker, a great portion of the district I represent, the 15th District of Texas, borders our southern boundary.

The residents in my district operate their own good neighbor relations program very efficiently. One of the recent exhibitions of this border friendliness was an international spring fiesta held by the cities of McAllen, Tex., and Reynosa, Tamaulipas, Mexico, on March 2–5.

So that all can see the response such an event secured from the sister Republic, I am entering below a copy of a translation of a newspaper article which appeared in the March 4 issue of El Manana, the Reynosa, Mexico, daily newspaper:

WELCOME

We are celebrating and for a good reason. This day will visit us the most prominent citizens of the valley of Texas and our neighbor, McAllen, in a caravan of good will which we appreciate very much.

Mexico, with its traditional hospitality, opens its arms today, through Reynosa, window of our country, in order to welcome our neighbors, better said, our friends.

This embassy of friendship, we esteem with all truthfulness because we know that we are being visited by our sister city in the spirit of progress, and in the constant anxiety of cooperation because it serves as an example to other cities to follow the same pattern, to be each day better neighbors and better friends.

We will not be able to offer much during your visit because Reynosa is a young city in progress material, but in spite of our defective neighborhoods, we offer you a sincere heart, always open to benefit mankind; we open our arms because in them fit all men of good will and because we know that your visit will strengthen even more the spiritual and material ties that bind us since a long time ago.

We hope that you will enjoy your visit as much as we will enjoy having you visit us and if we cannot leave a pleasant impression with you as a result of our defective materials noticed by everyone, we do desire with all our hearts that you take the life memory that in Reynosa, you not only have a friend and neighbor, but a city that wants, as well as all North Americans, agreement between men, based upon the solid ground that establishes the successful progress of cities.

Welcome, friends from the valley of Texas; when you return home, we ask that you give our warm regards to all who could not be with us today and also the assurance that while they participate with us in the policy of good neighborhood, they will not find another friend more faithful than Reynosa and Mexico.

The Advantages of Building With Condominium

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. CLEM MILLER. Mr. Speaker, the Associated Home Builders of the Greater East Bay are leading the way in an understanding of what condominium building is, and why it constitutes a step forward in better and cheaper housing under private enterprise for low-income families. I follow here with the speech of Lester Burdett, Jr., vice president of Alcan Pacific Co. at the Western Rental Housing Conference, a truly outstanding contribution to understanding of this new approach to housing:

The condominium law, established by the Romans in the sixth century, B.C., provided for joint sovereignty, or joint ownership, of property.

The law specifically provided for individual ownership of a given part of a communally held structure and land.

Under the condominium plan, housing has been built in Latin America, including Puerto Rico and, particularly, Brazil.

Condominium, however, differs from the cooperative procedure in that dwelling units can be sold, rented, or mortgaged by their owners independently. There is generally a requirement, however, that cotenants be given a priority.

In a cooperative, tenants pay their share of interest and amortization on a single blanket mortgage. In a condominium, there is a separate mortgage for each housing unit.

Before going into specific aspects of condominium, I would like to quote the definition given to these vertical subdivisions by the Congressional Committee which studied the Puerto Rican projects: "Condominium is the individual ownership of single units in a multiunit structure, with common ownership of halls, stairs, elevators, lobbies, driveways, etc. Condominium may be bought, sold, mortgaged, and are taxed separately. Each owner's property is liable only for his own mortgage debt. Another's default does not endanger his interests."

To better illustrate what we are dealing with let me review the three basic types of cooperative.

First. The traditional co-op where the owner purchases stock and is a shareholder in the entire project whether it be a high-rise building or a community of separated houses. Due to his stock interest, he has a corresponding vote in the management. The stock purchase generally entitles the stockholder to a long-term renewable proprietary lease. Hence his only real estate interest is a leasehold.

Second. The tenancy-in-common type of co-op wherein the purchaser by deed gets merely an undivided interest in the whole with the right to occupy a particular unit. For example, if there were 25 apartments, he would get a one-twenty-fifth interest in the whole, including common areas, parking facilities, utilities, etc.

Third. The condominium wherein the purchaser by deed gets a fee title to his unit and a joint ownership of the common areas and the ground underneath.

Mr. Moffett will more clearly define the property descriptions and what is meant by common areas. For our purposes let us consider that the owner has a fee title to his apartment or individual house. Incidentally, the condominium is used extensively in Latin American countries for commercial buildings. While visiting Mexico City recently I had the pleasure of discussing this type of commercial financing with both owners and developers and found enthusiastic approval on both sides.

What are the advantages of a condominium to a developer?

Anyone who has ever tried to put together a stock ownership cooperative in an area where the concept is not too well known will immediately recognize that the condominium is the answer to your prayers. About 18 months ago my company, Alcan Pacific Co., started to organize and plan a stock ownership co-op for senior citizens in Carmel Valley, Calif., known as Hacienda Carmel. There are 300 apartments with extensive community facilities on 40 acres of land. From the very outset I had educational, legal, and financing problems.

Let's look into these and see if the condominium may help to solve them. In the first place, with respect to the educational difficulties—starting with the planning commissions and the citizen's advisory commit-

tees under them—I discovered almost a total ignorance of any of the fundamentals of cooperative ownership. These good citizens were wary and, indeed, a little suspicious. Hence, it required months of explaining and illustrating what we were trying to do. Surprisingly enough, I discovered this same reaction among many lenders. Today, however, much of this education problem has been taken care of by the initiation and construction of a great number of stock ownership co-ops, at least in this northern California area. This program will necessarily inure to the advantage of those considering the condominium since you are offering them something much more attractive, but still the basic concept of community ownership and living.

The legal problems will still exist but perhaps will not be quite as complex since you may not be operating under the jurisdiction of the Corporations Commisisoner and the Security Exchange Commission. You will be selling real estate interests, something we are all accustomed to living with, rather than securities through securities brokers and agents, something we are not accustomed to working with. Incidentally, those of us who have worked with a stock ownership co-op not registered with the SEC and hence limited to offering within the State to bon fide residents, will have the door opened to interstate sales.

Financing: Here is perhaps the greatest advantage in the use of the condominium. Many lenders would not lend on a stock ownership co-op because of the foreclosure problems, i.e., foreclosing on the entire building or project because of the default of one or a small group of owners. The condominium eliminates this problem in that the units are individually owned in fee with an insured title. The lender therefore will be making a series of individual loans and the aforementioned foreclosure problem eliminated.

What are the advantages to the lender?

The advent of the condominium will open the door for lending institutions to a much broader field. Consider a rental apartment of 300 units—one loan perhaps of several million. This is beyond the legal capacity of many lenders. But these same lenders will be able to handle the smaller individual loans directly with the buyer.

What are the advantages to title companies?

Mr. Moffett will consider this matter, but suffice it to say here that the title companies should be happy to have 300 policies on this same apartment where in the past it would amount to only 1.

What are the advantages to the buyer?

In this area the condominium offers virtually the same tax and interest deduction benefits as other types of cooperatives. But your average buyer can understand and appreciate a fee title to his home a lot better and easier than he can a number of shares of stock in a corporation and long-term lease on his home.

To quote Jay McIver in his article in California Builder, November 1960, "Absence of mutual risk spells out the vital difference between the conventional stock corporation co-op, and homeownership in fee. The ever-present danger of default by one or more partners in the stock enterprise deters many buyers from taking the plunge into cooperative ownership. Still remembered vividly are the depression failures of the past. There is also an important psychological principal involved. Basically the stock corporation co-op is a rental concept. Psychologically it does not convey to its prospective shareholders any strong sense of individual homeownership."

What are some of the problems we can anticipate?

You can be sure there will be some difficulty with planning commissions, boards of supervisors, and perhaps with tax assessors. In the case of the latter they will be asked to levy and collect taxes on an apartment individually, rather than on the building. There doesn't appear to be any legal reason why this can't be done, at least in California. But local assessors may hesitate to assume this new concept and added workload without specific affirmative authority from the State legislature.

There may be temporary problems with lenders in some cases until the condominium is better understood and accepted locally and on a national level.

Will there be buyer education needed? Yes, of course, but I believe that by keeping this as simple as possible and not scaring the buyer with a lot of legal phraseology the newness will wear off and the general concept enthusiastically received.

Probably the greatest assist we are going to get in education and financing of the condominium is FHA authorization to insure loans on individual units in a condominium. The legislation has been drafted, hearings have been held on Capitol Hill, and there seems to be positive assurance that before this session of Congress is over FHA will have the necessary authority to insure these loans.

Some of the groups behind the move to obtain FHA insurance of condominium are NAHB, the National Real Estate Board, the State Home Builders Council, the California Real Estate Association, realtor groups and title insurance companies. I might add the names of two individuals to these groups: Mr. Don Stone of Stone & Schulte, and your own treasurer, John H. Tolan, Jr., of Barrett Homes Division of Barrett Construction Co.

This array of talent is actively working to obtain FHA insurance because of its impact on large scale financing of condominium. But what of conventional or private condominium financing? Is there any reason why it can't be done now without waiting for enabling legislation for FHA insurance? I say the answer is "No." If a title company is prepared to insure a fee simple deed on each apartment and a lending institution will make individual mortgage loans to prospective apartment purchasers, I see no obstacle to starting a condominium project now, providing construction money has been arranged.

In closing, I can't emphasize too strongly the need for education of public officials, lenders, title companies and the buying public in the overall condominium concept. A good public presentation on a national basis is mandatory. In this area the HHFA, FHA, and NAHB, and real estate boards can be of immeasurable help.

Anniversary of Israel's Independence

SPEECH
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. SANTANGELO. Mr. Speaker, the people of Israel and all her friends in America and elsewhere are today celebrating the 13th anniversary of Israel's establishment as a free, independent, and democratic State. It was only yesterday, it seems, that we witnessed the historical events associated with the rebirth of Israel to statehood—and now we suddenly realize that 13 years have passed since then.

Whatever trepidation or concern we may have had in this country for the welfare of Israel when it was born 13 years ago in the face of armed aggression by its Arab neighbors, we know today that its survival is firmly rooted in the strength of its ever-growing population and in the unflagging support that Israel is getting from the multitude of friends it has in the United States.

In these 13 years Israel has demonstrated to the world not only its significance to the life of the Jewish people, but it has also provided a shining example of what a determined people can do when the love of freedom, the desire for national rebirth, and the instinct for social justice inspire its aims and its efforts. This Israel accomplished not by the force of arms, but by its advancement in the fields of agriculture, industry, science, education, and other phases of its national activity.

Today Israel enjoys the admiration and good will of many nations and millions of individuals the world over who value Israel's friendship and its achievements. I am particularly pleased that the Government and the people of the United States enjoy the most cordial relations with Israel and are cooperating in many spheres of human endeavor for the welfare of all mankind and the peace of the world. I am pleased to note also that President Kennedy has always shown a positive interest in Israel and that this will lead to greater cooperation between our two countries in the future.

On this great anniversary, I extend my best wishes to the people of Israel, to its capable leaders, and to the Jews of America who have a major share in Israel's success. May we all soon achieve lasting peace in the world, as is prophesied in the Bible.

Are We Ready?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. MICHEL. Mr. Speaker, last Thursday the House of Representatives again amended the Social Security Act; and while 400 Members of the House supported these amendments on a roll-call vote, I was 1 of the 14 Members opposing the bill, not because it did not incorporate some good features but because there were several objectionable ones to which I cannot subscribe.

In the first place, when life expectancy is increasing at the rate it is, I see no good grounds for cutting back or reducing the age of retirement as was done in this bill and wonder how long we can go on increasing taxes before reaching the point of diminishing return. The day of reckoning will come when those who want to promise the electorate an increased benefit every 2 years will have to face up to the facts of life.

Last Friday, April 21, my very good friend, Mr. Robert W. Leu himself a chartered life underwriter, delivered an address on social security to the Peoria Association of Life Underwriters in which he made some very cogent remarks which I believe deserve the serious consideration of not only you, my colleagues, but also the American public in general. Under unanimous consent, Mr. Speaker, I include Mr. Leu's address in its entirety at this point in the RECORD:

TEXT OF AN ADDRESS ON SOCIAL SECURITY TO PEORIA ASSOCIATION OF LIFE UNDERWRITERS

(By Robert W. Leu)

Mr. Chairman, I consider it more of an honor to speak to my own local association than almost any other life insurance group I have addressed, for the Peoria Life Underwriters Association has produced some of the real leaders of the life insurance industry.

In the area of community service, also, we find a number of members of this association providing devoted leadership in a variety of worthwhile causes. This is, in truth, an association of which we can be, and should be, justly proud.

I am here today to ask the serious question "Are we ready?" to see that the social security program of our Federal Government is kept in its proper place in the American way of life.

To say that we have come a long way in 25 years of social security in these United States is perhaps the understatement of the year. We can hardly recognize the rather modest act of 1936 in terms of present day taxes and payments and yet I feel the same basic concepts should apply today as they did 25 years ago.

The social security system was designed in 1936 to pay monthly benefits to people who, because of age, could no longer support themselves by working. These payments were intended to be sufficient to provide the aged people in our society with a "floor of protection" against the hazard of old-age security.

In 1939 payments to survivors of family breadwinners who die prematurely were authorized.

Thus, the basic concept of social security was to assure, through a system of compulsory taxes and payments, a "floor of protection" for retired workers and survivors of family breadwinners.

Let us see what has happened to this basic floor of protection. When I entered the life insurance business 21 years ago the maximum survivor benefit under social security to a widow with 2 children was $65 per month. One of the great tragedies of our generation is that we have allowed inflation to erode the purchasing power of the dollar. Thus, we will have to agree the value of the dollar has depreciated approximately 55 percent since that time. Therefore, if our basic $65 figure is adjusted for inflation we find the figure should now be $144 per month.

But what is the maximum benefit today for a widow and two children? Two hundred and fifty-four dollars per month.

We must stand fast for the principle that social security should only funish a basic floor of protection; with individual, voluntary initiative relied upon to furnish the balance of the financial security.

But now who has arrived on the scene in our Nation's Capital to lead the welfare planners as the new Assistant Secretary of Health, Education, and Welfare? None other than Prof. Wilbur J. Cohen from the University of Michigan, whom you will recall headed President Kennedy's so-called task force on health and security. Even though, as we have seen, benefits are now well above the original floor-of-protection level, Professor Cohen has repeatedly expressed the view since arriving in Washington that social security benefits should be increased another 40 to 50 percent—apart from adjustments that might be needed to offset any future inflation.

Now, my friends, are we ready to face the really big question?

Who pays for these social security benefits? We life insurance men, who represent the soundest financial institution yet created in the free enterprise system, need to remind the American people of one fundamental truth—Government cannot create anything. Let it be remembered that for every benefit paid there must be a tax to pay for that benefit.

It is most unfortunate that most of the discussions in Congress concerning social security relate only to the benefit side of the social security coin. We must insist that our representatives in Washington also examine the other side of the coin—the cost side.

Social security is not a one-way street. Therefore, discussions in Congress should give equal recognition to the heavy burden of tax as well as to benefit payments. The overwhelming majority of the citizens of the United States are not aware that present laws provide for the social security tax rate to rise to 9 percent by 1970. By that year social security tax collections will rise from the present $12 billion level to $21½ billion. We life underwriters need to remind the American people of the heavy social security tax which is already the law of the land.

If you will consult the actuaries at your home offices they will tell you that benefits for new employees, equal to social security benefits as they now stand, can be provided through private plans at a cost lower than the combined employer-employee taxes (9 percent beginning in 1970).

The present decade is often refererd to as the "soaring-sixties," although to date the business world has done very little soaring. By 1970 when Americans feel the full heat of social security taxes I suspect the next decade may well be known as the searing seventies.

I believe we life underwriters have another responsibility in helping our friends and neighbors to understand social security. Simply stated—"social security is not insurance." Over and over in the Halls of Congress the word "insurance" keeps cropping up in speeches and committee hearings on social security.

The truth is social security carries no "rights" to anything except what Congress may, from time to time, grant as benefits. The contributions to social security by both employee and employer are not "insurance premiums," they are a tax, pure and simple.

For the record, the Supreme Court, in a little noted decision on June 20, 1960, ruled finally on this question which has irked some of us insurance men for many years. Social security is not insurance, said the Court. You'll be interested to know that in a brief to the Supreme Court Secretary of Health, Education, and Welfare Flemming said social security "is not a federally administered insurance program." "The contribution exacted," he went on, "is a true tax. It is not comparable to an insurance premium."

Albert C. Adams of Philadelphia, past president of our National Association of Life Underwriters and chairman since 1952 of the association's social security committee, has long been a leader in the fight to insist that the Government stop the improper use of language in referring to the social security program, and he has redoubled his efforts in the light of the Supreme Court's clear decision.

"In the business community," he says, "truth in advertising is enforced to permit the public fairly to make up its collective mind as to the wisdom of patronizing the advertiser."

"In governmental matters, truth in advertising will likewise permit the public fairly to make up its mind as to the wisdom of retaining or expanding, or restricting existing legislation. It is as patently unfair for a governmental agency to expand on the basis of false and misleading advertising as it is for a business competitor to expand on the same sort of misrepresentations" concludes Mr. Adams.

There is no longer any excuse for Senators, Congressmen, or bureaucrats to speak so loosely as to refer to social security as insurance.

Our distinguished Representative in Congress, the Honorable ROBERT MICHEL, said to me just 2 weeks ago that he feels we life insurance men must take the lead in explaining the true picture of social security to the American people.

It seems to me this is an important and a grave responsibility. My fellow life underwriters, "are we ready?"

San Francisco Youth Association Celebrates Its 15th Year

EXTENSION OF REMARKS

OF

HON. JOHN F. SHELLEY

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. SHELLEY. Mr. Speaker, I wish to bring to your attention and to the attention of my fellow colleagues an article that appeared recently in the San Francisco News-Call Bulletin, relative to the 15th anniversary of the San Francisco Youth Association.

I have followed the activities of the San Francisco Youth Association for many years. I am well aware of the civic contributions made by the high school young people as delegates to the youth association, under the untiring guidance of its able executive director, Mr. Tom Rowe.

The San Francisco Youth Association is a citywide youth council, representing 26,000 high school students, with elected delegates from 47 high schools and youth-serving agencies. During its 15-year history the high school young people have carried out worthwhile projects of significance in the field of international understanding, as well as initiating projects for the civic betterment of San Francisco.

Among the projects undertaken in the field of foreign affairs has been a consistent support of the United Nations, the collection of textbooks and seeds for the Philippines, exchange of program materials with youth councils of southern Ceylon, Indonesia, and South Korea, and, active participation in the San Francisco-Osaka sister-city program.

During the past election, the San Francisco Youth Association initiated a project, entitled "Youth in Politics," and assisted in the recruitment of nearly 2,000 high school students who actively participated in the presidential campaign.

The former Presidents discussed in this article exemplifies the leadership potential to be found among the delegates to the San Francisco Youth Association.

But to commend the present delegates and their predecessors alone is to leave the reason for the success story of the San Francisco Youth Association but partly told. At this time, Mr. Speaker, I wish to note the members of the adult advisory council of the San Francisco Youth Association. I believe I may safely say their unselfish work on the council is but a reflection of their individual concern with civic betterment in San Francisco.

The present members are: Mrs. Harriett Alden, Mr. Emil Anderson, Mr. William Becker, Mrs. R. E. Brennan, Mrs. William Brinton, Mrs. Richard S. Cahn (secretary), Judge Melvyn I. Cronin, Mr. E. R. Duncan, Rev. John T. Foudy, Miss Ruth Franklin, Dr. Joseph Hill, Mr. Donald Hofdendahl, Mr. James Kearney, Mr. Daniel E. Koshland (co-chairman), Mrs. Harry Krytzer, Mrs. James Lang, Mrs. Robert Lauter, Miss Mary Lins, Mr. Carl Livingston, Jr., Mrs. Thomas Lynch, Mr. Ray Milton, Dr. James Morena, Mrs. Polly Mosby, Mr. Edgar Osgood, Mrs. Tony Patch, Mr. Melvin Peterson, Mr. Maurice Powers, Rev. James E. Prindeville, Mrs. A. Boyd Puccinelli, Rev. Francis Quinn, Mr. Earl Raab, Mr. Neville Rich, Sr., Robert John L. Roberts, Mr. Robert Simcock, Mrs. Ward Miller Smith, Mr. William Solari, Jr., Mr. Roy Sorenson, Mr. James Wyatt, Mr. Stephen Zellerbach (chairman), and Mr. Herman Zischke (treasurer).

Under leave heretofore granted, I include the following article from the San Francisco News-Call Bulletin:

YOUTH ASSOCIATION WELL REMEMBERED ON 15TH ANNIVERSARY

Ten to fifteen years ago, they were five teenagers—four boys and a girl—and they had one thing in common: Each was a president of the San Francisco Youth Association (SFYA).

Today they are: A minister in Pittsburg, Calif.; an administrative secretary in Geneva, Switzerland; a professor of medieval history at Bryn Mawr College; and two accountants in San Francisco.

And all remember with warmth their experiences in the youth association, which is celebrating its 15th anniversary during the coming week.

"A fine training ground," says the Reverend Richard Roe, the organization's first 1946 president, who is now minister of the Pittsburg Congregational Community Church.

"She mentions it frequently," says Mrs. W. B. Baquie, whose daughter, Sylvia, was 1949 SFYA president.

"Sylvia is in Geneva now, and we've half expected she'd start a similar youth organization over there."

The others—David Herlihy, 1947; John Schultz, 1948, and Robert Lovejoy, 1950—are equally enthusiastic.

"They are," says Tom Rowe, executive director of SYFA, "a fine group, a credit to the organization. There is definite relationship between the association and the caliber of its graduates."

The caliber, as indicated by an anniversary check of the first five presidents, is outstanding.

Reverend Roe, a George Washington High School student during his SFYA days, went on to the University of California and the Pacific School of Religion.

He met his wife, Gerri, while a student. They have three children. Two years ago the pair directed a Palo Alto college group in community work and last year did a similar job in Holland.

Herlihy, the Bryn Mawr professor, is a graduate of St. Ignatius High School who won a scholarship to the University of San Francisco. He earned his master's degree in history at Catholic University, and his doctorate at Yale—also on scholarships.

Widely known as an expert in medieval history, Herlihy has written extensively for historical journals, and spent a year in Italy on a Fulbright fellowship.

That's a fair match for the Guggenheim award his wife, the former Patricia McGahey, has received. She will take her own doctoral degree next month.

Miss Baquie, another George Washington alumnus, is strongly remembered by Rowe for her interest in world affairs during her SFYA days.

It flowered after her graduation from the University of California with a major in international relations. She served 2 years with a vitally important, but secret, Government agency; transferred to the United Nations and went to Geneva, and while in Switzerland became an executive of the Joint Distribution Committee engaged in the resettlement of Jewish refugees.

"Just last week," her mother reports, "Sylvia accepted the position of administrative secretary with an investment company in Geneva."

Schultz, a graduate of Sacred Heart High School, and Lovejoy, a former Mission high student, have had remarkably parallel careers in some respects.

Both were graduated from University of San Francisco, both saw Army service in this country, both are accountants, and both the father of two children.

Schultz, of 105 Forest Side Avenue, is with the Shell Chemical Corp. here, and is active in encouragement of music and the arts.

Lovejoy, of 3900 22d Street, is with Arthur Andersen and Co., has been a strong supporter of boys' clubs and is currently active in Republican county politics.

Basic Aims of the National Farmers Union

EXTENSION OF REMARKS

OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, the Nation's Capital played host to 2,500 Farmers Union members from across the country when the 59th annual meeting of the National Farmers Union was held here March 11–16. During that convention, the farm delegates approved a 1961 policy statement that includes the basic aims of this organization. Under leave to extend my remarks, I would like to include those aims in the RECORD.

FARMERS UNION FOUNDED ON UNDERSTANDING OF GOD AND NATURE

The basic aims of National Farmers Union are founded on our understanding of God and nature. We live close to nature. Our livelihood depends on it and requires its understanding. Observation of nature compels respect for the dignity of the individual human being. We are convinced of the truth and rightness of the Declaration of Independence and the Constitution of the United States, its Bill of Rights and other amendments. We are opposed to the principles and practices of communism, fascism, and all other forms of dictatorship.

A. INHERENT HUMAN RIGHTS

All men are created equal, important in their own right, without distinction, or discrimination.

1. Freedom of expression: Freedom of thought, speech, radio, television, press, the secret ballot, religion, assembly to organize, and to petition the Government for redress of grievances must be expanded.

2. Equality of opportunity: Each person has a right to an equal opportunity to become educated, to choose his own way of living, to earn, spend, save, invest and own property, and to make his working and saving efforts and his property count for the benefit of himself and his family toward the attainment of their aspirations to the extent of his ability to do so without encroaching upon the equal opportunity of others.

3. Adequate standards: No person should be compelled by circumstances beyond his control to fall below an adequate standard of living.

B. THE FAMILY IS BASIC

The family unit of human society should be preserved and strengthened.

C. DEMOCRACY IS ESSENTIAL

It is our abiding determination to preserve and further improve the democratic nature of our governments. We believe in government by law, not by men outside the law. The inherent rights of man can be attained and protected only in a self-determining, self-restrained democracy. Government, the one cooperative endeavor embracing us all, is needed to protect the rights of expression, to insure equality of opportunity and to perform such service as can be performed more efficiently by people as a whole, rather than as individuals, cooperative business activities or other private groups.

1. Equal voice: Democracy should give each person an equal right to take part in making governmental decisions personally and through representatives of his own selection. All the people should have a voice in determining our laws and selecting the leaders of government under which they live. Each person is the best judge of his own best interests.

2. Responsive government: Democratic government is the only form of government through which the people by peaceful means can maintain freedom of expression and equality of opportunity. The checks and balances, the division of governmental powers, are necessary to the preservation of responsive representative government. By such means, we protect the rights of minorities, guard against the development of a totalitarian or despotic elite, and prevent the concentration of economic and political power in a few hands, thereby preserving the opportunity of our people to retain their rights and freedom.

3. Citizenship: We pledge the devotion of our energies and resources toward assuming the full citizenship responsibilities involved in the exercise of our democratic rights.

D. WORLD AFFAIRS AND U.S. FOREIGN POLICY

The foregoing principles have universal application; these are aims which reflect the aspirations of people everywhere. Farmers Union will continue to strive for the earliest possible attainment of a democratic world brotherhood of nations, operated on principles consistent with our Constitution and the Bill of Rights, living at peace with one another in a United Nations that derives its powers directly from the people of the world

and provides the basis and opportunity for constantly increased production and improved living standards. United States should in cooperation with other nations of the free world and within limits of our economic ability assist in expansion and strengthening of the productive capacity and living standards of people of other nations in ways that will help them move toward democratic forms of national government and ultimately a democratic world brotherhood of nations. Abundant U.S. food production can play a great, important and decisive role in the implementation of these policies.

E. EXPANDING ECONOMY OF ABUNDANCE

Continuously expanding national and world economies of ever greater abundance are essential to the improvement and extension of representative democracy and to the ultimate attainment of permanent world peace with justice.

F. THE LAND

The soil, water, forest, and other natural resources of the Nation should be used and conserved in a manner to pass these resources on undiminished to future generations.

G. FAMILY FARMING

Farm families on family farms are an essential balancing force in the social and political structure. They are vital to the stability of representative democratic government, to an efficient and productive economic system, and to a satisfying world society. On the family farm, the business and home are one. The family is owner of capital, borrower of funds and accumulator of savings, manager of home and business and the major source of labor. The child grows up with opportunity for well-rounded knowledge of nature, family, business and life. He learns the meaning of ownership and the security of a home. Grave danger to democratic institutions would result if we allow our entire population, including agriculture and small business, to become divided into separate groups of owners, managers, financiers, and workers.

H. PARITY FARM INCOME

Farm families have the right to earn and receive income from their work, management and property ownership equivalent to that earned and received by people in other walks of life from similar productive work and resources.

I. ENRICHED NEIGHBORHOODS AND COMMUNITIES

Successful rural family living depends upon the existence of strong rural neighborhoods and communities. To build these requires the development in rural areas of adequate cultural centers including: stronger churches and other religious centers; improved local governments; better schools; provisions for local discussion forums for all citizens; rural libraries and art centers and healthful rural recreation centers.

J. COOPERATIVES

Farm cooperatives and other patron-owned forms of private corporate business organizations are a stabilizing factor in our free enterprise society.

Cooperatives also play a uniquely significant role in maintenance and promotion of democratic processes.

We pledge our continued support for such cooperative business organizations in recognition of their important contribution toward the strengthening of the economic position of agriculture and other segments of our economy.

K. FARMERS UNION

Farm people need and have a right to set up and operate their own organizations to provide for themselves informational and educational services, to serve as a channel through which the right to petition government may be exercised and through which farmers can organize, develop and expand needed farmer-owned cooperative business institutions.

In this 60th year of National Farmers Union, each State, county and local union should make a concerted effort to expand and strengthen Farmers Union as the farmers' farm organization.

L. SUMMARY

We seek an agriculture of farm families on family farms, prosperous, efficient, masters of themselves, good stewards of the soil they till, standing on their own feet and seeking nothing of any man or government except a fair and equal chance to use their abilities to the fullest in their own behalf as useful members of a democratic society. We seek a like opportunity in life for our fellow man, both within our own country and in other lands. These aims can best be attained through combined individual and cooperative private action with and under programs of democratic government.

Is This the College for You?

EXTENSION OF REMARKS

OF

HON. GEORGE P. MILLER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mr. GEORGE P. MILLER. Mr. Speaker, in the May issue of Ingenue magazine, there is an article focusing on Mills College. This college is a great educational institution with an outstanding faculty, and a very successful alumnae to attest to the quality of educational opportunities offered.

I am very proud of Mills College and I am pleased to incorporate this article in the RECORD for the interest of my colleagues:

IS THIS THE COLLEGE FOR YOU?

Where would you like to locate? There's a new enthusiasm among students to switch coasts when it comes to choosing a college. This gives them a chance to see and know the country as a whole. It gives each individual a sense of freedom and a pioneer feeling of exploration to be on her own far from home.

This college is close to a colorful, cosmopolitan and friendly city that offers an additional polish to the learning acquired in class. It is an amazing blend of healthy naturalness and genuine sophistication which makes for good development.

It began way back in 1852, as a young ladies' seminary and became one of our earliest women's colleges in 1885, under the guidance of its president, a Williams graduate, and his wife from Mount Holyoke.

What type of college? This women's college believes in stimulating female thinking to the best of its particular abilities and might be for you if you believe in a liberal education as a solid background for living, not particularly a means to a livelihood. It promises intellectual, not economic security, although there is no question that it pays off. With a predominantly masculine faculty, many of whom are noted scholars, musicians, artists, you are exposed to the most valuable sort of teaching. (Pierre Salinger and Dean Rusk, prominent in the Kennedy administration, are former faculty members.)

Do you want a small college? Here, friendliness and informality touches every aspect of college life. In small classes with lots of individual attention, you can feel that you are a growing person. In one of the 5 dormitories with about 120 girls, you easily find your place among groups of friends.

There are no cliques, no barriers to friendships. There are no sororities—no need for them. You get to know the faculty (1 professor to ever 12 students) and the student body, and feel close to all. Current enrollment: 691 undergraduates, 63 graduates. This college states, "Ours is not an education just for information or an education just for skills, but an education for insight, which presupposes both knowledge and skills but is more difficult." Think about this statement. It can be an inspiration.

Have you a talent, a field? Perhaps you're one of those lucky girls with a burning interest in science or an urge to write, dance, paint. Here you'll have a chance to dig deeply into your subject, and to use your knowledge creatively.

If you have no field as yet, the requirements will put you on your academic track. You can't fail to find your special subject by the time you have sampled the necessary courses—English, a foreign language, a fine arts course, a natural science, a course in the humanities and physical education. You'll find your way.

WHAT ABOUT DATES, FUN, SOCIAL LIFE

This small college is surrounded by nearby large universities and men's colleges. There are many introductory mixers, proms, play productions and such. There are coffee, library and dinner dates. There are events at the other colleges, and there are the endless possibilities for fun in a nearby city—everything from a cable car ride to an opening night at the opera.

Extra-curricular activities include tennis, riding, golf, swimming or skiing at the college's own chalet-type lodge in the High Sierras. You can join campus clubs with specialized sports, social and intellectual interests, work on the paper or participate in student government work. This is one of those rare instances where the government actually is of, by and for the student body.

DOES A BEAUTIFUL CAMPUS APPEAL?

This campus is a dream—136 acres, handsomely wooded, wonderfully landscaped. White buildings, many of Spanish stucco with red tile roofs, suit the setting to perfection. Paths are banked with "lush" shrubs and trees. Year round, it is a place of beauty in a moderate climate with brilliant skies and "winey" air.

WHAT ABOUT CLOTHES?

Simple. Cotton skirts and blouses by day in the warm weather of fall and spring; cardigans or jackets early or late in the day. Skirts and sweaters for day in cooler months. Slacks or shorts are worn in some labs and on picnics. A raincoat is a must. You should have dark, not too high heels for the city. (It's really hilly). You'll also want a hat for city and chapel wear. You'll need wool dresses for informal dates and Wednesday dinners, a short formal, and cocktail-type dresses for dances, fraternity parties and such. Oh yes, you'll need a white dress to celebrate Founder's Day, and other traditional events. Clue: Gals in this section of the country wear thin angora socks to match sweaters and roll them to the ankles above white bucks. Sloppiness is out. This in contrast to easterners who wear heavy white socks with their sneakers.

AND MONEY?

Since this is a small independent college for women, you may expect that expenses will not be small as in some State-supported universities. But there are many available scholarships worth investigating. The average basic resident student fees per year total $2,300. Students say that an allowance of $25 to $50 per month is usual.

"CAMPUSLANG"

"Bent twig"—a student with an alumna relative; "Hey Day"—a big campus cleanup day followed by picnic and stunts; "Zippers"—those old hands who introduce new students to college life; "Cap Hunt"—when sophomores try to find hidden freshman caps; "Midwinter Formal"—in a city ballroom or country club; "Spring Weekend"—the biggest social event of the year; "Pearl M"—the pearl set pin worn by seniors and graduates; "the Oval"—an open, tree-lined lawn.

Approves President Kennedy's Actions

EXTENSION OF REMARKS
OF
HON. BYRON G. ROGERS
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. ROGERS of Colorado. Mr. Speaker, I ask unanimous consent to have inserted in the Appendix of the RECORD a telegram sent by James G. Patton, president, National Farmers Union to President Kennedy, which is as follows:

APRIL 21, 1961.

THE PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: In behalf of the 750,000 Americans who belong to National Farmers Union I wish to thank you and congratulate you on speaking out as firmly as you did regarding the Cuban crisis. Your address before the American Society of Newspaper Editors is indeed a historic statement. You deserve the overwhelming support of the American people in this matter.

We fully appreciate your call for a sense of urgency. As you very well said, "The message of Cuba, of Laos, of the rising din of Communist voices in Asia and Latin America—these messages are all the same." As president of National Farmers Union I have seen this same message in many parts of the world where I have been. We wholeheartedly support you and will live daringly up to the challenge you have issued. We must move in every possible direction to halt and roll back the tide of worldwide totalitarian communism.

We, of course, agree that America must have a powerful shield of armament but this struggle will not be won with nuclear weapons, rockets and tanks. The struggle is going to be won, and I believe the free nations of the world will win it, in the rice paddies, the wheat fields, and in the hearts and minds of men.

The Cuban crisis should reassure you and all of us that we have been right in calling for all-out use of food for peace. We have been right for years in urging that everything possible be done to raise the standard of living and the hopes of the landless and starving people of the world. We are right in putting into action the Peace Corps, a reciprocal Peace Corps, a daring approach to land reform and all of the other economic and social devices which the majority of the people in the world who are underprivileged are seeking. We must, as you have very properly urged, move rapidly here at home to eliminate poverty, unemployment, and take those steps which will put into full production our human, industrial and natural resources so that America can adequately fulfill the role of leadership in leading the non-Communist world to victory over totalitarianism in Communist or in whatever form it may appear anywhere in the world.

You, Mr. President, are indeed a great leader in the most challenging period of mankind's history and we pledge to you our continuing, all-out effort, our support and loyalty in the titanic struggle for freedom and peace which you are waging.

Respectfully,

JAMES G. PATTON,
President, National Farmers Union.

In the Service of Communism

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. DORN. Mr. Speaker, the following bulletin should be of interest to every Member of this Congress:

IN THE SERVICE OF COMMUNISM

(The task of the people's army in the Soviet occupied zone—General Hoffmann the military confidant of Ulbricht)

We have been informed by sources in Berlin that the fifth anniversary of the national people's army was celebrated in the garrison towns of the Soviet occupied zone with parades, conferring of decorations and addresses, in which the soldiers were exhorted to "show their love for the workers' and peasants' power, as well as discipline and self-sacrifice, and at the same time to hate the enemies of the German people." By the "enemies of the German people"—and this was obvious from all the speeches that were made on this occasion—the Federal Republic was, in the first place, meant. Thus, the Minister of Defense Hoffmann, who was recently promoted to the rank of general, declared at a festive assembly held in the Friedrichstadt Palace in East Berlin: "In Europe the chief danger for the peace and security of the peoples emanates from the West German militarists. Obstinate and incorrigible as they are, Straub and Heusinger and their militarist fascist scum are constantly crying for revenge for the lost World War II."

Hoffmann talked about the "diabolical tradition of German militarism, which is being trained for a new aggression" and then stressed that the "national people's army" on the other hand, "personifies the good military traditions of the German people." In his order of the day, Hoffmann appealed to the people's army to continue "to fight for a constant readiness of action," and added that the troop units in 1960 "reached a new stage in their development."

It can be seen from Hoffmann's statements that the national people's army in his opinion has by no means reached the highest stage of perfection aimed at by the leaders of the SED Party; for there are still constant complaints about lack of discipline and political indifference on the part of the rank and file, whilst as far as the officers' corps is concerned, the leaders of the SED are to a certain extent afraid lest it might develop its position of power to a state within the state. In the meantime, the former officers of Hitler's army, who, after being retrained in the Antifa camps or in the National Committee of Free Germany, were taken over by the Soviet Zone army and in some cases were given key positions (as for instance the Generals Vinzenz Müller and Arno von Lenski), have been excluded again and to a large extent replaced by trustworthy old Communist and barricade fighters or veterans who have fought in Spain.

A striking representative of this new type of officer is the present Minister of Defense and Army General Hoffmann. By trade a mechanic, Hoffman, who is now 50 years old, has been an active member of the Communist Party since 1926; in 1935 he emigrated to the Soviet Union, where he became a Soviet subject and attended the Frunse Academy in Moscow; as political commissar of the 11th International Brigade he took part in the Spanish Civil War; he returned to Moscow in 1939, attended the comintern school there until 1943 and continued his military training. After the war Hoffmann was for a short time Ulbricht's personal assistant and was subsequently entrusted with the task of building up the Soviet Zone army, which was at first camouflaged under various names. In this capacity Hoffmann was the permanent representative of Zaisser in the state security service and in the chief administration of the people's police. In 1950 he was appointed inspector-general and head of the Chief Administration for Training, to which at that time the military units of the people's police belonged. In 1952 Hoffmann was promoted to lieutenant general of the garrisoned people's police, and at the beginning of 1956, when the national people's army was officially founded, he became commander in chief of the army and representative of the German Democratic Republic on the staff of the high command of the Warsaw Pact states. In July 1960 he was appointed Minister of National Defense of the German Democratic Republic as successor to Stroph, and on the recent occasion of the fifth anniversary of the national people's army he was promoted from lieutenant colonel to army general.

These personal data suffice to show that Hoffmann is obviously regarded by the Soviets and the SED chief, Ulbricht, as the surest guarantee that the tasks assigned to the Communist civil war army in divided Germany by the top political authorities will be carried out consistently. It was in this connection that the complete militarization of central Germany, in which the paramilitary units and various police organizations must also be included, was effected. Hence Hoffmann recently designated the units of the people's police, border police, and auxiliary police as the "other armed units in addition to the National People's Army." In the event of military attack on the Socialist camp, Hoffmann set the army the task of helping the working class and all peace-loving forces of West Germany to rid themselves of the rule of German militarism and of bringing about the victory of the policy of peace by setting up a truly democratic order in the west zones, too.

Very significantly Hoffmann added:

"Situations might arise in which the German Democratic Republic is forced to intervene in West Germany in order to insure that international treaties and the Potsdam agreement are observed."

Another important aim is the fostering of hatred against the Federal Republic which is systematically bred in the garrisons in the Soviet occupied zone. The official directives for the National People's Army, for instance, state:

"Every soldier of the German Democratic Republic must consciously fight for the workers' and peasants' power. He must know and hate his opponent and must be fully convinced that his own side will be victorious."

Again and again, Hoffmann stresses the inseparable ties between the army of the Soviet occupied zone and that of the Soviet

Union; at the beginning of the Korean war, for instance, he impressed on officers of the Soviet zone forces, which in those days were still camouflaged as garrisoned people's police, "We are not police but soldiers. When the time for action comes, we shall fight side by side with the Red army."

In connection with psychological military training and discipline, Hoffmann, strictly according to Lenin's doctrine, distinguishes between just and unjust wars, and, of course, it goes without saying that only the Communist East can conduct just wars, whereas the capitalistic West on principle only starts unjust wars. Hoffmann also stresses, "We Socialists do not oppose war in principle," and threaten to make short work of the pacifists if they should get active in the Communist sphere of influence. In order to increase the love of soldiering in the Soviet occupied zone, Hoffmann has since 1960 been voicing the theory that "Bonn is planning an atomic war against the German Democratic Republic," and bases his insistence on the necessity for the utmost military efforts on this theory. He is determined above all to foster hatred against the Federal Republic in order to create the preconditions for a state similar to civil war. The aim of these efforts is obvious, and Hoffmann, a Soviet subject, would be the last person to have any misgivings about carrying out the orders of his master.

The Need for a Federal Recreation Service

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mrs. GRIFFITHS. Mr. Speaker, the Federal Government has no single agency, bureau, office, division, or department which has as its primary responsibility the promotion and development of recreation opportunities for the people of our Nation.

Recreation services can be found in the Armed Forces, hospitals, industry, parks, private and voluntary agencies, public recreation, recreation education, religious organizations, rural, State, and other services and settings. Yet there is no one place in the United States where the combined progress of recreation can be focused, related, and used on a two-way street.

There are many, many recreational needs which are not being met today. The larger city needs research assistance on land standards, types of recreation structures, programing, financing, general administration, in the same way that the smaller community does—perhaps even to a greater degree. Master planning, personnel problems, program development, and land acquisition face the urban metropolitan region and the small communities. Every type of recreation service in every setting needs a central agency which can gather and disseminate information.

My bill H.R. 216 would establish a Federal Recreation Service in the Department of Health, Education, and Welfare. I believe that such a service belongs in a Department that is mainly concerned with human needs and the general welfare of the people.

The use of recreation as a positive and preventive force in our time and the time to come depends on the passage of this legislation. Misuse or abuse of recreation is a problem of paramount importance today.

The Federal Recreation Service, created by this bill would provide an agency which would offer communities and organizations ready advice. It would be able to offer technical data for the improvement of existing and proposed recreation services in communities and agencies. The purpose of the bill can easily be carried out within the framework of the Department of Health, Education, and Welfare with relatively little expense.

The benefits derived from the establishment of such a service would be great for and with the many public and private agencies striving to improve recreation programs, leadership, and facilities throughout our Nation.

How To Fight Communism

EXTENSION OF REMARKS
OF
HON. F. BRADFORD MORSE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 11, 1961

Mr. MORSE. Mr. Speaker, one of the outstanding newspapers in the Fifth District of Massachusetts, the Woburn Times, has once again contributed a thoughtful editorial well worthy of the attention of the Congress. Under leave to extend my remarks, I now insert it in the RECORD:

HOW TO FIGHT COMMUNISM

Communism is for us a life or death challenge.

The fight against communism is not against bearded bomb tossers.

The fundamental point that we must all remember is that communism is both a movement of social protest and a conspiracy dedicated to world conquest.

Its social protest appeals to the victims of capitalist oppression and colonial exploitation. The oppression and exploitation are hard facts to millions who live in poverty and without education after their own sweat and their ancestors' toil enriched men who knew how to corner them and make them virtual slaves.

All the Communists can offer is promises, but the promises look good for they offer a better and happier life in a society dedicated to equality and justice.

The Communist conspiracy is a double threat of direct or military aggression, and the threat of subversion, or indirect aggression.

The intelligent attack on communism must be based on valid social doctrine and exposing and checking the Communist conspiratorial drive to power.

Russia poses itself to the underdeveloped nations as a great industrial power where all citizens are equal.

These things are enough for oppressed people. For if they can develop industry they will no longer be hungry or poorly clothed. If they get equality, they will have a freedom they have never before enjoyed.

While some Americans are satisfied that the former colonial peoples will have to develop through communism before they liberate themselves into what we know as Western Democracy, it is obvious to others that unless we observe strictly the tenets of social justice in dealing with these people, we are going to get nowhere with them.

As for the conspiracy toward world conquest, we must try to infiltrate every nation with our concepts of freedom, stirring up people to accept self-determination, blasting on our loudest loudspeaker whenever the Communists make a move.

As for segregation in this country, our greatest liability at the moment in our fight against communism, we have played the great American Symphony too long on just the white keys. Let's start using the black keys, too, and get some real melody and lilt in the tune.

The Constitution and What It Means

EXTENSION OF REMARKS
OF
HON. WAYNE L. HAYS
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. HAYS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an outstanding essay entitled "The Constitution and What It Means," by Robert French of Bellaire, Ohio. Robert, a ninth-grade student, was one of the winners in the essay contest sponscored by the American Legion of Ohio. His essay follows:

THE CONSTITUTION AND WHAT IT MEANS
(By Robert French)

The Constitution of the United States is a frame of our Government and the basis of all laws of the United States. It defines our rights and freedoms, and guarantees that other laws will not infringe upon these rights and freedoms. This Constitution is the supreme law of the United States.

The very existence of the U.S. Government is based on the Constitution. It outlines the plan of the U.S. Government, dividing it into three main branches: the legislative, the executive, and the judicial departments. The Constitution definitely outlines the organization and duties of each of these three departments which are organized in such a manner that each checks the other two. The Constitution makes provisions for new States to enter the Union and for foreign-born people to become citizens, thereby making the U.S. Government a democratic one. Thus, one might say that the Constitution is the frame of the U.S. Government.

The Constitution definitely states the powers of the government. It tells what the U.S. Government and the governments of the individual States may and may not do.

The 10th amendment states that the source of the powers not given to the Federal Government by the Constitution, and not prohibited to the State governments, rests in the citizens of the United States, who vote to select their representatives in the various branches of the Government. These elected representatives of the people of the United States have the power to pass laws in accordance with the Constitution; but the Constitution, itself, is the supreme law of the land.

The Constitution tells us our basic rights and freedoms in its main text, while some

of the amendments to the Constitution clarify and guarantee these rights and freedoms. Therefore, the Constitution is the declaration of rights and freedoms of Americans.

To me, a freshman in an Ohio high school, the Constitution is a great document which defines and outlines the Government of the United States, states my rights, and secures my freedoms. It provides a democratic plan as a foundation for our Government. It is something that I have inherited, a treasured gift from my ancestors. Thus, the Constitution, to me, is a symbol of our democracy.

The Constitution, in a broader concept, is more than a plan of our Government, a declaration of our rights, the supreme law of the land, or a symbol of our democracy. It is a great document giving us, the people of the United States, the responsibilities of justly governing ourselves and our fellow Americans. But not all Americans realize what the Constitution really implies and the importance of the obligations it imposes. The Constitution implies individual equality of opportunity; but not all Americans know equality of opportunities. To me this equality is a fact; to other people it is merely a dream, a symbol of hope. It is the obligation of the youth of America to make their dream a reality.

This is what the Constitution means.

B–70 Program

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, in these days of space age spectaculars, our scientists and engineers have considered that one of the areas in which the United States may well acquire a first is that of the supersonic airliner. But now, in the proposed cutback of the B–70 program, not only is our national security imperiled but also the timetable for America's first operational supersonic, commercial transport—which will grow out of the B–70 technology—is thereby moved back indefinitely.

In regard to national security, we could be assured that if our Armed Forces in certain situations might need a troop carrier able to travel 3,500 to 4,000 nautical miles in a couple of hours, the supersonic transport could supply this capability. The B–70, as a long-range bomber, could reach almost any point on earth and return at mach 3 speed. Supersonic airframe and engine technology, adapted to commercial air transport development, could uphold America's position as world leader in commercial aviation, could prove a boon to American industry, and could bring advances in science and technology that would pay off in economic growth and industrial progress.

The economic implications of a supersonic airliner are imposing. Today, fully 85 percent of the more than 5,000 airliners operated in the West are U.S. made. Exports of all types of aeronautical products have been running at an annual rate of $500 million. This is 12 percent of the total of all exported manufactured goods.

The economic lift to be gained from a supersonic airliner program would be considerable from a purely domestic standpoint. The aviation industry has the highest employment of any industry in the Nation. But the employment trend has been sharply down of late. Thus, manufacture of a major new product would be exceedingly helpful.

Almost a year ago, the Committee on Science and Astronautics of which I am chairman, held hearings on the status of the supersonic air transport program. As a result, the committee recommended that on the basis of national security and because of its close relationship to the commercial possibilities of supersonic travel, the complete B–70 development should be carried out.

The B–70 has been designed to compress time and distance far beyond anything of its type yet built, and I believe the research and development phase has progressed sufficiently so that added funds should go into a speedup of the program—not a cutback to the prototype phase. The development of new weapons systems requires such a long lead time that if we delay further, we may find that we have lost out to other nations. I believe in this instance we would be justified to take a calculated risk to push the B–70 program. I am among the first to recognize that these risks are expensive and money can we wasted. But when the security of our country is involved, when the program would not only have great military significance but infinite commercial possibilities as well, I feel it is necessary to take those risks and proceed with the development of this program with a sense of urgency.

A few weeks ago, the New York Times quoted Mr. Najeeb A. Halaby, new head of the Federal Aviation Agency, as saying in an address delivered to the Society of Automotive Engineers that there were "at least four cogent reasons for pushing the [supersonic airliner] project."

First, he said, it was important for the advancement of the technology of manned flight.

His second reason had to do with national security.

Third, he said, the Nation's prestige is involved. He warned that the United States was in danger of losing its traditional lead in aviation.

Mr. Halaby's fourth reason was economic. He said a fleet of supersonic planes would add to the Gross National Product by creating more jobs, by saving the time of executives, and by moving goods more quickly.

The B–70 and its sister, the commercial supersonic airliner, are too important to our national interest to be held back by insufficient funding.

The Knights of Columbus—The Good Right Arm of the Roman Catholic Church

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. SANTANGELO. Mr. Speaker, during the Easter recess public officials are frequently invited to communion mass and breakfast. It was my pleasure on March 19, 1961, to attend the communion mass and breakfast of St. Luke's Council No. 438, Knights of Columbus, at St. Rita's Auditorium, Bronx, New York, N.Y. One of the principal speakers was James E. Foley, chairman of the New York Chapter, Knights of Columbus. His address was so inspiring that I believe that it merits a wider audience than the several hundred attendants. In his talk, Mr. Foley set forth the conditions which gave rise to the need of a Catholic lay society that today numbers over 1,300,000 in over 4,500 councils throughout 62 jurisdictions of the world. Mr. Foley detailed the development of the organization and its accomplishments. His speech follows:

ADDRESS BY JAMES E. FOLEY, CHAIRMAN OF NEW YORK CHAPTER, KNIGHTS OF COLUMBUS, AT THE ANNUAL CORPORATE COMMUNION MASS AND BREAKFAST OF ST. LUKE'S COUNCIL NO. 438, KNIGHTS OF COLUMBUS, AT ST. RITA'S AUDITORIUM, BRONX, NEW YORK, N.Y., MARCH 19, 1961

Mr. Toastmaster, William O'Malley; Rt. Rev. Msgr. P. F. Mackin; Rev. William P. Burke; Worthy Grand Knight Antony B. Caramele; distinguished guest of the morning, Maurice Fitzgerald; Hon. Alfred E. Santangelo; distinguished guests on the dais; officers and members of St. Luke's Council, its Columbiette unit, its Columbian squires; my brother knights and friends, at the outset may I extend my personal gratitude to the chairman and his committee for having extended to me the courtesy of participating in this, your outstanding Columbian activity of the year. At the same time may I, on behalf of the remaining 40 councils comprising the New York chapter jurisdiction, note the combined appreciation of our entire membership to the splendid cooperation that has been extended to the chapter officers by St. Luke's Council. Particular emphasis should be made of the accomplishments of your Worthy Grand Knight Anthony B. Caramele for his outstanding efforts as chairman of the chapter speaker's course. Under his wise and able administration, the speaker's course this year enrolled the greatest number of participants since its inception in 1918.

I am particularly pleased this morning to join with you in testimonializing Maurice Fitzgerald for his many years of unselfish devotion to the workings of this council. Certainly, Brother Fitzgerald is an example of the efforts that have been expended by those who have been members of our order for a longer period of time than we of the new generation, and who have through their concerted actions designed the foundation upon which this very tremendous Catholic

fraternal order has been developed. It is the hope of all of us that the Divine Lord will grant to Brother Fitzgerald many additional years of health that he may assist in guiding the course of our development to a greater future.

March 29 of this year will mark the 79th anniversary of the birth and origin of the Knights of Columbus. Indeed, as Father Michael J. McGivney and a small group of some 14 laymen gathered together at St. Mary's Parish in New Haven, Conn., at the institution of Bishop Lawrence S. McMahon of Hartford, Conn., little did they realize that at that time they were giving rise to a Catholic lay society that, today, numbers over 1,300,000 in over 4,500 councils throughout 62 jurisdictions of the world.

The original purpose in the formation of the Knights of Columbus was to provide a fraternal benefits society, to the Catholics of those days, which might in some measure assist them and the members of their families when sickness and other hardships struck the breadwinner of the family. Thus, it was that we sought a Catholic fraternal organization that was cosmopolitan in membership, American in nature, and Catholic in character, and that would give to Catholic men a conduit toward economic advantages.

That our society has satisfactorily achieved this purpose can be attested to by its many accomplishments of the past. The record is monumental and inspiring: In 1914 an endowment fund of $500,000 at the Catholic University of America was established; during World War I the K. of C. hut and the K. of C. slogan "Everyone Welcome—Everything Free" were famous throughout the fighting area, and gave rise to the idea of the USO in World War II; in 1924 the order contributed the funds necessary to combat the so-called Oregon School Law through the Supreme Court of the United States, which statute would have outlawed parochial education; in 1947 our Catholic advertisement program was instituted which has since drawn 4 million inquiries and has enlisted over 400,000 in our correspondence course of religious instruction; the order has microfilmed the Vatican library which is available to scholars and study groups at St. Louis University; and finally, through your generosity, the Campanile of the National Shrine of the Immaculate Conception, known as the Knight's Tower and which stands some 316 feet in height, second only to St. Mark's in Venice, was constructed. These are but a few of our contributions to the moral, educational, and social background of our country and our church.

However, due to the changing nature of our times, and due likewise to the tremendous development that has been made in workmen's compensation, disability, and hospitalization insurance plans, the initial design for which we were incorporated has slowly and surely given way to a new purpose to which we must all, today, dedicate the spirit and direction of our lives.

This new direction is in the field of Catholic action. Throughout the last presidential election, much mention was made of the fact that the Communists were now only 90 miles from the shores of the United States. I assure you, my brother Knights, if it were not for the worldwide efforts of the Catholic Church in opposing this atheistic philosophy of communism, that distance might be much shorter. On many an occasion, our heirarchy has extended to us the flattering characterization as "the Strong Right Arm of the Catholic Church." This, we inherit from those of our brothers who preceded us in this order and who have made the way for us today.

Yes, we have inherited a tremendously vital Catholic fraternal organization. We have inherited a rich heritage and a fruitful organization, but with this we have likewise inherited the responsibilities and the obligations that are coincident with the honors of the order. To these, we must revitalize the efforts and the spirits of our lives. Much was likewise said in the recent presidential election of a decline in the prestige of the United States abroad. I say to you that over the period of the past several years, there has been in some localities and I will emphasize that of our own, a decline in the prestige of the Knights of Columbus. Its cause can be laid primarily to the apathy and complacency of our membership, and to Catholics in general, in participating or letting themselves be heard on any measure which affects their social and public welfare.

Should we not reinvigorate our philosophy; should we not develop a greater spirit of public-mindedness; should we not as Catholics and as members of this wonderful order participate and cooperate thoroughly in the functions of the supreme council, of the New York State Council of the Knights of Columbus, and the New York Chapter Knights of Columbus? Should we not reappraise our attitude, then I say to you that each of our councils would be nothing more than local social organizations which would act to deteriorate the foundation of our society.

So, brothers, let's take that which has been given to us from the past and, using it as the basis for future development and construction of a greater edifice of the future, let us combine our talents so that 10 or 15 years hence, as we refer to the Knights of Columbus we will not be reciting the vicarious developments of our brother knights, but rather that each of us will be able to take pride in pointing to what he has done to develop this new structure of the future. Let us take recognition of the zeal of others outside our religion in effectuating legislation designed to assist in the propagating of their beliefs.

Your Congressman SANTANGELO has presented to you this morning a synopsis of President Kennedy's Federal aid to education program. In this program, no mention is made of financial assistance to private or parochial schools. I urge that you follow your Congressman's advice and write to your Federal Representatives advising them that, while you are not opposed to Federal aid to education, you would be opposed to it in any form where financial assistance to private or parochial schools is omitted. This is but one of the many instances in which you as an active member of the Catholic lay apostolate can assist your community, your church, and yourself by concerted action. Many others can be mentioned to you but time does not permit.

So, on this happy occasion, if we are to leave with but one thought in mind, let that thought be that we will devote and develop ourselves to instituting and implementing our own individuality in the Catholic lay apostolate through the Knights of Columbus so that the wonderful image of the past will become a greater reflection of the future.

The State Starves the Workers

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. DORN. Mr. Speaker, the following statement is attributed to Plato:

Democracy does not contain any force which will check the constant tendency to put more and more on the public payroll. The state is like a hive of bees in which the drones display, multiply, and starve the workers so the idlers will consume the food and the workers will perish.

Resolution Favoring Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. AUGUST E. JOHANSEN
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. JOHANSEN. Mr. Speaker, under leave to extend my remarks, I include the following letter from Mr. Harvey Wood, superintendent of the Dimondale Area Schools, in my district:

DIMONDALE AREA SCHOOLS,
Dimondale, Mich., April 14, 1961.

Hon. AUGUST E. JOHANSEN,
U.S. House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN JOHANSEN: It has come to our attention through the Legislative Bureau of the Michigan Education Association that a Michigan school board recently had its resolution opposing Federal aid to education read into the CONGRESSIONAL RECORD. We believe that this action may have given some Members of Congress the mistaken impression that this board was speaking for all or a majority of Michigan school boards. Since we do not subscribe to this point of view, nor do we believe it to be representative of the thinking of the majority of boards of education in this State, we are requesting that you introduce the following resolution of our board of education into the CONGRESSIONAL RECORD.

"Mover by Fay, seconded by Baird, that the board of education of the Dimondale area schools, recognizing the need for increased support for education through Federal participation if our national objectives are to be attained, hereby endorses the concept of Federal aid to education. Carried."

The above motion was adopted at the regular meeting of April 10, 1961, and is on record in the official minutes of that meeting.

For the board of education:

HARVEY WOOD,
Superintendent.

I am, of course, happy to comply with the request of the board of education and Mr. Wood that the resolution of the board be placed in the CONGRESSIONAL RECORD.

I unqualifiedly endorse and support the constitutional right of citizens or of any duly constituted governmental body to present its petitions and views to the Congress of the United States, including those instances, of which this is one, in which the views do not coincide with my own.

In response to a telephone inquiry to Mr. Wood, I am advised that the vote of the school board on this particular resolution was 4 to 3 in favor. I conclude therefrom that the sentiment of the board, either with regard to Federal aid to education or with regard to the board going on record in this manner, was something less than unanimous.

I believe one further comment is in order with respect to the statement made by Mr. Wood to the effect that introduction in the RECORD of a resolu-

tion opposing Federal aid to education on behalf of another Michigan school board "may have given some Members of Congress the mistaken impression that this board was speaking for all or a majority of Michgan school boards."

While I do not happen to have read this earlier extension in the RECORD, I am sure that no Member of this House is so naive as to believe that any single school board speaks for, or presumes to speak for, all or a majority of Michigan school boards.

I certainly do not presume to know what the thinking of the majority of boards of education in Michigan is on the issue, although Mr. Wood evidently believes that a majority of the boards of education of the State are not opposed to Federal aid to education. I notice that he cites no basis for his conclusion.

I made the point of inquiring of Mr. Wood as to whether the Dimondale board's action was unanimous, because I believe this is highly relevant to the whole matter.

I wish that on issues of this type, where there is a sharp cleavage of honest opinion, the practice of submitting minority views, which is an established procedure of the committees of this House, might also be followed by other governmental bodies. I believe it would contribute a great deal to the airing of opposing views at the grassroots.

I note with particular interest the obvious eagle-eye alertness of the legislative bureau of the Michigan Education Association in this matter. Of course, I do not deny the right of that organization to exhibit this type of interest and alertness.

At the same time I do not hesitate, in the face of either the Michigan Education Association activities, or the 4-to-3 vote of the Dimondale board of education, to reaffirm my own unqualified and vigorous opposition to the concept of Federal aid to education in general and to the specific program of Federal aid recommended by the present administration.

Msgr. George N. Habig

EXTENSION OF REMARKS
OF
HON. FRANK T. BOW
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. BOW. Mr. Speaker, the people of Canton, Ohio, suffered a severe loss last week with the passing of Msgr. George N. Habig, pastor of St. Peter's Catholic Church for the past 30 years. I am among the many who feel a deep sense of personal loss. Under leave to extend my remarks, I include an editorial tribute from the Canton Repository:

MSGR. GEORGE N. HABIG

There was a community opinion of Msgr. George N. Habig that had been held for years and was as well known to him as it was to all the rest of us who loved and respected him—that no pastor could have served his parish, his city, and his metropolitan area with more distinction and compassion.

Monsignor Habig was full of learning, honors in the Roman Catholic Church, and Christian devotion. But the quality that shone from him in more than 30 years here as pastor of St. Peter's Catholic Church was serene kindliness. He was the prototype of everything a religious preceptor should be. He was his own best living example of the benison of faith.

At the age of 70, it cannot be said that any man is being taken prematurely from his work. Monsignor Habig had done all his duties well. But his presence in Canton will be sorely missed. It will be a long generation before we shall see St. Peter's Church without thinking of the good pastor who guided it from 1930 until his death.

Associated Students, University of California, Berkeley, Calif., Executive Committee Endorses Peace Corps as Great Step Forward in America's Concept

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I call to your attention, and the attention of my other distinguished colleagues, a letter to me, dated April 4, 1961, from the president of the Associated Students, University of California, Berkeley, Calif., Mr. George H. Link, which enclosed a copy of a resolution adopted by the executive committee of the Associated Students at the university in full support of the Peace Corps:

ASSOCIATED STUDENTS,
UNIVERSITY OF CALIFORNIA,
Berkeley, Calif., April 4, 1961.

DEAR SIR: Please find enclosed a copy of a resolution adopted by the executive committee of the Associated Students of the University of California at Berkeley at its meeting of March 7, 1961. We hope that you will consider the position of the representative body of the students of the University of California.

Thank you very much for your consideration.

Sincerely yours,
GEORGE H. LINK,
President.

PEACE CORPS

Whereas the long proposed Point Four Youth Corps or Peace Corps is fast developing into a real institution under the Kennedy administration; and

Whereas such a Peace Corps would recruit young people to serve in technical capacities in developing countries, thus fulfilling the following objectives: (1) Oversea training to qualified persons who would otherwise be lost to international service, (2) skilled manpower for countries urgently in need of it, (3) development of a large-scale offensive by Americans to demonstrate our interest in and dependence upon the good will of "third area" countries; and

Whereas the present plan of organizing the corps to utilize both governmental and private agencies will enable it to draw upon private financial resources, to engage the service of skilled personnel existing in the private sector who might be unwilling to sever these ties, might be instrumental in preventing the problem of the corps being reacted to negatively as U.S. Government intervention, and will at the same time provide the central governmental coordination and financial subsidy necessary to make the corps effective on a large scale; and

Whereas the present plan of initiating the corps on a pilot basis will make it possible to find solutions to many of the essential questions which can only be solved in the field in the course of corps work, thus insuring the success of the corps when it is ultimately launched on a full-scale basis: Be it therefore

Resolved, That we, the undersigned 15 voting members of the executive committee of the Associated Students of the University of California, speaking as individuals and not claiming to represent the university or the student body as a whole, view the Peace Corps as a great step forward in America's concept of national defense and international relations and heartily endorse its creation as ordered by President Kennedy on March 1, 1961.

However, whereas the problem of draft exemption remains to be resolved; and

Whereas many graduating students who would be excellent Peace Corps material will feel that 3 years of service in an underdeveloped country would be time well spent, but would be unwilling to return from this service still liable to 2 years of active military service with the normal military reserve obligation still to follow; and

Whereas many students, especially those in fields requiring extended education, such as medicine, law, education, and engineering who would be particularly valuable to the corps, might be prohibited from participating due to the extended absence from a wage-earning capacity which the additional military obligations would impose; and

Whereas for maximum effectiveness, the method of selection, the training, and the service of corps participants must necessarily be of such a nature both quantitatively and qualitatively that it would be inherently protected from draft dodgers: Therefore be it further

Resolved, That we urge special consideration of a plan to exempt Peace Corps members who faithfully complete their tour of duty from peacetime active military service.

Ayes: Messrs. George H. Link, president; Don Alves, first vice president; Edward Germain, lower division representative; Roger Kauffman, men's representative; Dr. Armin Rappaport, faculty representative; Henry Schacht, alumni representative; Dean William Shepard, chancellor's representative; Larry Beyersdorf, Tom M. Jones, Dave Melander, Jerry Newfarmer, Brian Van Camp, Miss JoAnn Thebolt, representatives at large; Miss Dolores Robbins, second vice president.

Federal Court Judges

SPEECH
OF
HON. FRANCIS E. WALTER
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

Federal court judges, their dates of birth and dates of appointment (with age at time of appointment), April 1961

SUPREME COURT OF THE UNITED STATES

Justices	Date of birth	Date of appointment	Age at time of appointment	Justices	Date of birth	Date of appointment	Age at time of appointment
Earl Warren	Mar. 19, 1891	Oct. 2, 1953	62	Charles E. Whittaker	Feb. 22, 1901	Mar. 22, 1957	56
Hugo L. Black	Feb. 27, 1886	Aug. 18, 1937	51	Potter Stewart	Jan. 23, 1915	Oct. 14, 1958	43
Felix Frankfurter	Nov. 15, 1882	Jan. 20, 1939	57	Retired:			
William O. Douglas	Oct. 16, 1898	Apr. 15, 1939	41	Stanley Reed	Dec. 31, 1884	Jan. 27, 1938	54
Tom C. Clark	Sept. 23, 1899	Aug. 19, 1949	50	Harold H. Burton	June 22, 1888	Sept. 22, 1945	57

Extinction via Imports?

SPEECH

OF

HON. RICHARD (DICK) ICHORD

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 18, 1961

Mr. ICHORD of Missouri. Mr. Speaker, under leave to extend my remarks, I wish to commend the distinguished gentleman from Georgia [Mr. VINSON] and my colleagues for a very interesting and enlightening discussion on April 18 of the effect of imports upon the textile and apparel industries in the United States and to associate myself with the discussion.

The apparel industry is an important factor in the economy of the Eighth Congressional District of Missouri, and my concern of the disastrous effects upon the industry of imports is amplified by the fact that our lead mining industry is seriously depressed due to excessive importations of lead. I do hope that the action taken to save our textile and apparel industries will be stronger than the insignificant quota impositions that were used to assist the ailing lead mining industry. In the case of lead, the quotas came too late and were too liberal to materially aid the industry. This is attested to by the fact that imports are now providing almost 60 percent of the annual United States lead requirements.

I wholeheartedly agree with my colleagues that immediate action must be taken to avert the destruction of these 2 great industries employing 2,100,000 Americans. Our present trade policies can only lead to chaos; they must be altered.

Certainly, our foreign friends cannot validly object to a firm system of quotas that will assure our manufacturers of their fair and proper share of the market in view of the serious threat of extinction which our textile and apparel industries are facing.

I also hope that my colleagues are equally concerned over the deplorable conditions existing in our domestic mining industries.

Red Buildup in Laos

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. DERWINSKI. Mr. Speaker, Cuba, Laos, South Vietnam, the Congo and other areas all have one thing in common—intense Communist subversive activity, intense Communist propaganda and ineffective counterefforts by the West, led by the United States. The following editorial entitled, "Red Buildup in Laos," from the Chicago Sun-Times of April 15, 1961, carries a practical, worthwhile analysis of the situation in Laos:

RED BUILDUP IN LAOS

After a period of crisis, the situation in Laos has been marking time. But the surface quiescence covers developments that are extremely disquieting.

For while Soviet Premier Khrushchev has been withholding his answer to British proposals for a cease-fire, Russia has accelerated its airlift of arms to the Pathet Lao rebels.

Only one conclusion can be drawn from this. Khrushchev is stalling. By the time a cease-fire is agreed upon in some form, he intends the Communist forces to be so strong no coalition or neutral government can stand up to them. Or the arms shipments can serve him equally as well in taking a tough bargaining position at the conference table.

The West's lack of clear information both as to current Russian activities in Laos, as well as Soviet intention was strikingly illustrated this week. Intelligence reports from abroad told of a tripling of the delivery of Russian arms to the Communist-held portion of the tiny kingdom. President Kennedy told newsmen, however, he believed the flow had remained fairly uniform. But the next day the U.S. State Department confirmed there has been an increase in the shipments since the fighting came to a standstill.

Thus, in the absence of positive Russian cooperation, the situation is moving back to the same grave atmosphere which marked Mr. Kennedy's call for a peaceful settlement last March 23.

The British proposal was for a three-stage Laos solution—a cease-fire, reactivation of an Indian-Canadian-Polish truce team, and the convening of a 14-nation conference to work out guarantees of the southeast Asia country's permanent neutrality.

Beyond acceptance in general terms, this has never been answered by Khrushchev, despite repeated British efforts to win an actual cease-fire agreement from him.

Doubtless, the reply is being reconciled between European Communist leaders and the Asian Communists, headed by Mao Tse-tung. It could be that Khrushchev finds—or pretends to find—difficulty in producing a reply reflecting his own professions of peaceful coexistence and the more belligerent attitude of Mao. Or the delay could simply be a prelude to raising more conditions, thus paving the way for gaining by negotiations what he cannot gain by force.

Meanwhile, the buildup of Communist strength goes on in a race against the advent of the monsoon season, due in the next few weeks. Thereafter, military operations in the usual sense by SEATO or anyone else will be impossible.

Communist bands will simply be free to roam the rugged countryside, well armed and equipped, establishing themselves in command networks and subjugating the population outside the main towns and villages. What happens at the conferences will make little difference to Laos under these circumstances.

In any event, until the Soviet dictator shows some signs of emerging from his mood of inscrutable truculence on the Lao question, it is unwise for the West to concede—as did President Kennedy and British Prime Minister Macmillan last week—that any future coalition government in the southeast Asia country must include Communist supporters. Such points might better be saved for the bargaining table. Advance indications are they will be needed.

Washington Report

EXTENSION OF REMARKS
OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of April 22, 1961:

The omnibus judgeship bill for the appointment of additional circuit and district judges passed 336 to 76. The final version was the Democrat bill proposing 70 new judgeships (10 circuit, 60 district; at present there are 68 circuit, 245 district judges). Earlier, amendments to limit the number of new judgeships, to 35 and 59, respectively, both Republican sponsored (I supported) were defeated by near party-line votes.

Background: The acute need for additional judgeships is unquestioned. The question was how many more? Last year the House Committees (Judiciary and Rules) unanimously approved 35 new judgeships, after the judicial conference recommended 54. This year the Senate approved 73 new seats. In between the Judicial Conference approved 59 and 69 respectively. The Senate held no hearings and the House held hearings only on the 59 after last year's study and approval of 35.

Arguments for the 70 new judgeships centered around the need and the judicial conference's latest recommendation of 69. Arguments against, centered around Judiciary Committee action which cut last year's recommendation from 54 to 35, so why now go beyond the latest recommendation, particularly without hearings in either House or Senate on the need for this number? To me the debate was a sad commentary on Members playing politics with the judgeships instead of putting merit and need first. Obviously, the 2-year delay in action by a Democrat-led Congress was solely a gamble on political grounds, awaiting the presidential election outcome, so that the new judgeships would be Democrat selected. As Mr. BROWN (Ohio) put it quoting the Rules Committee chairman: "We gambled on this judiciary bill and we won. We gambled on the results of the election and now we will name the judges." There it is plainly stated. For my part, I shall continue to vote on the merits of a bill, smart politics, whatever they may be, notwithstanding.

There are some interesting philosophical byproducts of this debate: (1) 35 judges, we clearly established by hearings and study, were needed, perhaps even more. But 70 have never been established as needed; (2) Members of Congress are even more vulnerable now to legitimate criticism because so many are attorneys and may well be looking hopefully toward appointment to the Federal bench; (3) we should not forget the increasing workload and shift of cases as Federal courts replace State courts in our continuing Federal centralization of our Government; (4) many Members were forced to vote against the bill (including myself) who are indeed for additional judgeships and have for years sponsored such legislation because of this political padding of the number; (5) the northern Democrats and southern Democrats coalesced to pass the bill. There was no coalition of Republicans and southern Democrats against it. Only Republicans, 76 of them, opposed the bill; (6) the President can appoint 89 judges (15 circuit and 74 district) now—all Democrats—a number not appointed by any of his 3 predecessors until 4 years in office. Last year President Eisenhower offered to select on a bipartisan basis 50 percent from either party as an incentive to stimulate Congress to act, but Democrat leadership refused to act despite the need.

The lessons of this bill were twofold; Congress is playing politics with the Federal judiciary and a heavily concentrated one-party political philosophy by Federal judges is a danger to our society.

Social security amendments of 1961 passed handily 400–14 (plus 3 paired against). The bill generally followed the Kennedy proposals: (1) increased minimum benefits from $33 to $40; (2) lowered men's retirement age to receive benefits from 65 to 62; (3) increased the widow's benefits from 75 to 82½ percent of the worker's retirement benefit; (4) lowered the qualifying work requirement from 1 quarter each 9 months worked to 1 quarter per year (years since 1950); (4) increased social security taxes one-eighth percent employer, one-eighth employee beginning in 1962.

Arguments for are self-evident: There is wider coverage and greater benefit offered for an almost gratuitous cost. Arguments against as expressed in minority views (MASON, Illinois, UTT, California, ALGER, Texas) include: (1) A closed or gag rule prescribed floor debate preventing amendments being considered (remember the Rules Committee fuss and the real danger should the committee change the rules of floor debate). (2) Social security is actuarily unsound because it shifts the cost (like a chain letter) to future generations—some $300 billion in present and future obligations of this program are "unfunded." Examples of why (a) For $13 paid in $9,100 can be received. (b) For the maximum amount paid in since social security started in 1937 of $2,580, a man and wife retiring this year can receive $31,200. (3) This bill considers social security as an antirecession, pump-priming device which it never was intended to be (Document 81, February 2, President's message). (4) Social security taxes are becoming a secondary graduated income tax scheduled to go up to 9¼ percent by 1969. As a first dollar tax there are no deductions so it hits modest incomes the hardest. Many will pay more social security tax than income tax. (5) This is not insurance. The Supreme Court justifies it only as welfare. It is a hoax and pretense to present it as insurance. It can be voted out. It is political.

Perhaps Sam Gompers, the father of labor unions, said it best: "Compulsory social insurance is in its essence undemocratic and it cannot remove or prevent poverty. The workers of America adhere to voluntary institutions in preference to compulsory systems, which are held to be not only impracticable, but a menace to their rights, welfare, and their liberty."

For my part, I refuse to vote increased costs which further imbalance an already dangerously imbalanced program. I predict the whole program will either collapse financially or will be voted out by later generations who refuse to pay the charge accounts the program is running up.

The basic faults of the program rest on (1) assumption of constantly increasing number of new entrants to the program, who will pay the taxes, always on high income—there dare not be a slowdown in population growth or a decline in pay scales or this program will fail to collect what must be paid out; (2) unforeseen factors earlier unknown include (a) people are living longer, so there are progressively more beneficiaries than anticipated at the outset, (b) Congress constantly increases coverage and benefits for political reasons, to please voters (always just before election every 2 years—this bill now being the exception).

Opposition in Congress is growing as the fallacies of the social security program are seen or suspected. Since my coming to Congress, opposition has increased from 2 (of which I was one) to 17 recorded votes. This number will grow. My hope is that we can correct the program before it collapses irreparably, leaving many older citizens without the promised security.

THE COMMUNIST CONSPIRACY—WORLDWIDE DOMINATION

Communism versus the United States: We are at war because the enemy is at war with us and intends to win either the cold war of subversion or a shooting war, limited or worldwide. These are the goals of the Communists who intend to bury us, literally, in victory at arms through violent revolution, if necessary, or figuratively by subversion and propaganda and/or forcing us to spend ourselves into bankruptcy. Communism, the worldwide conspiracy, headquarters in Moscow. Success has resulted in 43 years from murder, enslavement, lying, deceit, blackmail and refusal to honor contractual agreements. Now approximately half of the world is dominated by the Kremlin. Meanwhile fifth column activities go on in all the other nations above or underground, regardless of illegality. The U.N. has been used as a propaganda tool where Russia pays too little, controls too many votes, vetoes action, minipulates the Secretariat, and disregards both the charter and any agreements reached within the U.N.

The United States as the leader of the free world, on the contrary, abides by law and contracts. The United States has caused no world problems through conquest, has sought no new real estate nor enslavement of any people. The United States has tried to negotiate honorably any disagreements between nations through the U.N. The United States abides by the U.N. Charter and agreements. The United States has sought to provide leadership by example, and to help and to protect any nation maintaining or seeking freedom defined as the right to its own self-determination. The United States has even sought in good conscience to be understanding of and get along with the Russians. The United States has practiced peaceful coexistence. Military alliances with other nations are defensive only. Exchanges of all kinds—educational, cultural, trade and technology—even with the enemy, have characterized U.S. conduct. Foreign aid has been given to many nations to help each nation develop. Over the years since World War II's end (when we were militarily stronger than the entire world) the United States has been continuously losing strength relatively and the Communists have been gaining. U.S. successes at most have been a temporary halting or slowdown of communism's growth—half the world since 1917—962 million people and 10 nations engulfed since World War II. Today Cuba is in the balance, Laos is tottering, Africa is leaning. Tomorrow what other area or nation, and the day after, until what—the United States stands alone confronted by the entire world? Too late then will it be to enflame the enslaved people, who like Hungarians, are thoroughly crushed and unable to rise.

Let's look at the balance sheet (BARRY GOLDWATER, "Conscience of a Conservative," Soviet Menace, p. 86). The United States officially recognized the Communist Russian Government in 1933. United States has subsidized Socialist and Communist governments, dedicated enemies, and neutral governments, hardly U.S. friends, then or now. United States has lost at every negotiation by agreeing to negotiate matters not negotiable (example: agreeing to other nation's enslavement by Communists). United States has lost the propaganda battle through the U.N. at every turn, the exchange program has

brought Communist spies and dupes, peaceful coexistence as a practice by the U.N. has meant bowing to Russia's wishes because of the Russian world blackmail through the balance of terror, the threat of an atomic world war III.

So the United States has been weakened by the U.N. actions and by its own policies, another example of the latter being the self-imposed ban on testing of nuclear weapons. Tactical weapons for limited warfare are needed and tests are needed.

Our policies of peacefulness have led to the outright invasion of our hemisphere by the Communists in Cuba, 90 miles away, in violation of the Monroe Doctrine. The bill of particulars in Cuba reads like all the others. (1) U.S. citizens have been executed, (2) Cuba has expropriated over $1 billion of U.S. citizen's property, (3) the propaganda lies have well discredited the United States in the eyes of the word, despite U.S. hands-off policy, (4) the revolutionary forces are unquestionably tools of the Communists.

What are we going to do about Cuba and communism—assuming we still consider freedom paramount and believe in "Give me liberty or give me death." The agonizing reappraisal, so long overdue, will include the realization that the Communist menace will not be licked by local skirmishes in outlying countries. No; the trouble center is the Kremlin. To beat them, to win this struggle, the United States must: (1) realize we are at war and we must win; (2) take the offensive, no policy of drift or awaiting another new trouble area; (3) keep building our present military superiority—start nuclear testing and develop the tactical warfare nuclear weapons needed for limited warfare; (4) keep our economy strong—cut down welfare spending, stimulate free enterprise production by tax cuts; (5) be firm, tough, the self-recognized leader: Stipulate and make others conform to our standards, defined and defended as peace, freedom and justice, as against the Socialist and Communist domination of people, and their appraisal of and demand for other standards; (6) extend foreign aid only to anti-Communist friends on our terms, mainly as loans and technical assistance with self-matching effort from the recipient nations; (7) declare communism the outlaw of civilization; withdraw recognition of the Communist leaders as the government of the Russian people; refuse to do business with them or to make contracts that won't be honored, even as we refuse to recognize Red China, as a bandit nation; (8) encourage captive nations to revolt, being particularly careful on timing; (9) encourage expatriated people to liberate and regain their homeland (China, for example); (10) be prepared for armed conflict, knowing that all nations respect strength (particularly the bully)—talk tough, but be tough.

Only as we pursue a firm, clearly outlined course of U.S. self-imposed interest, as the free world's leader, can we hope to avoid world war III, and if it should come, God forbid, survive it while communism perishes.

Recalling Spengler's Forecast

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. DERWINSKI. Mr. Speaker, in view of the importance of the problems of foreign affairs, I believe that the following editorial by Constantine Brown is deserving of the careful attention of the Members of Congress:

RECALLING SPENGLER'S FORECAST—40 YEARS AFTER, IT IS FOUND THE FATE OF WEST'S CIVILIZATION IS IN DANGER

(By Constantine Brown)

The diplomatic Pearl Harbor we suffered at the hands of the Communists in Cuba brings back to the minds of many the superpessimistic book the Decline of the West, written in 1914 by the German philosopher Oswald Spengler. All those who read the English translation in the early twenties described it as "so much intellectual posh." How could anybody in full possession of his faculties, it was asked, predict that Western Christian civilization, which had just emerged stronger than ever after the defeat of the Central Powers, was on the downgrade? After the various peace treaties had been concluded, the British, French, and Japanese empires were even more powerful than ever. Amferica, which had been aloof from foreign entanglements, had just joined, with her immense might, the concert of the world powers.

Yet today, some 40 years after the first English translation of Spengler's book, it appears that he was not as "cock-eyed" as many considered him in those days. The fate of the Western Christian civilization hangs in the balance. Through the blunders, lack of vision, and ill-placed optimism of its leaders, we have created a destructive, materialistic, atheistic force—the Soviet-Communist empires—which stand ready to engulf us. The U.S.S.R., which has survived exclusively with the assistance of the West, now has become an empire greater than those known in the past.

The Government of the United States, influenced by misguided idealists, tolerated and indirectly assisted the creation of the Chinese Communist Empire, which now has more than a fair chance of conquering the whole of Southeast Asia. The Chinese Communists under the able leadership of Mao Tse-tung were sold to the American people as "agrarian reformers." For the last 10 years the combined forces of the British Government and the American political sentimentalists have tried to have the barbarous Chinese regime accepted in the United Nations. Judging by recent reports from London concerning the conversations between President Kennedy and Prime Minister Macmillan, they are in a fair way of achieving the goal. The United Nations, which used to be the great club of peace-loving nations, is rapidly changing to a tool in the hands of international communism.

The West, and particularly the English-speaking countries, is endeavoring to stave off the decline of the West by placating the tigers by negotiations. Yet it has become obvious over the nearly half-century since communism established itself in Russia that negotiations are meaningless—unless they serve the purposes of the modern Attilas. President Eisenhower secured the Korean armistice with the Communists. It is true that there has been no fighting there since. But according to all informed observes the Korean puppets of Mao in the North are now in a fair way to swallow up the South by negotiations. Despite the firm assurances we hear from Washington, there is real concern that soon we may have another Berlin crisis in order to force another series of negotiations which would serve the objectives of the Communists. We are willing and ready to negotiate the Communist-fabricated and supported Lao crisis. And only the wishful thinkers or the ultranaive actually believe that we could save that kingdom from the Red clutches.

Beset with jealousies and lack of reciprocal understanding, the West even at this late and tragic hour believes that negotiations will save our civilization. The game as we have been playing it for the last 15 years is to see how cheaply the modern Huns can be bought for what may be only a moment of peace.

Remarks of the Honorable Douglas Dillon, Secretary of the Treasury at the Annual Meeting of the American Society of Newspaper Editors, Statler-Hilton Hotel, Washington, D.C., Friday, April 21, 1961

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. McCORMACK. Mr. Speaker, under permission to extend my remarks, I include a profound and informative address delivered on April 21, 1961, in Washington, D.C., at the annual meeting of the American Society of Newspaper Editors by the Honorable Douglas Dillon, Secretary of the Treasury of the United States:

It is a pleasure to be here and to share with you the Administration's thinking about some of the pressing economic problems that have a bearing upon our Nation's present and future well-being.

To begin with, I think one can fairly say that there is a substantial concensus in our country today on national economic goals:

We want a steadily expanding economy, based upon a strengthened system of free enterprise.

We want a rate of growth sufficient to give us an ever-rising standard of living and to provide jobs for all.

We want to assure the education of our youth and the health and security of those who are growing old.

We want an economy that can adequately provide for our national defense and furnish our fair share of the development needs of less fortunate peoples in Africa, Asia, and Latin America.

We want to accomplish all of this in an atmosphere of relative price stability.

Inevitably there will be differences among us over the means we should employ to achieve our objectives. But we must not permit such differences to obscure our basic agreement. We must recognize that unless all elements in our society work together, we cannot mobilize the massive effort required of our Nation in meeting the challenge of the sixties.

Before considering the fiscal and monetary policies we should follow to achieve our objectives, let us look briefly at ourselves as we are today:

We are a people who have built what is clearly the strongest and most advanced economy on earth. But, as recent experience demonstrates, we have not mastered the art of keeping our economy operating at the highest sustainable levels.

The recession from which we are now beginning to emerge has been relatively mild. For example, in terms of constant dollars which allow for inflation, gross national product is now only 2.2 percent below last year's peak, compared with a decline of 4.7 percent in the 1958 recession. Personal income and industrial production have also

fallen less than in previous postwar recessions.

However, before we take too much satisfaction from these figures, let us remember that they are relative. The absolute figures tell a far different story: Current unemployment, with 6.9 percent of our labor force out of work, approaches the worst days of the 1958 setback. A record number of our cities are classified as areas of substantial unemployment.

Why, in view of the relative mildness of the recession, do we have 5½ million people unemployed?

The answer is clear: We have not been producing at our full capacity for some years. Even last year, at the point of highest production in our history, our economy was operating well below its potential and we still had 5 percent of our labor force unemployed. We can and must do better in the future. Meanwhile, until we find ways to improve the overall performance of our economy, the extent of current unemployment demands prompt and forthright action by the Federal Government. President Kennedy has, therefore, taken a number of steps to speed recovery:

The annual veterans' dividend of $250 million, ordinarily paid out over the course of a year, was paid in full during March.

Tax refunds were speeded up and we are now $500 million ahead of last year's pace.

Government programs have been expedited by the prompt obligation of available funds.

Most important, a temporary unemployment compensation bill has been enacted.

These actions, together with increased defense spending that got underway last fall and reduced revenues stemming from the recession, have created a budgetary deficit of about $2 billion in the current fiscal year. Such a deficit is not a cause for alarm in times like these. On the contrary, it is a stimulus to recovery that can, and should, be readily offset by surpluses as prosperity returns.

Another deficit is in prospect for fiscal 1962: one of about $3 billion. This, too, will be entirely appropriate. The economy will require the stimulating effect of a modest deficit in the coming fiscal year if it is to move forward at an adequate pace.

The innate strength of our economy, the increase in Government outlays which I have mentioned, and the automatic action of the so-called built-in budgetary stabilizers, are apparently putting an end to the current recession. Looking backward we may well find that the turning point was reached early in March. But, unless we act energetically, recovery is likely to be sluggish, just as the decline was gradual and slow.

No matter what the pace of our recovery from the recession, there are major problems confronting us which must be solved if we are to realize our full economic potential. We must find ways first to achieve and then to maintain production at full capacity. We must insure employment for our steadily growing labor force. At the same time, we must preserve reasonable price stability.

If we balance these goals against our accomplishments, I think it obvious that new and forward looking governmental action is called for.

Excessive Federal spending is clearly undesirable. But our minimum national needs must be met. Let me cite those which merit highest priority:

First, after careful reexamination, the President has concluded that we must increase our defense expenditures in the coming fiscal year by 1½ percent, or about $650 million. Surely, no one can logically question our need or our capacity to spend whatever is required for our Nation's security.

Second, we are confronted by a shameful lag in education. More education will, of course, assure the flowering of our national culture. But, beyond this, we must recognize that education today lies at the very root of a nation's power and well-being. Without adequate education, we cannot hope to achieve the economic growth we desire. Our shortcomings in providing our citizens with education according to their needs and capacities is a blight upon our future. The problem has grown so large that an additional Federal contribution is clearly and urgently required.

Third, we must supply the ever-growing needs of our municipalities: slum clearance, improved transportation, modern sewage facilities, and increased water supply. These needs are placing an unbearable burden upon our larger cities.

We can and we must fulfill these needs. Fortunately, if our economy operates at full capacity, our present tax system can yield a surplus of several billion dollars. Our problem is not, therefore, how to raise additional revenues but to get our economy operating at higher levels. Moreover, in setting tax policy, our most difficult task is not obtaining more revenue but strengthening and modernizing our whole tax system so as to stimulate growth and improve equity. One of our major objectives is thorough-going tax reform. An extensive review is now under way and we expect to present concrete recommendations to the Congress next January.

In the meantime, there is one important tax reform that cannot wait: This is legislation to spur the modernization of our plant and equipment. It is an unpleasant fact that our plant equipment is growing older year by year. By contrast, thanks to more liberal investment incentives than are available under our laws, Western Europe and Japan are modernizing at a much faster rate. We must step up our rate of modernization if we are to maintain our Nation's competitive position. The installation of new and more efficient equipment is of prime importance in enabling us to meet foreign competition in the drive for export markets which are so essential to improving our balance of payments.

Since the installation of modern equipment means that labor can produce more, we must recognize that it may complicate the problem of unemployment. However, modernization will also increase jobs in the capital goods industries. Indeed, we estimate that the tax incentive President Kennedy has recommended should lead to an increase of from $2 to $3 billion a year in expenditures for plant and equipment. Some 250,000 new jobs would be required to provide this equipment. In addition, at least as many more people would find employment as an indirect result of these expenditures. Although major benefits to economic growth will accrue over the longer run, it is also clear that this tax incentive will have a substantial effect in speeding our recovery from recession. And, as our economy speeds up, increased consumer and business demand will expand the variety and volume of goods produced, thus creating new jobs to replace those eliminated by increased productivity. This is the way of future progress.

The legislation the President has requested is carefully designed to promote increased spending for modernization and expansion. Its enactment is necessary to speed full recovery and promote rapid grown thereafter. Initially, it will result in some loss of revenue. To compensate for this loss, he is asking that a number of serious tax defects be corrected:

First, expense accounts—an area where abuse has virtually become a national scandal. Tighter enforcement of the present law is not an adequate solution, for it would put an unacceptably heavy discretionary burden upon Government tax auditors. What is needed is a new and stricter legislative definition of allowable deductions. This is what we are asking.

Second, we are asking for withholding at the source of interest and dividends. Our best estimate is that about $3 billion of income from interest and dividends goes unreported every year. This situation is clearly unfair to all wage earners and, indeed, to the majority of taxpayers. We are asking that it be corrected by a workable withholding provision that, as in the case of wages, will collect at the source a substantial portion of the tax on interest and dividend income.

Third, we are asking for repeal of the 4-percent dividend credit. This credit was adopted in 1954 in an attempt to lighten the double taxation of dividend income. But, at only 4 percent, it has not served its purpose. Furthermore, it gives considerably greater benefit to those in the higher income brackets than to the vast majority of stockholders. This favoritism in the law is unhealthy and should be ended. The related $50 exemption should also be dropped.

Finally, we seek an end to tax provisions that encourage American business operations abroad through the use of tax havens. We also want to withdraw preferential tax treatment for American capital going into industrially advanced countries, for such treatment discriminates against the investment of capital at home. These changes will have a needed and favorable impact upon our basic balance-of-payments deficit. We are not, however, recommending changes in tax inducements for investment in underdeveloped countries which are an essential part of our overall program to help these countries grow.

I have briefly outlined our overall fiscal and budgetary thinking. I have also told you something of our plans for the immediate future as regards taxation.

Now, let me take up monetary policy. This is a field where we face an entirely new situation brought about by the recently achieved convertibility of foreign currencies. Convertibility permits owners of liquid funds to shift them freely from one world financial center to another in search of higher interest rates. Therefore, the extremely low short-term interest rates of previous recessions could have dangerous repercussions today. Short-term interest rates much below present levels might well touch off a renewed outflow of dollars that could imperil our balance of payments and the soundness of our dollar.

Nevertheless, we need low, long-term rates to stimulate borrowing for modernization, plant expansion, housing construction, and the like just as much today as in previous periods of recession. Accordingly, the administration is attempting to promote lower long-term interest rates without putting downward pressure on present short-term rates. For one thing, the Federal Reserve is now purchasing securities of all maturities, instead of restricting itself to short-term Treasury bills. For another, President Kennedy has taken direct action in the housing credit field which has helped to lower average mortgage rates by more than a quarter of 1 percent since the turn of the year.

Far more meaningful than interest rates, however, is the quantity of funds flowing into investments. Here, we see evidence of improvement in the mortgage credit area, where, although rates are still on the high side, availability of credit is no longer an inhibiting factor. We also see increasing evidence of growing municipal and corporate borrowing.

Finally, since the budgetary deficits that are presently envisioned are modest and bear no comparison to the deficit of 1959, monetary policy will remain free to act in support of business recovery. Therefore, the substantial increases in interest rates that characterized the 1958–59 period are not likely to recur this time.

To sum up:

Our policies—be they budgetary, tax, or monetary—should have one overriding goal: the promotion of a healthy rate of economic growth within a reasonable atmosphere of economic stability. We must meet the needs of the day in the fields of defense, education, housing, highway construction, urban development, and other essentials. Fortunately, we are in a position to meet them—this year, and the next, and in the long run—without undue strain on our economy.

We must overhaul our tax system to provide greater fairness and incentives for efficiency and growth, beginning with an investment incentive this year, and following with a basic overhaul next year.

We must maintain an interest rate structure conducive to the steady flow of funds into investment.

To achieve all these things will not be easy. But with determination and perseverance we should be able to attain our goals. In the process, we can look forward to a period of growth and prosperity during the sixties such as this Nation has never known.

Communism and the House Un-American Activities Committee

EXTENSION OF REMARKS

OF

HON. EDGAR W. HIESTAND

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. HIESTAND. Mr. Speaker, this is the second in a series of articles by Robert B. Dresser, dealing with communism and the House Un-American Activities Committee.

It appeared in Economic Council Papers, volume XVI, No. 2, on March 1, 1961:

COMMUNISM AND THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE

(By Robert B. Dresser)

In November 1954 Senator William F. Knowland rose on the floor of the Senate and delivered a momentous and prophetic address. It was at a time when the question was being considered whether we should permit the Chinese Nationalists to bomb the mainland of Red China in order to prevent a Communist landing on the island of Quemoy, then and now in the Nationalists' possession.

Three out of five Joint Chiefs of Staff, including the Chairman, and also Secretary of State Dulles, recommended this move. President Eisenhower decided against it.

SENATOR KNOWLAND'S ADDRESS

In the course of his address Senator Knowland made the following statements:

"Are 'coexistence' and 'atomic stalemate' synonymous terms? If they are not, just what is the difference? Is the former merely an inevitable prelude to the latter? And what of our foreign policy and our defense policy when such an atomic stalemate takes place? Does not atomic stalemate mean inevitable Communist nibbling aggression, rather than peace in our time? How many years remain when we still have some initiative left? These are some of the basic questions before the Government and the people of the United States.

* * * * *

"The survival of this Republic and the possibility of a free world of freemen hangs in the balance.

"The civilizations that flourished and died in the past had opportunities for a limited period of time to change the course of history. Sooner or later, however, they passed the point of no return, and the decisions were no longer theirs to make.

"Coexistence and atomic stalemate will result in ultimate Communist victory. * * * We must face up to the fact that the Communist concept of 'peaceful coexistence' means that the United States or other free nations of the world will be allowed to exist only until communism is able to subvert them from within or destroy them by aggression from without.

"It is my belief that the Soviet Union is advancing the Trojan horse of coexistence only for the purpose of gaining sufficient time to accomplish what we may term 'atomic stalemate.' When would they hope to accomplish this objective? The target date is probably between 1957 and 1960.

* * * * *

"Let us examine the possibility then of even a troubled peace. It is more likely that at that point, when the free world has become paralyzed and immobilized by the realization that the United States and the Soviet Union could act and react one upon the other with overwhelming devastation, the men in the Kremlin will see their best opportunity to start with what for the want of a better term I will call Operation Nibbling, wherein they will seek to take over the peripheral nations bite by bite.

* * * * *

"Then they will start down through our smaller allies first to soften us up. These will not all be nibbled at once, but will be spaced out so that as each country passes behind the Iron Curtain, it will increase the despair of the other victims and the paralyses of the nations who might be willing to resist.

* * * * *

"Before our eyes the people of the United States would see nation after nation nibbled away and when the realization finally dawned that this policy would inevitably result in our country becoming a continental Dien Bien Phu in a Communist totalitarian world, the chances of our winning such a struggle would be so lessened and the Soviet world so extended that they then would be prepared for an all-out challenge to us wherein we would be allowed the choice to surrender or die.

* * * * *

"Time is running out and I would remind the Senate that in this day and age of the airplane and the atomic weapon, time is not necessarily on the side of the free world."

DR. GERHART NIEMEYER'S STATEMENT

The December 10, 1954 issue of David Lawrence's U.S. News & World Report contains an article by Dr. Gerhart Niemeyer, of Yale, entitled "1964—After 10 Years of Coexistence," in which strikingly similar views are expressed.

W. H. FERRY'S STATEMENT

On January 13, 1960, W. H. Ferry, the vice president of the Fund for the Republic, wrote a letter to the Santa Barbara News-Press, from which I quote as follows:

"When one says that war is unthinkable, it must be taken as a literal statement, i.e., nuclear war cannot be thought about. We have no vocabulary, no recourse to imagination sufficient to deal in logical terms with the prospect of 60 or 70 million American corpses, to say nothing about the carnage accompanying a nuclear attack, and to say nothing of the effects of radiation lingering over generations.

"Perhaps this is one reason why all current assessments of the impasse between Russia and the United States end up in the same sterile and hopeless formula: Arms and yet more arms.

* * * * *

"Suppose we were to go in the other direction? Suppose we were to junk all of our weapons of whatever kind? Suppose we were to tell the world that we are doing so because we are convinced that it is the only practical way out of the fateful dilemma in which all are caught?

"The best possible result of such a decision is * * * that Russia would follow our example * * *.

"The worst possible result is that Russia would instantly take advantage of our defenselessness to bomb the United States into radioactive rubble. In this case we would not be worse off than if we had engaged in a two-way war. All that would be lacking would be a regret among survivors that we had not had vengeance on our attackers. But this result seems wholly unlikely. It may better be supposed that Russia does not desire the extinction of the United States but its submission as a nation and great production center to communism.

"Another and more possible result then is that this country would be taken over by the Reds, commissars replacing our managers and mayors, legislators and union officials, broadcasters and publishers. * * * This is a desperate and repellent vision; and while I do not believe that this would be the outcome, it is necessary to accept it as a possibility if one is willing to argue that unilateral disarmament is the only practical policy for this country to adopt. Red domination of this and other free nations is at least thinkable. We can at least imagine it in all its hateful and dismal aspects, while we find the consequences of a nuclear, germ, and gas war unthinkable and unimaginable. We would survive as a nation with the greatest of traditions and with the unquenchable intention of demonstrating by argument and peaceable resistance the power of freedom and justice as man's best and only proper organizing principles.

"It might well take years or decades to regenerate freedom and justice. But we would have the chance to do so, a chance that by common agreement would not be vouchsafed us in the case of an all-out war which no nation could win. Should war come, the task would not be resisting or throwing off the hand of an oppressor by reasonable means; it would be the task of rebuilding civilization from barbarism and chaos.

* * * * *

"The alternatives are drastic and repugnant in the highest degree. But the important point is that there is an alternative to our present policy."

Here you have it—in the year 1960—precisely what Senator Knowland predicted in 1954.

The significant thing is that a prominent American, holding the position that Mr. Ferry holds, should be preaching this doctrine. This raises the question as to how many of our citizens share Mr. Ferry's views and whether their number will increase until they are sufficiently strong to force an acceptance of their views. May Heaven forbid.

WHAT HAVE THE AMERICAN PEOPLE BEEN DOING?

What have the American people been doing since Senator Knowland delivered his warning in 1954?

Have they been rooting out the Communists in their midst and putting their own house in order?

Broadly speaking, the answer is "No." Thousands, if not hundreds of thousands, of

our citizens have been duped or deceived by Communist propaganda, and have been unwittingly led to adopt ideas and programs of Communist origin, the effect of which has been to aid immeasurably the accomplishment of the Communist objective. The evidence of this is legion. It may be found in abundance in the reports of the Committee on Un-American Activities and the Senate Internal Security Subcommittee, in the statements and writings of J. Edgar Hoover, the head of the FBI, and in the statements and writings of many others.

It is important to understand how the Communists operate.

TESTIMONY OF J. EDGAR HOOVER IN 1947

The following is an excerpt from the testimony of J. Edgar Hoover before the Committee on Un-American Activities on March 26, 1947:

"For the most part [Communist] front organizations assumed the character of either a mass or membership organization or a paper organization. Both solicited and used names of prominent persons. Literally hundreds of groups and organizations have either been infiltrated or organized primarily to accomplish the purposes of promoting the interests of the Soviet Union in the United States, the promotion of Soviet war and peace aims, the exploitation of Negroes in the United States, work among foreign-language groups, and to secure a favorable viewpoint toward the Communists in domestic, political, social, and economic issues.

"The first requisite for front organizations is an idealistic sounding title. Hundreds of such organizations have come into being and have gone out of existence when their true purposes have become known or exposed while others with high-sounding names are continually springing up."

SOVIET TWO-PRONGED THREAT

No informed person can be anything but gravely concerned at the Soviet threat. It is a two-pronged threat: (1) Destruction by force from without, and (2) the gaining by peaceful means of control from within. Naturally, Russia prefers the latter course, for it would give her control of the vast resources of this country intact.

Let no one think that this is a fantastic idea. Starting with a population of less than 200 million at the end of World War II, Russia has since rapidly expanded her influence in Europe and Asia until today she controls roughly 40 percent of the world's population and 25 percent of the earth's surface and this control continues to be rapidly expanding. The United States has approximately 6 percent of the world's population.

CONDITIONS IN UNITED STATES UNDER COMMUNISM

Speaking of the conditions in the United States under communism, J. Edgar Hoover states in his "Masters of Deceit":

"Under communism, a tiny minority, perhaps 10 to 20 men, would rule the United States. An open dictatorship called the dictatorship of the proletariat would be established. * * *

"The Constitution, and all our laws, would be abolished. If you owned productive property you would be arrested as an exploiter, hauled before a revolutionary court, and sentenced to a concentration camp—that is, if you convinced the 'judge' you were worth saving at all. All property used in production would be confiscated, thus leading ultimately to total communization, meaning state ownership. This confiscation would include your home, business, bank deposits, and related personal possessions. These would belong to everybody. You have no right to own them under the Communist scheme.

"The revolution would affect every man, woman, and child in America. Communists do not propose to remodel our government or retain any part of it. They would tear it to the ground, destroy all opposition, and then create a new government, an American province in the Soviet world empire. * * *

"All industry would be nationalized and farms taken away from their owners. A small businessman is just as guilty as a large businessman; both must be liquidated. Rents, profits, and insurance would be abolished. Countless occupations, termed by the Communists as useless and parasitic, would be ended. * * *

"Action would be drastic, immediate, and without appeal. An armed Red guard would enforce the orders of party henchmen. Hotels, country clubs, and swimming pools would be used for the benefit of 'workers,' meaning, in most cases, party bosses. The workingman in the mines, factories, and mills would be told to work certain hours for certain wages. Labor unions, as we know them, would be obliterated. All such organizations would be owned and operated by the Communist government, and no laborer would be permitted to organize a union or to strike against his government. * * *

"This picture of a Communist America is not overdrawn."

COMMUNIST ATROCITIES

Millions of Russians have been killed by their Communist masters and millions more sent to Siberia to work in slave-labor camps until death came to their relief.

In the Ukraine alone, during the 1937–38 purge, under the direction of Khrushchev, an estimated 400,000 were killed and terror gripped the whole population.

A second purge in 1943, also conducted by Khrushchev, "was if anything more bloody and more horrifying than the first."

And more recently we have the cruel slaughter of the Hungarian freedom fighters. "Our Ambassador in Moscow at the time asked Khrushchev what he would do to stop the blood flowing in Hungary. To which the master of the Kremlin replied: 'We will put in more troops and more troops until we have finished them.'" ("The Crimes of Khrushchev, Part I"—testimony before the House Un-American Activities Committee, Sept. 4, 1959, of Eugene Lyons, a senior editor of the Reader's Digest, former press correspondent stationed in Soviet Russia, student of international communism and biographer of Khrushchev.)

And this is the man who was invited to visit this country and who was entertained by President Eisenhower, and with whom a further summit conference with our present President appears to be under consideration.

Also, we should not forget the many millions liquidated in Communist China.

COMMUNIST AGREEMENT WORTHLESS

How long will it take the American people and their leaders to learn that the Communists never have kept, and never will keep, any agreement they make, unless it is to their advantage to do so?

The summit conferences are justified by our leaders as a means of easing international tension. However, the only tension is the tension created by Russia herself, and all she has to do is to desist from her skulduggery. A summit conference is not needed for this. The Russian purpose is not to compromise, but merely to exact further concessions from the West.

In Heaven's name, let's stop this nonsense.

COMMUNISM AN INTERNATIONAL CONSPIRACY

The Communists do not constitute a political party. They are a group of international gangsters and criminals of the most vicious type. To accomplish their objective they will lie, cheat, steal, and murder. Why can't the American people and their leaders understand this and act accordingly?

STATEMENT OF DMITRI MANUILSKI

In 1953, Dmitri Manuilski, a Soviet official and at one time the presiding officer of the United Nations Security Council, stated to the Lenin School of Political Warfare in Moscow:

"War to the hilt between communism and capitalism is inevitable. Today, of course, we are not strong enough to attack. Our time will come in 20 or 30 years. To win we shall need the element of surprise. The bourgeoisie will have to be put to sleep. So we shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions. The capitalistic countries, stupid and decadent, will rejoice to cooperate in their own destruction. They will leap at another chance to be friends. As soon as their guard is down, we shall smash them with our clenched fist."

AMERICAN BAR ASSOCIATION'S COMMITTEE REPORT

In its 1958 report to the association's house of delegates, the American Bar Association's special committee on Communist tactics, strategy, and objectives said:

"The Communists aim to keep us complacent until the choice is annihilation or surrender, at which time they confidently expect us to submit to a negotiated surrender."

This, of course, is the purpose of their policy of so-called peaceful coexistence—to lull us into a feeling of security until they are strong enough to take over.

DIFFICULT FOR AMERICAN PEOPLE TO BELIEVE

It is difficult for the American people to believe that these things are going on right in their midst—they are so foreign to anything that our training and past experience have taught us. And yet the evidence is overwhelming that these things are and have for some years been going on beneath the surface and that they are rapidly reaching a climax.

CONCLUSION

Are we as a people so dumb that we cannot be made to see? Are we so lazy and indifferent that we will not take the time to acquaint ourselves with the facts which involve our very survival? If so, we deserve the fate that will inevitably befall us.

Let me close with this quotation from a statement by America's Future:

"While Butcher Mikoyan charmed, Soviet fighters shot down an unarmed transport, lured off its course with 17 American boys. Six are dead. Eleven have vanished. Mikoyan swears the plane crashed. But a recording of the attacking pilots' crosstalk proves he lies.

"Congress screams and America boils at the callous brutality of this murder. Yet only 17 were involved. Meanwhile, every day 175 million Americans and hundreds of millions of other freedom-loving people are being led nearer to slavery or slaughter. They are being led there by the blind and stupid refusal of too many Americans, in and out of Government, to recognize Communist subversion and act to stop it. In schools and colleges, in Government, and labor unions, in communications and entertainment, even sometimes in business, we help the Communists undermine us. The murders, lies, insults, and diplomatic sideshows are only little incidents, planned diversions. They keep us from seeing the real threat.

"His head buried in sand, the ostrich sees no enemy and thinks there is no danger. How like the ostrich are we. The evidence

is all around us, but to see it and recognize it for what it is disturbs our dream of peace.

"It's up to you. For your own protection, will you look and listen? Will you know the enemy, understand his tactics, recognize his plans in operation, learn to anticipate his moves, stop giving him odds in this death struggle?"

Wisconsin Electric Co-op Celebrates Silver Anniversary

EXTENSION OF REMARKS
OF

HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, March 27, 1961

Mr. JOHNSON of Wisconsin. Mr. Speaker, just a year after REA celebrated its 25th birthday, Wisconsin Electric Cooperative—WEC—is observing its silver anniversary. This statewide organization of rural electric and rural telephone cooperatives has made a large and valuable contribution to the sound growth of the rural electrification movement in Wisconsin as well as setting a good, workable pattern for the organization and development of similar associations in other states.

Throughout the past 25 years, WEC has pioneered in many fields and has many "firsts" to its credit. In 1936, it started the first and only cooperative engineering service. Four years later, WEC began publishing the Wisconsin REA News, which was the first statewide rural electric co-op newspaper in the Nation and which remains a leader among REA publications. WEC was also the first statewide organization to merchandise line materials, a service which now has been expanded to cover 13 States.

When delegates from WEC's member co-ops assembled in Madison, Wis., last month for their silver anniversary meeting, they passed a series of resolutions that are in keeping with WEC's tradition of looking to the future. Under leave to extend my remarks, I would like to include a series of those resolutions in the RECORD:

RESOLUTIONS OF WISCONSIN ELECTRIC COOPERATIVE DELEGATES

RURAL COMMUNITY DEVELOPMENT

Whereas the availability of low-cost energy in our rural areas can play a highly significant role in reversing out-migration population trends and bolstering and diversifying the economies of our rural areas; and

Whereas cooperatively-owned rural electric systems are the chief suppliers of electric service in rural areas where the need for an effective program of rural community development is greatest; and

Whereas by organizing the resources available in these areas, and organizing the leadership potential of our electric cooperatives, much can be accomplished to introduce new industry, consolidate and improve the standards of existing industry, improve the efficiency of farming and develop areawide community improvements programs; and

Whereas the potential of such a program can be greatly enhanced through the availability of low-interest loan funds as provided in legislation now being considered by the Congress: Now, therefore, be it

Resolved, That we initiate rural community resource development programs in our service areas, that we direct WEC to develop the groundwork for a coordinated approach to such a program, and that we endorse S. 1 and H.R. 4569, which provides for a $100 million revolving fund for low-interest loan funds for rural development.

REA LOAN FUNDS

Whereas we fully endorse the sentiments expressed by the President of the United States, John F. Kennedy, in reference to the Rural Electrification Administration program that much remains to be accomplished in bolstering rural electric service and to correct conditions in rural telephone service; and

Whereas particularly in the field of securing long-range solutions to wholesale power requirements of REA borrowers, there is a critical need for low-interest loan funds to meet the long-range requirements of rural people; and

Whereas only one-third of the Nation's farms have modern telephone service, and the REA loan program is the most effective means whereby modern service can be brought to all of America's rural people: Now, therefore, be it

Resolved, That we respectfully request that the Congress appropriate an amount of loan and administrative funds for both the rural electric and telephone programs at a level adequate to meet all sound and feasible requirements of the program for the coming fiscal year.

REA TELEPHONE LOAN POLICY

Whereas in rural America today only one farmer in three enjoys modern telephone service and the greater portion of modern telephone service now available in rural areas has been achieved through the low interest loan program conducted by the Federal Government through the Rural Electrification Administration; and

Whereas despite the considerable progress achieved in this field through the REA loan program since 1949, the attainment of the full potential of this effort has been retarded and may forever be blocked by the language of the act and the administered policies of REA which actively promote and encourage the use of loan funds to rehabilitate small privately owned companies serving limited areas because, although this creates small pockets of modern service in a limited area, it destroys the feasibility of development of areawide subscriber-owned systems developed from a nucleus of several existent companies; and

Whereas the ready availability of REA financing to speculators interested in buying out small and underdeveloped companies results in lively competitive bidding which has resulted in inflated market prices, which are subsequently pumped into the investment costs to unnecessarily increase the cost of service; and

Whereas we feel as a matter of sound public policy, REA telephone and electric loans should be available only for the exclusive purpose of making modern service available to rural people at lowest possible cost, those policies which promote and encourage such speculation and inflated rates are contrary to the intent of Congress particularly when they serve as an obstacle to the achievement of areawide service; and

Whereas five out of every seven REA telephone borrowers are privately owned companies, and two out of every three loan dollars for telephone development go to private borrowers, that this policy is, in fact, developing limited, small islands of modern rural telephone service while actually retarding, if not emasculating, the potential for large-scale development: Now, therefore, be it

Resolved, That we urge Congress to enact such changes in existing legislation to direct and permit REA to give first priority in its loan policy to areawide telephone development at the lowest possible cost consistent with good service; and be it further

Resolved, That a complete investigation be undertaken, reviewing all existent telephone loans with the objective of directing disallowal of any further low interest financing in instances where operations are being conducted in a manner where the objective of service to all rural people in an area is being subjugated to policies aimed at trafficking in the differential between REA interests rates and the permissable rate of return allowed by regulatory commissions on borrowed equity; and be it further

Resolved, That we urge the Wisconsin Public Service Commission to limit permissable rates of return to give recognition to the low cost of REA borrowing so as to prevent speculative profit taking on REA financing.

TRIBUTE TO OUR DECEASED ASSOCIATES

Whereas the joy of gathering here this week at the silver anniversary annual meeting of the initial organization of Wisconsin Electric Cooperative as a central service agency for our membership is restrained by the tragic automobile accident last month which resulted in the untimely death of our first and recent president, H. O. Melby; of Vernon Electric Cooperative Treasurer Elmer Smith; and of Vernon Manager and Mrs. N. F. Leifer; and

Whereas over the years, Mr. Melby provided us with inspired leadership in the efforts of we rural people to organize ourselves to provide the highest concepts of rural service, and Mr. and Mrs. Leifer and Mr. Smith were loved by everyone for their devotion and achievements to this program; and

Whereas the unusually tragic accident which so abruptly brought to a halt the association of these beloved people with us has shocked us deeply and demonstrates the continuing challenge of developing new leadership ready to step into our ranks as they become thinned by sudden tragedy, as well as the attrition of the inevitability of death: Now, therefore, be it

Resolved, That we spread on the minutes of this meeting our profound sense of deep loss at the sudden departure of these devoted associates, and that we wish to convey our great sympathy to their immediate families; and be it further

Resolved, That we wish to similarly express our sorrow in the deaths during the past year of former beloved associates and directors Ervin Starck, C. W. Miller, and Vernon Birong, and we want to express to their immediate families our high regard for them achieved during the years when they served WEC with distinction and devotion to our common objectives.

CONGRATULATIONS TO NORMAN M. CLAPP

Whereas we feel that the State of Wisconsin was singularly honored by the appointment by President John F. Kennedy of a native son of Wisconsin to the high post of Administrator of REA; and

Whereas we have great respect for the new Administrator Norman M. Clapp for his lifelong devotion to the principles and objectives of the REA program and have full confidence that he will serve in his post with distinction; and

Whereas we have always considered Norman M. Clapp as an outstanding friend and supporter of the REA program as a means of achieving significant improvements in the social and economic standards of our rural areas on the basis of his service as a member of the senatorial staff of the late U.S. Senator Robert M. La Follette and as a friendly and sympathetic publisher and editor of two newspapers in Wisconsin: Now, therefore, be it

Resolved, That we extend our congratulations, our good wishes and cooperation to Norman M. Clapp in his administration of the REA program; and be it further

Resolved, That we express our gratitude to his predecessor, David A. Hamil, for his years of service to the REA program and want to convey to him our very best wishes for the future.

RURAL ELECTRIFICATION RESEARCH

Whereas agriculture is the largest single industry and source of employment in the economy of the United States; and

Whereas the application of electric energy to agriculture constitutes the most effective single means available for improving efficiency, reducing operating costs, increasing quality and improving the standard of living of farm producers; and

Whereas there is a great need for increased facilities for intensifying research and broadening the areas of electrical applications in agriculture, but that this work has been drastically impeded both by inadequate funds committed to such research, and limited physical facilities for research; and

Whereas the Congress of the United States now has before it legislation which would authorize the construction of an Electrification Research Center proposed to be located in Minnesota which includes an appropriation of $2 million for construction and conduct of an expanded research program in farm electrification: Now, therefore, be it

Resolved, That we convey to the Congress our respectful recommendation that this legislation be enacted into law.

ADMINISTRATION RESOURCE POLICY

Whereas the President of the United States has outlined to the Congress his basic resource policies, which include the following basic principles in respect to the marketing of power produced from publicly financed facilities: (1) Preference in power sales shall be given public agencies and cooperatives; (2) domestic and rural consumers shall have priority over other consumers in the disposal of power; (3) power shall be sold at the lowest possible rates consistent with sound business principles; (4) power disposal shall be such as to encourage widespread use and to prevent monopolization; and

Whereas the President reported that he had directed the Secretary of the Interior to develop plans for early interconnection of Department marketing agencies with adequate common carrier transmission lines, and to plan for further national cooperative pooling of electric power, both public and private; and to enlarge such pooling as now exists; and

Whereas the President has called for a broad new power policy under which the Nation's natural resources would be fully developed for maximum utilization; and

Whereas we fully agree with the recent public statement of the Secretary of Interior Stewart L. Udall, that "furnishing adequate low-cost power for homes, farms and industry is a matter of basic importance to the economic growth and defense of the Nation and is, therefore, a matter of governmental concern": Now, therefore, be it

Resolved, That we heartily endorse the farsighted objectives of the President's resource policy to assure maximum development of our natural resources and to promote widespread use of electric energy at lowest possible cost as essential to the Nation's maximum economic development; and we further

Resolve, That we favor the inclusion of power generation as an integral part of multipurpose development wherever feasible as a basic and essential means of achieving maximum development of our natural resources.

ATOMIC POWER FOR RURAL AREAS

Be it resolved, That we respectfully request of the Atomic Energy Commission that it carry forward a greatly expanded program of development for nuclear reactors specifically designed to meet conditions of rural electric service; and be it further

Resolved, That we express our good wishes to one of our members, Rural Cooperative Power Association of Elk River, Minn., for complete success in its operations beginning this summer of a nuclear unit in conjunction with its conventional generating facilities.

REVOLVING FUND ON REA APPROPRIATIONS

Whereas through the availability of capital loans for the purpose of constructing rural electric and telephone facilities throughout the Nation, we are making rapid strides in achieving our objective of electric and telephone service to all rural people; and

Whereas all funds advanced for these purposes are being fully repaid with interest at no cost to the Nation's taxpayers, and are actually productive of many billions of dollars in new tax revenue to governmental units through new taxes paid and their productivity of greater efficiency, lower cost production, higher earning power and the $15 billion market they have created for electric appliances and wiring; and

Whereas the annual appropriation of funds for this purpose is actually a fully returnable investment by the Federal Government as these loans are fully liquidated under the most remarkable repayment record of any nationwide credit program in the Nation's history; and

Whereas the Congress of the United States is considering possible legislation which would provide for a capital budget under which fully repayable appropriations and self-liquidating investments would be earmarked as investments rather than expenditures; and

Whereas as an alternative to such a plan, the Congress is also considering a plan where all REA allocations of funds for rural electric and telephone loans would be set up as a revolving fund with repayments annually credited to the fund and requiring new appropriations only for those amounts where new allocations exceed repayments: now, therefore, be it

Resolved, That we endorse the principle of the capital budget as a more realistic reflection of actual governmental expenditures; and be it further

Resolved, That we also endorse the principle of legislation which would establish with the Treasury of the United States a revolving fund of REA allocations and repayments with such repayments credited against total allocations in any given fiscal year.

JAMES SULLIVAN

Whereas James F. Jim Sullivan, as a member of the staff of Wisconsin Electric Cooperative for the past 14 years, has demonstrated great ability and devotion to the program of cooperative rural electrification; and

Whereas Jim's work successively as editor of the Wisconsin REA News, as assistant public relations director, as assistant to the general manager, as the originator and editor of the "Top o' the News Capsule" and as a speaker at a great many electric cooperative meetings throughout the country, has earned for him the respect and admiration of all those who have come to know him; and

Whereas Jim's knowledge of the REA program throughout the State and the Nation and his proven ability to further the interests of the rural peoples it serves has been recognized by his recent appointment as administrative assistant to REA Administrator Norman Clapp: Now, therefore, be it

Resolved by the delegates to WEC's 25th annual meeting, That we congratulate Jim on the recognition that he has received and Administrator Norman Clapp on his good fortune to obtain so able and devoted assistant. We wish Jim and his wife, Muriel, every success and happiness in Jim's new field, with the knowledge that what is WEC's immediate loss is the national REA program's gain. Another good Wisconsin product is being contributed to make the national REA program better and the lives of all peoples in the Nation affected by that program, enriched.

Too Much Money for Government

EXTENSION OF REMARKS

OF

HON. EDWARD J. DERWINSKI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. DERWINSKI. Mr. Speaker, an editorial which appeared in the Blue Island (Ill.) Sun-Standard, one of the typically fine community newspapers in my district, contained a message of basic commonsense which all Members of Congress should read. For the benefit of my colleagues, I therefore place this article in the RECORD:

TOO MUCH MONEY FOR GOVERNMENT

One basic fact we must understand about our Government's reckless, profligate, sky-for-limit spending program is:

It coincides perfectly with the clearly enunciated Marxist theory that high taxes will surely destroy the private enterprise system. The United States is drifting toward a slashing tax system guaranteed to blast our traditional economy, which is rooted in individualism, and to leave in its place a mistaken form of serfdom.

A new economic theory has been conjured out of thin air and is getting serious attention in governmental circles. It claims to depend on national growth and expansion to lead the way out of financial troubles. It is one of those modern ideas which champions change for the sake of change, being ready to discard as old fashioned all of the time-tested ideas about taxes, balanced budgets, and national debt. It is claimed that, if the national economy is expertly managed along credit lines, it can go along indefinitely in the red.

This optimistic theory reared its head some years ago, when we faced real emergencies—depression, two World Wars, and the Korean "brushfire." No present emergency looms up to provide excuse for heavy domestic spending and continued deficit financing, save the ever-increasing bill for national defense, which could be met easily by decreasing needless domestic spending and ill advised foreign aid. Yet, there is enough contentious, mistaken stubbornness to argue that our Government need not count the billions; we can spend ourselves out of debt, stabilize Federal finances by a program of waste and, chief aim of some, let the spenders find favor with the multitude by handing out more and more gratuities.

Is this the path to national solvency? No. A few things—among them, honor, and honesty—do not become old fashioned, save among outcasts and criminals who have said goodby to integrity.

Modernism is a hoax. It is playing havoc with America. We must have more integrity, more decency, from the top right down to the bottom in government. Taxes as now levied spell theft from one, charity toward another, disaster for all.

Charity should be reserved for those who are dependent through no fault of their own; not for the indolent or the greedy. Too much charity kills incentive for the worker as well as the businessman. More

state aid, less incentive; more unrealistic share the wealth, less freedom; more centralized government, less America.

Already our people are staggering under a killing taxload. In addition to income and property taxes are the countless hidden taxes. The sardonic Khrushchev is waiting for U.S. prosperity to collapse. Unless we, as a nation, and as individuals, revert to sound economic practice, our Soviet foe will be rewarded for his patience.

No government $300 billion in debt can withstand a sudden letdown in commerce and survive. More than one kind of financial crisis could suddenly jolt us off our complacent acceptance of inflationary prosperity. Bankers know that we are doing business with 47-cent dollars and many of them are unhappy about it. Outrageous taxes, inflations, a break in the economic levee, then what?

One U.S. Senator said: "If I had to reduce all I have learned in 14 years in Congress, I could sum it up in these words: 'Please do not give your Government so much money.'"

Another high Government official said: "Everybody is overtaxed, and the middle class is being taxed out of existence." This realist spoke the truth. Please remember, in this connection, that the Soviets, to solidify their conquest of a subdued nation always—with routine and ruthless determination—proceed to liquidate the middle class, known to them the bourgeoisie. Is our Nation pursuing a like course?

Patriots can, if they will, stop these terrifying excesses, these mistaken concepts of justice. First, learn the pertinent facts. Study them with diligence. Pass them on to your associates; they will be surprisingly grateful, for our people want to know. Influential public opinion stems from such earnest beginnings.

How United States Confirmed Soviet Space Feat

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. BROOKS of Louisiana. Mr. Speaker, ever since April 12, when Russia announced the first successful attempt to orbit a man in space and return him safely to earth, the Committee on Science and Astronautics, and I as its chairman, have been deluged with communications calling this feat a "hoax" perpetrated by Russia.

In the New York Times of Sunday, April 23, Mr. John W. Finney, the New York Times reporter who writes so knowledgeably on space matters, gives an answer to these accusations. Because of the interest in this matter, I submit his article, entitled "How United States Confirmed Soviet Space Feat," for the attention of my colleagues:

HOW UNITED STATES CONFIRMED SOVIET SPACE FEAT

(By John W. Finney)

WASHINGTON, April 22.—At the annual convention here this week of the American Society of Newspaper Editors, an editor of a Texas newspaper arose to announce that some people down in Texas did not believe that the Soviet Union had actually put a man into space. The reaction of the Texans was sympotomatic of a flurry of widespread doubt seemingly stirred up by hurt national pride and deep-seated distrust of the Russians, about the authenticity of the Soviet feat.

The skeptics may find some solace in passing the Soviet accomplishment off as a hoax, but their doubt flies in the face not only of Soviet statements but also of every bit of evidence available to the American Government.

As Dr. Frank Press, a member of the President's Science Advisory Committee, told the doubting Texas editor, "there is no doubt in the minds of any knowledgeable person in this field that the Russians did what they said they did."

WHY SO CERTAIN

How could American officials be so sure that Maj. Yuri Alekseyevich Gagarin had indeed circled the earth in a space ship, as triumphantly announced by the Moscow radio in the early morning hours of April 12? Their certainty springs from the fact that through a combination of electronic and traditional cloak-and-dagger espionage the United States is able to keep a secret eye on Soviet space activities.

For several years the United States has maintained a global surveillance network to keep track of Soviet launchings. So effective is the system that the United States has had knowledge of every major Russian space shot in advance of the Moscow announcement as well as of missile launchings that were never announced.

In the maze of Government secrecy, no information is much more sensitive or secret than the electronic intelligence obtained by listening stations monitoring activities of the Soviet Union. On repeated occasions a public statement that the network exists or that it has monitored Soviet failures on the launching pad has provoked Presidentially ordered investigations into the source of the information.

The existence of the network, however, is now an established fact, well known to the Russians and alluded to by Government officials in their announcements that the United States had known in advance of a Soviet space launching or in their hints that the Soviet Union has had launching failures just as the United States has had.

FIRST CLUE

The first clue that a major Soviet space shot was impending came early in April when Soviet tracking ships were spotted taking up position in the Atlantic and Pacific Oceans. Immediately, official Washington and the secret surveillance network was alerted.

As launching preparations began at the Soviet missile site at Tyura Tam, north of the Aral Sea, secret United States listening posts in the Middle East tuned in on the increasing volume of radio messages passing between the launching site and downrange tracking stations. The messages and their very volume told what was going on at the launching pad.

It is no secret to the Soviet Union any longer that its launching activities are being subjected to electronic eavesdropping by the United States. The Russians, however, might be surprised at the effectiveness of this form of electronic spying.

One report common within U.S. space circles is that the United States is able to follow every minute and final seconds in a Soviet countdown, and in fact, the countdown is marked on a blackboard in a U.S. monitoring station just as is presumably being done in the Soviet blockhouse at Tyura Tam. Probably the best testimonial to the effectiveness of this radio monitoring network is that at times the United States has been able to ascertain when the Soviet Union has encountered failures on the launching pad.

When the huge Soviet launching rocket rose above the horizon, long-range tracking radars in Turkey—and reportedly also in northern Iran and Pakistan—followed the spaceship in the initial leg of its journey. By the time the rocket had flashed eastward across Siberia, it came within range of another powerful U.S. radar located on Shemya in the Aleutian Islands.

A quick look at the Shemya tracking information showed that a satellite had been launched, rather than junst another long-range ballistic shot into the Pacific. Within seconds word of the satellite launching had been flashed to a command headquarters deep in the basement of the Pentagon and thence to White House officials.

Thus the White House press secretary, Pierre Salinger was able to announce shortly after Moscow radio made its 2 a.m. announcement that the United States had known in advance of the launching.

If the Soviet spaceship has continued circling the earth—instead of making just one orbit carrying it down across the Pacific, around the tip of South America and then back up across the Atlantic and Africa to the Soviet Union—it would have come under detection by other segments of the U.S. surveillance network.

SURVEILLANCE FENCE

Strung across the United States, from Georgia to California, is Spasur, the space surveillance fence developed and operated by the Navy. Any satellite passing through the fence's fanlike beams of radio signals sends back telltale radio echoes. Within a few passes, Spasur, and its electronic computer, in Dahlgren, Va., is able to tell the orbital path of the satellite. Using this information, Air Force radars, such as the Lincoln Laboratory's Millstone Hill radar in Westford, Mass., are able to lock onto the satellite and provide more precise information on its orbit and even its size.

From the information of the electronic surveillance network, therefore, it was conclusively established that a Soviet satellite had been launched early Wednesday morning last week. It was also because of this network that American officials could be so definite in dismissing the still unexplained series of reports that seeped out of Moscow about how a Soviet astronaut had been launched before April 12—reports, incidentally, that have contributed in their own way to the doubts about the Soviet achievement.

As U.S. officials pointed out, they would have known if a Soviet satellite had been launched and there was no evidence that any space ship was placed into orbit before the 5-ton vehicle of Major Gagarin.

But even if it was established that a Soviet satellite had gone into orbit, this still goes not answer the questions of how did the United States know that a Soviet astronaut was inside the space ship and that it was, in fact, Major Gagarin who stepped out of the satellite after a trip around the world.

Here the evidence becomes obscured in the most secret, clandestine channels of intelligence. One possible surce of confirmation may have come from monitoring the messages that, according to Soviet accounts, Major Gagarin sent back to earth during his trip. Or, from intelligence sources within the Soviet Union, the United States may have received information confirming the Soviet account.

GAGARIN MONITORED?

Officials will not say whether any of Major Gagarin's messages were monitored and for obvious reasons will not discuss what independent intelligence information may have been received from within the Soviet Union. All they will say is that the official con-

gratulations of President Kennedy were withheld until it was certain that the Soviet Union had indeed scored the historic first flight into space.

Ironically, the doubts about the Soviet feat have been kindled by the secrecy of the administration and of the Soviet Union. Under a new secrecy policy, the administration has withheld information, provided in the past, about the tracking of the Soviet shot and the spotting of the Soviet tracking ships. To complicate the confusion in the public mind, tracking information obtained by the military was not made available immediately to the National Aeronautics and Space Administration, which had been designated as the official spokesman on Soviet space shots.

SOVIET EVASIVENESS

The Soviet Union, for its part, has contributed to the doubts by its evasiveness and contradictory accounts about certain circumstances of the flight. Still unresolved are such details as: Did the space ship have portholes for Major Gagarin to look out at the earth below, how was the space ship designed so as to resist the tremendous temperatures of reentering the earth's atmosphere, and how did the astronaut return to earth, in a parachute or inside the capsule?

The Soviet Union, which has traditionally been reluctant to describe the details of its space fights with the same openness as the United States, may never clear up these minor mysteries. But there is no mystery about whether Major Gagarin circled the earth. Every bit of evidence available to the United States confirms the feat and rules out the possibility of deception.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided*, That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided*, That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided*, That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further*, That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided*, That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

Appendix

Gold

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. MOELLER. Mr. Speaker, we have recently heard a great deal of talk concerning the crisis in the balance of international payments, that is to say in the gold flow out of the United States. Although at the moment the gold flow problem appears to be abating somewhat, it may again return to plague us. On the theory that all interested citizens have a right to be heard on this very difficult and perplexing question, I take pleasure in placing in the RECORD the thoughts of Mr. J. Keller Kirn, Sr., of Lancaster, Ohio, a student of this and related problems.

In addition, Mr. Kirn has favored me with a copy of a letter he has written to the editor of the Columbus (Ohio) Dispatch on the general subject of teaching communism in the schools. I am also including this letter in the RECORD in the hope that those with such proclivities will be deterred thereby.

The articles follow:

GOLD

Importing $100 million gold from England in 1907 stopped the panic. Each nation went its own way and made its financial policies subject always to the limitation that if it overextend itself, other nations would drain away its gold and force it to reverse its policies, without war. This illustrates how currency redeemable in gold coins stabilizes credit and halts inflation.

When Mr. Charles Henry, Lancaster, Ohio, paid $1.25 for his hair cut August 3, 1960, he said he remembered when he paid 10 cents for his hair cut. That was when we were on a gold standard. In other words we now have 8-cent-paper dollars not redeemable in gold coins, invested in U.S. bonds, deposited in banks, and in our hands. Increased prices wil increase our so-called income but further reduce our 8-cent-paper dollars not redeemable in gold coins, and reduce our pay checks.

Lancaster, Ohio's John Sherman, Secretary of the Treasury under President Hays, raised our 35-cent dollar to a 100-cent dollar with gold.

According to John Sherman's "Recollections of 40 Years in the House, Senate, and Cabinet," volume II, page 74, those opposed to restoring the gold standard and coinage for our use predicted "that resumption in gold and silver would be impossible on the then volume of paper money; that if it were attempted the desperadoes of Wall Street and the money kings of Europe would present greenbacks and take the gold as fast as it could be paid over the counter of the Treasury. Not a year rolled around until resumption came, and these Wall Street desperadoes and these money kings of Europe, instead of coming and demanding our gold in exchange for greenbacks, now bring their gold to us and want greenbacks for it. They don't want the gold at all and we can't put it on them. United States notes now travel the circuit of the world with undiminished honor, and be everywhere redeemed in coin."

When we were on the gold standard in 1920, our recession lasted only 1½ years and was followed by 7 years of real prosperity. We had a flexible wage scale that permitted immediate and adequate adjustments in accordance with changing conditions. Prices fell until buying resumed according to the law of supply and demand. We balanced the budget each year during that time. Franklin D. Roosevelt never balanced the budget.

We had more gold January 2, 1933, than on November 2, 1932, therefore there was no need to take us off the gold coin standard and there is no need to keep us off the gold coin standard. Neither our Nation nor any other nation has ever maintained a 100-percent gold coin reserve for convertibility of all nongold money, just as banks can't keep all of depositors money in banks and make loans.

Restore the gold coin standard at $35 per ounce of gold, nine-tenths fine, then recall our currency not redeemable in gold coins and replace it with currency redeemable in gold coins.

Standards must stand. Reducing the gold content of our dollar to raise the price of gold produced more dollars but not more gold, just as reducing a yard from 36 to 18 inches produces more yards but not more cloth.

Emulate Switzerland, at peace with neutrality as proclaimed by our President George Washington April 22, 1793, and prosperous with currency redeemable in gold coins, since 1815. Switzerland is not a U.N. member.

Constitutionally yours,
J. KELLER KIRN, Sr.

LANCASTER, OHIO.

[From the Columbus (Ohio) Dispatch, Apr. 14, 1961

LOOKS TO BIBLE AND CONSTITUTION IN DEFENDING AMERICAN PRINCIPLE

To the EDITOR:

Dr. Oswald Hoffman, speaker on the Lutheran Hour, March 12, 1961, stated that a man said: "We started with communism, why do we fight it now?"

Acts 2:44–45: "And all that believed were together, and had all things in common; and sold their possession and goods and parted them to all men, as every man had need."

Some would not work. 2 Thessalonnians 3: 10: "For even when we were with you, this we commanded you, that if any would not work neither should he eat." After that each man was given a piece of land to cultivate to feed himself and family. From that time, communism stopped and prosperity began.

Clyde Moore in his column stated: "Dr. Alexander Miekeljohn maintains that Communists should be allowed to teach. To be consistent, no doubt he would be opposed to quarantining a teacher with smallpox, as it would do the students good to learn first hand about the disease and decide for themselves whether or not that wanted it."

Instead of learning all about communism to fight it, learn all about our U.S. Constitution to defend it.

Do our citizens prefer to be governed by those whom they elect with laws made in pursuance of the Constitution or be ruled with rules made by the bureaucrats whom they did not elect?

U.S. court decisions are the law of the land, only when they are made in pursuance of the Constitution consisting of three branches, legislative, judicial, and executive. There is no fourth branch for Government ownership of operation of industries, as under socialism and communism.

William Penn said: "Men will either be governed by God or ruled by tyrants." With blessings come responsibilities. Parents demand that teachers and professors who try to destroy our "In God we trust" Constitution be fired now.

Abraham Lincoln said: "The Constitution was adopted to preserve our Government, not to act as a protecting screen for those who while claiming its privileges, seek to destroy it."

Emulate Switzerland, at peace with golden rule neutrality as proclaimed by President George Washington, April 22, 1793, and prosperous with currency redeemable in gold coins, since 1815. Switzerland is not a U.N. one-world member.

J. KELLER KIRN, Sr.

LANCASTER, OHIO.

There Are More Criminals in the United States Than There Are College Students

EXTENSION OF REMARKS
OF
HON. JOHN C. WATTS
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. WATTS. Mr. Speaker, under leave to extend my remarks, I wish to bring to the attention of the House the following article, written by the Honorable Keen Johnson, former Governor of the Commonwealth of Kentucky, former vice president of Reynolds Metals, Inc., and now back at his first and old love, writing editorials for the Richmond (Ky.) Daily Register. The following editorial appeared in the Register on April 11, 1961:

THERE ARE MORE CRIMINALS IN THE UNITED STATES THAN THERE ARE COLLEGE STUDENTS

An aggressive attack upon organized crime is proposed by Attorney General Robert F. Kennedy. Congress will be asked to enact a series of anticrime laws which it is believed would strengthen the Government, provide authority to run down racketeers and curb organized crime activities.

Attorney General Kennedy served as chief counsel of the congressional committee investigating racketeers in labor unions. As result of that experience he wrote a book, "The Enemy Within," in which he expressed deep concern about the steadily increasing crime activity. Now, as Attorney General, he urges laws that will curb interstate gambling rings, strengthen the Federal Firearms Act;

give more protection to witnesses cooperating with congressional investigators and make it more difficult for lawbreakers to cross State lines.

The steady increase of crime should cause us more concern than it does. We would probably have a better understanding of its seriousness if we understood what it is costing us as taxpayers.

J. Edgar Hoover, Chief of the Federal Bureau of Investigation, says: "Crime costs the U.S. taxpayers $28,500 a minute; $1,710,000 an hour."

There are three times as many criminals as college students. The criminals force us to spend each year 4⅔ as much on them as we spend on all forms of education, public and private.

Major crimes have increased 56 percent since 1950, four times the increase of our population. And Hoover predicts that there will be another 35 percent increase in crime in the next 10 years.

The increase of law violation, the steady sweep of crime is just as frightful in Madison County in Kentucky as it is throughout the Nation. It would be fortunate if we should become concerned about it here at home.

It is a strange anomaly that in this the most literate of all nations, where exists greater opportunity for living a life of rectitude, crime flourishes, criminals increase in number and in their sinister disregard of law.

The most disturbing thing about it is that we accept with complacency a situation that gradually gets worse. The effort of the Attorney General to make a vigorous attack on crime should be widely approved. There should be cooperation from Congress in enactment of anticrime laws that would help check lawlessness.

Second Thoughts on Peace Corps

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. DERWINSKI. Mr. Speaker, the value of study and deliberation often proves a sounder policy than snap judgments inspired by impetuous idealism. A recent editorial in the Chicago Daily News, entitled "Second Thoughts on Peace Corps," certainly deserves the attention of the Members of Congress:

SECOND THOUGHTS ON PEACE CORPS

The managers of the Peace Corps are having some sobering second thoughts. Bill Moyers, assistant to R. Sargent Shriver, the Director, accompanied Vice President Johnson to Africa. What he saw of native living conditions gave him the shudders and a new conception of the "very real problems" facing the project.

The idea of a corps of eager and dedicated young men and women on missions of light to the far corners of the earth caught the public imagination. College campuses buzzed with excitement.

Some of these young people may be merely leaping at what they imagine to be an exciting adventure. But most are motivated by genuine idealism.

If some of them saw it in terms of Steig's "dreams of glory," with themselves being cheered by adoring natives, that would be youth.

Moyers himself sounds as if he had never before visited—and certainly few of the Peace Corps applicants ever have seen—a village of mud huts, in which the family lives with the chickens and water buffalo and subsists on bread and onions. Even if the corpsmen did not shrink from this hardship of "living with the people," the health hazards would threaten Americans habituated to sanitary conditions.

The flies, the mosquitoes, the filth that he saw so alarmed Moyers that he has warned Shriver that it will be necessary to include a medical assistant and a public health expert with each of the American teams.

That begins a retreat from "living with the people." That prospect was never very real anyway, because anybody who eats three square meals a day is already set apart from most of the inhabitants of the areas that need help the most.

The search goes on for young people who combine a knowledge of Swahili, farming, road building and carpentry. But there is also a growing awareness that this is no business for amateurs.

Illinois Senate Resolution Supports U.S.S. "Arizona"

EXTENSION OF REMARKS
OF
HON. PETER F. MACK, JR.
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. MACK. Mr. Speaker, under leave to extend my remarks I include the following joint resolution passed by the Illinois State Legislature:

OFFICE OF THE SECRETARY OF STATE,
Springfield, Ill., April 20, 1961.

Hon. PETER F. MACK, Jr.,
Member of Congress,
Washington, D.C.

DEAR MR. MACK: As authorized, I am enclosing herewith a copy of Senate Joint Resolution 13 as adopted in the 72d general assembly of this State.

Sincerely,
CHARLES F. CARPENTIER,
Secretary of State.

SENATE JOINT RESOLUTION 13

Whereas the project to build a permanent memorial over the hull of the U.S.S. *Arizona*, sunk in the December 7, 1941, attack on Pearl Harbor and still containing the bodies of 1,102 servicemen entombed within it, is slowing because of lack of funds although the project is nearing completion; and

Whereas the Navy Club of the United States of America, one of the originators of the plan to enshrine the *Arizona* and its gallant dead as a memorial to all who died at Pearl Harber on the "day of infamy" in 1941, has been responsible together with the Pacific War Memorial Commission for raising $250,000 privately toward the $500,000 needed; and

Whereas the Hawaii Legislature has appropriated an additional $50,000 toward the memorial, leaving an additional $200,000 still needed; and

Whereas the completion of this memorial is in the interest of the Nation as a whole as a shrine to the men who gave their lives and as a symbol for future eternal vigilance: Therefore be it

Resolved by the Senate of the 72d General Assembly of the State of Illinois (the House of Representatives concurring herein), That Congress is memorialized to appropriate the necessary $200,000 in additional funds so that the memorial over the U.S.S. *Arizona* may be completed at an early date as a national shrine for the men killed at Pearl Harbor on December 7, 1941, and that suitable copies of this resolution be forwarded by the secretary of state to the President of the United States and the Members of Congress from this State.

A Journey to Ireland

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include another in a series of articles on Ireland written by Mr. Thomas Heffernan, editor, Sunday Independent, Wilkes-Barre, Pa., this article having appeared in that newspaper on April 23, 1961.

Mr. Heffernan wrote this highly interesting and informative series on Ireland following an extensive trip through that country last fall.

The indicated article follows:

A JOURNEY TO IRELAND—IRISH GYPSIES CALLED TINKERS, AND THEY ARE NOT POPULAR

(By Tom Heffernan)

You don't hear much about gypsies in Wyoming Valley any more—those swarthy travelers whose background was so mysterious and who used to arouse neighborhoods by moving a whole caravan into an empty storeroom for the winter.

In Ireland they are still common, though not called gypsies very often and proving also to be of entirely different appearance.

In fact, they looked much like the regular Irish folk. But there the similarity ends and they definitely are not well liked.

We saw our first a short time after arriving at Shannon Airport and while being driven to our hotel in Adare, about 4:30 o'clock of a Saturday morning by the wonderful Paddy O'Toole of Shannon Travel.

ALL WAGONS THE SAME

It was as a man on a bicycle, going the same way we were, loomed up ahead of us in the headlight beam.

"There's a tinker," said Paddy, and we wanted to know how he knew.

"We just passed a wagon," Paddy explained and these wagons of the tinker and every one exactly like every other one and thus unmistakable.

They look as if a huge, straight-sided barrel had been mounted on wheels.

Then, told the story by the sound of Paddy's voice, we wondered why they were not liked.

It seems that, generally, they are not considered of any value to any community, careless, perhaps dirty, paying no taxes, supporting nothing but themselves, their honesty suspected and—getting closer to the Irish heart—to be watched in a horse trade.

A REAL EVIL

And like gypsies everywhere, they seem to go in for trading horses.

That some of the horses they acquire are believed to be shipped to the Continent for human consumption is one more thing the horse-loving Irish hold against them.

Naturally, as the common name of "Tinker" suggests, they also earn a bit here and there at mending jobs.

Seen along the roadside of an evening, huddled over a tiny fire on the steep shoulder of a road, having a crude dinner in the open they are far from a romantic lot of wanderers.

Instead, they look pretty pathetic.

IRISH FARMS ARE UNCLUTTERED

We are not one to find everything better in other countries—mostly because it isn't possible to do so.

Not in many cases.

However, there is a great difference between homes in marginal farm areas in Ireland and here in Luzerne County—and Luzerne County does not gain by the comparison.

In most local cases, as a drive in any direction will disclose, the local homes are apt to be marked first by an old automobile or two, in various stages of dismantling as the principal feature of the front or side yard.

Then, far too often, a lot of the rest of the land near the house will be marked with a pile of old bad springs, a tumbledown chicken coop, some piles of ashes and what-have-you.

NOTHING TO THROW AWAY

Not so in Ireland and it well may be that the Irish in these poorer farming areas cannot afford to throw things away.

Certainly it is true they never had an automobile—of any vintage—to let go to rust and ruin in the front yard.

Furthermore, with the houses usually built of stone or a stuccolike cement, the lack of paint is not so noticeable.

They may be poor and the cow barn may be too close to the house of the farmer's family to let the olfactory nerves get much of a rest, but you'll find no clutter of rubbish in piles around the house.

It might be added that the most common type of architecture—that of the Irish cottage—is good.

MOST FARMERS WELCOME HUNTS

The overwhelming majority of the Irish farmers have no objection to the hunts riding across their land.

As a matter of fact, with the places where the hunts are to meet are scheduled and made known well in advance, and something like a holiday air is met there quite often.

Many farmers and villagers turn out to watch and lots of them, keen about the sport, try to keep up as they can.

The youngsters run across the fields and as far as they are able.

Schoolchildren usually come out of the school buildings to watch as the hunt passes.

Farmers or their young people with horses often join in.

When a fox goes to ground, down into a hole, a crowd gathers in no time.

TWO RUGGED INDIVIDUALS

Twice, however, in the course of our hunting holiday in Ireland, we came upon land the owners of which denied permission to ride over.

In both cases it caused the hunt to scatter a bit as different routes were sought in the effort to keep up with the hounds.

And on one occasion, with Lord Hamilton—a handsome big fellow in his forties—was acting as master of the County Limerick hounds since Lord Daresbury had been called to London, the result of one farmer's attitude was that we were rather confined in a field.

We could not jump the fence without getting on forbidden land.

So Lord Hamilton turned to us to remark, quietly:

"We will now leave the field—through the gate."

Having had quite a few hours of what was for us hard riding and with many jumps, we had to give, as an honest answer:

"Perhaps that's something to be thankful for."

MISSED MEETING U.S. AMBASSADOR

We had the misfortune to miss meeting with former U.S. Ambassador to Ireland Scott McLeod—who was popular on the Emerald Isle.

Our original plan called for one week in Adare, County Limerick, and then a week in Dublin.

However, we liked Adare so well we hastened back, leaving on a Wednesday when Ambassador McLeod was not due to return from a trip to Geneva, Switzerland, the next day.

Both Mr. McLeod and his office—which we also missed visiting—most graciously gave us some service that was most helpful and thoroughly appreciated.

POLICEMAN IS CALLED GUARDA

Police in Ireland are known as civil guards and, when you speak to them, you call them what sounds mostly like guarda.

They are an impressive lot, according the respect to be found associated with police throughout Britain, and most accommodating.

The guarda really offers service and all of them make it a point to be specially easy with visitors.

However, be sure to have your driver's license with you if you intend to operate an automobile.

Power To Regulate Rests Better With the Congress

EXTENSION OF REMARKS

OF

HON. ROBERT W. HEMPHILL

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Evening Herald, Rock Hill, S.C., April 18, 1961:

IN OUR OPINION: POWER TO REGULATE RESTS BETTER WITH THE CONGRESS

A battle seems to be shaping up between President Kennedy and the House Legislative Oversight Subcommittee for control of the Federal regulatory agencies.

The agencies were created by Congress. They include the Interstate Commerce Commission (ICC), the Federal Trade Commission (FTC), the Federal Power Commission (FPC), the Securities Exchange Commission (SEC) and other groups that regulate certain areas of our lives.

Congress reserved the right to oversee their operation after creating these agencies. Representative OREN HARRIS, Democrat of Arkansas, chairman of the subcommittee, is concerned over what appears to be the President's efforts to gain control of the agencies.

The chairman's concern is proper. The regulatory agencies can best serve the people with a minimum of political control.

Some people lean to the view that the regulatory agencies should regulate themselves, independent of both Congress and the White House. This offers the possibility of dictatorial action and seems inadvisable.

A reasonable amount of check against unlimited power seems the best course. And this power to check the power of regulation is better reserved to a continuing body of elected Representatives, rather than being given to one man, who may be gone in less than 4 years.

Speech by the Honorable William M. Tuck, Representative From the Fifth District of Virginia

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. ABBITT. Mr. Speaker, on Sunday, April 23, the Commonwealth of Virginia officially marked the opening of the Civil War Centennial. The Honorable WILLIAM M. TUCK, who so ably represents the Fifth District of Virginia in the House of Representatives, delivered the address at the opening ceremony at the State capitol in Richmond.

Congressman TUCK has long been identified with those who cherish the ideals, traditions and heritage of our people and who are endeavoring manfully to impart to the present generation the importance of preserving liberty, freedom and the rights of our people and to prevent government by men and not by law.

Representative TUCK was introduced by the Honorable Charles T. Moses, president pro tempore of the Senate of Virginia. Senator Moses and I live in the same county and I am proud of the splendid work he is doing to preserve our way of life and the freedoms and privileges of our people.

Under leave to extend my remarks, I include the splendid address of the Honorable WILLIAM M. TUCK:

SPEECH BY HON. WILLIAM M. TUCK, REPRESENTATIVE, FIFTH DISTRICT OF VIRGINIA, SUNDAY, APRIL 23, 1961, CEREMONIES MARKING THE OPENING OF THE CIVIL WAR CENTENNIAL IN VIRGINIA

Mr. Chairman, distinguished guests, ladies, and gentlemen of the late Dr. Edwin Anderson Alderman, president of the University of Virginia, in his matchless address to a joint session of the Congress of the United States commemorating the life and services of Woodrow Wilson, adverted to the comments of an ancient Athenian. This individual had commended the fitness of the Athenian Public Memorial, but doubted the wisdom of any speech on such occasions. He declared that where men's deeds and actions have been great, they should be honored in deed only; that the standing and character should not depend upon the judgment and the words of one; that their virtues should not depend upon whether he spoke well or ill. While I know that what I say has no comparable value to the situation described by Dr. Alderman, nevertheless, I find myself incapable of employing words that would justly and accurately portray the scenes which obtained in Virginia a century ago, or to give appropriate expression to the sentiment which permeates the breast, or the thoughts which crowd upon the mind at this time.

We have met here today to open formally the Virginia Civil War Centennial anniversary. This occasion is a mere milestone on the road of time, a niche in the long corridors of history. But in the deeper sense of noble sentiment and high obligations to our Commonwealth and to our country, we are here to commemorate the soul-wrenching ordeal through which Virginia passed and from which, despite hardships and

handicaps, she emerged to take her proud place in the forefront of the sisterhood of American States.

Virginia had furnished much of the leadership which established the Union. Madison was named by the muse of history as the father of the Constitution, just as another great Virginian, George Washington, had been the Father of his Country. And Virginia herself was loved and respected, as she is today. She was then, as now, known as the "mother of States and of statesmen." And so she stood in those sorrowing days entrapped within a national disturbance of complex causes, a commonwealth of powerful prestige whose movement to one side or the other was fatefully awaited by all.

As Virginia waited, there was little hope of escape. Soon the decision must come, and 100 years ago it did come, from within the walls of this very building where we are gathered, from the assembled trustees of the will, the conscience and the power of Virginians everywhere.

To the broad southern mind, the election of Abraham Lincoln meant secession. They say no happiness in a Union presided over by him. The very waves of the deep southern discontent, and the northern discontent with the ways of the South, profoundly threatened the foundation of the Nation. As these waves beat against this State, Virginia was caught in the vortex of these angry emotions.

To the eternal and everlasting credit of the Virginians of a century ago, they exhausted every resource and explored and employed every honorable device to preserve the peace and save the Union short of fighting against the people of the South. None of the succeeding generations have had cause or reason to blush and no apologies to make. We can stand proudly in the confident knowledge that, upon the record established, our ancestors took a firm but conciliatory stand. Moral heroism, though less frequent and less acclaimed than physical courage, nevertheless is worthy to excite our highest admiration.

Because of the prominent part Virginia took in the conflict that followed, as well as the fact that so much of the actual warfare occurred on Virginia soil, her name is synonymous with the war. But let us never forget that Virginia did not start that war. At the very hour when Fort Sumter was under fire, an official Virginia committee was in Washington for a conference with Lincoln on his policy toward the South.

At that time Lincoln was not conciliatory, and his reply to the Virginians meant coercion, of which they could not approve. Distinguished historians have pointed out that it was not the firing at Fort Sumter, but it was the Lincoln proclamation calling for 75,000 troops that produced Virginia's ordinance of secession. On many occasions that impeccably honest and irreproachably correct citizen of Rockbridge County, Gov. John Letcher, destined to become Virginia's determined and much-loved war Governor, stated his and the position of Virginia to be that "he would resist the coercion of Virginia and to the adoption of such a policy of coercion whenever the attempt is made by either Northern or Southern States." Governor Letcher furthermore stated his position and that of Virginia which constituted the very crux of why the State adopted the resolution of secession: "I will regard an attempt to pass Federal troops across the territory of Virginia, for purpose of coercing a Southern seceding State, as an act of invasion, which should be met and repelled."

Virginia was in no mood to tear the Union asunder. In 1861, as in 1775, she labored long and arduously for peace and conciliation. She it was who sponsored a resolution in Congress creating a commission of one from each State in the Union to solve the differences.

The Governor of Virginia in November 1860, called a special session of the legislature to deal with the problem facing the Nation. This session of the general assembly passed a resolution calling for a convention, with the understanding that no action taken by the legislators would be binding upon the people of Virginia until they had a chance to vote on it.

The Virginia Legislature on January 19, 1861, passed a resolution calling for a peace convention in Washington. This resolution authorized the commissioners to confer with the President and with representatives from the seceded States in the hope that an atmosphere could be created whereby the seceded States might find it practicable to return to the Union. The aging and beloved ex-President, John Tyler, of Virginia, was commissioned to call on President Buchanan. Another distinguished Virginian, Judge John Robertson, was sent to South Carolina to urge against any action by that State which might result in war pending the peace conference. As a result of President Tyler's visit to President Buchanan, the latter requested Congress to leave the status quo undisturbed until Virginia had run her course in the cause of peace. South Carolina in the meantime agreed to take no action that would precipitate a conflict.

When the Virginia Convention met on February 13, the delegates to that convention put aside the business of passing an ordinance of secession and settled down to explore the possibilities of compromise. These are only a few among many other actions taken by Virginians of that period to avert this gory conflict, and the record of Virginia's attempts to reconcile the difference and to bring about compromise is long and need not be here repeated. Her efforts along these lines persisted until the very moment of the beginning of hostilities.

The inauguration of President Lincoln and his Executive order calling for troops to invade the South shook Virginia. The country was already at war when Virginia seceded. It was no longer a question af whether the State should go to war; it was simply a question of deciding with whom she would war.

On the 17th of April the secession convention passed an ordinance of secession subject to popular approval. Volunteers were summoned into the State service, and upon the 18th they descended upon the Harpers Ferry arsenal and captured arms, ammunition, and machinery.

Already the long shadow of Robert E. Lee was discernible. This gentleman shared the views of the Virginians of that day that every honorable effort should be made to avoid war. He was a colonel in the Regular Army. He had established a most creditable and distinguished record in the service.

Lee did not know for sure that Virginia had seceded until the morning of April 19, when he went into Alexandria on business and there read the news he had hoped he would never see: "Virginia had seceded." To his mind that meant the wreck of the Nation, the beginning of sorrows, the opening of a war that was certain to be long and full of horrors.

When other hopes had failed before this time, Lee told himself that secession could not become an accomplished fact until the voters of Virginia had passed on the ordinance of secession, as they had specifically reserved the right to do, but now Lee's judgment told him that war would not wait on a referendum. Virginia would certainly consider that her safety required the seizure of Federal depots within her borders. The Federal Government, on its part, would certainly take prompt action since the State just across the river from its Capital had left the Union.

As one of the senior field officers in Washington, he might be summoned at any hour to defend Washington by invading Virginia—which he could not do. Duty was plain. Their could be no holding back. The time had come. All the Lees had been Americans, but they had been Virginians first.

Dearly as Lee loved the Union, anxious as he was to see it preserved, he could not bear arms against Virginia, which had seceded and doubtless would join the South. Her action controled his own. He could not wait for the uncertain vote of the people when war was upon him. So after midnight on the 19th he sat down and wrote this letter, not more than 15 hours after he had received positive information that Virginia had joined the ranks of the seceded States:

ARLINGTON, VIRGINIA
(WASHINGTON CITY P.O.),
20 April 1861.

Hon. SIMON CAMERON,
Secty of War.

SIR: I have the honor to tender the resignation of my commission as Colonel of the 1st Regt. of Cavalry.

Very respty your obt servt,

R. E. LEE,
Col. 1st Cavly.

Lee sent in his resignation to General Scott on the 20th. In it he said: "Save in defense of my native State, I never desire again to draw my sword." That same day he received a communication from Judge John Robertson requesting in interview. It was set for the 21st. On the evening of the 21st a messenger arrived at Arlington mansion with a letter from Robertson. He apologized for his delay and—this was the important item—invited Lee, in the name of the Governor, to repair to Richmond for conference with the chief executive.

Lee realized, of course, that this meant participation in the defense of Virginia, but he did not hesitate a moment. In a few words he notified the Governor's representative that he would join him in Alexandria the next day in time to take the train for Richmond.

Dressed in civilian clothes and silk hat, Robert E. Lee departed from Arlington on the morning of April 22, never again to enter its friendly portals. If he heard a tall clock chime as he left the mansion door of his beloved Arlington, it was but to strike the beginning of his hour of growing greatness and glory.

No one knew better than Robert E. Lee, the trained soldier and the veteran of Mexico, the agonies that war would bring, although it is to be hoped that he was spared the prescience to know of the sorrows that would like sea billows roll during those 8 April days, as he passed along the road leading from Petersburg to Appomattox.

He was a man of simplicity and of superb dignity. He rode on before the crowd to the Spottswood Hotel at Eighth and Main Streets. A few hours later he was in conference with the Governor, who informed him that the general assembly had authorized the appointment of a commander of the military and naval forces of Virginia with the rank of major general.

The appointment was proffered, and that very night the convention unanimously approved the choice in an historic display of good commonsense. That night Lee carried to his hotel the heaviest burden borne by any man since George Washington, and next day he went to work at a simple office on Main Street—without so much as a clerk to help him.

On that same day 100 years ago and just before the noon hour struck, Lee climbed the hill leading to the Capitol. He was escorted by a committee from the convention and walked between the massive columns of the south portico of the Capitol to the old hall of the House of Delegates. Along the way he paused in the rotunda of the Capitol and gazed momentarily at Houdon's famous marble statue of Washington.

A few minutes later the doors opened and Lee stepped forward on to the convention floor, amid a hush of silence, before a multitude of admiring eyes. His father and other ancestors had been there many times before him.

The convention rose ecstatically to its feet. An escort by his side spoke out: "Mr. President, I have the honor to present to you and to the convention Major General Lee."

The members sat down. In measured tone, the chairman addressed the general at considerable length, formally apprising him of the actions of the convention. Faith and confidence were expressed in him as seldom they are in any individual in this doubting world. He was handed a scroll of faith and a commission of honor so demanding that it was obvious he would be expected to respond.

What he said was this: "Mr. President and gentleman of the convention:

"Profoundly impressed with the solemnity of the occasion, for which I must say I was not prepared, I accept the position assigned me by your partiality. I would have much preferred had your choice fallen on an abler man. Trusting in Almighty God, an approving conscience, and the aid of my fellow citizens, I devote myself to the service of my native State, in whose behalf alone will I ever again draw my sword."

We are here today to relive those precious memories of a century ago. We are here today because, thank God, we are not unmindful of the unexcelled heroism and valor of the men and women of the South on and off the battlefield. We cannot forget the sacrifices of our forefathers. We do not want to forget them. We shall prize and appreciate them as long as patriotism and love of country linger in the human breast. We must not fail to remember that history is prolog, that as the great Virginia patriot, Patrick Henry, said, we have no way of judging the future but by the past. The Civil War was an object lesson to us, a tragic reminder of the horrendous results which occur when men are driven to employ force as a means of solving their problems. We must look upon our tests today with the same spirit of sacrifice shown by our forefathers a century ago.

Today we hear of depressions and recessions. What we had in the South after the close of the Civil War was devastation. A mere depression or recession would have looked like a high form of relief. Hundreds of thousands of our men were killed or wounded, or otherwise incapacitated. Our manpower was thus depleted. Our homes, our cities, and our towns were in ashes. Our lands lay in waste, and our fields were impoverished. Our livestock was consumed or carried away. We were without tools and instruments with which to labor.

Our money was valueless. Our smokehouses were empty. Little children were starving. Vituperation and malediction laid like a pall over all the land. All that we had left and that was much, was the character of our people and the marrow in their bones. They did not subscribe to the something for nothing doctrine, so familiar to us today. They knew that worthy achievement comes only from service and sacrifice.

Without complaint, the returning Confederate soldier began to lay the foundations of a new order and a new civilization. Although Virginia lay prostrate and had been swept by a besom of desolation and destruction, the fields which ran red with the blood of our people in the spring were ripe with a teeming harvest in the fall.

They had no government to which to look, save the whim of martial tyrants. There was no Marshall plan. There were no Federal lending agencies, no Government relief programs, no veterans' benefits. The only Federal agency operating in the South was the Freedmen's Bureau, a rapacious corps of human vultures, with an eye on property that might be picked up at a fraction of its true value, or for no price at all. Though these facts and others not here related are to be deprecated, these statements are made in no tone of bitterness, for there were many in the North who wanted it otherwise, but who were powerless to mollify the wrath of the radicals. The situation presents a contrast in study between the attitude of the American Government toward its defeaed enemies of World War II and the attitude of the same Government toward defeated fellow Americans after the Civil War.

But it was from these ruins that Virginia and the other Southern States, without assistance, have grown to greatness. Today the eyes of the Nation and of the world are turning toward the South, which now definitely become economic opportunity No. 1. In the last decade the white population of the South rose by 22 percent. Factory employment jumped 31 percent, more than four times as fast as in other States. Cars and trucks, a sign of wealth and industry, increased by 68 percent, while the rest of the United States had a gain of only 47 percent. Personal income in the South increased 50 percent during the last 10 years, whereas the income in other States advanced by only 49 percent. The Virginia figures taken alone present even a better picture. This economic development and improvement has done much to enhance the cultural, educational, and civic status of our people.

We are not refighting the Civil War; we are restudying it. We hope to engage in this worthy endeavor with eyes undimmed by emotion and minds unclouded by prejudice or by passion. We hope to derive from this study inspiration left by the heroic men and women of the past, to bind ourselves in an undestructible unity through understanding of one another, and by so doing to form a united country that can face with confidence the constantly arising problems created by the new scientific and rapidly developing world. We are here today because we want to rededicate ourselves to the fundamental principles of liberty and freedom. We are doing so in order that we may show a devotion to the sound doctrines of government that safely guided the destinies of the Nation throughout its long and glorious history.

Many of the problems with which we are now confronted could easily be solved if only the country had leadership of the type provided the people of the South by Robert E. Lee during the tragic era that followed the war. The people of that generation would have frowned upon the faithless and perfidious promises so characteristic of some of the leaders of the present generation. They would have scorned men who promise one thing today and do another tomorrow. They would have looked with disdain upon the wastrels and squanderers who are as careless with our rights as with our money, and who swarm like locusts around our Nation's capital, and who consistently advocate spending more each year until the country is hanging on the cliff of financial irresponsibility.

If we could revive that spirit of patriotism, of self-reliance, of self-denial which existed during the days of the Civil War and the years that followed, we could restore fiscal sanity and sound government, and speedily discharge the national debt.

What is it that we want to gain from the Civil War and the great men like Robert E. Lee who participated in it? We want to gain freedom for ourselves and for our children from the harsh restrictions of a central government which have been needlessly and recklessly imposed. We need to gain self-reliance and to indulge in the practice of self-denial, the outstanding and inspiring examples, which Lee gave to his followers in the South during the terrible years of reconstruction.

After the war, Lee was the uncrowned leader of his people. He was disfranchised. He held no office, no commisison. His strength lay in his character, his faith and courage, the confidence of the South and the hope for his people that still lingered in his Christian heart. He consistently refused offers of worldly gain and preferred instead to share the miseries of his people. Like the gentleman and patriot he was, he clung to Virginia in her fallen fortunes. The life he lived is worthy of emulation on the part of us all.

In addition to the fact that he ranks among the foremost soldiers of all ages and all nations, he possessed remarkable private virtues. His life taught the futility of vain regret; that human virtue is superior to human calamity.

He was the champion of reason rather than passion. He pleaded for silence and patience as the true antidote to excitement and passion. He knew that hate could thrive only on ignorance. If there was an attempt to besmirch his name, he covered it with a cloak of charity.

He exemplified in the highest degree the virtues of modesty and simplicity and was always sustained by the strength of his religious faith.

Notoriety and applause were not only distasteful but even painful to him.

In every relation of life, he set the example of a devoutly religious man. It has been said that "he was as devout as Stonewall Jackson, with an added note of sweetness and light."

No man in all American history has had such a profound influence and control over the hearts and minds of man as did Lee during the harsh and trying years of reconstruction.

The illustrious historian, Dr. Freeman, in the last chapter of the last volume of his matchless "R. E. Lee," describes the tour Lee took through parts of the South in 1870 just before his passing. Throngs came out at every point causing him embarrassment over the profuse attention heaped upon him. At one of such stops, a tall, 13-year-old boy was seen to maneuver himself quietly through the crowds until at least he gained a place by the side of the great southern chieftain where he could look into his noble countenance. The name of that 13-year-old boy was Woodrow Wilson.

In conclusion, if there is one incident in the life of Robert E. Lee that should be selected to serve as a message to the young southerners and to succeeding generations whose parents stood in hushed awe with heads bowed at every hearthstone on that bleak day in October 1870, when his blameless life ebbed out, it was one that occurred on his last trip to northern Virginia, which he loved so dearly. So great was the admiration of the people for the southern leader that he was almost deified. A young mother handed her babe over to the arms of the great general and asked him to bless the child. He took the child before he realized the nature of the request, and then with some embarrassment, he returned it to the mother's arms with these words which come ringing down to us through the centuries past: "Teach him to deny himself. That is all."

Speaking for Thousands of Jobless

EXTENSION OF REMARKS

OF

HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. McINTIRE. Mr. Speaker, I have on numerous occasions addressed the

House of Representatives in an effort to call attention to the severe economic conditions that have visited with our domestic textile industry as a consequence of free-flowing textile imports. I have, at the same time, introduced several pieces of legislation which are designed to effect a correction in this deplorable condition.

I am not alone in my concern. The tide of protests against too-liberal textile imports swells with each passing day, from whence I hope will come a wave of reason that will sweep the perplexing problem of textile imports from our American shores.

In this regard I enclose a pertinent article from the April 21 issue of the Bangor Daily News, a prominent Maine publication:

SPEAKING FOR THOUSANDS OF JOBLESS

The American textile industry finally got a hearing before Congress this week, and it presented strong arguments for stricter import quotas. Spokesmen for the industry in Maine and other textile regions showed that foreign competition is throwing thousands of men and women out of work and threatening the entire U.S. industry.

There was only one sour note. This came from the Committee for National Trade Policy which charged that "the injurious effect of textile imports has been exaggerated."

We invite members of the committee to visit Maine and talk with the 10,000 workers who have lost textile jobs in recent years. They also should look at the closed plants and mills, and those operating at a reduced pace because they can't sell their goods in competition with those produced by cheap foreign labor. They would find the same story in the textile States of the South.

Finally, they should listen to J. M. Cheatham, past president of the American Cotton Manufacturers Institute, who says the present trend imperils the U.S. textile industry and the jobs of 2 million workers.

Under present conditions, the American industry is operating under an unfair handicap. Wages of textile laborers in foreign countries runs as low as 10 percent of U.S. wages. Foreign manufacturers have the latest in equipment and technological know-how, thanks to a large degree to U.S. post-war aid. The setup is such that foreign firms can purchase U.S. cotton at 8 cents per pound less than American firms. The U.S. Government itself is responsible to a large extent for putting the U.S. industry at a disadvantage.

Now that southern Members of Congress have added their protests to those of Maine and other New England States, perhaps something will be done about a long overdue restriction on textile imports.

GSA and Customs Service Propose Hindrance to Development of Ports of Los Angeles and Long Beach

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. HOSMER. Mr. Speaker, the ports of Los Angeles and Long Beach currently represent a capital investment of some $280 million. However, by 1970 the port of Long Beach alone will represent an investment of $300 million, and Los Angeles Harbor plans similar expansion. Yet, the General Services Administration has proposed that harbor development be held back by the dead hand of the past. It has proposed to institutionalize a 22-mile mistake at unnecessary cost to the Federal taxpayer by building multimillion-dollar customs headquarters into a new Federal office building in the traffic-choked, landlocked Los Angeles Civic Center.

Originally, customs headquarters were placed in central Los Angeles, 22 miles away from the harbor, because the two manmade harbors were then little more than mudflats and lacked many of the facilities necessary to commerce.

This is no longer true. The harbor area communities now number more than 1½ million residents. The harbor area is the hub between the two metropolitan areas of Los Angeles to the north and fast-growing Orange County to the east and south. All banking and commercial facilities necessary for foreign trade exist in the port cities.

No other harbor in the United States has its customshouse 22 miles away. Most are within a few blocks of the harbor. Construction of this absentee customhouse has been protested by port officials at both harbors, by shippers, by customs brokers, by Los Angeles County officials, by importers, and by a resolution unanimously passed by the California State Assembly.

House Resolution 211—Special Committee on Captive Nations

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. FLOOD. Mr. Speaker, on March 8, 1961, I introduced a measure calling for the establishment of a Special Committee on Captive Nations in the House of Representatives. This measure is now House Resolution 211. There are not sufficient words to express my profound gratitude and personal delight to the more than 20 Members of the House who joined with me in that most stimulating and very enlightening discussion which took place then on the subject of the captive nations—CONGRESSIONAL RECORD, March 8, 1961, "Russian Colonialism and the Necessity of a Special Captive Nations Committee," pages 3286–3311.

The popular response to House Resolution 211 has been so enthusiastic and impressive that I feel dutybound to disclose the thoughts and feelings of many Americans who have taken the time to write me on this subject. These citizens are cognizant of the basic reasons underlying the necessity of the proposed committee. They understand clearly the vital contribution that such a committee could make to our national security interests. In many cases, they know that no public or private body is in existence today which is devoted to the task of studying continuously, systematically, and objectively all of the captive nations, those in Eastern Europe and Asia, including the numerous captive nations in the Soviet Union itself.

Because their thoughts and sentiments are expressive and valuable, I request that the following responses of our citizens to House Resolution 211 be printed in the Appendix of the RECORD:

CARTHAGE, N.Y., *March 29, 1961.*

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

SIR: I wish to extend you my encouragement and support for your sponsorship of House Resolution 211 which proposes the establishment of a Special House Committee for the Captive Nations. As a student of international affairs, I believe such a committee would be a sound weapon to employ against Russian suppression of these eastern European and central Asiatic peoples.

Although the censorship of the Iron Curtain keeps us unaware of the happenings in these countries, the infrequent news we do receive from them, such as the recent church-state conflict in Poland, gives us good reason to believe that the United States can do much to aid the cause of freedom in this area. The proposed committee would become a strong tool for fulfilling our and President Kennedy's hopes for the captive nations. As he has stated them: "Our best hope, and theirs, is rather in having more nations follow the example of Poland, Yugoslavia, and Finland in moving gradually, if cautiously, away from total Soviet political domination and in seeking greater economic independence as well. We can, however, help by offering the best possible concrete alternatives, by being prepared to take advantage of every opening to establish better relations with the West, by having ready various forms of economic aid to lessen their dependence upon the U.S.S.R. or China."

Respectfully,
DAVID C. SWARTZENTRUBER.

UKRAINIAN CONGRESS
COMMITTEE OF AMERICA, INC.,
Bismarck, N. Dak., March 29, 1961.

Hon. DANIEL J. FLOOD,
Congressman, House Office Building, Washington, D.C.

DEAR CONGRESSMAN FLOOD: It gives us real pleasure to be able to note with pride and satisfaction in our newspapers that you have introduced a resolution in the U.S. House of Representatives, calling for establishment of a Permanent Captive Nations Committee.

Therefore, in behalf of our Ukrainian Congress Committee of America, State branch of North Dakota, and 25,000 Americans of Ukrainian descent living in this great State of ours, I wish to compliment you for your initiative and wholeheartedly congratulate you for your patriotism and farsighted move in introducing this resolution.

Such a committee is long overdue and your trailblazing courage manifested in the introduction of this resolution will do much toward exposing to the people of our country and to the whole free world, that the rule of Russian Communist tyranny in Moscow is a constant threat to freedom everywhere.

A committee on the captive nations would serve many good purposes. First of all this Committee would give moral support and courage to all forces which are fighting Communist enslavement. Also, the Committee would be able to collect true information and data on the various nations in the U.S.S.R., which later could be made available to our Government. The enslavement of the non-Russian nations in the U.S.S.R.

constitutes the veritable Achilles' heel of the Russian-Communist empire, and the constant and ceaseless aspirations to freedom and independence of these nations are a great deterrent to Russian aggression and expansion. This Committee should also pass information to the American people and to the free world that the U.S.S.R. is not one nation but a conglomerate of many various nations. And, therefore, a Committee of Captive Nations should assist our Government in formulating its policy with respect to the captive nations.

The present state of affairs in the world shows that the struggle between the Communist world and the free world is entering a critical phase. The constantly increasing threat of Russian Communist imperialism with the universally known objective of world domination, indicates the urgent necessity of more effective and dynamic policies with respect to the captive nations enumerated in Public Law 86–90, and initiative on the part of the free world, especially by the United States of America.

Our organization wishes to assure you, that we fully agree with the arguments and conclusions of your resolution and deem it a privilege to aline all our forces in support of it.

Therefore you will no doubt be pleased to hear that we are making a direct appeal to both of our Congressmen of North Dakota, to the Honorable DON L. SHORT and the Honorable HJALMER NYGAARD, asking them to support your resolution.

Respectfully yours,

DR. ANTHONY ZUKOWSKY,
President, Ukrainian Congress Committee of America, Inc., State Branch of North Dakota.

RAVARINO & FRESCHI, INC.,
St. Louis, Mo.

Congressman DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: Congratulations on your submission of the House Resolution 211 for a Special Committee on the Captive Nations. It is gratifying to realize that this vitally important area may be given the attention which it necessitates.

A special committee such as this should make worthwhile advances in exposing the pseudobloc of Soviet Communists for what they really are. Unless we expect to fight the entire cold war ourselves, Soviet propaganda must be countered and a nationalism stirred in the captive nations.

If the people in these nations can be assisted peacefully to a strong enough resentment of Russian communism, desire for freedom, and hope of deliverance; Russia will be attacked in one of her most vulnerable spots.

Sincerely,

WILLIAM J. FRESCHI, Jr.

WALLINGFORD, CONN., *April 5, 1961.*

DEAR MR. FLOOD: Having read your present bill before the House Rules Committee, House Resolution No. 211 for the creation of a House Captive Nations Committee, I would like to express my full support.

It is only by taking a definite attitude toward the Communist-enslaved nations that our country can hope to be victor in the cold war. Moreover, there is a moral obligation for our country not to ignore these nations which have been deprived of their freedom. House Resolution No. 211 is a must, if liberty is to be preserved and tyranny overthrown.

Respectfully yours,

DANIEL F. ULBRICH.

ASSOCIATION OF AMERICAN UKRAINIANS,
New York, N.Y., March 29, 1961.

Hon. DANIEL J. FLOOD
House Office Building
Washington, D.C.

DEAR CONGRESSMAN FLOOD: Our organization, long active in helping Ukrainian immigrants to this great country to accustom to the new conditions in reliance on their own forces, is very happy to learn of your sponsorship of the resolution for the establishment of a Permanent Committee on Captive Nations in the House of Representatives.

We are writing our Congressman from the city of New York, the Honorable LEONARD FARBSTEIN, asking him to aid you in your resolution.

Faithfully yours,

ALEXANDER GLADYSHOVSKY,
Secretary.

BROOKLYN, N.Y., *April 9, 1961.*

Hon. DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: I wish to congratulate you on the bill that you presented to Congress. Your House Resolution 211 is the best action that a Member of Congress has taken in a long time regarding the subjugated nations of the world.

I certainly do hope that this bill will go into effect, as it is desperately needed for both our sake and for the sake of the subjugated nations as well.

Once again congratulating you, and also thanking you for your interest in the Russian dominated nations and peoples, I remain,

Very truly yours,

MARGARET TODARO.

MARCH 25, 1961.

Congressman DANIEL FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: It is encouraging to read that men like you realize the great potential of future allies in the captive nations such as Ukraine, Armenia, and so on, in the most cruel colonial empire in the world, the U.S.S.R.

I hope you continue to work to establish a congressional committee of the enslaved nations. We who love America and freedom are behind you.

God love you,

Mr. and Mrs. FRED BLEECH.

WARREN, PA.

BAYSIDE, N.Y., *April 4, 1961.*

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR SIR: I am very glad that something is planning to be done for the captive nations in addition to naming a week for them.

It is our duty as Americans to help subjugated nations regain their freedoms and to free them from the bonds of Russia.

Therefore, I am in favor of your House Resolution 211, which will establish a Committee for Captive Nations. I sincerely hope that the bill will pass through Congress for our sake in trying to maintain world freedom and peace and for the sake of the subgugated nations themselves.

Yours very truly,

WALTER J. HESS.

UKRAINIAN CONGRESS COMMITTEE
OF AMERICA, INC.,
Syracuse, N. Y., March 28, 1961.

Hon. DANIEL J. FLOOD,
House of Representatives,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: The Syracuse Branch of the Ukrainian Congress Committee of America is very grateful to you for introducing the resolution asking for the establishment of a Permanent Committee on Captive Nations in the House of Representatives.

We consider that such a Committee on Captive Nations will be very helpful in informing the free world on conditions behind the Iron Curtain and in supplying our Government with all the information necessary to formulate its policies regarding the nations occupied by Soviet Russia.

At the same time we are petitioning Mr. RIEHLMAN, our Congressman, to support your resolution.

Respectfully yours,

MYRON SYDOROWYCH,
Chairman.

IWAN ROMANIUK,
Secretary.

DEAR REPRESENTATIVE FLOOD: I have lately read a copy of House Resolution 211 and do hereby give my full support to the establishment of a Special Committee on Captive Nations. In these precarious times a committee of this sort would expose to the world the ruthlessness and hypocrisy of the Communist way of life. This committee will give the free world a chance to take the offensive after the United States and her allies for so many years have been on the defensive. You have my support, Mr. FLOOD and I hope to get my Congressman, my friends, and my neighbors to back the formation of this much-needed committee.

Sincerely yours,

JAMES L. SCHWAB.

QUEENS CHAPEL, R.I.

Revised Gettysburg Address

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mrs. MAY. Mr. Speaker, inasmuch as the month of April, as all Americans well know, is income tax reporting month, and inasmuch as the President has recently sent to the Congress his income tax program, I feel it is apropos to insert under unanimous consent, the following reprint from the March 30, 1961, issue of the Othello (Wash.) Outlook in the RECORD. While very few taxpayers chuckle while filling out their tax reporting forms, the following may have the effect of lightening our feelings on the matter:

REVISED GETTYSBURG ADDRESS

One score and sixteen years ago our fathers brought forth upon this Nation a new tax, conceived in desperation and dedication to the proposition that all men are fair game.

Now we are engaged in a great mass of calculations, testing whether that taxpayer or any taxpayer so confused and so impoverished can long endure. We are met on Form 1040. We have come to dedicate a large portion of our income to a final resting place with those men who here spent theirs that they may spend our money.

It is altogether anguish and torture that we should do this. But in the legal sense we cannot evade—we cannot cheat—we cannot underestimate this tax. The collectors, clever and shy, who computed here have

gone far beyond our power to add or subtract.

Our creditors will little note nor long remember that we pay here, but the Bureau of Internal Revenue can never forget what we report here. It is for us, the taxpayers, rather to be devoted here to the tax return which the Government has thus far so nobly spent.

It is rather for us to be dedicated to the great task remaining before us—that from these vanishing dollars we take increased devotion to the few remaining; that we highly resolve that next year will not find us in a higher income tax bracket.

That this taxpayer, underpaid, shall figure out more deductions; and that taxation of the people, by the Congress, for the Government shall not cause solvency to perish.

Mandan, N. Dak., Opposes Rail Merger

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SHORT. Mr. Speaker, the Board of City Commissioners of the City of Mandan, N. Dak., have unanimously adopted a resolution opposing the pending application of the Great Northern, Northern Pacific, Burlington & Seattle, Portland & Spokane Railroads to merge into a gigantic single railroad of unprecedented size and economic power.

This resolution sets forth clearly the reasons why the city commissioners of Mandan are concerned about this development, and therefore, at the request of the commissioners, under unanimous consent I insert the full text of this resolution in the RECORD, together with these explanatory remarks:

Whereas the Northern Pacific Railway Co., the Great Northern Railway Co., the Chicago, Burlington & Quincy Railway Co., and the Seattle, Portland & Spokane Railway Co., are proposing to merge into a single company; and

Whereas such proposed merger would create a monopoly in transcontinental railroad service; and

Whereas such railroad companies now serve competing areas in this State and do not in any manner extend the services of either or any of them into new territories not already covered by extending its lines beyond the service areas in which they presently operate; and

Whereas the proposed merger would sharply reduce services and facilities in practically the southern half of this State; and

Whereas the proposed merger will result in loss of job opportunities, destroy property values, and seriously affect the economy of this area of the State, including the city of Mandan; and

Whereas the companies proposing to merge are in excellent financial shape and there is no economic justification for such mergers; and

Whereas the Northern Pacific Railway Co. was given public lands upon which to construct its railroad and was given many privileges not otherwise enjoyed by other industries, all of which make it imperative that it continue to provide good, competitive railroad service for this area of the State; and

Whereas the proposed merger would seriously impair the taxing abilities of the State and the various political subdivisions of this State and would jeopardize the continued operation of schools and other governmental units in this area, as well as seriously affect the entire economy of this area; and

Whereas the city of Mandan, in the county of Morton, and State of North Dakota, a municipal corporation, does not consider such merger to be in its best interest or in the best interest of its people or the people of this county and State: Now, therefore, be it

Resolved by the Board of City Commissioners of the City of Mondan, N. Dak., as follows:

1. That the city of Mandan opposes the proposed merger and submits that it is not in the best interest of this Nation, State, or city and that such merger would seriously impair the economic and social growth of this city and others and that, therefore, it is urged that the Interstate Commerce Commission disapprove such proposed merger and that the city of Mandan further urges the officers and shareholders of such companies from further pursuing any further effort to accomplish such merger.

2. That the city auditor is hereby authorized and directed to forward a certified copy of this resolution to the U.S. Senators and Representatives of this State; the Governor of the State of North Dakota; the members of the Interstate Commerce Commission; the Public Service Commission of the State of North Dakota; and the presidents of such railroad companies.

By order of the Board of City Commissioners of the City of Mandan, N. Dak.

JOHN HANDTMANN,
President.

Attest:

ARNOLD T. LIVDAHL,
City Auditor.

I, Arnold T. Livdahl, being the duly appointed, qualified, and acting city auditor in and for the city of Mandan, N. Dak., do hereby certify that the annexed resolution is a full, true, and correct copy and transcript of a resolution duly passed by the Board of City Commissioners of the City of Mandan at a regular meeting held at the city hall in said city of Mandan, N. Dak., on the 30th day of January 1961.

I further certify that such resolution was passed by a unanimous vote of all the members of the board of city commissioners and that said resolution was then spread upon the minutes of said meeting.

In witness whereof, I have hereunto placed my hand and the seal of the city of Mandan, N. Dak., on this 7th day of February 1961.

ARNOLD T. LIVDAHL,
City Auditor, City of Mandan, N. Dak.

Problems of the Domestic Textile Industry

SPEECH
OF
HON. ABNER W. SIBAL
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. SIBAL. Mr. Speaker, numerous studies of the problems currently besetting the American textile industry have been made. All of them point out the fact that the time is now at hand for urgent action by the proper agencies of Government.

This industry, with the closely related apparel industry, employs more than 9 million persons in the United States. In wages and purchases, it pumps billions of dollars of revenue into our economy. In recent years, however, this industry has come under attack at home and abroad from the low-wage areas of the world.

American producers are unable to meet the competition of low wages and long hours from oriental countries. Under these conditions we face the loss of this essential industry. American workers and their employers do not ask for a protective shield behind which they can hide from the realities of world commerce. But they do ask and are entitled to have market conditions of fair competition. I am convinced that, given this, American ingenuity and resourcefulness can meet competition from anywhere in the world.

I am concerned that we, who are in a position to act, do not stand aside and in effect underwrite the ruin of thousands and thousands of jobs.

I urge most strongly that the Government establish country-by-country quotas for each commodity as recommended by the Senate subcommittee report "Problems of the Domestic Textile Industry."

Commemoration, Scholarly Effort, and Women of the Civil War

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SCHWENGEL. Mr. Speaker, during the Assembly of the Civil War Centennial Commission at Charleston, S.C., April 10 to 12, I had the distinct honor of being one of the speakers on the fine program which was presented there.

Since that occasion, I have had several requests to make my remarks public. Under leave to extend my remarks, I include the speech I made at the assembly in the Appendix of the RECORD:

COMMEMORATION, SCHOLARLY EFFORT, AND WOMEN OF THE CIVIL WAR

(By Congressman FRED SCHWENGEL)

I bring you greetings from your own Capital in the District of Columbia—the finest and greatest capital in the world. There are many reasons for this and not the least of which is the fact that our Capitol Building is more of a symbol of freedom and hope for mankind everywhere than any other capital in the world.

Students of history and of our heritage know, also, that this is so because this Capital is the place where more moving and meaningful history has been made by reaping benefits for its people and for all people than any place else in the world.

Nehru, in his simple eloquence, told us in a joint session of Congress, 1949, I quote, "During the last 2 days, I have paid visits to the memorials of the great builders of this Nation—I have done so because they have long been enshrined in my heart and their example has inspired me as it has inspired innumerable countrymen of mine. These memorials are the real temples to which each generation must pay tribute and

in doing so catch something of the fire that burnt in the hearts of those who were the torchbearers of freedom not only for this country but for the world. For those who are truly great have a message that cannot be confined within the particular country but is for all the world."

This is a fine admonition and reminds us of our own heritage. It tells us that much can be learned from our own history. Certainly it suggests, too, what can come from a study of our own Civil War period with a proper and adequate commemoration of significant events of that period.

On the north and south entrances of the Archives Building in Washington are some interesting inscriptions. One of them reads, "What is past is prologue." This is true.

Another reads, "Study history." This is good advice.

On the south side one reads, "Eternal vigilence is the price of liberty." A necessary reminder.

On the other side of that entrance it reads, "The heritage of the past is the seed that brings forth the harvest of the future." This suggests that we revive and relive history.

We need to note these admonitions. I believe that is what we are doing in this commemoration. Let us do it well.

It is hoped that the National Commission can give adequate leadership and inspire, encourage, move, and use the best talents available everywhere. We need to do this in such a way as to assure that all of us on the National Commission and you and the organization you represent will carry out to the fullest the intent of the authors of this idea to commemorate that tragic but significant experience of 100 years ago. Some are suggesting this is a time for celebration. I feel that this is not a time for celebration; but it is a time for commemoration.

The Civil War Centennial Commission, headed by Gen. U. S. Grant III, the grandson of a great general and President, who himself is great, decided at the Commission's first meeting that the Civil War is something for us to commemorate and not to celebrate.

Further, I am sure historians everywhere agree this 4-year nationwide centennial of the Civil War emphatically should not be a celebration.

In my opinion, the events of 100 years ago are far too important to be debased by a carnival spirit or by a string of useless holidays. Just as those events were of supreme importance to our Nation then, so today they deserve to be properly commemorated by us.

But some people ask, What is it that we are commemorating? Sincere and earnest people sometimes ask: Why focus on a bloody war, on an era of bitterness? This is a fair question that deserves a fair answer.

One thing is certain: Those of us who serve on the Federal Civil War Centennial Commission have no thought of reviving the sadness, the anguish, the bitterness of 100 years ago, or of romanticizing a bygone era. The centennial is not a retreat to a shadowy, unreality of the past.

For all of us, and especially we who like to think of ourselves as historians and who, like myself, like to be with historians and for various reasons have a special interest in this, the most tragic experience of our heritage, are certain, too, that we need to read, study, pause, think, and reflect on our interesting and meaningful past so that we can learn again from the lives and lessons of our history.

This will lead us to testimonials, conclusions and ideas that went into the establishment of this great idea we call American. It will help us understand the problems of the struggling nations of the present in other parts of the world and it can be of immeasurable benefit to us as we seek to help ourselves by helping them with their problems in this difficult time.

If individually and collectively we do this well and thoroughly we will learn again to feel the spirit that carried the people we call our forefathers through grave difficulties in their search and fight for the right.

As we think of the millions who gave the last full measure, and we will be reminded of this often, we should remind ourselves of a thought expressed at Gettysburg 2 years ago by America's most beloved poet, historian, and private citizen—Carl Sandburg. I quote:

"We have heard that the dead hold in their clenched hands only that which they have given away. When men forget, if they ever knew, what is at the heart of that sentiment, and it is terribly sentimental, they are in danger of power being taken over by fantastic fools or beasts of prey or men hollow with echoes and vanities."

A proper commemoration can effectively bring this noble thought to mind in many ways. A celebration can talk about it but commemoration can make us feel this moving truth. We need very much right now to make people note the drama and feel more of our history.

We, the leaders of the free world, indeed lovers of liberty everywhere, need to reflect on and to understand the import of what a son of a Confederate veteran, a present day American statesman, said recently in Washington. The occasion was the reenactment of the first inauguration of Abraham Lincoln. SAM RAYBURN spoke during the introduction of that program and said:

"Prejudice, hate, agitation brought about the Civil War. I have always thought if it had not been for hotheads in the South and the inane and insane agitators of the North that Abraham Lincoln, by his justice, his fairness, his great statesmanship, would have prevented the Civil War which destroyed the flower of our young manhood in this country that at that time was so sorely needed.

"As a son of a Confederate soldier, who did what he thought was right, I say for him and for myself after that was over, he was proud that our great Union was preserved.

"The saddest thing that ever happened to the border States and the Southland was for an insane man to assassinate Lincoln. Lincoln was strong enough in the hearts and minds of the people in the North that he could have prevented, and would have prevented, some terrible things happening in some parts of our beloved country. But North, South, East, and West, we are proud indeed."

I say, Yes, we are happy and proud of our Nation and of the hope that it holds for better things for us and for the world. Commemorations like that reenactment attended by over 20,000 people and seen, heard, and read by many millions more is a moving experience that solemnizes and lauds the worthwhile things that need to be noted and forever remembered by us and by the world. Like an ancient psalmist, Lincoln reminds us: "We are not enemies, but friends. We must not be enemies."

We will find from commemoration how necessary it is for all of us and not just part of us "to be eternally vigilant" and have deep convictions about the eternal verities of freedom. History tells us that in giving freedom to people we assure freedom for ourselves. In this way we were honored for what we gave and in giving we assured more security to ourselves. From those who fought and gave the last full measure in the battle 100 years ago we can learn from their example that death is not the worst of life, that defeat is not the worst of failure but that not to have tried to do our best at all times is real failure. Let us note that in their relentless trying to preserve this Union for us and forever they achieved one of the great successes in all recorded time.

Importantly and uppermost in our minds, too, must be the idea that the centennial should be a time of reflection for us. Reflection can be the beginning of wisdom. So let us learn as well as remember. Let the Centennial be the occasion for serious study of the war in all its complex phases—not only its technical aspects but its deeper meaning for us today.

To me, its deeper meaning is what it gave us as a Nation. Bitter, bloody, and tragic though it was, it yet made possible our unity today—a unity at once indivisible and marvelous—one that is not static but adaptable—a unity that gives cohesion and at the same time accommodates a vigorous diversity. To me this is the unity of a matured people who can remember the past while seeing the future. This is the unity that demands that we be the leader of the free world.

So, let us study this great chapter in our past and appropriate its wisdom and its heritage to today's problems. It is, after all, a heritage that comes to us from the men and women of both North and South, and one that all Americans proudly honor and cherish; people who possessed the cardinal virtues of true greatness: courage, wisdom, and goodness.

Goodness to love the right, wisdom to know the right, courage to do the right.

What can we do to assist the serious study of the Civil War? Well, we can search for documents, letters, diaries, photographs and newspapers of the period and then deposit these in our State libraries or historical societies. You are saying to yourselves, this is repetition, and I say, yes it is but this needs repeating often all across the United States.

We can establish scholarships and fellowships devoted to special studies by students in every age group where we now teach history and, in the institutions of higher learning, encourage real scholarly efforts in areas that have not been thoroughly researched and written about. Here it must be noted that it has already begun. The press, radio, and TV have started and already made some fine contributions. Catton, Nevins, Wiley are doing a great job but we don't have enough of them.

We can encourage our legislatures to appropriate funds that will enable our State archives departments to arrange, index and microfilm their documents bearing on the war. I was able to help some in Iowa recently, I am sure, by pointing out that the $40,000 that the commission was asking for this year, compared to the $225,000 that they approved for monuments at Vicksburg in the late 1800's when Iowa had less than one-eighth the population they now have, is pretty insignificant by comparison.

These are a few of the things all of us can do to help assure that the centennial will yield enduring contributions as well as bad oratory.

WOMEN OF THE CIVIL WAR

Then there is one vast and important area of the Civil War study that I hope will be undertaken which relates to the role of the women in that conflict. With the exception of the noble work done by Florence Nightengale, women never had anything to do in an organized way in a war before. In this war they were real heroines even though very little credit is given to them in the publications, books, and periodicals of this time.

Lincoln once said: "I am not accustomed to the use of language of eulogy. I have never studied the art of paying compliments to women; but I must say, that if all that has been said by orators and poets since the creation of the world in praise of women were applied to the women of America, it would not do them justice for their conduct during this war. I will close by saying, God bless the women of America."

Judging from the record we can say that Lincoln knew the value of the women's efforts during the war. But, it is very evident that students of that time and since didn't value or appreciate it.

To prove the neglect in this area, I offer, as exhibit A, Mark M. Boatner III's book "The Civil War Dictionary," as evidence to prove my point.

I preface my remarks by saying to you, first of all, that this book is a fine, complete, authoritative dictionary of the Civil War and ought to be available to all serious students and writers. What I have to say is not critical of the book, but rather, critical of the meager written record we have made of and for the women.

The flyleaf of the cover of this book proudly points to the 2,000 succinct biographical sketches in the book. I have recently read it and find that out of the 2,000 sketches, only 35 are about women. Much more evidence akin to this could be presented to prove my point.

May I just underscore this evidence by pointing out that there was a woman from Iowa who started that sanitary commission work there, and who, before the war ended, became one of the best known personalities of the war period. She was the first person in the whole United States to be officially assigned to a commission created by a legislature. She carried forward her responsibilities on the sanitation commission nobly.

She became concerned about the lack of proper diets for soldiers, talked to Stanton, Meigs, and Lincoln about it, and was named head of all the diet kitchens of the hospitals of the North. She was the author of the first book of recipes ever written for any army in history. She saw the great need to take care of orphans and started an orphans asylum association in Iowa in 1864. She talked to Lincoln about that and he endorsed the idea in his second inaugural address. She was a personal friend of many famous people in the District of Columbia, and especially close to the Grants, Julia and U. S.

Grant said she was one of the great heroines, if not the greatest heroine, of the war and, yet, she is not in Boatner's book, and no one except some people in Iowa knows I have been talking about Annie Wittenmyer. You don't know about her because no one ever wrote a good book about her.

And have you ever heard of that wonderful lady who established a home in Springfield, Mo., for orphans of both Confederate and Union veterans? Her name was Mary Whitney Phelps, and she was the wife of Gen. John S. Phelps.

There was another girl, a Richmond resident. She established a hospital on her own after the first battle of Bull Run. Later the Confederate Government took it over, and she was commissioned captain by President Davis, and became the only woman to receive a regular commission in the Confederacy. My, what relief she and her kind brought to thousands. To most of you the name, Sally Tompkins is new, isn't it?

Have you ever heard of Madame Turchin, the immigrant from Russia, symbol of foreign aid, who went with her husband, a colonel in the Union Army, and served as nurse and mother confessor to the regiment. And, once when her husband became ill, she took over and led the regiment into battle with confidence and poise and won the skirmish.

In the books by Ishbell Ross on the lives of Kate Chase, Rose Greenhow, Clara Barton, and Mrs. Jefferson Davis, we find excellent samples of what can be done to reveal the devotion, even though some were by intrigue, and the wholesome and sometimes almost unbelievable and thrilling influence women can have in difficult and challenging times.

In these books she has demonstrated, as others could if they were inspired to study as she has and do the exceptionally skillful job of investigating and fine writing, the spirit of the women. All of this could give us a new insight and a new and different angle from which to view and appreciate the Civil War.

So much more needs to be done for so many other women who have made significant, interesting, and worthwhile contributions in so many ways. People like Elizabeth Waring Duckett of Maryland; just the story of how she got to Lincoln and Stanton and others in behalf of her father and brother who were in prison and was able to get them out.

Then there is the mother of the 1st Tennessee Regiment, Mrs. Betsy Sullivan. We only know about her through searching the records and yet in some ways there was no greater inspiration than any regiment could receive than she furnished by her devotion to the solution of many problems for the average soldier.

The story of the girl who earned the title "The Florence Nightengale of the South," Mrs. Ella Trader, of Arkansas, is a thrilling one, too.

These are just a few examples that suggest areas that need research, study, reviving, and writing about.

A study and review of the life of Mrs. Jeb Stuart could be a very interesting and worthwhile contribution.

Yes, the histories of wars are records of the achievements of men, for the most part: The chroniclers have had to record that women, by their intrigues or their fatal gift of beauty, have been the cause of strifes innumerable; and it is confessed that they have inspired heroism and knightly deeds, but they have had small share in the actual conflicts. It has been their portion to suffer in silence at home, and to mourn the dead. For them it has been to hear of sufferings which they could not alleviate, to grieve or rejoice over results to which they had contributed only sympathy and prayers.

But, it was different in our conflict to save the Union. Other wars have furnished here and there a name which the world delights to repeat in terms of affection or admiration, of some woman who has broken through the rigidity of custom and been conspicuous either among armed men, like the Maid of Saragossa, or in the hospitals, like the heroine of Scutari. But, the Civil War furnished hundreds as intrepid as the one, and as philanthropically devoted as the other. Indeed, we may safely say that there was scarcely a loyal woman in the North or South who did not do something in aid of the cause—who did not contribute, of time, or labor, or money, to the comfort of the soldiers. No town was too remote from the scene of war to have its society of relief; and while the women sewed and knit, and made delicacies for the sick, and gathered stores, little girls, scarcely old enough to know what the charitable labor meant, went from house to house, collecting small sums of money, the fruitful energy of all keeping the storehouses and treasury of the sanitary commissions and comparable organizations full, and pouring a steady stream of beneficence down to the troops in the field.

Everywhere there were humble and unknown laborers. But there were others, fine and adventurous spirits, whom the glowing fire of patriotism urged to more noticeable efforts. There were those who followed their husbands and brothers to the field of battle and who went down into the very edge of the fight, to rescue the wounded, and cheer and comfort the dying with gentle ministrations; who labored in field and city hospitals, and on the dreadful hospital boats, where the severely wounded were received; who penetrated the lines of the enemy on dangerous missions; who organized great charities, and pushed on our sanitary enterprises; who were angels of mercy in a thousand terrible situations.

There are others who have illustrated, by their courage and address in times of danger, by their patience in suffering, and by adventures romantic and daring, some of the best qualities in our nature. Like the soldiers of the armies, they were from every rank in life, and they exhibited a like persistence, endurance, and faith.

There are many hundreds of women whose shining deeds have honored their country and, wherever they are known, the Nation holds them in equal honor with its brave men. But, they are not known.

The story of the war will never be fully or fairly written if the achievements of women in it remain untold. They do not figure in the official reports; they are not gazetted for deeds as gallant as ever were done; the names of thousands are unknown beyond the neighborhood where they live, or the hospitals where they loved to labor; yet there is no feature in the Civil War more creditable to us as a nation, none from its positive newness so well worthy of records of the U.S. Sanitary Commission, U.S. Christian Commission, the various State historical society records, the thousands of references to women's activity found in local publications of the time will make it easy for us to do something in this area that will give the women the credit that is their due.

In assuring this credit we will add to our own heritage and will be building on the gallant spirit of graciousness and tenderness toward women of that time that we know about but which never has been properly recognized in writing.

Now let me summarize very briefly by saying, again, that we must commemorate appropriately, adequately, and as completely as we can. We will do this better if we encourage and engage the very best of our scholarly efforts everywhere. When we do this we will have more, more accurate and more complete, historical literature of this very significant time in our history.

And, I reiterate, we must demonstrate our gallantry toward the gentler sex. This story is a thrilling one and will reflect great credit on the women from both sides of the Mason-Dixon line.

In addition, and in conclusion, it may be worthwhile at this point to suggest also that we can learn much from the lives of all the people, great and small, who served the cause of the people as they understood the demands of their time—for my purpose now I should like to refer to two of them.

One became great and immortal before and during the war and one during and after the war. Both left us needed sublime words and thoughts at the close of the tragedy which point to the goal and call us to the task.

Ninety-six years ago last March 4, one of them, Lincoln, left us words and suggestions about malice, charity, firmness, right and the task before us. Told us what to care for, what we should do, achieve and cherish for ourselves and for all nations.

Soon after that Robert E. Lee, seeking to serve against a united nation, left us some unforgettable words and then an incomparable example of unselfish citizenship.

Bruce Catton, in one of his great books, tells us of it in this way:

"Through the sheets of rain that fell on the morning of April 15, 1865, a Baptist minister living on the outskirts of Richmond caught sight of a man on a gray horse. His steed was bespattered with mud, and his head hung down as if worn by long traveling. The horseman himself sat his horse like a master; his face was ridged with self-respecting grief; his garments were worn in the service and stained with travel * * *." Robert E. Lee had returned at last from the wars.

Lee, a paroled prisoner, was indicted for treason but was never brought to trial; and on July 13 he applied for a Federal pardon, which was never granted. Courageous and resolute in war, Lee was never bitter in defeat. "The war being at an end * * *" he wrote in September 1865, "I believe it to be the duty of every one to unite in the restoration of the country, and the establishment of peace and harmony * * *."

That month he became president of Washington College in Lexington, Va., a position which he held for the 5 remaining years of his life. On the morning of October 12, 1870, the old warrior lay dying. His former opponent, Ulysses S. Grant, was in the White House; but Robert E. Lee was once more on the battlefield. "Strike the tent," he murmured as he died.

I'm loath to close but I must because there are others who also have important observations to make but it cannot be wrong for me to suggest that we, like our forefathers, must strive for a greater, more appropriate and devoted patriotism toward the self-same ideals that they gave to us through sacrifice and preserved for us through sacrifice. I know of no better way to develop this patriotic spirit in the hearts and minds of boys and girls and in the hearts and minds of all our citizens and liberty-loving people everywhere than by reviewing, rewriting, reliving and reviving the great American story and its magnificent struggle for freedom.

Good luck as together we do those things that will give assurance for a greater and finer America for ourselves, forever and for everyone.

Four-Year Term for Members of House of Representatives

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Wilkes-Barre Times Leader of Saturday, April 22, 1961, which sets forth a point of view with which I am sure many Members of the House concur. As the editorial points out, it is indeed very interesting that a majority of those questioned in a national poll favored a constitutional amendment to extend the term of Members from the present 2 years to 4 years.

The indicated editorial follows:

[From the Wilkes-Barre Times Leader, Apr. 22, 1961]

FOUR-YEAR TERM IN HOUSE

The idea that Members of the House of Representatives ought to be elected for 4-year instead of 2-year terms has long been advocated by many students of the American system of government. The basic argument advanced in favor of such a constitutional amendment is that the longer term would permit Congressmen to devote more of their time to their work and less to getting reelected every 2 years.

That argument, though it is not all that can be said on the subject, is a compelling one. And the proposal appears to be gaining popular favor. In a national poll, 51 percent of those questioned favored a constitutional amendment to make the House term 4 years. Only 34 percent of those questioned were opposed. This is an indication that public sentiment is moving in the right direction—toward giving House Members a 4-year term.

The principal argument against this is that the present 2-year term gives the voters a closer rein on its Representatives in the House. If they do not act in accordance with their constituents' wishes, they can be ousted in 2 years. That is an advantage of sorts.

This advantage is far outweighed, however, by the fact that having to run for reelection every 2 years puts enormous pressure on a Congressman. In a sense, he must run almost continually, and knowing that he can soon be whisked out of office may tempt him to vote for what is popular at the moment rather than on the basis of his honest convictions. Senators are entrusted with office for 6 years at a time. The House term should be increased to at least four.

Army Should Investigate Before Relieving General

EXTENSION OF REMARKS
OF
HON. WATKINS M. ABBITT
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ABBITT. Mr. Speaker, under leave to extend my remarks, I desire to include an editorial from the Hopewell News of Thursday, April 20. The editorial points out cogently the different treatment received by conservatives and liberals. It is shocking to see a vital part of the Federal Government discriminating against one of our generals simply because he is a conservative.

I commend the editor of the Hopewell News for bringing this matter to the attention of the public and I urge all of the Members of this body to carefully read the editorial which is as follows:

ARMY SHOULD INVESTIGATE BEFORE RELIEVING GENERAL

We think the Department of the Army made a mistake in relieving Maj. Gen. Edwin A. Walker of his command of the 24th Division in Germany "pending the outcome of an official investigation."

While the order did not name the John Birch Society by name Army officials acknowledged that the action was taken because of allegations that General Walker had been urging the views of that organization on the troops under his command.

Now the John Birch Society is a perfectly legal organization. It has not been cited for any reason. It has not even been investigated. Furthermore in this country a man is supposed to be held innocent until he is proved guilty.

In this case it is a little hard to know what the general could be proved guilty of. As we understand it the John Birch Society is very conservative. Just when has it become a crime to be a conservative in these United States? Just who abolishes the right of free speech?

We would lay a little bet that if General Walker had been accused of urging the views of some leftist, or pink organization we would never have heard a word about it. There is a large and growing number of so-called liberals, who Life Lines calls the "mistaken," who have been trying hard to make the word "conservative" a dirty word and the airing of conservative views a crime.

WELCH OFF BASE

Now we hold no brief whatsoever for this man Welch who founded the John Birch Society. Apparently he has strong and strange views, but that in itself is still not yet a crime in this country, and we understand that the society itself does not subscribe to the extreme views Mr. Welch has been alleged to hold. In fact, Mr. Welch has denied some of the statements attributed to him.

But, really, it does not matter just what the doctrines of the John Birch Society are, unless they are subversive, no man should be fired from his job and put under pressure, until after the investigation has been held and the full facts are known. All too often officials of our Government have protected leftwingers and pinks from the consequences of their actions and talk, when we thought it was downright subversive.

The main tenet of the John Birch Society, as we understand it, is a strong anti-Communist stand. Perhaps some of its other tenets, such as the abolition of the income tax, do not set well with officials in Washington who want to increase the tax burden on the American people to carry out their ideas of the all-powerful welfare state, but we do not see how they can object to anyone being strongly anti-Communist.

The international Communist conspiracy is our sworn enemy. It is trying by every means, by every hook and crook, to undermine and "bury" us. It's insidious propaganda is spreading in the United States. It had duped many innocent people into following its "line." It is weakening the will of the American people, while our welfare state is weakening our initiative and individual liberties.

INVESTIGATE NOW

We are not entirely familiar with the whole program of the John Birch Society, but its officers have been trying to get the Congress to investigate them. They have offered to come to Washington and answer any and all questions. Is not that a rather refreshing offer after all the hundreds and hundreds of people, some in high places, who have taken the fifth amendment when organizations to which they belong have been investigated by the Congress?

In view of what has happened to General Walker, we would strongly urge that the Congress go ahead and investigate the John Birch Society at once. Let's find out what all the shooting is about. But we have a real strong hunch it will once again be shown that all the so-called liberals and leftwingers are simply out to "get" anyone and everyone who can be labeled "conservative."

Well, we invite them down to Virginia. The woods are full of good, solid, substantial Virginia Democrats who glory in being called "conservative"; who stand foresquare for the American Constitution, the American flag, and are sworn enemies of anything and everything that is tinged with the poison of the international Communist conspiracy.

A Tribute to Credit Union Activities and Services of Mrs. Dyalthia Benson

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. PATMAN. Mr. Speaker, in these days of loan sharks and amid the cries of various plans of credit through quick-

cash, check credit plan, instant money, tempting the average American to overspend, to run the risk of financial insecurity, insolvency, and bankruptcy it is comforting to read the true story of the financial situation in the typical farm and ranch community in the Southwest, Hereford, Tex., USA.

There are no loan sharks in that community because back in 1936 Dyalthia Benson came face to face with people and their money problems in her capacity as welfare worker. She helped organize the Hereford, Tex., Federal Credit Union to serve all residents within the county and the Hereford vicinity. Small loans were an exception with the two banks but the bankers encouraged Mrs. Benson's efforts. She has made thrift a byword by all who borrowed or invested. Although the bankers now have small loan departments they emphatically state that the community needs the credit union. The two banks, the savings and loan, and the credit union work very closely in financial and civic affairs and hold regular meetings with Mrs. Benson serving as chairman. This is a wonderful tribute to a dedicated American. Her story is the story of many dedicated men and women who have made the credit union movement a success throughout America.

A special tribute was paid to Mrs. Dyalthia Benson in an editorial written by Mr. Jimmie Gillentine in the Sunday Brand, Hereford, Tex., February 5, 1961.

With permission to revise and extend my remarks, I insert herewith the editorial written by Mr. Gillentine:

[From the Sunday Brand, Hereford, Tex., Feb. 5, 1961]

IT COULD HAPPEN ONLY IN AMERICA

Soaring to heights beyond any fairytale ever dreamed by Hans Christian Andersen is the story of an idea which took root in Hereford 24 years ago, and grew even faster than Jack's fabulous beanstalk.

The story centers around hard, cold cash. The guiding light and start of the performance is a generous woman with a gracious soul and a warm heart. The cast consists of ordinary, everyday people who need an occasional helping hand. The setting is a typical farm and ranch community of the Southwest, Hereford, Tex., U.S.A.

It all started back in 1936, when our heroine, Dyalthia Benson, came face to face with people and money problems in her capacity as welfare officer of Deaf Smith County. Always, it seemed, a bad circumstance might have been averted had a small loan been available somewhere along the line. Finally, Mrs. Benson organized the Hereford, Tex., Federal Credit Union in 1936 with an outlay of $125.44.

Just 24 years later, Horatio Alger would have found it difficult to believe the audited financial statement on December 31, 1960, when assets totaled $2,247,995.

Of equal importance to the manner in which the business has grown in the basic operation of the firm, created in the days when small loans were the exception with banks, and loan sharks were having their heyday in Texas. Thrift is a byword for all who borrow or invest, and Mrs. Benson is proud of the fact that the credit union now has 825 children among its depositors. She is also proud of the fact that the presidents of both Hereford banks were sufficiently interested to take part in the program at the annual meeting last December, because she wants the credit union to be supplemental to private enterprise.

Testifying to all of these things are a long list of teachers, clerks, janitors, farmhands, and even a few businessmen who have found assistance at the credit union down through the past quarter of a century. At least two of these people have been instrumental in organizing additional credit unions, when they moved to other communities.

These things speak well for the credit union, no doubt about that, but those who have seen the organization grow from the paltry $125.44 into a multimillion-dollar institution are more inclined to give credit where it is deserved, namely to Mrs. Benson. Without her interest, zeal, and ability, it would probably never have passed $1,000 in assets—and hundreds of people who today have a nest egg to fall back upon would be penniless and without credit.

Only in America could it happen. A dream, based on the Golden Rule, plus a few dollars, plenty of hard work, and a spark of ambition. Result: an outstanding institution which is setting a pattern for all America to follow.

Resolution of the Professional Men's Club of Rochester, N.Y.

EXTENSION OF REMARKS
OF
HON. JESSICA McC. WEIS
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mrs. WEIS. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD it is my privilege to include at this point the following resolution adopted recently by the Professional Men's Club of Rochester, N.Y.

The Professional Men's Club of Rochester is an Italian-American organization whose membership includes many of Rochester's leading business and professional men. This resolution expresses disapproval at what the club believes to be flagrant and widespread abuse and degradation of Italian-Americans by certain segments of the television industry and requests that action of a legislative nature be taken to establish a set of fair practices in the entertainment industry which would prohibit malignment of any national group:

PROFESSIONAL MEN'S CLUB, ROCHESTER, N.Y., RESOLUTION

Whereas the Professional Men's Club of Rochester, N.Y., is an Italian-American organization whose membership is composed of persons of Italian extraction, and who, by scholarly pursuits, have been awarded degrees in the fields of medicine, law, dentistry, pharmacy, engineering, or in the various other arts and sciences; and

Whereas Americans of Italian extraction have made significant contributions to the cultural, social, scientific, educational, economic, and political life of America; and

Whereas in the course of the daily practices and associations of such professions, businesses, pursuits, and vocations, there has been experienced a rising tide of resentment and indignation on the part of this general membership, as well as on the part of those thousands of Italian-Americans comprising their patients, clients, clientel, and associates, in and about the county of Monroe, N.Y.; and

Whereas this resentment has resulted primarily from the predominant and persistent portrayal, in scripts and typecasting by segments of the television industry, of persons of Italian nationality as gangsters, hoodlums, perpetrators of fraud, gamblers, prison inmates, and persons of unsavory morals and character: Now, therefore, it is hereby

Resolved—

1. That the Professional Men's Club of Rochester, N.Y., does hereby except to, disapprove, and condemn the flagrant and widespread abuse and degradation of the Italian-American public, by segments of the television industry, whether by design, indifference, or otherwise.

2. That the Professional Men's Club of Rochester, N.Y., hereby excepts to, disapproves, and condemns, as un-American, and therefore, contrary to any standards or concepts of fairness, morality, and decency, the unjust enrichment and capitalization upon such discriminatory and degrading portrayals of Italians, by segments of the television industry, under the guise of entertainment.

3. That the Professional Men's Club of Rochester, N.Y., proposes and suggests that the television industry and its affiliated networks conduct a reevaluation of their programing; also that there be considered the creation, amendment, or enforcement of codes of fair practices to eliminate and prevent the discriminatory, degrading, and abusive portrayals of persons of Italian descent, or of any other nationality, or minority group.

4. That the Professional Men's Club of Rochester, N.Y., place itself upon record as urging the enactment or promulgation, of remedial legislation, rules, or regulations on local, State and/or Federal levels to provide for the establishment and/or enforcement of laws pertaining to fair practices in the entertainment industry.

5. That the Professional Men's Club of Rochester, N.Y., hereby dedicates itself to the elimination and prevention of such unfair and un-American practices.

VINCENT FRANCIOSA NOLAN,
Resolution Committee Chairman.
JOSEPH A. TADDEO.
VINCENT J. DIRAIMO.
ROSS IMBURGIA, M.D.
Committee Members.

Federal Aid to Education—An Opening Wedge

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SCHNEEBELI. Mr. Speaker, the heated and spirited public debate which we are currently experiencing on several issues involved in the question of Federal aid to education has tended to obscure a key question—is Federal aid necessary? If the increasing number of authorities are correct in their statements that States and local communities have built classrooms at a greater rate than the legislation would provide and have substantially increased teachers' salaries, then many of the advocates for Federal aid must have another motive in mind.

A recent editorial, found in the April 3, 1961, issue of the Williamsport, Pa., Sun-Gazette, clearly and cogently warns that the ultimate purpose—and certainly the necessary result—of Federal aid is Federal control.

I am pleased to call this excellent editorial to the attention of my colleagues:

AN ENTERING WEDGE

Beyond all doubt, proposed Federal aid to education has become one of the leading political issues of the day.

With much being said concerning the need for it, Dr. Russell Kirk, an authority on educational questions, is bound to draw fire when he argues "there is no financial necessity for Federal subsidies."

He says the Nation is growing rapidly enough that local and State taxes can absorb the educational load in the years between now and 1970.

Here is what Dr. Kirk told a New York audience a few days ago:

"What the zealots for Federal aid really desire is not simply more money but more power—great power. The present pretext of school construction and bonuses to teachers' salaries are intended merely as entering wedges: the first steps toward establishing a wholly centralized system of public instruction, directed by an important Washington bureaucracy."

These are blunt words. But we have learned from history and experience that once government enters into any sphere, no matter how modest the scale at the beginning, it demands and gets more and more power.

It should never be forgotten that he who pays the piper calls the tune.

Recreation Seeks a Place at the Water Table

EXTENSION OF REMARKS
OF
HON. JOHN KYL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. KYL. Mr. Speaker, I am pleased to call to the attention of the Members an address entitled "Recreation Seeks a Place at the Water Table," by Francis W. Sargent, executive director of the Outdoor Recreation Resources Review Commission, Washington, D.C., delivered before the Eighth National Watershed Congress, Tucson, Ariz., April 19, 1961:

Human existence depends upon water.

I am sure that you are even more keenly aware than I of the vital truth of these opening words of the report of the Senate Select Committee on National Water Resources. For the past 3 days you have been in one way or another considering the dependency of humanity on water. Indeed many of you have devoted a large part of your lives to this problem.

Today I would like to add to your burdens, to emphasize yet another facet of human existence which is dependent in large measure upon water—outdoor recreation.

First, I would like to strongly associate the cause of outdoor recreation with wise agricultural, industrial, and domestic use of water. Our economy is dependent upon water, and if we do not have a strong growing economy which provides its citizens with disposable income and leisure time, there can be little outdoor recreation—an important ingredient for the health and happiness of the American people.

Let's look at the role of water in outdoor recreation—it is great.

The recently published California Outdoor Recreation Plan reports that 60 percent of all outdoor recreation activity is water oriented. If this holds true for the rest of the Nation it means that 600,000 out of each of those millions of Americans who are seeking outdoor recreation today seek water.

And it means that at least 60 percent of the growing numbers of Americans who will be seeking recreation in the outdoors over the coming years will also seek water. In fact that percentage may even increase. Water oriented activities are apparently growing faster than others. And to further complicate the matter those activities which require great expanses of water seem to be gaining popularity most rapidly of all.

For example, it takes a lot of water for the 8 million recreational boats which the Outboard Boating Club reports are using our waterways today. Water skiers and powerboat enthusiastis require the use of enough acre-feet to satiate many other thirsty uses. A new reservoir these days fills with boats as it fills with water.

Almost all outdoor recreation activities become more attractive with the presence of water. The first campsite or picnic spot taken is always the one closest to the lake or the stream or in fact, the ocean.

Water is simply one of the most important factors to the outdoor family.

This importance of water to outdoor recreation is reflected in the study program of the Outdoor Recreation Resources Review Commission.

One study is devoted directly to the problems of water recreation. It is being carried out for us by the Geological Survey of the Department of the Interior and will consider such factors as access, planning of water projects, pollution abatement, conflicts in water use, and the relation of hydrology to reaction. There is a separate study considering the crucial problem of providing shoreline opportunities—opportunities that are perhaps becoming the most scarce commodity in outdoor recreation. Every day more of our fresh and salt water shorelines are being developed in one way or another and lost to the need of a growing population for a quiet beach, stream bank, or lake shore. This is one of the most critical areas for immediate effective action.

Another Outdoor Recreation Resources Review Commission study is considering the problems of providing fishing opportunities. It seeks to estimate in broad terms the existing supply and the probable kind, quality, and location of the fishing resources of the Nation for the next 40 years. And it will suggest alternative policies aimed at improving the adjustment of future supply to the anticipated demand.

In addition most of the other Outdoor Recreation Resources Review Commission projects are concerned with water because of its importance to the entire recreation complex. The national recreation survey of 16,000 households will provide the most extensive information yet compiled on the outdoor recreation habits and preferences of the American people. Outdoor Recreation Resources Review Commission's inventory of publicly designated recreation areas will give the Nation an idea of what resources we have to meet the demand which these habits and preferences reflect. These two studies are both very much concerned with water activities.

Our study program is now being completed, analyzed, and interpreted. The information it develops will, we hope, be of lasting value to all those concerned with water problems as well as outdoor recreation. The Commission will use the data developed in these studies as a base for its policy recommendations—essentially to say what we should do with the potential we have over the next 40 years to meet the demand Americans seeking outdoor recreation will generate.

The recommendations and the studies of the Commission will be reported to the President and the Congress on January 31 of next year. Congress recently authorized this 5-month extension from the reporting date established in the original Outdoor Recreation Resources Review Commission Act.

As our studies are not yet complete and as the Commission has not reached final agreement on its recommendations I cannot today report findings or conclusions. However, there are problems in the water field affecting recreation which have become abundantly clear in our studies, and I would like to share a few of them with you.

First, there are the traditional conflicts between outdoor recreation and other uses of water. Outdoor recreation does not consume water as some other uses do, but there are obviously some points where the needs of irrigation, power, navigation, water supply and industrial uses conflict with the needs of outdoor recreation.

One obvious example of this is the drawdown problem in reservoirs. If the shoreline is a vast expanse of mudflats, much of the potential for recreation on that lake is gone. If the lake is not drawn down to meet other needs it is not serving its purposes. Better coordination in planning and operation, carefully designed access points and midwater facilities can help in this area.

Second, and this may become an even more bitter controversy than the traditional one among different uses, are the conflicts among different outdoor recreation activities themselves. Water skiers and high speed boating enthusiasts cannot enjoy themselves in harmony and safety on the same area of water with swimmers or anglers. As the demand increases for recreational use of our limited water area this problem is going to rapidly grow worse.

Some areas have tried zoning—putting the water skiers in one area and the swimmers in another. Some have tried using alternate days for alternate activities and I understand that one lake in New Jersey has found it necessary to have a traffic cop out in the middle directing Sunday traffic.

Third is the problem of pollution abatement. Pollution is one of the great destroyers of outdoor recreation opportunities. This is one area where clear-cut action can, in effect, create new natural outdoor recreation opportunities.

As part of our study program we are seeking to find out just how much money is spent for outdoor recreation by all levels of government. In this study we went to some agencies not directly in the outdoor recreation business and asked them to estimate what proportion of their expenditures they felt benefited outdoor recreation. The Department of Health, Education, and Welfare replied that it felt that every dollar it spent on water pollution control benefited recreation. Thus it well may be that in many areas the outdoor recreation benefits alone are sufficient reason for pollution abatement.

Fourth is the problem of access. There are actually a great many natural bodies of water in this country. Florida, for instance, has 16,000 lakes. Minnesota's license plates advertise that it has 10,000. These lakes are generally in public ownerhip and thus theoretically available for public enjoyment.

But in many cases access to the lake is blocked by a ring of private holdings, and the lake itself is thus appropriated to private use. Now this is a natural thing. Property owners on a lake would prefer that the lake not be crowded with weekend visitors from the city, but where waters are in public ownership, it seems apparent that public access must be provided.

This access problem is closely related to the role of the private sector of the economy—a role the Commission is convinced must be considered in meeting the demand

for outdoor recreation. Where feasible commercial enterprise can be encouraged to provide facilities.

In other cases where the land is primarily used for another purpose outdoor recreation may be an auxiliary use which returns a profit. We have grown to accept multiple use of our public lands. Perhaps this concept can be extended to private lands and bodies of water if suitable arrangements with the owners can be evolved. Farm ponds and small watershed improvements represent a considerable recreation resource. If means acceptable to both the private owners and the public can be worked out, these resources can help greatly to ease demand on other areas.

Another facet of the access issue is access to public water developments. Often hampered by inadequate planning, lack of authority and funds, our water resource development agencies have not been able to acquire enough land around reservoir sites to realize the optimum recreation benefit from the development. If this is not done early in the life of the project, the recreation opportunities may be lost or substantially reduced.

Finally, there is the problem of providing a place for recreation in water resource projects. There are only a limited number of sites in our Nation which will support water resources projects—whether they be large or small. And this limited number must serve all the needs of our people.

We have become accustomed to thinking of multipurpose projects, but too often recreation has not been a full party to the initial planning of such projects. Dr. Luther Gulick, of our advisory council, put it this way at our third joint meeting:

"Recreation is the orphan child and does not sit at the table when the menu is being planned and the dinner is served. We pick up the crumbs."

Outdoor recreation is now big business. While exact figures are difficult to assess Americans spent at least $5 billion in 1960 on water oriented outdoor recreation—boating, fishing, and swimming. This means that outdoor recreation has come of age. It's a major industry as well as a major activity.

It should be taken into the family and allowed to sit at the table when the meal is being planned and when it is served—but this may well mean that outdoor recreation should bear some of the family expenses, too. I do not believe that the millions of Americans seeking a place in the water will object if they have to pay an equitable fee for this privilege or if a reasonable part of their tax money is spent to provide it.

I realize that this homey little analogy leads directly into the middle of the benefit-cost ratio question—should outdoor recreation benefits be included in computing the benefits of projects. And this in turn raises one of the most difficult problems in this field—how do you realistically and equitably set a price on the benefits of outdoor recreation.

The Commission is considering this problem very carefully. In all candor I cannot promise that we shall come up with a completely satisfactory solution. The issue is extremely complex and there are far-reaching ramifications which require very careful study. The Commission has not reached any conclusions on this specific issue, but it is very much in their minds, and they will certainly recommend some action to the President and the Congress in this area next January.

But I can say that the Commission does feel strongly that outdoor recreation must be taken into the family as a full member in all natural resource planning. Long-range planning including recreation will lessen some of the earlier problems I mentioned. Conflicts among uses can be reduced. Conflicts among different recreation uses may be alleviated. The drive for pollution abatement can be bolstered.

This message to you today may not be an altogether pleasant one but it is a fact of life. Americans are demanding the use of water for outdoor recreation. They like the water. They want to sit by it, swim in it, fish in it, ski on it, and run their boats across it. And as there are more people with more money and leisure time to do these things the demand for recreation on water is going to increase.

Other uses, of course, will also be demanding more of our limited water supply. Therefore, it is imperative that all uses be considered fully in every action we take which affects water. Outdoor Recreation Resources Review Commission is convinced that outdoor recreation can work in harmony with the other members of the water-using family, but it is also convinced that it is time to consider outdoor recreation a full-fledged member of that family.

Ten Reasons Why Communism Is Winning

EXTENSION OF REMARKS
OF
HON. WALTER H. JUDD
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. JUDD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

TEN REASONS WHY COMMUNISM IS WINNING
(By Edgar Ansel Mowrer)

American defeats in Cuba and Laos are causing some surprise in Washington. True, President Kennedy predicted that things would get worse before they got better. But his advisers on world affairs have insisted on treating the Communist power conspiracy as if it consisted of normal governments with which the United States could do business. They have got their fingers burnt. It remains to be seen if they have yet learned why communism is winning.

Here are the important reasons:

1. Communists play to win. Communizing the planet is their overriding task. The West, including the United States, wants only to call the game off. It fails to admit that this is a real war which it can win only if it gives it No. 1 priority and stops considering it just another problem like smog or juvenile delinquency.

2. Communists believe fanatically in the triumph of their social system. Khrushchev "knows" that he can win without major war. Mao is willing to have a major war to win. Americans fear major war almost as much as they fear communism. Some westerners are impressed by Communist successes. Many are beginning to see previously unobserved "virtues" in communism. Western policy is based on a naive belief that given time communism will, if "unprovoked," go away or lose its will to win.

3. In Communist society the people are terrorized and brainwashed to the point where they support anything—look at Cuba. In the West, people must be convinced before they will act. Their leaders cannot convince them that the cold war is the outstanding fact of this century until they themselves understand it. So far three American Presidents have not so understood it.

4. Communist societies sacrifice everything—comfort, decency, ethics, individual freedom—to naked power. The U.S.S.R. almost equals the United States in weapons (and outstrips it in rockets and missiles) with less than half the total production. The United States permits stoppages in arms factories and constant wage and salary increases while refusing to match its enemies in weapons lest its "peace economy" suffer.

5. Despite Western talk about a coming split between Red Russia and Red China, all Communist countries act as a single team. In Cuba, Russian, Czechoslovakian, and Chinese advisers and experts (and pilots?) work happily together to insure Castro's victory. Western countries ignore President de Gaulle's plea for a common policy and oppose each other in places like Algeria, Guinea, Indonesia, and Laos.

6. Communist tactics are infinitely flexible. They ignore all principles save that of winning, offer every discontented individual the promise of exactly what he wants when communism has triumphed, practice one system here and another there, and back their unending subversion with unlimited funds. Westerners have no tactics except "nonprovocation."

7. Communists' strategy is exclusively offensive. They look for soft spots and attack wherever they find one. The West, through fear of war, remains strictly on the defensive. It provokes no uprisings in Communist countries, dares not denounce the U.S.S.R. as a colonialist empire, and prevents South Vietnamese from invading North Vietnam (as the northerners do the south).

8. Communists consider nonalinement (of former Western territories) the first step in communizing them. The United States urges weak non-Communist countries to become nonalined, regards them as well as it does faithful allies and tries to pretend that nonalinement is the best defense against Communist infiltration—despite shrieking refutations in Czechoslovakia, Laos, the Congo, etc.

9. To Communists, international agreements, including the United Nations Charter, are instruments of expansion. The Reds never stand in the way of armed intervention (as in Hungary) whenever it serves communism. To the West, keeping agreements comes before the protection of vital national interests.

10. Communists win against non-Communists in places like Laos and Cuba, largely because the few fanatics terrorize the others into fighting by making them more afraid of their bosses than of the enemy. Western morals do not permit certain excesses yet many westerners find excuses for excesses by Communists.

The reader can doubtless find other reasons why the West is losing.

Always a Doctor in the House

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Mr. Lou Rauscher, staff writer, Sunday Independent, Wilkes-Barre, Pa., that was featured in that newspaper on April 23, 1961, and the subject of Mr. Rauscher's article was the Rogers family of Wilkes-Barre who have had a doctor in its family for the past 150 years. I found the article on

this distinguished family to be of great historical value and extremely interesting.

The indicated article follows:

FOUR GENERATIONS OF ROGERS FAMILY HAVE LISTED M.D.'S

(By Lou Rauscher)

There's been a doctor in the Rogers household for the past 150 years.

Lewis Leonidas Rogers III, is the fourth generation member of a local family physician cycle which extends back to his great grandfather, Joel Jackson Rogers.

Lewis III's grandfather was Lewis Leonidas Rogers, Jr., and his father was Lewis Leonidas Rogers, Jr. Both were physicians.

Joel Jackson Rogers, senior member of the family medical lineup, graduated from King's College in New York, now Columbia Medical School, and did his general practicing in the back mountain area.

He is remembered to this day for his trademark habit of answering calls with a distinctive shawl wrapped around his shoulders on cold days.

Joel Jackson Rogers in the mold of the physician of his time, ran his own drugstore and furnished his own prescriptions. He made his home in a colonial-type structure in Huntsville which ranks as a landmark of the area and which still stands today.

He died in 1913 and is remembered as one of the charter members of the Luzerne County Medical Society which celebrates its centennial this week.

PRACTICED IN KINGSTON

Joel Jackson's son, Lewis Leonidas Rogers, Sr., worked on the family farm during the summer and attended Jefferson Medical School. Graduating from there he became a general practitioner in Kingston with offices at 268 Wyoming Avenue, next to the Hoyt residence.

Lewis, Sr., was noted for his special herb tea prescriptions which he prepared in his office. He pursued his profession in the Kingston area for over 50 years, and was one of the founders of Nesbitt Hospital. Oldtimers still remember how he used to respond to home calls with a scrupulous dedication.

It's been said that, on a stormy night, Dr. Lewis Rogers, Sr., would forgo his horse and buggy and answer a call on foot. "He thought more of his horse than he did of himself," an admirer once said.

He was 72 years old when he died. A daughter is now living in Connecticut.

TOP X-RAY SPECIALIST

Lewis Rogers, Jr., after attending Wyoming Seminary and finishing at the University of Pennsylvania Medical School, developed into one of the area's top X-ray men.

Following his internship at Wilkes-Barre City Hospital, now the General, he practiced for a time from an office on East Northampton Street. After becoming an X-ray specialist, he moved to North Franklin Street, where he was to round out 28 years of serving the local population.

He served in the Army during World War I, being stationed at Camp Greenleaf, Ga. Attached to the hospital there, he became the first physician in Army medical history to operate an ambulance with a portable X-ray unit.

Returning to Wilkes-Barre after the war, Dr. Lewis Rogers, Jr., became president of the same county medical society which his grandfather had helped found.

Dr. Lewis Rogers, Jr., was only 50 years old when he died in 1940. He is survived by his wife, the former Elizabeth Seibel, sons Lewis Leonidas Rogers III, and John Seibel.

His widow maintains winter residence at 43 North Franklin Street, the same location as Lewis III's offices. Son John is a staff supervisor with Bell Telephone in New York.

KINGSTON HIGH PRODUCT

Rounding out the Rogers medical tradition is Lewis III. A graduate of Kingston High School, as was his father, Lewis III pursued his pre-med studies at the University of Pennsylvania and finished at Jefferson.

After interning at Wilkes-Barre General Hospital, he put in his residency at Robert Packer Hospital, Sayre. He entered the U.S. Army in 1943 and served in the Medical Corps until the end of World War II.

Returning to Wilkes-Barre in 1947, he set up his practice at its present location and now maintains a family residence in Carverton. He is married to the former Betty Whitenight of Kingston and they have four children, three of them girls. The children are Patricia, Deborah, Lewis IV, and Susan.

The family was in Washington during the week attending the convention of the Daughters of the American Revolution. Mrs. Rogers is a DAR member while two of the children belong to the CAR—Children of the American Revolution.

Just to prove that the medical tradition hasn't been limited to the Rogers side of the family, the present Dr. Rogers' grandmother, Mrs. Lewis Rogers, Sr., was a cousin of Dr. James Brooks, a Plains practitioner who still has a daughter living in Forty Fort.

OTHER DOCTORS TOO

Mrs. Lewis Rogers, Sr., also numbered Dr. pelatiah Brooks, Dr. Amos Barton, and Dr. Milton Barton among her relatives Dr. Brooks, an uncle of hers, was proud of his affiliation as a surgeon with the 44th Regiment of the New York State National Guard.

Dr. Amos Barton was a first cousin to Mrs. Lewis Rogers, Sr., and Dr. Milton Barton was his son. Both practiced for many years in Plains.

With this long line of doctors in the family, the obvious question is: Does Lewis Rogers IV intend to become a physician, too?

Members of the family say that the young man, presently attending Wyoming Seminary Day School, has a sister who seems more interested in the profession at this time.

As for what his intentions are: "All he talks about is that he wants to be a baseball pitcher."

Quiet Disciple of Principle

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. ABBITT. Mr. Speaker, Young Americans for Freedom, a national nonpartisan conservative youth organization, was founded in September of 1960. Since then it has quickly expanded and now represents more than 21,000 students and young people in 250 college and other chapters.

One of the founders of Young Americans for Freedom, who also serves on the board of directors, is George W. Gaines, 22, of New Iberia, La. George has served as a page in the 85th Congress and graduated from the Capitol Page School. Since then he has been active in politics and has studied at Tulane University.

In the April edition of New Guard, the official publication of Young Americans for Freedom, George has written an article concerning my colleague from Louisiana, Hon. HAROLD B. MCSWEEN. I would like to call this to the attention of the Members of the House.

The article follows:

QUIET DISCIPLE OF PRINCIPLE

(By George Gaines)

For the first time in 40 years, an independent Democrat is representing the Eighth Congressional District of Louisiana, long considered the baronial fief of the Longs.

"I'm the first non-Long man to hold this seat since it was created back in 1913."

In his calm thoughtful way, HAROLD B. MCSWEEN, Congressman from the Eighth District of Louisiana, was talking about politics in his office in Washington, D.C.

"I represent what you might call a welfare district—most of the people there are used to a Congressman who votes for every budget-busting bill that comes along. My task is to sell them the idea of responsible conservative government and do a good job of politicking at the same time."

HAROLD MCSWEEN is a tall man with thinning reddish hair. He is young for a southern Congressman, only 34. He was first elected to the House in 1958, succeeding Huey Long's brother, George, and ran for reelection last fall against the late Earl Long. MCSWEEN was defeated by the slim margin of 4,000 votes and upon the former Governor's death (only a few days after election day) was selected by Democratic county chairmen to replace "Uncle Earl."

QUITE A CAMPAIGN

"It was quite a campaign," recalled MCSWEEN. "Earl called me just about everything you can think of, including a conservative. I couldn't and I didn't try to outpromise him. I campaigned as a Representative who would resist centralization of power, hold down taxes, and prevent the Federal Government from getting into States' affairs."

But some men don't fight as hard for their convictions as HAROLD MCSWEEN, who attracted national headlines before he had been in the House of Representatives 4 months.

In April 1959, President Eisenhower stood on the edge of his first congressional defeat. At issue was S. 144, the Rural Electrification Administration bill, which would transfer power to approve or reject REA loans from the Agriculture Secretary to the director of the National Rural Electric Cooperative Association.

To farm-State representatives the bill was most attractive. It breezed through Congress according to schedule: 60 to 27 in the Senate, 254 to 131 in the House. Ike promptly vetoed it, exercising that right for the first time in the Democratic 86th Congress.

With the help of six farm bloc-minded Republicans, the Senate overrode the veto 64 to 29 with 2 votes to spare. By the time the burning issue reached the floor of the House, the pressure was enough to crack the House Chamber walls. HAROLD MCSWEEN, a member of the Agriculture Committee and a Congressman from a predominantly rural district, felt that pressure as much as, if not more than, anyone else.

As the House vote was tallied it became apparent it was going to be a real cliffhanger. At the end, the two-thirds needed to override the veto was short by 4 votes, 146 to 280. Among four Democrats who voted to sustain President Eisenhower's veto was Freshman MCSWEEN.

"No," admitted the Louisiana legislator, "I didn't know how close it was going to be. And I had no idea that I would receive as much publicity as I did on the basis of that one vote. I certainly didn't vote 'nay' to make the front pages. I just voted that way because the REA had been doing a good job under the present setup and I didn't see any reason why its administration should be changed."

McSWEEN attended Louisiana State University and received an LL.B. from that same university in 1950. Always interested in politics, he first ran for State office in 1956 for a post on the Louisiana State Board of Election. His opponent: Earl Long's sister. He won.

"I think I'm making progress," the young Democrat mused. "I'm picking up support as I go along, but frankly I don't know whether the trend of civilization is sympathetic to free government."

The Congressman, however, leaves little doubt where he stands. He has declared his intention to oppose Federal aid to education, the use of social security funds for aid to the aged, and the common situs picketing bill. Last year he publicly supported the Connally reservation.

His attention was called to a recent editorial in the New Orleans Times-Picayune which stated: "The real hope for maintaining conservative principles in the Nation lies mainly in congressional and State legislative contests and not necessarily in who fills the executive department."

"Yes," McSWEEN replied, "I agree with that generally. But the whole problem would be so much easier if conservatives would learn how to translate their theories into political power. Too much energy is wasted on unrealistic causes—like abolishing the U.N., or fluoridation or impeaching Earl Warren. Too many conservatives don't want to talk about the minimum wage or social security.

"As for the 'coalition,'" remarked the young Democrat, "I don't worry about it. The 'conservative coalition' in Congress reflects the people and nobody ever has to apologize for representing the people."

Intelligent, educated, purposeful, HAROLD B. McSWEEN goes quietly about his business of building support for his political philosophy. He is young and unperturbed about the possibility of defeat. There are many like him in the U.S. House of Representatives.

Free Movement of Milk of High Sanitary Quality in Interstate Commerce

EXTENSION OF REMARKS
OF
HON. MELVIN R. LAIRD
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. LAIRD. Mr. Speaker, under leave to extend my remarks, I include a joint resolution of the State of Wisconsin relating to memorializing the Congress of the United States to enact legislation which will insure the free movement of milk of high sanitary quality in interstate commerce:

JOINT RESOLUTION 18, A

Joint resolution relating to memorializing the Congress of the United States to enact legislation which will insure the free movement of milk of high sanitary quality in interstate commerce

Whereas there is pending in the Congress of the United States a series of bills, H.R. 50 to H.R. 57 which provide for the free flowage in interstate commerce of milk of high sanitary requirements which must be met under the provisions of said bills; and

Whereas milk is the most important part of the diet for most people; it is our most perfect food, containing almost all of the essential elements for human growth, and is the principal food of infants, children, the aged, and infirm; and

Whereas more than one-half of our States are importers of milk and about the same number of States are exporters; and more than 13 million gallons of milk and cream are shipped interstate each day; and

Whereas this State has a tremendous stake in this industry, about 85 percent of its production of milk going into interstate commerce in one form or another, and milk production is one of the principal industries of this State; and

Whereas although the laws of our State require that milk and milk products must be produced under high sanitary conditions and result in sanitary, high grade products; and

Whereas importers of milk in the importer States have regulations for high sanitary quality by use of unnecessary requirements or other health regulations which result in a crazy-quilt pattern of milk sanitation regulation which duplicates inspection procedure in thousands of plants in the exporter States, thereby causing great unnecessary expense to a producer in meeting the different code requirements of his many customers; and

Whereas it is highly desirable to all the people that there only be Federal sanitation requirements, only one code, which must be complied with so as to insure the free, economical flow of milk in interstate commerce: Now, therefore, be it

Resolved by the assembly (the senate concurring), That the Congress of the United States be urged to enact one of the before mentioned bills, or a similar bill, into law, thereby insuring that milk and milk products produced within Federal requirements will have free flowage in interstate commerce; and be it further

Resolved, That properly attested copies of this resolution be sent to the President of the United States, to each House of Congress, and each Wisconsin Member thereof.

W. P. KNOWLES,
President of the Senate.
LAWRENCE R. LARSEN,
Chief Clerk of the Senate.
DAVID J. BLANCHARD,
Speaker of the Assembly.
ROBERT G. MAROTZ,
Chief Clerk of the Assembly.

Just Plain Jack

EXTENSION OF REMARKS
OF
HON. J. ARTHUR YOUNGER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. YOUNGER. Mr. Speaker, this morning Mr. Pierre Salinger, President Kennedy's press secretary, in an interview over the Dave Garroway televison show made this statement:

What Washington needs is more humor.

Carrying out his idea, I wish to insert three additional columns by Art Hoppe, of the San Francisco Chronicle, on "Just Plain Jack":

[From the San Francisco Chronicle, Feb. 26, 1961]

JUST PLAIN JACK BUILDS UP PIERRE

(By Art Hoppe)

Good morning, friends in televisionland. It's time once again for another episode of "Just Plain Jack," the typical success story of a typical American boy. With money.

As we join the rollicking heart-warming family in the big White House, Just Plain Jack is relaxing in the study doing one-handed pushups while writing Executive Order No. 10572 and dictating a speech. His aid and confidant, portly Pierre, enters, puffing a cigar.

Just Plain Jack: "Pierre, boy. How does this speech sound? 'We don't want a nation of spectators. We want a nation of participants in the vigorous life.'"

Pierre (shuddering): "Sounds great, chief, Absolutely great."

Just Plain Jack: "98, 99, 100." (He leaps to his feet and begins deep knee bends.) "Which reminds me, Pierre, I see Time describes you again as 'burly, belt-straining.' Throw me the medicine ball."

Pierre: "Could I roll it?"

Just Plain Jack: "Nonsense. We must move forward with vigor. Ready now. One, two, three, four."

Pierre (panting): "Chief, look out the window. The cops have taken their ball away and are chasing them off the lawn again."

Just Plain Jack: "Well, it's time they all got in here for the Cabinet meeting anyway. What's on the agenda today?"

Pierre (sighing with relief as he puts the medicine ball away): "Chin ups, Laos, Indian wresting, the Congo, 100-pound barbells, Berlin, and handstands. And, oh yes, you've been invited to attend the opening game of baseball season."

Just Plain Jack (chinning himself on the mantle): "Great. Do three laps around the grounds, Pierre. And about the game, which side am I playing on?"

Can Pierre do three laps? Will Washington win the opener? Is Adlai losing his paunch? Tune in next week, friends, for another episode. And in the meantime, as you go down the byways of life remember: nothing builds you up like just plain Jack.

[From the San Francisco Chronicle, Mar. 21, 1961]

JUST PLAIN JACK BECOMES A WHIG

(By Art Hoppe)

Good morning, friends in television land. It's time for another episode of "Just Plain Jack," the story of one typical American's struggle to lead a rich life. In spite of money. As we join them in the big white house, Just Plain Jack and the beautiful society girl he married are just entering his study.

Beautiful Society Girl: "Close your eyes, now. It's a surprise. I felt I ought to help you more in your work. I've been slaving on this night and day."

Just Plain Jack (ayes tightly shut and smiling expectantly): "Great, dear. I was afraid at first you hadn't quite captured the New Frontier spirit. We must move forward. With vigor."

Beautiful Society Girl: "There, now. Open wide. See? I've redone your whole study."

Just Plain Jack: "It's—uh—very interesting."

Beautiful Society Girl: "Silly, it's authentic. Every single thing in this room was made before 1802."

Just Plain Jack: "1802? Oh. Where's my easy chair?"

Beautiful Society Girl: "Silly, you sit here, see? On this authentic Jonathan Gostelowe ladder back chair. Comfy? Let me light the candle on this authentic cobbler's bench so you can see to read. There. I think if you slouch forward a little more, dear, the light will be just right."

Just Plain Jack: "It's awfully—uh—authentic."

Beautiful Society Girl: "And here. If you want to write another message to your friends up on the hill, you just climb up on this authentic William Savery stool, dip your authentic quill pen into this——"

Just Plain Jack (hesitantly): "You're a wonderful helpmate, dear. But I'm not sure 1802 exactly fits my image."

Beautiful Society Girl: "That's just it. I found all these treasures in the basement. Free. Don't you see? Economy. Tighten our belts. Ask not what your country——"

Just Plain Jack (brightening): "Economical, eh?"

Beautiful Society Girl: "Well, there is the refinishing. But they redid this authentic milking stool for only $783.22. And, of course, I did have to fly down to Florida a couple of times for conferences. And——"

Just Plain Jack: "$783.22?"

Beautiful Society Girl: "But just wait until I've finished the whole house. Every single thing in it will be authentic. Which reminds me, dear. Would you mind giving up shaving?"

Can this marriage be saved? If so, will muttonchop whiskers hurt Jack's image? Tune in again, friends. And in the meantime, as you go down the byways of life, remember: Nothing's more authentic than just plain Jack.

[From the San Francisco Chronicle, Apr. 4, 1961]

JUST PLAIN JACK OUTFOXES FOXES

Good morning, folks. It's time for another visit with Just Plain Jack. The true-to-life drama of the struggles of a young man with good looks, intelligence, money, and success to have fun.

(Music: "Ahunting We will Go.") As we join Just Plain Jack he is standing on the steps of his rustic weekend cabin, Glen Ora, hitching up his jodhpurs. The Beautiful Society Girl he married is beside him, nervously switching her riding boots with a crop.

Beautiful Society Girl (hesitantly): You really are determined to go again today, dear?"

Just Plain Jack: "Loved every minute of it yesterday. Brother Bobby and Brother Teddy did, too. The fox running this way and that, the baying of the hounds, the spectacular jumps. It's got touch football beat all hollow."

Beautiful Society Girl: "But, darling: You yourself said your mail was running 62 percent profox. And, remember, you wanted me to stop hunting because it was hurting your image. I guess I was a wee bit stubborn."

Just Plain Jack: "Nonsense. You were right to refuse. And I like your friends in the Hunt Club. They're great to talk politics with."

Beautiful Society Girl: "Yes. But I wish you wouldn't be quite so exuberant in talking about raising corporation taxes. And do we have to have all 35 Secret Service agents along today? They just don't fit in with the group. And the Sherman tank? Mrs. Vandastor's estate was a frightful mess."

Just Plain Jack: "Yes, but didn't Brother Bobby take the hedges well? And the way Teddy sailed over the water hazard. If I hadn't cleared that 6-foot fence I never would have beat them."

Beautiful Society Girl: "Yes, dear, but today I wish the three of you would use horses. It's——"

(Bobby and Teddy enter, each wearing Harvard sweatshirts, shorts, and track shoes.)

Just Plain Jack: "Hey, that's unfair, Wait'll I change."

Beautiful Society Girl (shuddering): "Never mind, dear. I've decided to give up fox hunting. Forever."

"Music: "Hearts and Flowers." Up and out.)

Will the Hunt Club be miffed? Are the Secret Service men sore? Tune in next week, folks. And in the meantime, as you go down the byways of life, remember: the best way to get a fox (or a mink) is with just plain "jack".

Lao Dilemma

EXTENSION OF REMARKS
OF
HON. STEVEN B. DEROUNIAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. DEROUNIAN. Mr. Speaker, this story by Marguerite Higgins, which appeared this morning in the New York Herald Tribune, indicates what happens to a great and powerful country when indecision rules its policy:

UNITED STATES HAS LOST IN LAOS DESPITE THE CEASE-FIRE?

(By Marguerite Higgins)

WASHINGTON, April 24.—Even if the British-Russian cease-fire appeal to be issued tomorrow at last brings results in Laos, the United States will go to the international bargaining table at great disadvantage. The reason is the intensified Red offensive that threatens to swallow a crucial chunk of the beleaguered kingdom before peace talks can begin.

Announcement of the cease-fire appeal in Moscow and London said three documents had been released: The text of a joint Russo-British appeal for the cease-fire, addressed to the warring groups in Laos; a letter to Indian Prime Minister Jawaharlal Nehru to convoke the three-man supervisory commission; and invitations to 14 nations to a Lao Peace Conference in Geneva.

WILL REBELS STOP FIGHTING

In Washington today it remains a question as to whether the Soviet accession to a cease-fire appeal will result in an end to the fighting immediately or whether it is just another maneuver to stay SEATO's hand while the Communists fight on.

The test will come, according to high officials, in the days immediately after the joint cease-fire appeal has been made public and followed up by a similar appeal by the Royal Lao Government. If the Communist rebels ignore the appeal and press their ever more menacing 11th-hour offensive, the United States will have no choice but to look to the contingency plans for military intervention in Laos as already worked out with the SEATO allies, these officials said.

In any case the international balance sheet on Laos already shows heavy losses for the United States—losses that will plague its negotiators at the 14-nation peace conference to be held May 12 in Geneva if a verified cease-fire on the ground has been achieved.

For the Communist military successes on the ground achieved since December by troops supplied by Russia and led by an estimated thousand officers and technicians provided by North Vietnam have already gained possession of three northern provinces Phong Saly, Sam Neua, and Xien Khouang) plus possession of the crucial Plaine des Jarres and the critical road-junction supply center of Vang Vieng. Additionally, there are innumerable pockets of guerrilla activity which make a map of free Laos look in some areas like a series of polka dots.

The Communist rebels in Laos have continued to grind ahead in their artillery and infantry attacks, and the Russians have continued to fly a military airlift despite the fact that Kremlin diplomats agreed in principle in late March to the urgent, last-ditch, cease-fire appeal sent to them by Great Britain and despite a solemn warning that without a cease-fire Washington was ready to go in with force.

Have the Russians been deliberately stalling, talking soft in the Kremlin but carrying an even bigger and more successful military military stick in Laos? The answer here is almost unanimously yes. But there is also a virtually unanimous decision that—if this cease-fire move is virtually immediate and not phony—the United States and its allies had better try to make the best of a bad bargain in hope that the peace formula to be worked out at the Geneva conference can in fact achieve the Austrian-type neutrality for Laos that the Soviet Union has privately agreed to in negotiations with the British.

THE FUTURE FOR LAOS

Why should the Reds agree to an Austrian-type neutrality when they are doing so well militarily and have key chunks of the 12 Laotian provinces already in their hands?

Because, say American officials, the Kremlin knows that there is a point beyond which the United States cannot be pushed in Laos and that point is rapidly being reached.

The best alternative—and least likely—foreseen for the 14-nation Geneva Conference that will include Red China would be a return to the 1954 Geneva accords which called for Lao neutrality, pledged the rebels to cooperate with the central government and yield their military positions.

A COALITION REGIME

A more likely alternative officials conceded is a coalition government which would be headed by neutralist leader Prince Souvanna Phouma and which would have to include some top Communists.

The most undesirable alternative from the United States point of view would be a partition of the country because the Communists merely use the partition line as a jumping-off point for new aggression.

The biggest hope in Washington is that pressure from the neutralist members of the 14-nation conference will make it inexpedient for Russia to reject the offer of truly neutral Austrian-type Laos.

In giving the plus side of the balance sheet on Laos, the United States pleads the fact that a cease-fire will spare intervention in a war which nobody, including some of the Laotians themselves, seemed to have much stomach.

APPEAL TO NEUTRALISTS

Although the Communists took new territory while negotiations dragged on between the British and the Russians, the Kennedy administration feels its cautious approach, plus its acceptance of a neutral (as distinguished from pro-Western) Laos, won support from southeast Asian neutralists (such as India) and muted European criticism of America's alleged trigger-happy tactics.

From the beginning of the Lao crisis, both Britain and France—the two European allies involved in SEATO—have been most reluctant to see force used even in face of the rising Communist offensive. Although the French have been privately most adamant, the British have been publicly the most vocal.

BRITISH WON OVER

It is considered a major achievement in the Kennedy administration that the President's restraint eventually won the British round to agreeing (in the Key West meeting with Prime Minister Macmillan) to join in any intervention if worst came to worst and every reasonable negotiating avenue seemed closed.

Even when it became clear to Washington that the Soviets were stalling while the Communists were winning new victories in Laos, the British held to their optimism and insisted that the United States should not make a military move lest it upset the diplomatic applecart. Thus the day before Mr. Macmillan arrived April 4 in Washington for

his formal sessions with the President, an official British Foreign spokesman told a press briefing in Washington that he expected a favorable Soviet reply "possibly in 48 hours, anyway at the end of the week." The acceptable Soviet reply was not delivered until today, nearly 3 weeks later.

DIFFERENCE IN APPROACH

This illustrates the fundamental point of difference of approach to the Russians that has marked British and American attitudes in the Lao affair. For many senior Americans experienced in Russian ways felt that instead of making soft statements in the hopes of spurring the Reds on, this would have the opposite effect; the essential point, the Americans thought, was to take measures making clear to the Russians that this country had the will to take countermeasures if the stalling continued.

Federal Aid for Education

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. DORN. Mr. Speaker, Mr. W. D. Workman is a highly respected writer and columnist. I recommend this article to the attention of the country and the Congress:

SOME MISCONCEPTIONS ABOUT FEDERAL AID FOR EDUCATION

(By W. D. Workman)

"Federal aid without Federal control" is the spurious cry of these assorted educators, politicians, and do-gooders who wish Congress to dish out more money for schools, schoolchildren, and schoolteachers.

Yet without Federal control, there is grave doubt that mere financial assistance will do all those things the Federal-aiders want done. This column opposes Federal aid, with or without control, but it seeks as well to expose some of the addled preachments with which Federal aid is being sold.

Federal aid is, of necessity, a pattern of redistributing that portion of the Nation's wealth which the Federal Government thinks should be applied to education. This obviously involves taking (through the compulsion of taxes) from the rich to give to the poor. For the Government has no money of its own—and what it gives away it must first take away.

If the poorer States are to benefit, they must get back from Uncle Sam more money than he takes from them. By the same token, Uncle must take more from the richer States than he will return to them. The net result will be that some States will have more mony available for school purposes, while others will have less. Then arises the overriding question: Will this federally disgorged money be put to the improvement of schools?

Without Federal control, there can be no assurance that it will. With Federal control, there is the assumption that the bureaucrats in Washington, political and educational, know better how to improve our schools than do the persons on the scene.

True, congressional appropriations can be tied up with conditions as to how the money will be spent, but who can guarantee that the receipt of Federal funds will not mean the release of State and local funds for purposes other than education?

But let's assume that all Federal aid will be used for education, and that it will be in addition to school funds already being raised on State and local levels. What then?

A great deal of the criticism of American schools is directed at education in the teeming population centers of the Nation. These, mind you, are located in States where per capita income is high, where total wealth and taxable property are great, and which will lose rather than gain revenues under the redistribution device of Federal aid.

Is it reasonable to expect that a State or city now tolerates inferior schools will immediately correct them under a program of Federal aid? Can we expect them to do more for their schools when they have less money with which to do it? The only guarantee of improved conditions would be through the imposition of Federal control, assuming that the improvement must be to national standards. This would give the lie to the chant, "Federal aid without Federal control."

Federal aid without control would be ineffective. With Federal control, Federal aid inevitably would lead to nationalization of education, further erosion of local self-government, and mass conditioning of youthful minds according to uniform standards prescribed from Washington. Actually, this is precisely what is desired by more and more professional educators who yearn to take over the Nation's schools—lock, stock, and barrel.

This frightening state of affairs is evidenced on every hand. It is documented, with chapter and verse, in Roger A. Freeman's new book, "Taxes for the Schools." That work, a companion to his earlier "School Needs in the Decade Ahead," should be required reading for both the proponents and the opponents of Federal aid to education.

It is worth the price for one chapter alone, "Powers and Responsibilities in Education," a thought-provoking exploration of all facets of Federal aid, and of the trend of professional educators to grasp the reins of school authority through Federal aid.

On this particular score, Mr. Freeman has served posterity by puting down in permanent form Paul Woodring's paraphrase of the Clemenceau axiom:

"Just as war is too important to be left to the generals, education is too important to be left to the educators."

Salute to Africa

SPEECH
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 17, 1961

Mr. NIX. Mr. Speaker, it is my privilege to add a few words as a member of the Subcommittee on Africa consistent with the unanimously passed House Resolution 232:

Resolved, That it is the sense of the House of Representatives that April 15, 1961, be recognized as African Freedom Day; and that we extend to the independent countries of Africa our congratulations and assure them of our continued good will.

The German philosopher, Immanuel Kant, wrote in his "Fundamental Principles of the Metaphysic of Morals":

Nothing can possibly be conceived in the world, or even out of it, which can be called good without qualification, except a good will.

I subscribe to his thesis that power, riches, honor, even happiness, "inspire pride, and often presumption, if there is not a good will to correct the influence of these on the mind, and with this also to rectify the whole principle of acting, and adapt it to its end."

My American heritage and my official position vouchsafe the purity and the sincerity of this expression of good wishes and honor. Should additional unmistakable proof be required, let it be found in my African descent.

In this effort to salute these 26 sovereign states of Africa, I am keenly conscious of every one of the 122 million individual citizens of those states, of their dreams of freedom, of their desire to live in the highest state of human dignity.

History attests the cost in blood of all revolutions whether they ended in frustrations or liberations. Some have always had to die that others might be free. It is a source of exceeding joy that during these last 8 years the world has witnessed so many gain so much in independence at no greater cost of human life. I regret the loss of any life, but surely all must concede that the carnage and chaos would have been infinitely worse had no good will existed as the number of African independent states rose from 3 in 1953, to 26 in 1961.

Staggering indeed are the needs and problems that confront each of these African states. They would defy any effort of mine to merely list them. But I suggest that they are all human problems, and therefore, soluble through the application of intelligence.

And we do see intelligence demonstrated in each of these several states as they seek to build sound economies and thriving industries. It is my anticipation and understanding Africa's hopes and efforts we will undergird our moral help and encouragement with material assistance in strict accordance with the protocol of free and independent states.

No expression of good will would suggest relieveing free man from the responsibilities of self-government though we know full well the hazards, intrigue, connivance, and duplicity, inherent therein. In the experiments, is to be found the substance of which great states and able statesmen are made.

New nations and new men making over and refashioning the old to meet the needs of the day and more in keeping with the excellence of the heart's desire, these I salute this day.

At the turn of the century there lived here in the United States a poet of African descent, Paul Lawrence Dunbar.

In the closing stanza of his "Ode to Ethiopia" he expressed a sentiment I here submit. I am confident that the word "Ethiopia," because of that nation's antiquity and continuing sovereignty, will be acceptable as quite applicable to all the independent countries of Africa we are saluting today:

Go on and up! Our souls and eyes
Shall follow thy continuous rise;
Our ears shall list their story
From bards who from thy root shall spring,
And proudly tune their lyres to sing
Of Ethiopia's glory.

Foreign Tax Havens

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. PATMAN. Mr. Speaker, America has faced a serious crisis during the past months because of the flow of gold from the United States. One of the causes for the unfavorable balance of payments is the large investments abroad by American interests. This is not necessarily a bad thing. But when American money flows out of the country to avoid taxes, that is another matter. Mr. Ed Kandlik, in an article appearing in the Washington Post, April 24, 1961, describes the way in which some tax-dodging funds operate. This is a serious matter and could destroy further the confidence of the people in the integrity of our tax system.

I commend to my congressional colleagues the article by Mr. Kandlik.

[From the Washington Post, Apr. 24, 1961]

GLOBAL TRADE—BERMUDA NOW TAX SHELTER FOR BIG MUTUAL FUND

(By Ed Kandlik)

Foreign tax havens are no longer exclusive hideaways.

They are getting big entrances on Wall Street, La Salle Street, and in major Pacific coast markets.

The latest invitation for U.S. dollars to seek tax shelter abroad is found in offering of $25 million of United International Fund, Ltd. shares. This is a Bermuda corporation.

As such it may escape many of the taxes that would be levied if it were formed in the United States.

The two things foreign about United International Fund are the place of incorporation and the intention to invest 85 percent of its assets abroad.

The underwriters are in the United States. The group is headed by Kidder, Peabody & Co., Bache & Co., and Francis I. du Pont & Co.

The assets will be held by the Chase Manhattan Bank, New York.

Although Intercontinental Advisory Corp. Ltd., a Bermuda corporation, is being set up as investment adviser, the officials are principally Americans. Several principals in the new fund are associated with Waddell & Reed, distributor of United Funds.

"The fund is designed to afford certain tax advantages under existing laws to its U.S.-resident shareholders," the prospectus states.

In Bermuda the fund is subject to no income, capital gains or other tax, except for a $650 flat annual fee.

The fund will be subject to withholding taxes imposed by countries in which its income originates.

Operating as a foreign corporation it expects to be subject to only a 30 percent withholding tax on income received from the United States. No taxes would be payable on capital gains made in the United States.

United International Fund does not propose to pay cash dividends, which could become taxable income to United States residents. It intends to build a tax-free pile abroad through the medium of corporate gains and accumulated income.

From time to time the fund may pay stock dividends. Stockholders could sell these or sell their shares to cash their profits, paying only the 25 percent maximum capital gains tax.

Originally United International Fund is being set up as a closed-end fund but it will convert to an open-end mutual fund at the end of 3 months. Then shares will be redeemable at net assets value upon demand.

The initial offering is being made at a series of underwriting discounts ranging from 8.8 percent down to 2 percent on amounts of $500,000 or over. This same schedule of underwriting discounts will prevail after the conversion to an open-end mutual fund.

National Little League Baseball Week

EXTENSION OF REMARKS
OF
HON. HERMAN T. SCHNEEBELI
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SCHNEEBELI. Mr. Speaker, our young people, dedicated to the highest ideals of citizenship and teamwork, sportsmanship and character, form the backbone of our country. Today more than a million boys in every corner of our Nation are developing these qualities through participation in the Little League Baseball program.

Representing as I do the congressional district which embraces the national headquarters of Little League Baseball, I am particularly proud to call to the attention of my colleagues the Presidental proclamation establishing "National Little League Baseball Week" in response to a concurrent resolution enacted by the 86th Congress:

THE WHITE HOUSE.

NATIONAL LITTLE LEAGUE BASEBALL WEEK

Whereas active participation by youth in appropriate physical activities contributes to their fitness and to the maintenance of our national vigor and vitality; and

Whereas little leagues in communities throughout the Nation have made it possible for thousands of young boys to take an active part in our national game of baseball; and

Whereas Little League baseball not only promotes the physical well-being of the players, but also instills into them the qualities of fairness, cooperation, and discipline—qualities which contribute to the development of good citizenship; and

Whereas the Congress, by House Concurrent Resolution 17, agreed to June 1, 1959, has requested the President to designate the week beginning the second Monday in June of each year as "National Little League Baseball Week," in recognition of the national and community benefits resulting from Little League activity: Now, therefore,

I, John F. Kennedy, President of the United States of America, do hereby designate the week beginning the second Monday in June of 1961 and the week beginning the second Monday in June of each succeeding year as "National Little League Baseball Week."

And I invite the people of the United States to observe that week in schools, parks, athletic fields, and other suitable places with appropriate ceremonies and activities designed to emphasize the importance of the physical development of our Nation's youth.

In witness whereof I have hereunto set my hand and caused the seal of the United States of America to be affixed.

Done at the city of Washington this 18th day of April, in the year of our Lord 1961, and of the independence of the United States of America the 185th.

[SEAL] JOHN F. KENNEDY.

By the President:

DEAN RUSK,
Secretary of State.

Rural Industry

EXTENSION OF REMARKS
OF
HON. WALTER H. MOELLER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. MOELLER. Mr. Speaker, I have been most pleased to note the increased interest of the Department of Agriculture in the development of our rural areas. It has been most heartening to me. Secretary Freeman is to be congratulated for his initiative in reorganizing the present rural development program of the Department. He has appointed Mr. John A. Baker, Director of Agricultural Credit, as head of the Rural Areas Development Board and is hoping to be designated the responsibility for the rural aspects of the soon-to-be enacted depressed areas legislation. I certainly hope he is given this responsibility, for he has shown a capacity and interest in the program that should carry it to a successful conclusion.

My own district, the 10th Congressional of Ohio, is predominately rural in character and should benefit greatly from a vigorous redevelopment effort assisted by the Federal Government. I am happy that we are now taking a more than passing interest in the economic development of our vitally important rural areas, and I congratulate my colleagues for turning down the Republican-sponsored Widnall amendment to eliminate the rural development section from the House-passed version of the depressed areas bill.

In this connection, I would like to insert in the RECORD two excellent articles from recent editions of the Washington Post which describe and analyze this new effort to bring industrial development to the rural areas of our Nation. I commend them to all, and I hope that this new program will gain the publicity and support of every conscientious citizen.

The Washington Post articles follow:

RURAL INDUSTRY AGENCY IS FREEMAN OBJECTIVE

(By Julius Duscha)

Secretary of Agriculture Orville L. Freeman is trying to turn his Department into an agency for rural industrial development.

Freeman is vigorously seeking the responsibility for administering the sections of the depressed areas bill that would affect rural areas.

He also is making plans to expand the existing rural development program which has been quietly underway in the Agriculture Department for almost 4 years.

The Secretary's efforts to include all aspects of rural life within his province could have far-reaching effects on cities as well as on the countryside.

COULD SLOW MOVEMENT

If substantial industry were brought to rural areas where farming is declining, the farm-to-city movement could be considerably slowed down.

This would mean that the urban problems of overcrowding, crime, and assimilation that have resulted from this migration would diminish.

The shaky economies of many small towns would be helped, too, by an influx of industry to the towns and the surrounding rural areas.

Freeman does not plan, however, to downgrade the importance of farming in rural America. Under his leadership the Department will continue to be a champion of farmers and farming.

What Freeman is doing is recognizing the facts of life in rural areas, where the mechanization of farming, the economic necessity for larger and larger farms and the lack of nearby industrial jobs drive more and more young men and women from farms to the cities.

The Secretary's immediate objective is a large share in the administration of the area redevelopment, or depressed areas, legislation.

Both the Senate and the House have passed redevelopment bills, and a congressional conference committee is trying to resolve differences between the two measures.

The legislation provides that administration of the $300 million loan program and the $89 million in grants provided by the legislation would be centered in the Commerce Department.

ONE HUNDRED MILLION DOLLARS IN LOANS

Freeman hopes that the rural development aspects of the legislation would be operated by the Agriculture Department.

A total of $100 million in loan authority would be used to attract industry to rural areas. A substantial part of the $100 million in loans provided for the improvement of water supplies, sewer systems, and other community facilities would also go to rural areas.

The Agriculture Department argues that its experience with the 4-year-old rural development program qualifies the Department for administering the rural parts of the depressed areas bill.

Nor is there any opposition from powerful farm State legislators on Capitol Hill to Agriculture Department administration of much of the depressed areas bill.

Freeman recently reorganized the present rural development program by establishing a Rural Areas Development Board under the chairmanship of John A. Baker, director of agricultural credit.

Operating on a budget of less than $1 million a year, the present program has concentrated on technical assistance to rural areas that are seeking industry.

RURAL INDUSTRY

Secretary Freeman's efforts to stimulate industrial development in rural areas have far-reaching possibilities. The immediate objective of this movement is to relieve underemployment of farmers, but if it is successful it can have a salutary effect on urban life as well.

A recent report showed that 45 out of every 100 farmer operators did some nonfarm work in 1959 and 36 percent of them earned more from their off-farm jobs than from the sale of agricultural products. Even so, a vast number are seeking new opportunities for part-time work off the farm, and aid for these people must be considered an important part of any general agricultural program. The stimulation of rural industries has been found to be the most effective and practical answer.

Cities have a direct interest in the movement because many of them are now being virtually overwhelmed with new population that they cannot readily absorb. Recent Census Bureau studies show that approximately 84 percent of the increase in the total population of the United States in the last 10 years was concentrated in cities of 50,000 or more and their surrounding areas. The movement is proceeding at a fantastic pace, with consequent overcrowding, transportation chaos, crime, and urban sprawl.

From the viewpoint of the Nation as well as that of the cities it would be desirable to slow down this frantic concentration of population in a relatively few large centers. A national policy of decentralizing industrial growth thus seems to be in order. The location of industrial plants in rural areas, where feasible, would serve the double purpose of relieving shaky economics of many small towns while easing the growth problems of the big cities.

The idea is not, of course, a new one. For some years the Department of Agriculture under Secretary Benson promoted the Rural Development program, and some 200 projects in 40 States are now underway. The present administration has modified the objectives somewhat and added the word "Areas" to the name, but the basic idea continues to be the location of more industry within reach of part-time farmers. Secretary Freeman would like to steer the agricultural end of the depressed-areas program in the same direction.

From these beginnings a new national policy may well emerge. As farms increase in size and still less manpower is needed to produce food, there are many advantages in taking factories to the country instead of luring more people into the large cities. Congress may well conclude that this is the only practical way of maintaining some degree of balance between rural and urban life in these changing times.

Role of Agriculture in Our National Economy

EXTENSION OF REMARKS

OF

HON. DON L. SHORT

OF NORTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. SHORT. Mr. Speaker, the Kennedy administration should be given credit for clarifying, to a considerable degree, the role of agriculture in our national economy. Farmers have performed a magnificent service in supplying the food and fiber necessary for our population and our industry, and I believe the general public not familiar with agriculture has sometimes come to believe that farming is a highly subsidized operation and that the farmer as a class always has his hand out for any benefits which may be offered. This is not true, as I have pointed out on many occasions. Most farmers are only looking for a fair opportunity to make themselves a decent living in our tremendously complicated and competitive economy.

Sometimes some of the spokesmen for this administration have, I fear, left an erroneous picture with the general public in regard to what was happening to our farm population. It is sometimes inferred, perhaps unintentionally, that the independent farmer is fast disappearing from the scene and corporate-type farming operations are taking over the production of farm commodities. This is not true. The family-type farm seems to remain a predominant type of farm operation in this country. There is no indication of corporate-type or industrialized farm operation taking over.

Mr. Speaker, the May issue of Successful Farming contains an editorial by Dick Hanson, which I believe does an excellent job of clarifying what has happened to family farming operations. Mr. Hanson takes facts and figures from the 1959 agricultural census and also from a recent study by the USDA's Agricultural Research Service, which I believe factually refutes the proposition that the family-type farm is disappearing from the scene.

I ask unanimous consent that this editorial will be included with my remarks in the Appendix of the RECORD:

[From Successful Farming, May 1961]

ACROSS THE EDITOR'S DESK

(By Dick Hanson)

The 1959 Census of Agriculture has heaped more fuel on an already smoldering question. The census shows fewer but larger farms in this country. And, this trend to fewer but larger farms will continue for some time in the future, apparently. To many people this trend means only one thing—family farms will eventually be gobbled up by a few giant operators who will then control agriculture.

To me, this line of thinking just doesn't hold water. Two factors will prevent a few from buying up the many. These factors are capital and labor. More and more colleges are studying the problem of optimum size of farm. What is the best, most economical size farm for the many different agricultural areas of the country? The size varies, of course. What may be the right size in Illinois would be far too small in Wyoming.

So far, the studies show that many of our present so-called family farms are already the right size to make optimum use of land, labor, and capital. In other words, there's no point in these farm getting any bigger.

A recent study by the USDA's Agricultural Research Service dispels some of the shadows hanging over the future of the family farm. Here are some of the findings in the report:

Family farms will be bigger and more highly specialized in 1975—and they will continue to dominate our Nation's agriculture.

Findings indicate that farmers will continue to step up adoption of laborsaving and output-increasing techniques. They will purchase additional equipment needed for more complete mechanization of crop production and livestock feeding operations. They will also hire more services, such as spraying, dusting, and fertilizing, and obtain more professional management assistance, including help in buying and selling livestock.

Dairy farms will continue to increase in size and decrease in number. Even so, the report states that dairying in 1975 will still be largely a family operated business. Average number of cows on family operated dairy farms may increase 25 to 30 percent by 1975. This is about the same percentage increase that occurred during the past 15 years.

Unit costs on a large-scale livestock farm are only 5 percent lower than such costs on a comparable one-man farm. In an Illinois survey optimum use of land, labor, and capital was found on farms of 260 to 339 acres.

In the Corn Belt, limited forage supplies will encourage some livestock farmers to expand hog production rather than beef production. Labor requirements, as well as capital and mangerial limitations, will prevent expansion to the 1,000 or more hogs that one man can raise. But 500 to 600 hogs per farm—compared to an average of 170 today—may be commonplace by 1975.

Family size feeding operations will continue to predominate in the Midwest because of the availability of farmgrown feeds and otherwise unmarketable operator and family labor.

I'm convinced that family farming, as we think of it, is going to be around for a long time. We'll need to make changes and use new methods in this highly competitive agricultural industry. But then, what growing industry doesn't?

Otsego County: One of America's Most Important Agricultural Areas

EXTENSION OF REMARKS
OF
HON. SAMUEL S. STRATTON
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. STRATTON. Mr. Speaker, I am proud to be the Representative in Congress of an area which is one of the most important agricultural areas in our country, Otsego County, N.Y. As an indication of the extent of agricultural activity in this great country, I include herewith an editorial from the Oneonta Star of April 19, 1961. This editorial appeared in the annual agricultural issue of this great newspaper and pays suitable tribute to the fine hard-working farmers of Otsego County who have been responsible for this extensive agricultural activity:

AGRICULTURE STILL OUR BIG INDUSTRY

Every Oneonta businessman knows that agriculture is this area's most important industry.

It will undoubtedly remain so, although like all other American industries, it is in a process of change.

The Bureau of the Census has just released its 1959 census of agriculture for Otsego County, which shows the current trend of change in this county.

There are fewer farms. The number of farms dropped from 2,823 to 2,391 between 1954 and 1959. That is a loss of actually only 313 farms, because the census points out that 119 of the difference lies in the change of definition of a farm.

But the farms that remain are bigger farms. True, in both years there were only 9 farms with 1,000 or more acres. But in 1959 there were 74 farms between 500 and 1,000 acres, compared with 63 5 years earlier. And there were only 103 farms of less than 10 acres, compared with 208 in 1954.

The census classed 1,934 farms as commercial. Of these, 65 had annual sales of $40,000 or more; 164 had sales of $20,000 to $39,999; 610 reported annual sales of $10,000 to $19,999; 645 farms had sales of $5,000 to $9,999. Only 370 farms had sales as low as $2,500, and only 80, sales below $2,500.

Otsego remains, and will continue to do so, predominantly a dairy county, but other agricultural enterprises are showing a sustained and important growth.

For example, in 1954, only 413,319 chickens, including broilers, were sold in Otsego County. But in 1959, sales of chickens were more than 1 million higher—a total of 1,476,316 sales reported. In 1954, Otsego farmers sold 3,698,365 eggs. Five years later, egg sales soared to 4,127,017.

Lesser farm enterprises also showed significant increases. Sheep and lamb sales rose slightly, nearly 4,000 more pounds of wool were produced, and although fewer farmers raised hogs for sale, they sold more hogs.

Otsego did not contribute materially to the Nation's biggest agricultural headache—the wheat surplus. Whereas in 1954, a total of 154 Otsego farms produced and sold 28,648 bushels of wheat; in 1959, only 46 farms produced wheat, and they sold only 5,032 bushels.

The census has a long list of equipment purchased by farmers, ranging from feeds and fertilizers to farm machinery and home freezers.

The cold figures of the census, however, do not reflect one of the most important aspects of area agriculture—the fact that we in Oneonta know the farmers of the area not only as good customers, but as good friends and good neighbors.

We on the Star hope that this Farmers Yearbook will reflect this newspaper's conviction that our farm readers are also our good friends and neighbors.

Textile Industry Must Be Safeguarded

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ROBERTS. Mr. Speaker, I have said in the past that the American textile industry was somewhat in the predicament of a man drowning in a swimming pool. The management has carefully provided lifesaver rings for use in just such an emergency, but the lifeguard will not toss one to the distraught victim.

Floods of imported textile goods have had the domestic industry awash for some time. Congress has carefully provided safeguards in the law to help industries in such a condition. But in the past the administration had always declined to use the safeguards we have established.

The section 22 case of a year ago is a case in point. Congress wrote that section into the Agriculture Adjustment Act to provide relief against imports whenever it is found that they tend to render ineffective or materially interfere with the agricultural programs of the Federal Government.

We asked the Secretary of Agriculture last year to seek relief under this provision for cotton products. We had a precedent in a 1941 Tariff Commission decision on wheat and flour.

The Secretary looked into it and recommended that the President take some action. But when President Eisenhower requested an investigation, he coupled it with an implication that the Tariff Commission could impose no more than an 8-cent-a-pound fee on the cotton content of imported articles.

This in itself was a misinterpretation of the act passed by Congress. The section in the law was predicated on the assumption that the Tariff Commission would recommend the relief it deemed necessary when it was determined that imports materially interfered with the domestic cotton program. Certainly it was not the intent of Congress to limit the considerations involved in one of these cases, or to do anything prejudicial to full and complete relief where it is indicated.

We recall the results of that appeal. With President Eisenhower's restrictive statement as a guide, the Tariff Commission voted against the textile industry. They chose to wait and see if the drowning man in the swimming pool went under for the third time.

Following these developments last year, I stated that there was something of futility in the repeated efforts of those of us here interested and concerned with the textile import problem to keep providing laws, lifesaver rings, which were not used. I said then that maybe it was time we got a new lifeguard.

The American people, in their wisdom, chose a new leader in the great election of last November. I can tell you that a lot of us from textile areas sent up a mighty cheer when this happened. We did not expect the new President immediately to rearrange all the existing trade agreements to give the textile industry a choice position in the world market, but we did believe that we would finally get off the buckpassing merry-go-round, and be given a full, fair, impartial, and unprejudicial hearing of our problem.

We have not been disappointed in this belief. The new President, who, by the way, has fought this fight in Congress for his native Massachusetts textile mills, put the textile industry's problems right at the top of his work agenda.

He appointed as Secretary of Commerce the Honorable Luther Hodges, a man with a distinguished background in the textile industry. He was Governor of North Carolina, the largest textile-producing State in the Nation. I can report personally of Secretary Hodges' deep and abiding interest in the welfare of the American textile industry. Last week, I paid a visit to Secretary Hodges, and took with me Mr. Hugh M. Comer, the chairman of the board of Avondale Mills, the great textile industry in my native State. The Secretary was cordial, attentive, and showed that he was well aware of the situation of the textile industry. I notice in the recent issue of U.S. News & World Report, that Secretary Hodges believes that American textiles are harder hit by import problems than any other industry in this country at the moment.

President Kennedy further evidenced his immediate concern with the import problem by appointing a Cabinet Textile Committee, chaired by Secretary Hodges. This Committee is due to report very shortly, it is my understanding.

Along with others, I urged Secretary Hodges' committee to make recommendations in line with those of the Pastore

Textile Committee in the Senate, calling for a country-by-country, category-by-category quota system. This recommendation reflects the position held by leaders of all segments of the textile industry, regardless of fiber or product. It is the only fair and equitable way for American textiles to compete on the world market and in this country.

We are already grateful for the immediate attention of the new administration to this problem. We desperately hope that we will not be disappointed in the action taken on textile imports.

The domestic textile industry must be delivered from the death blow which continued unfair imports surely will bring. Since 1947, 838 textile mills have been forced to shut down, throwing out of work more than 200,000 employees. We must have protection now for the 925,000 textile workers in this country today, including some 38,000 in my State of Alabama, who realize that their very jobs and the economic welfare of their communities are at stake.

Interior Department Program for Lower Colorado River

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ASPINALL. Mr. Speaker, I am taking this opportunity to inform all the Members of the House of the program announced by Secretary of the Interior Stewart L. Udall in his approach to the solution of the multiple problems that have been with us along the lower Colorado River ever since the Parker Dam was constructed in the 1930's.

One of the most vexing problems, which has been of continuing concern to the Interior and Insular Affairs Committee of this body, is the presence of trespassers and squatters whose occupancy precludes development for public purposes. In addition to the loss of revenue to the Government from unauthorized use, law abiding citizens, following authorized procedures, have been denied rights of occupancy and entry on the lands. Those of us interested in respect for law and order therefore supported the move of the United States, in June 1959, to evict trespassers; this having been offered as the only way to restore governmental authority over the area.

Institution of further eviction proceedings has been halted and the Department of the Interior has now moved to try to work out the problems without forcefully evicting unlawful occupants now on the ground. However, regardless of whether proceedings have previously been instituted, occupants will be required to acknowledge Federal ownership and enter into agreements for use of the lands on a rental basis for a 2-year period during which the Department will be establishing permanent land-use patterns. Where proceedings have been started, such arrangements will form the basis for settlement of the litigation by the Department of Justice. In any event, no new occupancy will be permitted unless it is in accordance with the master plan, and new trespassers will be evicted.

I hope that the squatter trespassers agree to cooperate with the Secretary of the Interior. If they do, it will reestablish Federal control over the area and provide a peaceful solution to the difficulties that have plagued the area along the lower Colorado River these many years. We will have to wait and see; your Committee on Interior and Insular Affairs will continue to be watchful of developments.

In the meantime, I congratulate our former colleague, Secretary Udall, on his efforts to find a statesmanlike solution. Under leave to extend my remarks, the complete text of the Department's announcement is inserted at this point in the RECORD:

COLORADO RIVER LAND USE AND TRESPASS PROGRAM ANNOUNCED

The Department of the Interior's plan for settling the troublesome problem of land use along the Colorado River from Davis Dam to the Mexican border was announced today by Secretary of the Interior Stewart L. Udall.

Land along the river was withdrawn many years ago for reclamation purposes, but some of these lands have been occupied by unauthorized squatters who have used various lands for agricultural, recreational, business, and residential purposes.

"In formulating this plan," said the Secretary, "the Department has kept three considerations in sharp focus:

"1. The lands constitute property of the United States and Federal ownership must be recognized;

"2. The locations of the lands along the banks of the only great river in the great Southwest require their integration in any master land-use plan; and

"3. The public interest requires that the lands be administered for the benefit of all the people of the Nation."

Udall's announcement was in two parts: First, there will be established in Yuma, Ariz., effective May 1, a land-use office to supervise implementation of the plan, and, second, details of how the land will be put to use. The latter includes instructions on a transition plan under which the squatters who cooperate can continue to use the lands for a period of at least 2 years while the land-use plan is put into effect.

"Some of the Government-owned land along the Colorado," Udall said, "offers an opportunity to salvage a major national recreational and scenic asset." The land will be classified in four categories:

1. Areas suitable for national recreational development.
2. Areas suitable for national game refuges.
3. Areas suitable for State parks and recreational uses.
4. Areas which should remain under State game and fish agencies as refuges. (Most of the river is bounded by Arizona or California, but to the north, Nevada controls a sizable stretch.)

The Secretary stated that Federal ownership must be acknowledged by the squatters if they are to participate in the transition program.

Udall's plan for present users of the Federal lands—some 20,000 acres of which are devoted to agriculture—includes the following requirements:

1. The squatters will be expected to sign a disclaimer statement acknowledging Federal ownership.
2. Those who do so will be given permits to use the lands they now occupy for approximately 2 years, subject to acreage limitation in case of agricultural use, if they acknowledge Federal ownership and if they agree to pay reasonable rent for past and future use. They will acquire no interest in the land and no preferential treatment will be accorded them in the administration of the program.

"Our program," Udall said, "will restore Federal control and management and at the same time offer the squatters a reasonable course of action to close out their investments. If present unauthorized users refuse to cooperate, we will have no alternative but to commence summary court proceedings to evict and recover full damages for all past use."

Permits for continued occupancy will be offered to persons who were on the land before the date of this announcement (April 20, 1961). Any persons occupying Federal lands along the river subsequently will be evicted and prosecuted for trespass, Udall declared.

The Yuma office will be opened under general supervision of Graham Hollister of Genoa, Nev., Special Assistant to the Secretary. It will administer the permit system, conduct further land use studies, and advise the Secretary in determining the best use, from the public's standpoint, of each parcel of land in the affected area.

Thirteenth Anniversary of the Rebirth of Israel

EXTENSION OF REMARKS
OF
HON. HERMAN TOLL
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. TOLL. Mr. Speaker, last Sunday the 13th anniversary of the birth of the State of Israel was observed in Independence Square, Philadelphia, by a great number of Philadelphians under the auspices of the Philadelphia Zionist Council and the city of Philadelphia. One of the speakers was the Lieutenant Governor of the Commonwealth of Pennsylvania, the Honorable John Morgan Davis. His talk so impressed the audience and Congressmen WILLIAM A. BARRETT and JAMES A. BYRNE, who attended in addition to myself that I include a copy of same for the benefit of all Members of the Congress:

REMARKS OF THE HONORABLE JOHN MORGAN DAVIS, LIEUTENANT GOVERNOR, 13TH ANNIVERSARY OF THE REBIRTH OF ISRAEL, APRIL 23, 1961

We gather here today, at the shrine of American independence, to celebrate the birthday of one of the world's newest democracies—the 13th anniversary of the rebirth of Israel.

Here where men declared that "all men are created equal, and are endowed by their Creator with inalienable rights of life, liberty, and the pursuit of happiness"—here, we come to recognize the reaching of the majority age of the Republic of Israel.

For Israel in this 13th year has come to its bar mitzvah, and has in actuality, reached the age of maturity.

And having done so, Israel becomes spotlighted during this year, and in the court at Jerusalem, shows to all the world—at this very moment—that it has indeed reached manhood in the community of nations.

How similar is the situation in this 13th year of independence for Israel, to our own 13th year as a nation—the first of the world's peoples to declare freedom and liberty before all the world.

For between the year of independence of this nation—between the hallowed Declaration at this very place, and our own 13th year—came revolution, war, and victory.

And in our 13th year, finally, in 1789, sprang forth, out of the minds and hearts of men, a foundation of law, a statement of purpose—the Constitution of the United States of America.

This was the culmination of 13 years of Valley Forge, Ticonderoga, Savannah, Brandywine, and Trenton—out of the Declaration had come turmoil and trial.

And out of turmoil and trial came the Constitution which stated:

"We the people of the United States—in order to form a more perfect union—establish justice."

Today in the spotlight of the world's glare, Israel—in its national manhood—establishes justice for all the world to see—establishes justice on behalf of the world's people—focuses the eye of mankind on the scales of justice in its dedicated effort to keep in men's mind a story of man's inhumanity to man.

Our own Constitution, founded on a Bill of Rights, weighed what had gone before in world governments and produced—in view of all the world—a document dedicated to provide the fundamental bases of man's humanity to man.

So, in a courtroom in Israel today, a young nation rivets the eyes of the world on the monstrous tragedy of men's recent past, in an attempt to insure that such inhumanity will never again take place in our world.

Although there is irony in the trial now taking place, it is an altogether fitting irony. Never before in the history of the civilized world has the magnificent concept of justice been held so high for mankind to look upon.

Never before has any government been so determined that justice shall be conducted fairly and without prejudice to the defense.

It will be impossible to erase the image of this trial from the memory of man.

Yet, remembering back through the years since Dachau and Buchenwald and Auschwitz, there is no more important page in history that man should rewrite. And Israel presents today, a rewriting of that history—no, rather a commentary on the history—a vividly true presentation of the facts of a time when men were inhumane to other men; when one man, or one people, or one nation, permitted genocide to be perpetrated.

Without this turning back of the pages of history; without this spotlighting of the horrible death of 6 million Jews and countless number of other peoples the world would little remember; it has already begun to forget.

It has been all too common in the years since nazidom's maniacal brigades ran rampant, to whitewash the actions of these horrible men.

Children have come of age in this decade who do not realize that a Nazi Germany existed. Instead of the harsh truth, we have seen, through popular novels and our photographic media, a blurred picture of military men who acted "on orders," and "noble leaders" who had no taste for the brutality, but who were forced to slaughter millions on orders from "someone higher up."

In the history of mankind; the history fashioned from the creation of man; the history which brought the exodus of the Jewish people out of the house of bondage—there was, is, and always will be, only one Higher Up.

And it is His moral law, given to Moses on Sinai, which commands in four strong words: "Thou shalt not kill."

And this law and nine others are the basis of the Judeo-Christian philosophy; the basis of our moral law; the basis on which the trial at Jerusalem must come to its final conclusion.

Israel is not seeking revenge upon one man or one group of men—or even one nation. This is not a question of revenge.

This is a matter of justice.

This is not even the payment of a debt.

For one life—created in the image of God—can never be fully paid.

The case in Jerusalem is the case against a political system utterly devoid in moral values; a system so amoral and brutal that it could accept the complete extermination of a people without any argument or equivocation.

At this time in the world's history—at this moment in the 13th year of Israel's freedom—the world sits in judgment upon itself in the courtroom at Jerusalem.

It is truly—this 13th year—a year of truth; a year of maturity; a year of emergence for the Republic of Israel.

It is, like our own 13th year, a year of national conscience—in 1789 as in 1961, America emerged to insure, through its Constitution, the rights, under God, of all men.

That year was, in our history, as in Israel's history, the year of emergence.

Both nations were created by those who sought a haven from persecution, and a free life in a new land.

A century and a half of history has seen peoples find freedom in this land; 13 years of history has seen peoples flock to the ancient land of milk and honey, to find freedom in Israel.

We take great pride in the fact that the first nation to recognize the independence of the infant Israel 13 years ago was the United States.

And during this infancy, more than 2 million people have found refuge in this haven of hope—Israel.

In all history—there has not been recorded a greater lesson in man's inhumanity to man as will be recorded in the courtroom at Jerusalem.

And in all history—there has never been recorded a greater lesson in charity—man's humanity to man—than has been recorded in Israel—for that young nation has accepted more homeless people in this short time than any other nation in world history.

We must never forget that Israel is the fount of human charity; that Israel was given to men by a benificent God; that Israel was chosen for His people, that Israel is dedicated to His way of life.

Israel, out of its ancient foundings, cannot be anything but charitable.

Israel, out of God's promise cannot be anything but just.

The land of Canaan was the result of God's promise.

The democracy of Israel is the result of man's genius.

Men only under God can achieve miracles, and in Israel, we have seen the miracle of man's genius, guided by the omnipotent hand of God.

A review of the past 13 years brings undeniable proof of God's handiwork on the earth of Israel.

And in this bar mitzvah, celebration of this great democracy, we stand shoulder to shoulder with this neighbor in the world's community, and extend a heartfelt "mazel."

May we foresee the day, in the not too distant future, when the world can be joyful as the result of the prophecy foretold in Israel that:

"They shall beat their swords into plowshares, and their spears into pruning hooks. Nation shall not lift up sword against nation, neither shall they know war any more."

This is the lesson we must learn during Israel's 13th year; and if it is learned, no bar mitzvah will ever have been so glorious.

The Textile Industry

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. DORN. Mr. Speaker, Senator TALMADGE for many years warned the country about the danger of uncontrolled, low wage, textile imports. The following are excerpts from the Senator's very excellent speech before the Atlanta Rotary Club on April 3:

EXCERPTS FROM A SPEECH BY SENATOR HERMAN TALMADGE, OF GEORGIA, TO THE ATLANTA ROTARY CLUB AND THE ATLANTA CHAMBER OF COMMERCE ON APRIL 3, 1961

As you know, for a period of more than 10 years now, I have been seeking corrective action to remedy the plight of the American textile industry.

Defense officials tell us that the textile industry is second only to steel in its importance to the security of our country. Yet, since the conclusion of World War II, we have seen more than 800 textile mills forced out of business in the United States, and more than 400,000 textile workers lose their jobs.

The wage scale in the United States—and in Georgia where we have about 100,000 people employed in the textile industry—is approximately 10 times what it is in Hong Kong, several times what it is in Indonesia and India, and far higher than it is in Portugal, France, and Italy. To compound that situation, a bale of cotton sells anywhere in the world for $42.50 less than it sells where it is grown in this country.

Now with odds such as that—where the wage scale is 10 to 1, and raw material is 8½ cents a pound cheaper—how can the American textile industry be expected to survive, particularly when we are welcoming the importation of competing products from other countries.

Some 5 years ago the textile industry of this country and allied countries were faced with competition primarily from the Japanese. And, let me say, it was the American taxpayers who rebuilt the Japanese textile industry with new equipment, and made it just as modern as it is anywhere in these United States.

When it became apparent that Congress otherwise would take action, the Japanese textile industry entered into a voluntary quota arrangement to limit the importation of Japanese textiles into the United States.

Since that time, however, competition has developed in Hong Kong, the Philippines, Indonesia, India, Portugal, Italy, and many other cheap-labor countries. It has become so severe that even the Japanese are being undercut. As a result they are now petitioning their government to increase the export quotas to the United States.

In recent years we have gone from a net exporter of textiles to a net importer. As I have noted some 400,000 jobs have been liquidated. There are only 900,000 jobs remaining in that industry in this country.

Senator PASTORE of Rhode Island, ably assisted by Senators THURMOND of South Carolina and COTTON of New Hampshire served as a special subcommittee of the Senate Com-

merce Committee to investigate this matter. They held hearings throughout the country and have submitted urgent recommendations for action to the Senate.

The only way the textile industry can survive in Georgia and in the United States will be through the imposition of some form of quotas limiting the amounts of all kind of textile products which can be shipped into this country.

Many people have said that we must have free trade. But I submit that there is no way that we can have free trade when our competitors' wage level is 10 percent of ours and their raw material cost is 8½ cents per pound lower. When Cordull Hull and Franklin D. Roosevelt devised the reciprocal trade policies which have been in existence since that time, it was their view then that we would export products we had in surplus and that would not import such products. Today's situation is far cry from that. We are importing more textiles into the United States of America than we are exporting. In many of the department stores here in Atlanta, Ga., you can find textiles imported from many countries and, in most instances, selling at retail cheaper than our own Georgia textile mills can manufacture them.

We have discussed this on the floor of the Senate. A House delegation with Congressmen VINSON as chairman called on the President a few days ago and a delegation from the Senate will meet with him in the not too distant future.

I have discussed this matter on several occasions with Secretary of Commerce Luther Hodges. I have discussed it on two different occasions with the President of the United States. I am hopeful that we can get some affirmative action taken.

If we fail in that regard we will, in my judgment, see the complete liquidation of the textile industry in our country in the not too distant future.

Disturbing Proposal

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SHORT. Mr. Speaker, under the heading "Disturbing Proposal", an editorial appears in the April issue of the American Cattle Producer, the publication of the American National Cattlemen's Association, which I am sure reflects the sentiments of not only the vast majority of the cattle producers in this country, but the sentiments of a great many operating farmers.

To me, the President's farm message and the omnibus farm bill introduced in Congress last week contained some exceedingly disturbing proposals which seemed to stem from a belief that only through government intervention can all segments of our agricultural economy remain prosperous. I think the record refutes this assumption in that there are many agricultural commodities, including cattle, which are enjoying a rather satisfactory price relationship. Rather than leaving these commodities alone to enjoy their prosperity, this administration seems bent on extending Federal regulation to every farmer and every farm commodity. There are some problems that do exist in agriculture which need the immediate attention of Congress and the Department of Agriculture. It would seem only practical that the immediate attention of Congress should be given to dealing with these known problems that do exist rather than dealing with a piece of legislation which has so many indeterminate possibilities.

Mr. Speaker, I believe it is unfortunate that this administration has seen fit to introduce legislation which serves more to disturb a large segment of our agriculture economy than to deal with problems that are known to exist in specific segments of agriculture.

Mr. Speaker, under unanimous consent I include this editorial from the American Cattle Producer with my remarks in the Appendix of the RECORD:

DISTURBING PROPOSAL

A disturbing proposal in President John F. Kennedy's special farm message to Congress is one which calls for referendums under which a two-thirds vote of farmers could put a commodity under Federal controls.

Included in the proposals are production and marketing quotas which, as we have seen in the instances where they have already been used, readily become capital assets which are valuable and salable.

Once started, therefore, these quotas become permanent and hang over the commodity like a straitjacket, impeding any movement of an industry toward expansion or adjustment to changing times.

The administration's proposals would offer this program to any or all of the various agricultural commodities, including, of course, cattle.

Agriculture, like business, is continually adjusting itself to changing conditions. For instance, the recent census of agriculture shows that enormous adjustments have been taking place in recent years within the agricultural economy.

In 5 years, the number of farms counted by the census declined from 4.8 million to 3.7 million—down 1,078,774 farms. This was a 23 percent reduction. Even after allowing for the change in the census definition of a farm, the number still dropped by 846,912, or 17 percent.

And within these figures were many other important changes. The number of farms producing $10,000 or more of sales increased 211,053, or 36 percent. The number producing between $5,000 and $10,000 of sales declined 54,000, or 8 percent. The number of part time and residential farms went down 167,000, or 12 percent, and the number of uneconomic, inadequate, small farms producing less than $5,000 of sales (commercial farms, too small to support a family) went down 1,072,519—a 53-percent decrease.

Thus the most important of these adjustments is a significant increase of adequate and quite successful commercial farms and a sharp decrease in the number of inadequate units on which families cannot make a satisfactory living.

The truly depressed segment of agriculture is the 965,000 farms in the 1959 census that produced less than $5,000 of gross sales. They constitute agriculture's underprivileged, poverty-stricken families. But the fact still remains that 5 years earlier there were 2,037,740 such farms.

It seems almost tragic to ignore these adjustments within agriculture and while adjustments are so rapidly advancing to suggest that the more productive, commercial segment of agriculture should be brought under control in order to provide benefits primarily to the 1 million farm families on unproductive farms.

The President's farm message ignores these adjustments. It would move us in the direction of high-cost control, increased food prices to consumers, expanded bureaucracy to run the programs, and it would block many of the adjustments that have been going forward at an all-time record rate.

Perhaps least of all can the beef cattle industry afford to let itself be brought into such a program. In the past 20 years the production of beef has doubled. This has been accomplished through improvement in the product. The market has been responding by wanting more beef. The industry has been able to expand in recent years even with rising prices.

A quota system for beef output would be an inevitable brake on further expansion. Quotas on amounts of beef marketed would merely hand some of the market for beef over to other meats and thus be an unnecessary ceiling over the cattle industry.

And under the administration's proposal, any small but vocal group of producers could request the Secretary of Agriculture to develop a quota program for cattle production. When this would be put to referendum it could be people rather than cattle that would vote. The producer who sells a half-dozen head a year would have as much voice as the man who runs several hundred head.

Not only stockmen and farmers but the Nation as a whole should pause long and look hard before we make such a fundamental change in economic policy as is requested in the President's farm message.

Destiny of Latin America

EXTENSION OF REMARKS
OF
HON. EDGAR W. HIESTAND
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. HIESTAND. Mr. Speaker, one of our most urgent concerns is the destiny of Latin America. Robert B. Dresser, writing in Economic Council Papers, volume XVI, No. 3, March 15, 1961, makes some splendid points which should be of interest to all Americans:

COMMUNISM AND THE HOUSE UN-AMERICAN ACTIVITIES COMMITTEE—WE ARE LOSING THE COLD WAR

(By Robert B. Dresser)

Beginning with the loss of China to the Communists in 1949, the Communists have made steady gains in the Far East and the Middle East, and even in the Western Hemisphere where their stooge, Castro, helped to power by our own State Department, is now in complete control of Cuba, an island within 90 miles of the Florida coast. Communist control of Cuba constitutes a most serious threat to the safety of the United States.

How has this come about?

LETTER TO THE EDITOR BY ROBERT B. DRESSER DECEMBER 26, 1951

In December 1951 I wrote a letter to the editor of the Providence Journal, which was published in that paper on December 26, 1951, from which I quote as follows:

"DANGERS FROM WITHOUT

"On November 30, 1950, President Truman, in a statement to the public on the intervention of Communist China in Korea, said:

" 'If aggression is successful in Korea, we can expect it to spread through Asia and Europe to this hemisphere. We are fighting in Korea for our own national security and survival.'

• • • • •

"It is the opinion of many competent observers (1) that the key to the successful achievement of Russia's manifest objective of world conquest is China, and not Europe or any other area, (2) that Russian control of China located in the center of Asia, with its 450 million people, the greatest reservoir of manpower in the world, would undoubtedly lead in the end to Russian control of all Asia with one-half the world's population, and (3) that with Russia in complete control of Asia the subjugation of Western Europe would quickly follow, and the United States without allies of appreciable strength, would face the rest of the world alone with but little chance of survival.

"That this is the Russian view is abundantly clear. Why it should not have been ours is far from clear. For years we recognized the importance of maintaining the independence and territorial integrity of China and her friendship for us. We even fought World War II against Japan for this very purpose. Successful in that war, we proceeded upon its termination to relinquish the fruits of our victory and to turn control of China over to our arch enemy, Russia, an infinitely more dangerous foe than Japan.

"Six years ago William Z. Foster, head of the Communist Party in this country, said:

" 'The war in China is the key of all problems on the international front.'

"In his radio address to the American people on April 11, 1951, President Truman said:

" 'The attack on Korea was part of a greater plan for conquering all of Asia.' In the same address President Truman quoted a Communist officer in the Far East as saying, 'In order to successfully undertake the long-awaited world revolution, we must first unify Asia.' Mr. Truman then stated, 'That is what the Communist leaders are telling their people, and that is what they have been trying to do. They want to control all Asia from the Kremlin.'

"Could anything be plainer? Despite this clear evidence of Russian intention, our Government has pursued in Asia a policy of appeasement with Russia, and by its betrayal of Nationalist China has put in Russia's hands the means of conquering all Asia, which Russia regards as the first step toward achieving her ambition of world conquest.

"That Chiang and his Nationalist government were deliberately betrayed by our own Government and prevented from waging a successful fight against the Communists would seem to be conclusively established by the evidence.

"Even after the 80th Congress in the spring of 1948, sought to repair the damage done by the State Department's policy regarding Chiang by authorizing substantial aid to Nationalist China, including much-needed military arms and equipment, the shipments were held up so that they did not arrive in time to save Chiang. In the opinion of Vice Adm. Russell S. Berkey, Navy director of public information, expressed in a speech made on May 15, 1950, had they arrived on time, the Chinese Communists 'would still be north of the Great Wall.'

"It should be noted that what Chiang needed was not our men, but our guns and ammunition. He had the men.

"With China in friendly hands, there would have been no Korean War and the 100,000 casualties suffered by us to date (now 150,000) would not have occurred. These casualties, therefore, are the direct result of the betrayal of Chiang.

"The high-minded 'agrarian reformers,' as representatives of our State Department chose to call the Chinese Communists, whom our State Department favored, won the war and drove Chiang out of China. For the past year these agrarian reformers, acting under the orders of Moscow, have been killing our American boys by the thousands in Korea.

"Meantime, our Government, in concert with the United Nations, has placed important limitations on our military commanders in the field by prohibiting the bombing of Chinese Communist bases across the boundary in Manchuria, and by forbidding the use of the half million troops which Chiang has on the island of Formosa. This has led our commanders, or certain of them, at least, to state that with such limitations it will be impossible to end the war in Korea. Meanwhile, we continue to furnish 90 percent of the outside troops in Korea and to suffer 90 percent of the casualties.

"Despite this incredible mishandling (to put it mildly) of our foreign affairs, the men responsible for it are still in office and directing such affairs.

"Are we as a people content to let these men continue to manage our affairs? Are we content to let the senseless slaughter of our boys in Korea continue in a war we are forbidden to win? If not, Mr. Citizen, what are you going to do about it?

"ROBERT B. DRESSER."

ARTICLE IN AMERICAN LEGION MAGAZINE FOR MAY 1951

In an article published in the American Legion magazine for May 1951, under the title "Who is Letting Our GI's Down?", written after a tour of the battlelines in Korea, Erle Cocke, Jr., national commander of the American Legion, wrote as follows:

"Our present-day Benedict Arnolds may glibly argue that it is necessary to keep Chiang and his armies blockaded on Formosa, but these arguments make no sense to our soldiers, sailors, airmen, and marines who have to do the fighting and dying. They see in Chiang's vast armies a way of saving some of the 250 lives that are being needlessly sacrificed each week because certain furtive people expound that Chiang isn't the right sort of person, and, therefore, we cannot accept his aid. Our fighting men are not impressed by these false prophets because they haven't forgotten that these same people not long ago were lauding Mao's murdering hordes as 'agrarian reformers.'

"For the life of them—and 'life' is meant in a very literal sense—they can't understand why our State Department and the United Nations make it necessary for them to be slaughtered by red armies which swarm down on them from territory which our own heads of Government make sacrosanct.

"Agents of the Kremlin, sitting in the councils of the United Nations, in Washington and elsewhere, must laugh up their sleeves at our utter idiocy. But you may be sure that our GI's are not amused. They see the picture as clearly as the Soviet agents do, but, unlike our stateside leaders, they see the results of this criminal skulldruggery in the blood they shed and in the mangled corpses of their buddies.

"What they cannot understand, though, is the strange apathy of the people back home. As they listen to radio reports of what is happening thousands of miles to the east of them, they are puzzled. Isn't the American public aware of what is going on? Don't they realize that their sons and husbands and sweethearts are fighting a ruthless enemy who has them at a terrible disadvantage, thanks to stupid or traitorous advisers and inept diplomacy?"

STATEMENT OF SENATOR TAFT IN 1957

On June 25, 1952, Senator Robert A. Taft repeated his demand for allied air smashes against Chinese Communist bases in Manchuria, stating that "all through the Korean war, 2 years old today, targets in Chinese Manchuria have been out of bounds to allied airmen."

STATEMENT OF GENERAL CLARK IN 1957

On September 17, 1957, Gen. Mark W. Clark, president of The Citadel, the military college of South Carolina, and former allied commander in Korea, made an address at the American Legion's National Commander's Dinner in Atlantic City after receiving the Distinguished Service Medal. I quote from his address the following:

"Imagine in Korea where our airmen could go up to the Yalu River and there look down and across it—see bridges that we were unable to destroy; see airfields loaded with Mig 15's and see ammunition dumps and other kinds of storage places piled to the sky with paraphernalia designed by the Communists to kill our men. Their killers came across the river with these weapons of war and I was not permitted to take out those bridges. Certainly we should have done it. If I'd had the authority and they had let me, I would have bombed Manchuria and North China.

* * * * *

"Let's not fight another war like we fought in Korea with our hands tied behind our backs. May God forbid that we ever have to fight another war, but when the authorities of our country decide that to protect our vital interests, it is essential, then let's do it with every means that we've got at our disposal and we will win it fast."

WE LOST THE KOREAN WAR

We lost the Korean war, a war which it was so important for us to win and which we could so easily have wone, as every commander in the field and other competent critic, I believe, will testify.

Our winning the Korean war would have led to the downfall of the Communist regime in China, and would have changed completely the world situation in our favor.

CUBA

Cuba has become a Communist satellite within 90 miles of the Florida coast. To permit this condition to continue is to jeopardize the independence and safety of the United States.

It is difficult to understand why our Government has permitted this situation to develop. Is it possible that we are going to continue our policy of vacillation and appeasement to a point where Communist Russia will be so firmly entrenched that she cannot be driven from the island without a war with the Soviet Union?

We have before us the tragic case of China where, because of the incredible errors and blundering of our Government (to put it mildly), a country with 450 million people was turned over to Communist rule. As a direct result, the United States and the entire free world have been placed in a position of dire peril.

ARTICLE IN PROVIDENCE JOURNAL, SEPTEMBER 11, 1960

In the Providence Sunday Journal for September 11, 1960, there was a news article headed, "Two Senators Say State Department Aided Castro."

I quote from this article as follows:

"Two Democratic Senators said yesterday that 'unknown policy planners' in the State Department cleared the way for assumption of power in Cuba by the Fidel Castro regime. They said this handed the island over to the Communists.

* * * * *

"Earl E. T. Smith and Arthur Gardiner, former Ambassadors to Cuba, told the Senate Subcommittee on Internal Security last month that State Department policies, and some U.S. newspapers, misguided U.S. public opinion about the situation preceding Castro's rise to power in Cuba.

"The testimony was made public yesterday by the subcommittee. Senators EASTLAND and DODD commented on it in a joint statement.

"They said Cuba, 'was handed to Castro and the Communists by a combination of

Americans in the same way that China was handed to the Communists.' They said unknown policy planners 'worked with pro-Castro elements in the American press to make Castro appear as Robin Hood.'

* * * * *

"The Senators said the testimony of the two former Ambassadors—both political appointees of President Eisenhower—demonstrate that American foreign policy is not made by top officials, but by 'unknown policy planners and memo makers who fill the Secretary's "in" basket.'

* * * * *

"The two Senators said that low level officials 'misguided American opinion' with the aid of the U.S. press."

STATEMENT OF DR. RUFO LOPEZ-FRESQUET

At a meeting in Sarasota, Fla., on January 17 of this year, Dr. Rufo Lopez-Frequet, the guest speaker, stated that Castro was a Communist from the beginning and that the decisions in Cuba at the present time are not made in Cuba but in Moscow. Dr. Lopez-Fresquet, a patriotic, well-educated Cuban, was former Minister of Finance for Castro. He fled to the United States when he found out that Castro was a Communist and was converting Cuba into a Soviet satellite.

PANAMA

Cuba is not the only danger spot in the Western Hemisphere. Another of equal importance is Panama.

On September 17, 1960, on the eve of Premier Khrushchev's arrival in this country, President Eisenhower ordered the flag of Panama to be flown with the flag of the United States in the Canal Zone.

Senator STYLES BRIDGES is quoted as having said that he was "surprised and deeply shocked" and that he saw "absolutely no valid reason" for the flag-flying order.

In the language of Congressman DANIEL J. FLOOD, Democrat, of Pennsylvania, in a statement issued September 21, 1960:

"It is a cowardly yielding on the part of the Executive to the pressure of mob rule in Panama comparable to hoisting the Soviet flag on U.S. territory. The ill-advised step, taken with the hope of placating Panamanian radicals, can only incite them to increase their demands.

* * * * *

"The Congress has been long aware of the fact that subversive influences are in control of important areas in our Department of State. It is the gradual growth and spread of this subversive influence that has alarmed the Congress.

* * * * *

"In this connection, we should recognize that an inexcusable policy of compromise and placation has made our Canal Zone the tinderbox of the Caribbean. We are dealing with a Soviet-organized plan for conquest of the Caribbean, which has the Panama Canal as its key objective. Such conquest by the Soviet would be but a prelude to their intended conquest of the United States.

* * * * *

"The congressional inquiries into subversive activities in the Department of State, which are now underway, should be pressed with increased vigor to the end that these influences may be identified and corrective actions taken by the Congress to repudiate the President's ill-advised action of surrender."

It should be noted that in 1903 the United States acquired by treaty exclusive sovereignty over the Canal Zone. This is a right which can be surrendered or modified only by renegotiation of the treaty and ratification by a two-thirds vote of the Senate.

MONROE DOCTRINE

In 1823 President James Monroe announced as a policy of the United States that we would regard as an unfriendly act dangerous to our peace and safety any attempt by a European power to oppress or control in any way any country in this hemisphere that had declared and maintained its independence. This meant that we would resist any such action. In the opinion of competent students of the subject, the Monroe Doctrine may properly be construed to include penetration and subversion.

RESOLUTION INTRODUCED IN CONGRESS

Last year a resolution was introduced in Congress stating that the United States would be "justified * * * in taking steps to forestall intervention, domination, control and colonization by international communism in the New World." The resolution was opposed by the State Department and as far as I am aware, no hearings were held upon it.

THE DOMINICAN REPUBLIC

In August, 1960, the United States broke off diplomatic relations with the Dominican Republic. The form of government we thought needed to be changed. It was a dictatorship under the control of one Trujillo, so we decided with a lot of Latin American countries that Trujillo must go. Incidentally, it happens Trujillo had some time ago severed diplomatic relations with Russia—the only head of a government in the Western Hemisphere, I believe, that has had the courage to do this. He was a friend of the United States and had never, I understand, caused us any trouble.

If we are successful in our undertaking, the chances are good that Trujillo will be succeeded by someone of the Castro type.

While we severed diplomatic relations with Trujillo, no thought was given to such action with respect to Castro. His government, you know, was not a dictatorship, but a democracy. And, of course, Russia and her satellite nations have a democratic form of government and therefore must be recognized.

How absurd can our Government get.

It was not until January 3 of this year that we broke off diplomatic relations with Castro.

HOUSE CLEANING IN STATE DEPARTMENT OVERDUE

Senator GEORGE A. SMATHERS, Democrat, of Florida, stated on January 9, 1961, that the State Department should be swept clean from top to bottom.

A very revealing book on this subject entitled, "Inside the State Department," has been written by Bryton Barron, a former member of the Department, and is well worth reading.

THREE-STAR EXTRA BROADCAST, OCTOBER 16, 1957

On October 16, 1957, Ray Henle in the Three-Star Extra radio broadcast said:

"Three-Star Extra feels that it should pass along to you this opinion, namely, that the international noose is tightening around our necks, and to all outward appearances nothing is being done to let us slip out.

"We are facing serious reversals in three important areas of the world—in the Far East, where no effective measures are being taken to overthrow the Chinese Communists; in the Middle East, where Russia, after centuries of trying, is on the verge of getting a firm, unshakable foothold; in Europe, where we are losing our battle to gain unification of Germany, with all that means to the strengthening of our European frontiers.

* * * * *

"But in Washington, no top official gives voice to an effective course of action and, indeed, powerful elements in the State Department advocate reaching an accommodation with the Communists on the three problems just mentioned.

"The very groups which now want an accommodation were in the forefront advocating, in the Far East, not to let MacArthur bring Red China to her knees, which could have been done in the Korean war, not to have a strong effective policy in the Middle East in order to keep the Russians out, not to force our way into Berlin during the airlife blockade. In each case, appeasement policies were advocated and adopted officially by our Government.

"The fruits of such appeasement now bring chickens home to roost. In our opinion, only the strongest leadership will get us out of our difficulties."

CONCLUSION

Yes, we are losing the cold war, and rapidly.

Meanwhile, we spend our time trying to destroy those who are seeking to save us from the Communists.

Does this make sense?

Bacone College Choir Charms Capitol

EXTENSION OF REMARKS

OF

HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. EDMONDSON. Mr. Speaker, some Members of this body, along with several hundred others who were passing by, enjoyed a rare treat on last Thursday afternoon, April 20. They had the pleasure of hearing Oklahoma's famous Bacone College Choir sing for the "Voice of America" on the Capitol steps.

The choir had not scheduled the "Voice of America" broadcast as a regular part of its annual nationwide tour, but cheerfully performed on very short notice in order to spread the word of the great work being done at Bacone College.

Founded in 1880 before Oklahoma was a State, Bacone was initially known as Indian University, and has always been primarily interested in the education of Indian youths. More than 40 different tribes from every corner of the United States, and from Mexico and Panama as well, are represented in its student body.

An accredited junior college sponsored by the American Baptist Home Mission Societies, Bacone sends its students to senior colleges and universities all over the United States. Its campus, on the outskirts of Muskogee, Okla., is one of the most beautiful in the southwest.

In its current tour, the college choir is singing in Missouri, Indiana, Ohio, West Virginia, Virginia, Maryland, Pennsylvania, and Illinois, in addition to two scheduled appearances already completed in Washington, D.C. Directed by Miss Jeannine Rainwater and accompanied by Mrs. Dick West, the choir features a splendid range of selections, and is aided in its colorful presentation by dances performed by the Wauhillau Indian Club.

Because the list of members of the choir provides a splendid picture of the tribal and State representation in it, I am listing the names of the members who performed in Washington:

Judy Onon Anquoe, Onondaga, New York; Joe Brown Bennett, Seminole-Creek, California; Freeda Blair, Oklahoma; Louie Brown, Cherokee, Oklahoma; Tony Buck, Creek, Oklahoma;

John Clements, Cherokee, Oklahoma; Gilbert Cosen, Apache, Arizona; Johnny Edwards, Cherokee, Arkansas; Bernadine George, Onondaga, New York; Will Getz, Oklahoma; Jo Ann Gibson, Shoshone, Nevada; William Givens, Creek, Oklahoma; Kelly Haney, Seminole, Oklahoma; Mary Hill, Delaware-Shawnee, Oklahoma; Joanna Ketcher, Cherokee, Oklahoma; Lance Lujan, Kiowa-Taos, Kansas; Jeanette Mandel, Paiute, Nevada; Mary Jane Miles, Nez Perces, Idaho; Thelma Murr, Oklahoma; James Palmer, Seminole-Creek, Oklahoma; Jenelle Poemoceah, Comanche, Oklahoma; Barbara Richards, Oklahoma; Melva Richardson, Cherokee-Sapony-Tuskarora, North Carolina; Patti Richardson, Cherokee-Sapony-Tuskarora, North Carolina; Shari Skenandore, Oneida, Wisconsin; Robert Soontay, Kiowa-Apache, Oklahoma; Telma Thomas, Nez Perce, Idaho; Russell Tsoodle, Kiowa, Oklahoma; Sam Warnock, Oklahoma; Antonwine Warrior, Sac and Fox, Oklahoma; Arch Henry White, Shawnee, California; Clara White Hip, Crow, Montana; Lou Ella Whiteman, Crow, Montana; David Williams, Tonkawa-Kiowa, Oklahoma.

While it is obvious that Indians predominate in the choir, it is also apparent that five choir members are non-Indian students. In its rapidly growing student body of today, Bacone includes many students who belong to no Indian tribe but have been drawn to the beautiful Oklahoma college by its splendid curriculum and its rich tradition.

Almon C. Bacone, who founded the college 81 years ago, summed up its mission in these words:

A Christian school planted in the midst of a people becomes one of the most powerful agencies in the work of civilization.

Bacone College goes about its important job of advancing the work of civilization in this turbulent century, and the choir which it sends across the Nation is a splendid group of ambassadors.

Twenty Thousand Relatives Still To Be Reunited Under Public Law 363

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. BARRETT. Mr. Speaker, Mr. Remo Zuecca, a representative of Il Popolo Italiano in Philadelphia, which is the only independent weekly in both English and Italian with a national circulation, sent me the following article on immigration taken from the March–April issue of the ACIM Dispatch published by the American Committee on Italian Migration.

The article is excellent and confirms my contention that the Visa Office of the Department of State and our consular authorities in Italy and throughout the world are dragging their feet in administering the law and reuniting families here in America.

I urge my colleagues to carefully read this article and then take appropriate action:

TWENTY THOUSAND RELATIVES STILL TO BE REUNITED UNDER PUBLIC LAW 363

In the 17 months since the enactment of legislation that allowed the entry of some 30,000 Italians into the United States, only 9,684 have been reunited with their families here. This figure was announced by the U.S. Visa Office on March 15, 1961.

The bill, signed into law by President Eisenhower on September 22, 1959 (Public Law 86–363), was designed to assist in the reunion of parents and spouses, sons and daughters, brothers and sisters of American citizens who had filed registration for migration to the United States before December 31, 1953.

The passage of the law was hailed by the American Committee on Italian Migration as a major advance in its efforts to bring about the complete reunion of all family units.

Assurances were received months ago from the Department of State Visa Office that visa petitions of those eligible would be accelerated, and though there has been a slight step-up in the processing of applications, ACIM sincerely hopes that immediate action will be taken by the authorities to insure a quicker reunion of those families who have been patiently waiting for years, and who benefit by Public Law 363.

Address by Mr. Richard Kulze

EXTENSION OF REMARKS
OF
HON. WILLIAM FITTS RYAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. RYAN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Mr. Richard Kulze, president of the American Seafood Distributors Association, entitled "Foreign Trade Today and the Future of the American Fishing Industry":

ADDRESS OF RICHARD KULZE, PRESIDENT, AMERICAN SEAFOOD DISTRIBUTORS ASSOCIATION AT ITS ANNUAL MEMBERSHIP MEETING, APRIL 15, 1961

The United States is on the verge of a historic change in its trade policy. We are either about to revert to a form of protectionism that we have not seen since Smoot-Hawley days, or—and I hope this is so—we are about to enter into a challenging program whereby this country can increase its exports abroad, preserve our domestic economy and our defense, and aid the free world. The status quo of U.S. trade policy can no longer be preserved in today's world; we must go one way or the other. It is vital to the country—and to us individually and as members of the fishing industry—that we choose the right way.

I need not emphasize to you those signs which point up the efforts of some who would lead us down the path of retreat to a high tariff wall. They have been highlighted in our newspapers: the U.S. balance of payments deficit, our gold loss, unemployment, threatened boycotts by labor against imported raw material. Of course these are not signs which indicate that the United States should head toward a protectionist policy. But they are new factors being used by those who favor high tariffs in an attempt to rush this country into a new and drastic trade policy.

Some 50 resolutions have been introduced in the 87th Congress which would declare it to be the sense of Congress that the United States should grant no further tariff reductions in the forthcoming GATT negotiations. Various bills have been introduced embodying the so-called flexible tariff principle, whereby some form of tariff adjustment is proposed based upon the difference between production costs here and abroad. Import labeling bills—pocket vetoed by President Eisenhower—have been reintroduced in this Congress. And individual commodity bills have been introduced providing for tariffs or quotas on bread, meat, iron ore, charcoal, plywood, chocolatas, and shrimp, among other items.

Our balance of payments deficit and the resultant gold drain are matters of grave concern to this country, even though the United States still has nearly one-half of the free world's monetary gold stock. Steps are being taken by our Government in an endeavor to better this situation, primarily by having the industrialized nations play a stronger role in foreign economic aid and free world defense programing, as well as continuing their relaxation of import restrictions that hinder broadened U.S. exports. But we cannot deny that the payments deficit has provided a strong vehicle for revival of protectionist thinking.

We can never emphasize enough that the payments deficit is the net difference of the funds that go out of this country—for imports, military installations abroad, U.S. tourists abroad, and foreign aid—and the funds that come to the United States—for our exports, foreign visitors, and income on foreign investments. It is not a trade deficit we are talking about, for we have had a healthy surplus of exports over imports for years and years, and in fact since 1894. In 1960, for example, our export trade exceeded import trade by roughly $4.7 billion, the third highest trade surplus of the decade.

There are those, however, who believe that so long as we have any deficit in our balance of payments, the remedy lies in trade restrictions and a decrease in our imports. So what really is at stake with those who seek to better our balance of payments situation by trade restrictions is not at all a trade deficit, but rather the magnitude of the trade surplus which could serve to cover in part the deficit in other payments categories. This is like saying that the Federal cigarette tax should pay the cost of operating the Department of the Interior; the payments deficit and the trade surplus are that unrelated.

On this new development of trade boycotts, because of unemployment, electrical workers in Chicago have threatened to boycott imports of Japanese radio, phonograph, and television parts. The Amalgamated Clothing Workers have threatened a boycott against Japanese fabrics to force the establishment of a quota on imported men's suits from Japan. Yet, imports of electronic parts amount to three-tenths of 1 percent of U.S. production, and imports of men's suits constitute two-tenths of 1 percent of American production. But this threat by certain labor groups to refuse to handle imported materials in the manufacturing process is an ominous development. If the threats become reality, it would have disasterous effect on the U.S. and world trade. Such boycotts would create a situation whereby U.S. trade policy would be determined by the unilateral and unofficial actions of particular segments of the population.

The payments deficit and unemployment are two serious problems for our country. Their cause is not imports, and their cure is not in import restrictions. This is no time for fear; this is a time for challenge. American industry did not become great by being sheltered; it achieved its greatness because of intelligence, pioneering spirit, research, new and imaginative ideas, and the one sure road to success—giving the consumer the best possible product for the best possible value.

This is a time of great challenge for U.S. industry and U.S. trade policy, particularly with the formation of trade blocs abroad, primarily in Europe. Over half of the U.S. exports go to 15 industrialized nations of the world, most of whom are members of trade blocs. These blocs, now mostly in the formative stage, are the groundwork for an economic system making possible the production and distribution efficiencies, the high wage rates, and the massive purchasing power which heretofore have been associated only with the United States.

Whether the United States will continue to maintain its large export volume with these countries depends upon which trade road we decide to take at this crucial intersection. A trade study group of the Senate Interstate and Foreign Commerce Committee in a report issued last month said:

"American decisions regarding international trade can topple or strengthen the government of an undeveloped state, cleave or cement an international alliance, confound or contribute to Communist expansionism. It can raise or lower standards of life, increase or decrease job opportunities, make or break industries in places as far apart as Karachi and Chicago."

Not only is the direction we take vital in relation to maintaining our existing export market and vital in determining the role which our exports will play in the tremendous markets that will rapidly be created in the now underdeveloped countries, but it is vital in relation to your freedom, that of your children, and that of millions throughout the world, particularly because of the challenge posed by the trading tactics and techniques of the Communist bloc.

Today is the time that flexibility and resourcefulness are essential in our Nation's economic life. Instead, U.S. foreign trade policy has moved toward increasing rigidity. Up to now, we have not provided incentives for American producers to adjust to change. By legislation or administrative regulation, we have tightened the escape clause in the Trade Agreements Act, the Buy-American Act, and the Anti-Dumping Act.

Now is the time for a new import policy, one that rejects the concept that international trade should be largely an exchange of noncompeting surpluses. Our past thinking has tended to encourage the export of manufactured goods and the import of raw materials, but to discourage the export of capital equipment and the import of manufactured goods. And yet in 1960, 79 percent of what we sold abroad was manufactured or semimanufactured goods. Trade thrives when we exchange that which we make best for that which other nations make better than we.

The Trade Agreements Acts, under which we negotiate item-by-item tariff reductions under the General Agreements on Tariffs and Trade, expires in 1962. A very basic change required in our trade policy, and which should be included in reenactment of that legislation, is a shift from item-by-item negotiations to an across-the-board method by which we would be offering to reduce national tariff averages by a given percentage over a given period of 3 to 5 years. This we must do, because the across-the-board approach is being used by the European trade blocs. Since one of our major concerns is maintaining our very sizable export trade with those countries, our negotiating effort must be in step with the pace and the approach those countries are following.

Such a proposal will not be well received by those who have apprehension at the ability of American industry to compete with countries that pay wages far lower than those earned by American labor. Yet as I mentioned before, U.S. exports of finished manufactures, produced by the highest wage industries in the world, have consistently been well in excess of U.S. imports of finished manufactures. Scores of American industries, big and little, consistently have been able to outsell Europeans in their home markets, as well as here in the U.S. market, and in third countries.

Given an equal chance in the world marketplace, most American consumer goods are well able to hold their own despite the wage gap. This is so because the ability to compete is determined not by national wage levels, but by total costs per unit of production. In comparing labor costs, the important standard is not wage rates but unit labor costs, which take into account not only wages, but also fringe benefits, volume of production, the number of workers required to put it out, and the amount of time it takes. Fringe benefits constitute a larger part of total labor costs in foreign countries than here. In some Western European countries, they run more than 40 percent of total labor costs. Capital, power, and raw materials are usually more expensive abroad than here. The wage gap seems to be narrowing. Labor costs per hour have risen more abroad since 1953 than here in the United States. Labor unions abroad are gaining strength and are beginning to push for higher wages.

The degree of displacement of American jobs by cheap foreign labor has been grossly exaggerated. Imports that are more or less competitive with U.S. production amount to about a fourth of our total imports. A study by the Library of Congress in combination with the Department of Labor in 1958 indicated that if all U.S. tariffs were suspended, the labor displacement that might result from such a free trade expansion of imports would range between 18,000 and 45,000 manufacturing workers. If this figure were doubled as a safety factor, it would represent less than half of 1 percent of our labor force.

Another figure is interesting: The peak total employment since 1948 in all industries in which the Tariff Commission has found serious injury under the escape clause was less than 150,000 workers. The lowest total employment in these industries since 1948 was slightly less than 100,000. If the apparent gross reduction in employment of about 50,000 is attributed solely to imports, without consideration to the effects of the recession, automation, and competition from other domestic products, the displacement is still a very, very small part of our total labor force. To those 50,000 who became unemployed, it was a very personal and harsh matter, for as we know, the national interest means different things to different people.

On the whole, however, American business has made and is making a successful response to foreign competition. How well American business faces up to the new competitive forces which have developed hinges on how well it applies the wide array of policies and methods at its disposal. The combined effect of foreign competition and high wage rates has forced most U.S. industries to find new and better ways of doing things. A major factor has been that cost of production and price policies have been subjected to meticulous reappraisal.

A second vital factor which must be included in the new U.S. trade policy is that of adjustment. Where we have injurious dislocation caused by imports, it should be promptly dealt with, in the first instance, by domestic economic policy, not through foreign trade machinery. Today the first step taken by any group alleging import injury is to restrict imports. The escape clause is in reality only an attempted evasion of the problem faced by the complaining parties, not a significant step toward its solution. The American economy needs a stimulus to adapt, not a relief or escape from the need to do so. Legislation that tells American producers that they would be protected against dislocation and hence against the need to adjust is bad economics and bad political science.

Thus, our Federal policy's response to the dislocating effects of imports should emphasize adjustment, rather than preservation of the status quo. If these dislocating problems are important enough to require Government assistance, they deserve the kind of assistance that assures success, not that which camouflages the real issue. Management inefficiencies are no reason for tariff assistance by the Government, nor should the Government be committed to the preservation of every industry or of its existing industrial structure.

A Federal adjustment program need not mean, and should not mean, greater Federal control over the economy, nor should it mean an uprooting of people from their home areas. A Federal adjustment program could include such measures as loans at low interest rates to finance new equipment with which to improve production of existing products or to embark on new lines of production. There could be special amortization privileges on equipment depreciation for tax purposes.

There could be tax breaks for research and development expenditures. There could be labor retraining programs. There could be technical assistance to local governments, labor, and industry. There could be stimulation of new investment in problem areas.

Only when these adjustment measures have been used as a matter of domestic economic policy, and have failed, should there be an approach to correcting the matter through our foreign trade policy. In effect, then, the Tariff Commission and trade restrictions should be the last step, and not the first.

In discussing these two major changes proposed for U.S. trade policy, I have not once specifically mentioned the American fishing industry. But the problems and the cures are as applicable to our industry as to any other. There is no room in today's economy for an industry that does not fit the pattern. Our foreign trade policy cannot be tailored to meet the needs of a handicraft industry any more than our national economy can. And our foreign trade policy cannot be tailored to meet the needs of a high-production-cost industry. We have a peculiar problem in our industry and we all know it: An unlimited number of vessels are fishing relatively stabilized resources and the unit cost of production is high. We will never meet our basic problem until we find the means of overcoming the many obstacles to putting the knowledge of our peculiar problem into practice. Otherwise, as they tone up their flabby marketing muscles, intensify their efforts to get out ahead of competition, and reduce the fat everywhere possible, the rest of American industry and the American economy will pass us by.

Labor Unions Invest in Real Estate

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mr. ANFUSO. Mr. Speaker, mindful of the fact that existing welfare and pension funds are being outdistanced by the serious problem of spiraling inflation, union leaders are focusing their attention on a broad, new avenue of investment, real estate syndication.

From initial indications, it appears that millions of dollars each year will be invested in a myriad of sound, conservative syndications, ranging from commercial properties and apartment house developments, to hospitals and nursing homes.

Perhaps the prime factor in unions' consideration of syndications as an area of investment is the necessity to cover members' medical care and life insurance. The fact that the yield on syndications of often more than double that of bonds and savings banks has also served to spark widespread union interest.

This new avenue of investment was opened last fall, when the welfare fund of local 220 of the Food Packers, Cannery & Miscellaneous Workers Union, Amalgamated Meat Cutters & Butcher Workmen of North America, invested in the Clinton Hill Associates syndication, in Brooklyn, N.Y.

The move was made after considerable and careful study. Approval was granted by the six trustees, representing employers and employees, and the general union membership voted approval of a $100,000 investment.

This action made an enormous impact among many unions. Shortly afterward, the welfare fund of Local 445, Waste Material Union, AFL–CIO, invested $75,000 in a 34-story office building at 575 Lexington Avenue, New York City.

Sydney V. Levy, syndicator of the two projects, who guided the unions on the investments, points out that many of the larger syndication firms have established special departments devoted exclusively to providing information and maintaining contact with labor's pension and welfare funds.

On the other hand, scores of major unions have been assigning their financial advisers and pension and welfare fund trustees to careful analysis of the many syndications available to them.

In pioneering this new area of investment for unions, Mr. Levy has displayed extreme foresight. He recently communicated with AFL–CIO President George Meany, and suggested that labor, within its department of investment, create a special advisory council to study real estate syndications, and provide information on a regular basis to the thousands of locals across the Nation.

By participating in various worthwhile real estate syndication projects, a vast partnership will be created between union members and other investors in the ownership of real estate throughout the country.

Administration Moves To Strengthen REA

EXTENSION OF REMARKS
OF
HON. ROBERT W. KASTENMEIER
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. KASTENMEIER. Mr. Speaker, in a speech before the Western Farmers Electric Cooperative in Anadarko, Okla., on April 14, Rural Electrification Administrator Norman Clapp spelled out details of the administration's program for strengthening America's rural electric cooperative.

The program has two principal goals. First, it would guarantee a secure power supply for cooperatives through insistence on fair power supply contracts or the use of REA's generation and transmission authority to give the cooperatives their own supply. Second, it would link the development of rural power to the broad rural areas development program as an essential factor for creation of new industries. Mr. Clapp also issued another assurance that the question of interregional transmission ties would be fully explored by Federal agencies and the electric industry.

Meeting the demand for rural power is, as Mr. Clapp emphasized, one of our new frontiers and it is most reassuring to see the administration approach this frontier with imagination and above all the determination to preserve and develop the distinctive contribution of the REA and its cooperative borrowers.

I would like to share with my colleagues the April 14 address by Mr. Clapp, who is, I am happy to say, a resident of my own State of Wisconsin:

A SECURE SUPPLY OF POWER

(Remarks of Norman M. Clapp, REA Administrator, at annual meeting, Western Farmers Electric Cooperative, Anadarko, Okla., April 14, 1961)

I appreciate the opportunity to join you here in Anadarko, to meet so many of you for the first time, and to receive the benefit of your long experience with rural electrification. Western Farmers Electric Cooperative is a fine example of the dynamic results that can be obtained through the cooperative approach. You and other federated power cooperatives have proved beyond question that it is sound and feasible for distribution cooperatives to join together to meet a common need for more power and lower cost power.

You have built something here that is tremendously valuable, not only to your member cooperatives, and your consumers, but to our whole Nation. The cooperatives financed by REA have accomplished something more than the physical fact of producing power and delivering it to rural people. I refer to the way in which you did the job. You showed your fellow Americans that it is possible to give reliable electric service, while keeping the public interest paramount. You proved that you could enjoy the benefits of Federal financing, while retaining grassroots control of your cooperatives. The course you followed represents the middle road between commercial power companies, organized for profit, and Government ownership of power facilities. By taking this middle road, REA and its borrowers have made a distinctive contribution to the American economy. It is a contribution that is in the best democratic tradition, and it is a contribution which must be preserved at all cost.

From President Kennedy on down, this administration recognizes the importance of the REA mission. We are solidly behind the REA programs. We already have taken a firm position on a number of important issues affecting the conduct of our agency and the future of our borrowers:

Full and complete authority to make REA loans has been restored to the REA Administrator by Secretary Freeman.

We have made it clear that we oppose any change in the present 2-percent interest rate on REA loans.

President Kennedy, in order to make adequate loan funds available for both the electric and telephone programs, has revised the 1962 budget request to increase the amount of funds for REA lending purposes by $100 million.

In all these ways, and more, this administration is moving toward fulfillment of the President's pledge to "restore REA to its former role of preeminence—freeing it from constant concern over political interference, higher rates of interest, and budgetary starvation * * *."

On February 3, Secretary of Agriculture Freeman translated the President's mandate into a significant set of guiding principles governing the Department of Agriculture's policy toward the REA programs. I endorse these principles, and I assure you that this administration is going to speak as a single voice on matters concerning REA.

Last month, following my confirmation by the Senate as REA Administrator, I announced that we would give power supply problems top priority in the REA electric program. I said that we would make sure that an increasing power supply is developed to meet the rapidly rising demand for rural electricity.

Let me give you some idea of the magnitude of this demand. In 1960, the power requirements of REA-financed systems totaled 29 billion kilowatt-hours. REA power experts estimate that in 1970, these requirements will rise to 68.6 billion kilowatt-hours. In 1985, they say, the demand will climb to 196 billion kilowatt-hours. This is one of the new frontiers this administration is talking about, and we intend to meet it head on.

How are we going to do it?

We are going to pursue an aggressive policy leading toward more abundant power and lower cost power for all rural Americans.

You know that in the past, REA has approved generation and transmission loans under two general conditions:

When no adequate and dependable source of power is available in the area to meet the needs of the distribution system; or

When the rates offered by existing power sources would result in a higher cost of power to the system than the cost from facilities financed by REA.

Personally, I believe that there are many factors which need to be considered in making decisions on G. & T. loans. This whole question of power supply is too complex to be reduced to easy formulas or copybook maxims. With this in mind, we are discussing our power supply policies at REA to make sure they take into consideration all the factors which we believe are significant today.

We do not believe that it is enough to judge the desirability of new generation and transmission starts from the standpoints of

adequacy, dependability, and lower cost alone. We also must be sure that cooperatives enjoy a supply of power—now and in the years ahead—that will guarantee the cooperative device a permanent place in the American power industry. One way you can obtain this guarantee is through power supply contracts that are fair and are negotiated in good faith. The other way is by generating your own power, as you people here are doing. We intend to use our generation and transmission authority when our borrowers are unable to obtain the security they need through power contracts.

I think we have no choice but to apply this criterion—the security criterion. As long as cooperative across the Nation are under fire from commercial power suppliers, as long as there are tricky twists in wholesale power contracts, as long as territorial integrity is threatened, we are going to have to concern ourselves with the security aspects of each power supply proposal we receive. Will it guarantee the continued existence of the cooperative? It is not enough for a supplier to claim that it will not be undersold, if, at the same time, it remains in a position to pull the rug out from under a cooperative.

We all know some of the ways power suppliers have threatened the existence of cooperatives. There is a cooperative in a State adjoining Oklahoma which asked its power supplier for an additional 300 kilowatts to serve a new industrial load in its area. The company declined, saying that its transmission line didn't have enough capacity. You can guess what happened next. The supplier built a tap off the same transmission line to serve the new load itself.

There are many variations on this tiresome theme. Sometimes the supplier puts a dual rate clause in its contract with the cooperative. Sometimes it reserves the right to approve the rates a cooperative charges certain types of consumers. Sometimes companies deliberately underbid our borrowers to secure a big load, even at the risk of suffering a loss. In a few cases, suppliers have offered industries lower retail rates than their wholesale rates to cooperatives.

From this day forward, when an REA borrower negotiates with a wholesale power supplier we want to see a contract emerge from those negotiations which guarantees our borrower adequate power to serve all consumers within its service area at reasonable rates and also provide the necessary guarantees that these benefits cannot be withdrawn at the whim of an unfriendly supplier.

You can put us down on the record now as opposed to any power contracts which call for dual rates or any other type of limitation aimed at denying a cooperative any legitimate consumer. If a cooperative can't get a fair contract, and it asks REA for help, then we are going to have to take a look at the possibilities of generation.

We also pledge that you will be pressured into no more unwilling alliances with commercial power companies as long as this administration holds office.

The trouble with almost all these "partnership" arrangements is that they have tended to bring more benefits to the power companies involved than to the cooperative. Sometimes they seem to start well, but when the honeymoon is over the company gets unreasonable, starts telling the cooperative how to operate, and uses the marriage to apply a little unfair leverage to its partner. Too often the partnership also tends to restrict a cooperative's future planning.

From now on, when we receive a generation and transmission loan application from a cooperative, we are going to examine the proposal you people make on its own merits. We are not going to make you swallow any suicidal counter proposals. If REA makes you a G. & T. loan, we want you to be able to control the power supply without getting the OK from a so-called partner who doesn't share your ideals of low-cost service.

REA is going to be in the fight to help cooperatives maintain their territorial integrity. We know that protecting your territories is becoming a critical problem in many States, and we are going to assist you in solving these problems in every way possible.

We recognize the fact that an abundant supply of low-cost power will not be achieved by REA alone. This administration has stated that the development of natural resources in our Nation and the generation and transmission of electric power in federally owned facilities has had a direct and important impact on the rural electrification program. We favor strict enforcement of the public preference clause in power marketing for power generated at Federal plants.

Upon taking office, I announced that REA will explore, in conjunction with other agencies of the Government and the electric industry, the means and methods of interregional transmission ties so that surplus or secondary power of one area can be used in other areas of power shortage and so that the benefits of low-cost hydropower can be shared more widely by consumers generally.

As President Kennedy made clear in a preelection address at Billings, Mont., this administration wants Federal interties constructed to link power areas served by the big Federal hydro projects. We have an interest in this plan, for we are convinced that interties will help relieve peak load problems and make more electricity available to our borrowers in areas where they have been chronically short of power. The new Assistant Secretary of the Interior for Power, Kenneth Holum, has indicated a desire to work closely with REA and its representatives in planning for these interties.

These backbone Federal interties could well be the first important step toward a concept that has excited the enthusiasm of some Americans—and indignation of others—for a number of years. I refer to the idea of giant power, which envisions interconnecting all of the power pools in the Nation with giant transmission lines. If the idea still seems novel to some, let me say that the concept has no novelty in Europe, where the major industrial nations have enjoyed the benefits of widespread interconnection for years. If the concept continues to arouse protest in this country, it is because the present inefficient method of transmitting power, the lack of interties, has proved extremely profitable for a number of power companies.

We have a number of reasons for being so interested in giant power and the lower-cost power that we believe will result from such a nationwide transmission system. Late last month, Secretary Freeman established a Rural Areas Development Board, with membership from 11 Department of Agriculture agencies, including REA. John A. Baker, the Director of Agricultural Credit over both REA and the Farmers Home Administration, was named Chairman of the new Board.

The objective of rural areas development is to promote more off-the-farm employment for the unemployed and underemployed in agricultural areas today. In 1959, the amount of underemployment on our farms alone was equivalent to 1,400,000 unemployed workers.

Cheap abundant electric power is one of the major factors that can help attract the growth and development of new commerce and industry. You can have a good labor supply, you can have water and transportation, you can have communications—but high electric rates still can turn an industry away. When you have low-cost power—and plenty of it—you see miracles occur in an area. We need look no further than the area of the Tennessee Valley Authority for proof of that.

The REA approach, the cooperative approach, already has proved a sound approach in three different areas. You people proved that a rural cooperative can build lines and distribute electricity. Then you proved that rural cooperatives can join hands and generate and transmit their own power. More recently, the cooperative approach has been used to bring modern dial telephone service to more than 200 rural communities. One of the most successful of these is here in Oklahoma, at Kingfisher.

Now we are faced with new problems—underemployment and a short deal on the food and fiber dollar. I hope that REA and people like you will have a chance to pioneer at least one demonstration project to prove that the cooperative approach—the middle road—can be applied to creating new kinds of community enterprise.

In closing, let me thank your president, Doyle Pope, and his associates on the board of directors, for inviting me here today. Your very active officers and directors, and the aggressive leadership of Elbert Karns, have helped western farmers to keep growing bigger and better with each passing year. Also contributing to your cooperative's getting started and building a substantial system was the fact that you were able to work out contract arrangements with the Southwestern Power Administration, headed by Douglas Wright. All of you are to be congratulated on your achievements.

In all the matters that I have touched on today, and in any other matters affecting REA, I shall welcome your ideas, your counsel, your suggestions and your criticism. The tasks before us will require the best efforts of all of us.

Paying the U.N.'s Bills

EXTENSION OF REMARKS
OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 19, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article which appeared in the Hearst newspapers on April 16, 1961. Mr. Hearst points up what are certainly some serious problems—ones which we are all deeply concerned with. A particularly unfortunate situation is that concerning the United Nations:

EDITOR'S REPORT: WE'LL CATCH UP IN SPACE

(By William Randolph Hearst, Jr.)

Sad as it is to relate, the big news of the week—in fact of the century—was Russia's successful orbiting of a man in space.

Yuri Gagarin has become as familiar a name to us in April 1961 as Charles A. Lindbergh was to the Russians in May 1927.

By his solo flight across the Atlantic to Paris, Lindy opened up a whole new era in aviation. By his solo orbit around the world, Yuri has opened up a whole new era in space.

And a column like this, which tries to comment on the significance of the news, cannot ignore either the achievement or its implications.

A nation that has developed (1) the huge booster power to launch a 5-ton vehicle carrying a man and (2) the technological competence to bring him back in buoyant health must be credited with a tremendous breakthrough in the dawning of the new era.

But there is no reason for us to push the panic button. We will catch up. Of that I am certain.

In the first place we have not been caught this time with our space suits down as we were when the Russians put up their first sputnik October 4, 1957. That was a real shocker. The present exploit was expected; it was almost a sure thing.

After sputnik, the Eisenhower administration made a remarkable comeback both in missiles and space satellites. The effort will—I hope—be redoubled in the Kennedy administration. We have achieved at least a standoff in missiles. We have put up more satellites than the Russians, but while more sophisticated they have been much smaller.

The one area—and one only—where we are behind is in developing the big bang. We have gone in for fancy pistol shooting in space. The Russians have concentrated on high-powered artillery.

All this does not let us off from having fuddled and fumbled, and having lost vital time in failing to recognize soon enough the prestige-propaganda-military importance of big space vehicles, and the thrust to get them up.

I notice that Gagarin speaks with almost schoolboy awe of the Russian prophet of rocketry, Konstantin Tsiolkovski (1857–1935), who evolved some of the first theories of multistage missiles. In fact, Gagarin said he studied the works of the prophet in school.

We have our own scientist-prophet, Dr. Robert H. Goddard, who fired a liquid fuel rocket from the farm of a relative at Auburn, Mass., March 16, 1926, and whose findings were the groundwork for the German V–2 rockets at the end of World War II.

Our military men were not impressed in 1926 and the townspeople, thinking him a litle touched in the head, called him Dr. Moony—a nickname that has sardonic connotations now. As far as I can determine, the only publication that did take him seriously was the Hearst "American Weekly," then edited by the late and great Morrill G. Goddard—no relative—but an editor who was also a pioneer in his field.

This is water over the dam, but it illustrates the challenge that now faces us, and one we had better do our best to meet.

For it is only on a basis of strength in space that we can hope to get the Russians to negotiate seriously on the control of space or to take any serious interest in the U.N. Outer Space Committee, which ironically enough they themselves proposed.

Which reminds me of a better-than-usual quip of U.N. Ambassador Adlai Stevenson: "Now that the Soviet scientists have put a man into space and brought him back alive, I hope they will also help to bring the U.N. back alive."

Adlai's phrase is singularly appropriate, because there is serious danger, in my opinion, that the very life of the U.N. may in time be drained away by economic malnutrition.

Certainly the world organization is being subjected to steady starvation by refusal or neglect to pay dues and assessments. In the case of the Communist bloc this is a deliberate rule-or-ruin campaign.

But the Reds are not alone. There are fair weather friends of the U.N. like President de Gaulle of France and the chiefs of the Arab States. They pay only if U.N. actions fit their aims. The Arabs renege on assessments for UNEF, the U.N. force which is in the Gaza strip to prevent outbreak of Egyptian-Israeli shooting. De Gaulle has just announced he won't let French money be used for activities of the U.N., calling it a disorganization.

As if refusals to meet obligations were not enough, there are many nations which make token payments, pleading poverty. Our friends the Latin nations—18 of them now on a growing list—have been delinquent that way.

Call it a hunch if you wish, but my feeling is that—if the U.N. meets its end (and that's concededly a big "if")—it will be via the money-starvation route. I don't like to think of that possibility because I have been stanchly hopeful for the world organization from the start.

When the U.N. was formed back in 1945, many of my associates were skeptical. Although aware of my father's irreconcilable opposition to the League of Nations, I felt differently about the U.N. I shared the U.N.'s aspirations, no matter how dreamy or unattainable some of them may now seem.

But in time it might become quite another story with the American people. The Soviet has welched on at least $17 million it owes the U.N. (without counting 1961) although its assessed share is only 13.62 percent.

The United States not only pays a whopping 32.5 percent assessment, but in addition has picked up some 45 percent of the tab so far for the Congo operation. Plus writing off the costly job we did in airlifting U.N. troops to the Congo.

It is bad for the U.N. to have the United States become virtually a half shareholder. It opens the way to charges that we run the U.N.

Under such continuing circumstances, I am afraid, Americans could start wondering whether we need the U.N. and perhaps turn more in the direction of regional alliances.

Without the United States, the U.N. would be a hollow mockery.

With yesterday's developments the imminence of the Cuban patriots' revolt against Fidel Castro's Communist dictatorship, mentioned here last week, now seems to have gained substance. President Kennedy has considered it diplomatic to say that under no circumstances will U.S. Armed Forces get involved. He has also pledged that the United States won't allow our soil to be used as a takeoff for Cuban exiles to land a revolt force on their native island.

Let's hope this doesn't mean our Government is getting cold feet on the question of getting rid of Castro. In his successful campaign for the Presidency, Jack Kennedy attacked the previous administration for having done too little about Castro.

I believe our Government and our people should do everything necessary to help the Cuban people reclaim their revolution from Castro's Reds. And, disagreeing with the President, I still believe we should use U.S. forces if the Cubans can't handle the job themselves.

We'll be accused in any case of helping the eventual Cuban uprising against Castro.

Sure, some will contend that helping the Cubans oust Castro will embarrass our relations with other nations, perhaps some of our Latin friends who are blind to the peril to themselves.

The answer to them is that we'll be a lot worse than embarrassed if we let Castro go on building his Communist bridgehead off our coast. How can anybody—anywhere in the world—have confidence in our pledges to defend them against the Reds if we stand still while the Commies inhabit a nest just 90 miles away?

When and if the Russians cry "lie" to our pledge of nonaggression my answer is—the Reds respect liars, but never fools.

Senate Resolution 109

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, March 29, 1961

Mr. DENT. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to submit, for the attention of my colleagues, Senate Resolution 109, sent me from the Ancient Order of Hibernians, of the 21st District, Westmoreland County, Pa.:

SENATE RESOLUTION 109

Resolved, That it is the sense of the Senate of the United States that the maintenance of international peace and security requires settlement of the question of the unification of Ireland and that the people of all Ireland, including the people of Eire and the people of Northern Ireland, should have a free opportunity to express their will for union and that this be attained by an election of the people of all Ireland under the auspices of a United Nations Commission for Ireland, to be designated by the General Assembly pursuant to articles 11 and 35 of the charter, which shall establish the terms and conditions of such election.

(NOTE.—This has been reproduced and forwarded to members and units of our order for the purpose of their soliciting the support of their respective Congressmen and U.S. Senators for this resolution.)

JOHN F. GEOGHAN,
National Secretary,
Ancient Order of Hibernians in America.

Migrant Farm Labor Problems and "Harvest of Shame"—XV

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, April 24, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 15th in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter:

NOT ALL BAD—CREW LEADERS

"Well, some of the crew leaders they are good. But the majority of them are bad. They are so bad that they are the worst they can be. They try to skin alive the migrants. They take every dime they make."—"Harvest of Shame."

"It seems to me that there are attempts being made to control or punish the migrant crew leader on the assumption that he is not a very desirable person. I would question that philosophy, very seriously."

The speaker was Robert Browning, a serious young man who was health educator in a 5-year migrant project which is one of the most concentrated and unusual sociological studies ever made in the United States.

Browning and others of the migrant project staff utilized crew leaders in one of the significant experiments made during the study.

"We felt that if crew leaders could be interested in passing on health information to members of their crews we could deal with some 500 individuals, rather than 10,000 to 15,000 individual migrants," Browning said.

Project personnel met with crew leaders at night for 2 years.

The crew leaders were volunteering their own time, with no possibility of financial gain, in an effort to learn how better to care for the workers in their crews.

"We had very good cooperation and very high attendance," Browning reported.

In a study of 60 migrants, selected by sampling techniques from five crews on the Eastern Shore of Maryland last summer, Browning discovered that half were involved in some sort of health and medical problem in a 2-week period.

In all but two of these cases, the migrant went to the crew leader, who was involved in some way in getting health and medical care.

Browning says he has heard of crew leaders who take advantage of migrants, but believes they are a small minority.

Work with crew leaders has been only one small phase of the 5-year migrant project, financed by the U.S. Children's Bureau and administered through the Florida State Board of Health.

Project personnel worked closely with other agencies, and occasionally with individual employers of migrants.

"We got cooperation whenever we felt the need for it, and wherever we asked for it," Browning said.

"Because of the existing desire in community agencies for teamwork, it has been possible to work with them toward achievement of desired goals," says a migrant project report.

"One of many examples that could be given is that of a 52-year-old woman who has been referred to vocational rehabilitation for physical restoration. She has no income and is not able to work at present. It is necessary for her physical condition to improve before she will be ready for recommended surgery.

"She receives a food allowance from from county welfare.

"She has special dietary needs, hence the amount she gets from the welfare department is supplemented by the migrant committee.

"The nutritionist helps her plan a medically approved diet.

"The migrant committee also pays this patient's rent. Thus, a voluntary group, by its flexible policy, prevents a farm laborer from suffering because of a gap in resources."

The migrant project has been of special interest in sociological studies because of the design of the study, which stresses throughout the importance of bringing the insights of several different scientific disciplines to bear on the problems of migrant workers.

The day-to-day project staff included a medical social supervisor, public health educator, public health nutritionist, two public health nurses, sanitarian, secretary and liaison worker.

Of particular interest is the role of the liaison worker, a person who is able to mix freely with the migrants on occasion going into the fields to work with them, and who is also trained well enough in the different scientific disciplines to be able to communicate freely with other staff members.

The project, which will be concluded this summer unless current plans for its being carried on for another term are successful, has demonstrated that public health activities can be carried on successfully within the migrant group.

It demonstrates that such generalizations as "you can't do anything with those people" are far from being true.

It also has demonstrated, in action, the genuine concern of the Public Health Service, and thus the country at large, in problems facing the migrant agricultural worker.

Space-Mapping Collegians

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. SCHWENGEL. Mr. Speaker, the people of Iowa are deeply proud of the role which the State University of Iowa has played in building instruments for our satellites and other space vehicles.

The importance of this work under the direction of Dr. James Van Allen has been reemphasized in an article which appears in the current issue of Transmission, a quarterly magazine published by the Northern Natural Gas Co.

Because I feel that all Members of Congress will be interested in the account of this work at the State University of Iowa, I am asking that the article be printed in the Appendix of the RECORD. Under leave to extend my remarks, I am happy to present this fine report:

SPACE-MAPPING COLLEGIANS

Bankers think it's true; farmers agree. Politicians won't argue the point.

Every plumber will swear by it. Housewives take it for granted. Boys in the street would bet their rusty jackknives on it.

Who, in fact, is naive enough to doubt the thing to get done right now is send men into space? Everybody in the country knows it—except, strangely, the scientists already exploring the great cosmos.

To them there is no race to space. Practical uses of their findings, startling as these may be to the rest of mankind, are of secondary import to the men of pure science.

Yet, because they are avidly inquisitive, space searchers have dropped the flag on a race with themselves, to discover what they can as fast as their curiosity compels them. Fortunately in the United States the runners have the legs, wind—and spurt—of youth.

One place to scout a galloping team of young space scholars is the State University of Iowa. Fifty collegians, some in their teens and early twenties, work there under the foremost specialist in his field.

The assignment: To build diminutive, dependable instruments which explore the vastness behind the wild blue yonder; and to log the facts which those instruments relay from their whirling trips above.

Prime mover of the project is Dr. James Van Allen, a native Iowan who lettered in research at Iowa Wesleyan College and SUI. He returned to Iowa City 10 years ago (at age 36) to head the school's department of physics and astronomy.

At their leader's side, pacing the complement of junior scientists, are faculty members who gained much of their own experience under his tutelage. His fame has spread so far as to attract student assistants from Korea, Bolivia, India, Argentina, Laos, Italy, Japan, and Formosa.

Dr. Van Allen's achievements, earned him the singular honor of having two space "oceans" bear his name. He discovered them * * * a feat declared the top accomplishment in space probes thus far.

These oceans, the Van Allen Belts, are bodies of radiation thousands of miles deep, almost enclosing the globe. At one time the belts were regarded as the worst hazard to space travel by earthlings. Happily now, they appear less of a threat, which can be countered by routine shielding of any manned ship.

Nevertheless work proceeds to follow the vagaries of the belts, trapped in this planet's magnetic field * * * yet bursting on occasion to fire the atmosphere with the glory of northern lights.

Iowa instruments went aloft on more than 100 International Geophysical Year space vehicles. Devices aboard Explorer satellites and Pioneer space probes detected, measured, and charted the radiation zones.

The past and future of radiation exploration have developed areas of stress and high purpose at both ends of the basement of SUI's 50-year old physics building. On one side is the rush to reduce signals, already garnered from space, to intelligible graphs, tabulations, and formulae. At the other end of the converted storage area is ceaseless development, testing, and assembling of equipment for future space rides.

Focal point of the reduction section is the radio tracking station tuned strictly now to coded reports from Explorer VII every time it comes over. The satellite went into orbit from Cape Canaveral on October 13, 1959. It was expected to talk for a year, but hasn't run down yet.

Since that date it has made more than 2,500 passes within range of the university—usually six a day. Its signals are taped each time. And the same vigilant procedure is followed at 17 other stations in such around-the-world spots as the West Indies, Chile, Hawaii, Germany, South Africa, Peru, England, Canada, Ecuador, and Australia.

Word from the celestial chatterer comes to earth like the strums of an eerie banjo, mixed generously with static. While the tones are recorded on magnetic tape they are decoded mechanically and inked on rolls of paper. Zigzag lines sketch the density of radiation through which the satellite is sailing.

Then comes the task of condensing the data to punch cards, already stacked a quarter of a million deep. Each card covers 10 seconds of the Explorer's voyage.

Although Explorer VII has been tracked just 18 months, the student recorders figure they are 7 years behind in digesting the information to a readable state. The process, once manual, has been speeded up by an automatic card-punching machine and two new giant computers.

Balancing the motion in the "reducing" section is the pace in the "producing" end of the business. In equally cramped quarters the student instrument builders have a crash program going.

They are working on more than a dozen separate satellite projects at one time. Three of these have approaching deadlines. The first one, slated for this spring, will carry the school's nickname, "Hawkeye."

The Hawkeye bundle will contain nine Iowa-made detectors: tiny Geiger counters, and transmitters assembled from transistors, diodes, resistors, and capacitors in the thousands. Designing the miniaturized packets and soldering the circuits with microscopic precision are merely the obvious steps in the task. Just as exacting is the choice of parts.

"In a piece of satellite equipment we look for the analog of a man who has such well-balanced perfection in his components that he will live to be 104," Dr. Van Allen has explained. "And we must be able to judge this state of perfection when he is only 1 year old."

Once the assembly is built and operative, it must prove its fitness for strenuous flight. The unit is shaken, slammed with sharp impacts, heated and frozen, subjected to every trial it is destined to encounter—even the noise of the rocket takeoff. After such harsh tests it must operate as accurately as before.

Dr. Van Allen satisfies his zest for knowledge with the certainty that these instru-

ments are more sensitive and reliable than a human being to supply the facts he wants.

Two years ago he tabbed man "a fabulous nuisance in space * * * not worth the cost of putting him up there and keeping him comfortable." He hasn't changed his mind.

When men venture safely into space, much credit must go to this modern-day pathfinder and his youthful, indefatigable proteges. But they won't be after the victory wreath for a race they didn't run.

Increase in Cost of Natural Gas

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. DINGELL. Mr. Speaker, neglect of the consumer by various agencies of the Federal Government has become far too common in recent years. This neglect is nowhere more conspicuous than in the manner in which natural gas rates have been permitted to get out of hand. Natural gas prices have risen by more than 40 percent since 1951, during which time the cost of retail goods on the average rose but 14 percent. Even more striking, since January 1958, through September 1960, the price of natural gas to the consumer has gone up 20 percent, whereas in the same period of less than 3 years, consumer prices generally have gone up less than 4 percent.

While a number of factors undoubtedly contribute to this soaring of the price of natural gas to the consumer, a major responsibility must rest on the doorstep of the Federal Power Commission. Its regulatory powers have been exercised in a dilatory fashion, and apparently with a flagrant disregard of the welfare of the ultimate consumer. Testimony before the House Committee on Legislative Oversight last spring revealed constant conferences, meetings, and other negotiations between individual commissioners of the Federal Power Commission and representatives of the various natural gas pipeline companies, but no comparable degree of contact between the commissioners and representatives of consumers of natural gas.

One of the practices of the Federal Power Commission, followed with disconcerting regularity, is that of permitting natural gas pipelines to put into effect a series of so-called temporary rate boosts, prior to final action by the Federal Power Commission. Pipelines which once were required to segregate funds collected as a result of these temporary rate increases and to hold them available for refund to consumers, are now permitted by the Federal Power Commission to use them as capital funds for expansion or similar purposes.

The number of rate increases which the major pipeline companies have promulgated, following one another in rapid succession, is quite impressive. The Tennessee Gas Transmission Co. has increased its rates six times since December 1951 and, in effect, only part of two of these rate increases have been disallowed. Since 1957 its rates have gone up by over a third. El Paso Natural Gas Co. has instituted three rate increase since the beginning of 1958, totaling about $67 million a year. United Gas Pipeline has raised its rates six times since April 1956 in an amount of $46 million annually, subject to final Federal Power Commission approval. Panhandle Eastern has put a rate increase of $22.4 million annually into effect as of September 1, 1958, which has still not been finally acted upon by the FPC. The Texas Eastern Transmission Corp. is collecting rate increases of $28 million since November 1957, still subject to refund.

These rate increases are being paid by the consumers while the Federal Power Commission is engaged in the lengthy process of deciding whether or not to allow them.

As one step, but, I believe, an important one, that will both tend to curb the number of rate increases and also prod the Federal Power Commission to act in a faster, more responsible manner, I introduced a bill recently, endorsed by the National Association of Railroad & Utility Commissioners, which would prohibit the FPC from allowing any change in rates of a natural gas pipeline company from going into effect while there is already a rate increase pending by such a company which has not been finally approved by the Commission. It is high time that this pyramiding of rate increases by natural gas pipelines is brought to a halt. It is high time that the Federal Power Commission act as a responsible efficient servant of the American consuming public.

Action Against Cuba Needed

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 19, 1961

Mr. ALGER. Mr. Speaker, faced with the Cuban crisis, the natural reaction of all Americans is to unite behind our leaders, with President Kennedy at the helm.

Yet would it not be a tragic mistake if we thus gave up our precious right of independent judgment and through which we can benefit from past mistakes.

My own concern is heightened by the fiscally irresponsible $600,000 give away of tax money. That was the inter-American social and economic cooperation program passed by the House today where Congress was asked to vote money without justification of need to nations that may not be friendly in a showdown over Cuba.

Because of this bill, which is improper legislative activity, when this Nation should right now be moving against Castro, I place in the RECORD this editorial from the Chicago Daily Tribune. It is high time that we took action against Castro, husband our resources, and learn who are our friends. This is no time to give aid to any who are not on our side and not willing to commit themselves. The editorial follows:

[From the Chicago Daily Tribune]

NO PUNCH, BUT NEAT FOOTWORK

No President ever got himself into a more embarrassing jam in faster time than John F. Kennedy over Cuba. And few Presidents have shown more adroit footwork in disarming the opposition. When one recalls the partisan, Democratic clamor that arose over the U–2 spy plane episode and the criticism to which Mr. Eisenhower was subjected, Republican forbearance has been remarkable.

The facts seeping out of Washington since the Cuban fiasco are to this effect: The Cuban rebel force was armed, trained, and financed by the United States. Mr. Kennedy was acquainted with the existence of the project before he was inaugurated. The responsibility of putting the operation in train was his alone.

That decision could only be reached on the basis of estimates provided by the Central Intelligence Agency. These were so mistaken as to be ludicrous. Very little consideration was given to the possibility of failure. The landing was flubbed from beginning to end. The rebel invaders were put ashore in a swamp, and Castro's forces were waiting to bag them. The dictator may have been tipped off in advance.

The landing party consisted of some 540 men, without air support or covering fire from naval guns. The enterprise proceeded in total disregard of the military axiom that no assault can hope to succeed unless all necessary power is concentrated on a given point. The result was complete failure, with the Communists having a field day reviling the United States.

It is only necessary to recall the Democratic outcry of "brinkmanship" against the late Secretary of State John Foster Dulles and the unrestrained criticism of President Eisenhower when the U–2 came down in Russia to appraise the vulnerability of Mr. Kennedy's position. Mr. Dulles never took the country over the brink, and the U–2 flights for 4 years provided much useful information.

Mr. Kennedy reacted rapidly. He covered the flop with a speech containing some tough talk before the American Society of Newspaper Editors, managing to enlist considerable sympathy and support.

He then arranged meetings with former President Eisenhower, former Vice President Nixon, Senator Goldwater, and Governor Rockefeller, to plant the implication that there was bipartisan responsibility for the disastrous results of an undertaking which could only be launched on his initiative. He recalled Gen. Maxwell Taylor from retirement to investigate the CIA and review deficiencies in guerrilla warfare methods.

Mr. Eisenhower, as a good soldier, was obliged to say that the man carrying responsibility for foreign affairs must be supported. Mr. Nixon, who had planned soon to make a series of speeches publicly appraising the Kennedy record to date, may have been left with the impression that national unity decreed discretion.

No American enjoys the discomfiture of his country and none will fail to stand fast against the abhorrent designs of the Communists. These facts are not altered by past Democratic attempts to make political capital at the expense of Mr. Eisenhower and Secretary Dulles. Mr. Kennedy is necessarily in charge if the peril mounts.

We were impressed by Mr. Kennedy's forthright statement in Washington. Probably to our Democratic friends' surprise we said that we liked what he said. We still do. But we think the time is rapidly approaching when Mr. Kennedy's strong words, blunt and forthright, must be backed by action just as blunt and forthright. As we are

sure the whole country feels, we are praying that he will be a man of action as well as a man of good speech.

Every administration makes mistakes. Every administration has its embarrassments. It does the country no good to harp on them. But neither does it do the country any good to continue to fumble the ball when you are playing a highly professional outfit such as Khrushchev puts on the field. It's an axiom of professional football that you can't afford many fumbles if you want to win.

Kansas Centennial World Food Fair

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks, I wish to include a concurrent resolution adopted by the Kansas State Legislature, extending an invitation for State, National, and international participation in the Kansas Centennial World Food Fair, which is to be held in Topeka, Kans., June 13–25, 1961:

HOUSE CONCURRENT RESOLUTION 33

Concurrent resolution extending an invitation for State, National, and international participation in the Kansas Centennial World Food Fair

Whereas Kansas is recognized among the States of this Nation as a leading producer of wheat, has won the popular acclaim of "breadbasket of the world," is a major producer also of other grains, beef, poultry, dairy, and other food products; and

Whereas food production and food trade are common goals of all nations as sustainers of life and industry, benefiting the welfare of all peoples, and contributing to the cause for peace; and

Whereas Kansas is this year observing its centennial of statehood, inviting all its citizens and visitors to celebrate 100 years of achievement; and

Whereas it is most fitting that Kansas, "Midway U.S.A.," invite other countries and other States to join in displaying food and allied products in a large international marketplace provided for this purpose as a feature of the State's centennial celebration; and

Whereas the Kansas centennial world food fair has been certified by the U.S. Department of Commerce for temporary duty-free entry of foreign exhibits under the Trade Fair Act of 1959: Now, therefore, be it

Resolved by the House of Representatives of the State of Kansas (the Senate concurring therein), That Kansas extend the hand of welcome and friendship to the countries of the world and to the peoples of other States through the Kansas Centennial World Food Fair to be held at Mid-America Fairgrounds in Topeka, June 13 to June 25, 1961, as a recognized trade show and public exhibition; and be it further

Resolved, That Kansas citizens and organizations, cities, counties, and State, join together in supporting this means of displaying the productive resources of this great State, and the hospitality and friendship of its people; and be it further

Resolved, That the secretary of state be directed to send enrolled copies of this resolution to the President of the United States, U.S. Secretary of Commerce, U.S. Secretary of Agriculture, U.S. Secretary of State, embassies of foreign nations, to each member of the Kansas congressional delegation, and to the Governors of the other 49 States.

I hereby certify that the above concurrent resolution originated in the house, and was adopted by that body.

MARCH 20, 1961.

WILLIAM L. MITCHELL,
Speaker of the House.
A. E. ANDERSON,
Chief Clerk of the House.

Adopted by the senate April 4, 1961.

HAROLD H. CASE,
President of the Senate.
RALPH E. ZARKER,
Secretary of the Senate.

Are We Giving Up?

EXTENSION OF REMARKS
OF
HON. JOHN H. ROUSSELOT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. ROUSSELOT. Mr. Speaker, there is no question but that communism poses a real threat to our way of life. The insidious character of this threat is pointed out in the following editorial from the Progress-Bulletin, a leading newspaper of the city of Pomona, Calif. Under unanimous consent I include this editorial in the Appendix of the RECORD:

ARE WE GIVING UP?

Communistic sentiment is spreading in this country with such amazing speed that it behooves us all to be frightened.

After watching the picture, "Communism on the Map," a prominent Pomona couple went home agreeing that it was time to get ready to live differently, for according to their opinion, we would be under Communist rule within 5 years.

Is it possible that such opinions are justified? Right here in our own valley some educators appear to go out of their way to criticize unmercilessly anybody that has a word to say against Communist activities. Five years ago, had these educators expressed such sentiments, they would have been thrown in jail or at least run out of town. Their statements would not have been tolerated in Pomona or any other city in the land.

Where is the appeal in communism that seems to arouse support right here in this country? Are Americans dissatisfied with their freedoms? Is it a lust for power? Are they craving for the power that the few secure in a dictatorial government? There are plenty of things to be dissatisfied with in this country, but are Americans ignorant of the fact that no other country in the world has such prosperity or gives its individual citizens such pleasurable living?

Recently Adm. H. B. Miller, a retired U.S. Naval officer who is now director of public relations of Pan American World Airways, made a talk before the Public Relations Society of America in which he gave some thought-provoking comments on the crises America is facing. His words were aimed primarily at the professionals making up the membership of the society, but they have significance for everyone who is concerned with the present world crises.

Admiral Miller told of a conversation he had with an American businessman while returning by air from West Berlin. They discused a multitude of world problems. These, the businessman felt, were deeply distressing. Yet he said, "Things could be worse. If Khrushchev weren't in power, we might have someone even more dangerous. Perhaps we ought to be grateful for small blessings."

This, said Admiral Miller, "revealed in terrifying starkness an all-too-familiar American point of view concerning, the challenge of communism." Things could be worse. What do these words mean? It seems to me that they represent an almost childlike desire to believe that this is a world which is not as menacing as surely we must know in our hearts it really is.

"Not for one moment do I believe that my companion and the people who often unconsciously echo him are willing to compromise honor. Unfortunately, however, they appear willing to pass beyond the bounds of reasonableness in yearning for a dream world that does not—and cannot—exist under present conditions." They are, in a sense, victims of their own feeling of good will for mankind. They think, consciously or otherwise, that if we make concessions in the name of peace, the Communists will do likewise.

Unhappily, the high strategists of communism have no intention whatsoever of doing that, for all of their diversionary tactics and their occasional use of seductive and honeyed words. Admiral Miller traces what has been going on in recent months—in Cuba, in Venezuela, and other Central and South American countries, in the Middle East, in Africa, and elsewhere. The pattern is always essentially the same—"riot, subversion and revolution." And, all too often, we are confused, we fail to orient ourselves with events, and we miss their tremendous and ominous significance.

One amazing part of all this is the rapidity with which it has happened. As Admiral Miller recalls, "43 years ago the Communists had nothing—nothing except an idea, a handful of leaders, and a devastated country." Now they control a third of mankind; they are undermining the will to resist of another third, and their drive for world domination continues at full speed.

What, then, has been our basic fault in dealing with this menace. Admiral Miller says this in the course of an extensive discussion: "Communism has provided the only case in the history of the United States with which we have attempted to deal by defensive measures. This is not the way in which we built our Nation. This is not the way we dealt with the Barbary pirates. This was not the objective of the Monroe Doctrine. This is not the way we spread our ideals to the Philippines, or to Liberia. We shall not preserve freedom in a threatened world by politely retreating rather than boldly challenging."

In sum, we must face and fully realize the hazards that confront us. We must move from the defensive to the offensive, to the positive approach. In a phrase, to quote him once more, we need to "breathe life, and vitality, and vigor, into the spiritual pride and heroic traditions that made America great."

Not Our Fight? We Can Lose It

EXTENSION OF REMARKS
OF
HON. GORDON H. SCHERER
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SCHERER. Mr. Speaker, of the millions of words that have been written concerning what has happened and is happening with respect to the Communist takeover of Cuba and the position of the United States with reference

thereto, the lead editorial in the Cincinnati Enquirer of Thursday, April 20, 1961, states the case more clearly, more understandably and more effectively than anything I have heard or read. It has impressed me so much that I have sent a copy to the President. It is my feeling that every Member of the Congress before he makes up his mind as to what course we should follow with respect to the situation in Cuba should read this editorial:

NOT OUR FIGHT? WE CAN LOSE IT

These are blunt words. They are meant to be. The time has come for them.

The United States cannot afford to let Cuba's freedom fighters be overwhelmed by Russian MIG's, Czechoslovakian arms, and the skills of Red Chinese "technicians."

This is not a campaign that we ordered. We have no quarrel whatever with the admirable people of Cuba. We shed blood in helping them gain their freedom a scant half century ago. We have shared our commercial enterprises with them, been the best customer for their principal product. We stood silently by while a bearded clown expropriated—stole—countless millions of American investments.

We endured his insults. We listened in silence to the ridiculous mouthings of his Communist satrapy, at home and before the forums of the world.

We stood by and heard him denounce the Monroe Doctrine, which has been the basis of peace in this hemisphere for a century and a quarter.

We watched while he imported communism—and functioned as a ready escape-hatch for spies and traitors.

It was not our business—we said—to attempt the restoration of freedom to the Cuban people.

But certain things have been made our business.

Despite our denials, despite our disheartening disavowal of support for those who would unseat the small coterie of professional Communists now in control of Cuba, we are being charged in every corner of the globe with having provoked and conducted the almost pitiful invasion efforts.

We are getting the blame for this attempt at Cuban independence, whatever the facts may be. No attention whatever is being paid to our little set speeches, our notes.

The so-called uncommitted nations of the world—and many of our allies—are watching the beaches of Cuba. They are taking note as a dozen Mig's—piloted almost certainly by those Red "technicians"—are strafing and blasting away the ill-equipped forces of the tattered army of liberation.

We're worrying—in official quarters—about what may be said in the United Nations and elsewhere if we so much as crook a finger in behalf of the anti-Castroites.

We needn't.

In every corner of the world we're coming to be recognized as the paper tiger reviled by the Red Chinese.

The Red Chinese called us that, and laughed in the faces of our armistice representatives at Panmunjon.

How much harder will they laugh if the supposedly mighty Uncle Sam is frustrated on an island 90 miles from our shores—by the bluster of Communists 4,000 miles away.

Our President, with an army of maps, and all the Nation's radio and television systems in attendance, recently showed how important to our survival was a strip of jungle on the far side of the world, and demanded that Russia forthwith stop furnishing supplies and equipment to the aggressors. We watched. We listened. We agreed with him.

Nikita Khrushchev, it seems, was otherwise engaged. The supplying of the Communist forces in Laos has been stepped up—not stopped. By the time the conference table is reached—if it ever is—Laos will be lost.

This is the Khrushchev who now warns us not to send any supplies or help to the freedom fighters in Cuba.

Well, he told us not to help the freedom fighters in Hungary, and we didn't. All around the world he has been calling the tune—and we've been dancing.

But now it is very late.

By various estimates, between $30 and $50 million worth of military hardware has been shipped into Castro's Cuba.

If resolute action is not taken soon—if we continue to allow the debating society in the United Nations to obscure our national interests—Castro's Cuba will increase in importance as a mighty military base. It will be made into a launching pad for rockets aimed at America's heartland.

How long do you suppose it will take for the triumphant Communists to put the torch to the remnants of the Monroe Doctrine if the MIGs and the 80-ton tanks have the final word in Cuba? How many independent governments of any kind will remain in Central or South America a year or two hence? How many men in public life will dare stand by the side of the "paper tiger," against the devilishly crafty and cruel Communists?

How brightly will the flame of independence continue to burn in places much farther away from this onetime "arsenal of democracy?"

We said, long before it was popular to do so, that with the abdication of Cuba to Castro the Communists had established a beachhead 90 miles from our shores.

Now we say something must be done about it. Before it is too late. If it isn't too late already.

In the Nation—A Check on CIA That Worked Well

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mrs. KELLY. Mr. Speaker, my continuing interest in the efficiency and adequacy of our intelligence activities prompts me to insert in the CONGRESSIONAL RECORD an article by Arthur Krock which appeared in the New York Times of April 25, 1961.

The article points out the renewed interest in the need for a Joint Congressional Committee on Intelligence Matters to evaluate and utilize all intelligence. Since this is my original resolution and as I have sponsored this resolution since 1953, I hope the new task study group appointed by President Kennedy will correct the shortcomings which prompted me to sponsor this resolution.

[From the New York Times, Apr. 25, 1961]

IN THE NATION—A CHECK ON CIA THAT WORKED WELL

(By Arthur Krock)

WASHINGTON, April 24.—What the President has officially designated as "a Government-wide study of para-military operations within the Government" will be heavily concentrated on the Central Intelligence Agency, especially on its operating function that many observers think should not be allowed to an intelligence-collecting group. But in the course of the study the four distinguished persons the President appointed to conduct it may also find something of value in the record of a formal supervising committee for the agency that existed in its early period and is remembered as having worked well.

This committee was composed of three high officials—the Under Secretaries of State and Defense and the Director of the CIA. According to those familiar with the committee's history, it reviewed all proposed projects of the Agency, decided whether to approve or disapprove them, reported its judgments to the National Security Council and kept key members of Congress informally advised of CIA operations. One day a week was assigned to the review with whatever additional time was necessary for the reports to the NSC and at the Capitol necessary for the relays.

This check on CIA projects, and the informatory meetings with congressional leaders, must be assumed to have worked well because in this period the agency was not involved in any disastrous failure, such as that recently in the rebel landings in Cuba. Also, the recurrent moves in Congress for a CIA watchdog committee made no headway. Whether a formal supervisory group, constituted as was this previous Government committee, would have vetoed the concept or the timing of the disastrous Cuban adventure, or both, and advised the NSC and the President against it must remain forever in the impenetrable cloudland of speculation.

But some still in Washington believe that if a counterpart of the old committee had been in existence in the last few weeks, and with the same assignment of responsibility for the CIA, the faults of the concept and the timing of the anti-Castro landings would not have been approved, as they were, by all officials of the administration on the top level.

If this opinion is accepted as reasonable speculation, on the basis that the defects of the project would have been urged with the authority and prestige of two members, or even one, of an official supervising group of the CIA, then there is room for the further speculation that the President would have returned the project to the agency for more deliberation and repairs. And, since developments subsequent to the failure in Cuba at least suggest that no definite program was laid out for immediate and positive steps to be taken in event of the failure which occurred, it may be that this program would have been in readiness if a strong dissent had been registered in advance of the expedition by members of a CIA supervising committee.

REVIVAL OF CALL FOR A "WATCHDOG"

At any rate, an inspection of the committee's record would appear to commend itself to the four Presidential appointees to make the forthcoming study—Gen. Maxwell D. Taylor, Attorney General Kennedy, Admiral Burke and CIA Director Dulles. Findings should be highly pertinent to the expected renewal of proposals that the agency, like the Atomic Energy Commission, be supervised by a joint congressional committee. This relation of Congress to the AEC is established in law. And, though secrecy of projects and operations is as indispensable to the AEC as it is to the CIA, there has been only one congressional leak of any consequence at the expense of the Commission, and that was unimportant in consequences.

The vital element of secrecy in agency activities, however, has been successfully urged thus far against proposals that Congress assume to it a similar legal relation. Though a law to this effect was favored by

Gen. W. Bedell Smith when he was in charge of the CIA, Director Dulles has always opposed it. As a counterpart, he, as did General Smith, frequently briefs key Members of Congress. But this information process is not comparable to that of the AEC to the Joint Congressional Committee on Atomic Energy.

The old CIA supervising committee of three took the middle position and regularly though informally kept certain leaders of Congress generally informed. The new study group might profit by reviewing this period.

Hail to Italy and Its Great People

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. PHILBIN. Mr. Speaker, the 100th anniversary of the rebirth of the great and illustrious nation of Italy is an event that will be noted throughout the world with acclaim, enthusiasm, and gratitude.

The proclamation of Turin climaxed the rebirth of Italy under the constitutional rule of Victor Emmanuel the Second.

The great Italian philosopher and historian, Croce, observed that this event might more appropriately have been called a birth, because it was the first time in Italian history in which there was an Italian state with all and only its own people and molded by an idea.

Thus, Italy is no longer the Italy of the Romans, or the Italy of the middle ages, but the Italy of the Italians. But it would be quite impossible to try to separate modern Italy, and the Italy of the Italians, from the glorious ages of Italian history where high orders of civilization fluorished, where art, literature, science and culture were nurtured, where fundamental principles of government and law were originated and developed.

That the unification of Italy under the Risorgimento brought desirable independence, liberty and unity to this great historic nation cannot be doubted, and this movement and its happy consequences constitute valuable milestones in the progress of man toward self-determination and individual liberty.

It would be a colossal task, however, to try even to outline the glorious, momentous contributions of Italy and the Italian people to the enlightenment and high state of civilization which we of the Western World enjoy today.

It would be equally formidable to try to describe the enduring effects of the great, invaluable contributions in war and peace which leaders and people of Italian blood have made to America and its progress. The American people can be very thankful for the truly monumental contributions of past and present generations of Italian blood, especially those that relate to the building and development of this country, which, in all our States, and in thousands of communities throughout the land, are so patently visible, and evoke the gratitude of our people for the gallantry and spirit of sacrifice in war and the long-sustained loyalty, steadfastness, and enlightened leadership and work in peacetime of Italians and Italo-Americans, to develop the strength and promote the progress of our Nation.

Italy is bound to us by many ties of blood, of kinship, of religion, of common law, and culture. It is a loyal and dedicated ally in the struggle to preserve human freedom, an integral and vital part of the free world, the beloved native land of very many noble, devoted American citizens, whose children, like themselves, are increasingly and influentially a meaningful part of the American dream.

I am very proud indeed as a Member of this great legislative body who represents here many fine Americans of Italian blood to join in the tributes that are being paid to Italy on its 100th birthday. My own bonds with the Italian people are deep and very dear. From early boyhood the Italian people have been among my closest and warmest friends and I dearly cherish them. They have sustained and inspired me in ways I could never forget.

I am indeed honored to express my words of congratulations and best wishes to the Italian nation and its wonderful people, on the occasion of Italy's centennial, and I hope and pray that the great Italian nation will continue to grow, prosper, and flower as it has throughout history in the arts, culture, and enlightenment for which it is famous, and in the ways of prosperity and individual liberty so fittingly symbolized by and worthy of its unity and independence.

The Italian people fill an honored place in this Nation and in the world. Their talents, zeal, courage and humane warmth are qualities this Nation and the whole wide world urgently need.

Here in our own land we will continue to hold them close to our hearts, just as they hold others who have won their trust and affection.

I rejoice with Italy and the Italian people on its 100th birthday and pray God that this beautiful, great land and its cherished people may go forward in good health, ever-growing prosperity and happiness and very many happy returns of the day.

Mr. Speaker, under unanimous consent I include a recent editorial entitled "Risorgimento Saluted," printed in the Worcester, Mass, Telegram Gazette, in the RECORD.

I thank the distinguished editor who wrote this brilliant piece for his inspiration and ideas:

RISORGIMENTO SALUTED

("If it were possible in political history to speak of masterpieces as we do in dealing with works of art, the process of Italy's independence, liberty and unity would deserve to be called the masterpiece of the liberal-national movements of the 19th century in Europe."—B. Croce, in his History of Europe of the XIX Century.)

One hundred years ago, Italy climaxed its "risorgimento," its "rebirth," with the proclamation in Turin, by the first Italian Parliament, of the Kingdom of Italy under the constitutional rule of Victor Emmanuel II.

Croce observed that it might more accurately have been called a sorgimento, a birth, because for the first time in all the ages there was born an Italian state "with all and only its own people, and molded by an idea." Italy, as Victor Emmanuel said, was no longer the Italy of the Romans or the Italy of the Middle Ages, but "the Italy of the Italians."

But whether a risorgimento or a sorgimento, Italy's unification under Victor Emmanuel was part of that same wave of humane enlightenment which swept Europe beginning in the 17th century and had its finest 18th century flowering in the American Revolution.

It is significant in this regard that the book "On Crimes and Punishments," by the Italian humanist Cesare Beccaria was read and annotated by Jefferson, who knew and spoke Italian, and was cited by John Adams in his defense of the English soldiers who were tried for the Boston massacre.

This year, we in America observe the centennial of a war in which our own national unity was preserved. It is therefore all the more fitting that we honor, also, the centennial of Italy's unity. A stanch free world ally—and the country of origin of so many fine Americans—deserves no less.

Promotion of Area Redevelopment in the United States

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. LANE. Mr. Speaker, I thought the Members would be interested in the interpretation of the area redevelopment legislation as outlined by Mr. Solomon Barkin, secretary-treasurer of the area employment expansion committee in New York:

PROMOTION OF AREA REDEVELOPMENT IN THE UNITED STATES

(By Solomon Barkin, address before the American Society for Public Administration, Apr. 6, 1961)

The United States is on the threshold of pursuing a completely new approach to the problem on area redevelopment. After a battle of some 10 years for establishing new machinery and resources to assist the depressed and underdeveloped areas in the United States, bills have been passed in both Houses of Congress, and an agreed measure will shortly be sent to the President for his signature. Unlike President Eisenhower, whose administration gave lip service to the ideal of helping distressed areas but was philosophically opposed to this undertaking, the present administration is committed to this program and has already initiated plans for the vigorous implementation of the resources made available under the new legislation. The area redevelopment bill will probably become law before the end of the month, and the new administrative organization will be launched immediately. The United States will then join the ranks of other highly developed nations in aiding all areas within its boundaries to share in national prosperity.

The opponents of this legislation have been the political and economic conservatives who have resisted all forms of Government stimulation of local enterprises. They have favored incentives to all business but not specific aids toward local economic

redevelopment. The formal spokesmen have been the U.S. Chamber of Commerce and hundreds of local chambers of commerce, and the National Association of Manufacturers. They have spoken glowingly of the need for community activity and interest.

But the record of the 14,000 local development groups sponsored and serviced in part by these chambers is regretfully uninspiring.

The skeptics of the proposed legislation have largely been the academicians. By digging into the past records of local development groups, State credit corporations and other local and private improvisations, they despairingly concluded that development is an arduous and perhaps futile undertaking. Having been reared in the atmosphere of academic reflection, they counseled an emphasis, if not exclusive preoccupation, on inducements and aids to stranded workers and families to move out of the depressed areas. To them, the new emphasis on development of local areas in order to bring jobs to the areas was untried and reflected extravagant optimism if it was not an outright absurdity. This skepticism was echoed even among some economists who have themselves participated enthusiastically in assisting foreign development programs sponsored by the American Government. They saw no parallel between the two types of activities.

OPPONENTS AND SKEPTICS BYPASSED BY EVENTS

To the opponents, the answer was quite evident. Continued high unemployment, waste, and underdevelopment were intolerable. Local efforts needed the stimulation, guidance, assistance and financial help from the Federal Government. To the skeptic the response was equally clear. Population and labor mobility were already of high order in this country. During the last few years, few areas with a true shortage had developed in this country. Moreover, the displacement from the rural areas was continuing at very high levels and would persist in being the country's most challenging social and economic problem of labor mobility for the next decade or two. Finally, the chapters of economic history written by billions of dollars of American aid in foreign underdeveloped and distressed countries provided promising texts for American domestic endeavors at redevelopment. The point 4 program for the American economy is aid and stimulation of our distressed and underdeveloped communities.

The new American program for area economic redevelopment differs markedly from that presently evident in the United States and in operation in the various European countries. It arises from the peculiar nature of the American governmental and economic system.

AMERICAN AREA REDEVELOPMENT DOES NOT BUILD ON LABOR OUTMIGRATION OR DIRECTED RELOCATION OF ENTERPRISES

Unlike the emphasis in Sweden in area redevelopment, and to a minor extent in England which is trying to relieve distressed and labor surplus areas through outmigration, the new act will place quite incidental stress upon this phase of the program. Provision is made for retraining the unemployed for new jobs and these retrainees may thereafter move out. But the objective is primarily to prepare people to work in the community. It seeks fundamentally to redevelop the existing area, to create new jobs in it, and to fit people to them.

One basic justification for this approach is that unemployment has been widespread since 1957. As noted, there are few areas with real labor shortage eagerly seeking to absorb labor surpluses of other districts. In contrast, the above two countries have had full employment economies and are eagerly looking for people to direct to the many labor shortage areas. Migration to these areas would, as expected by the leaders of these nations, also moderate the inflationary pressures by permitting higher total national output.

In England the aid to distressed areas has been actively tied in with the administration of the permits for new industrial and commercial construction. Intent on preventing overcrowding and overbuilt areas, the Government denied permits to companies which sought to expand in these proscripted areas. It compensated this deterrent with active inducements for relocation in depressed areas.

This approach is, of course, quite strange to the American system of administration and our philosophy of appropriate Federal activity.

The greater number of European programs provide financial aids and inducements for business to locate in specific depressed and underdeveloped areas. The aids consist of outright grants, tax exemptions, low interest rates, and subsidies. In most of these countries these special assists and guarantees supplement an already existing system of highly articulated programs designed to guide the flow of investments and to stimulate industrial development. This governmental program for stabilizing the economy and stimulating growth, through the control of private and public investments, has no doubt been carried furthest in Sweden, which also has the most advanced program for dealing with the problem of labor surpluses.

In nations where governments intimately control, guide, and tax business enterprises to stabilize the economic cycle and to direct their growth patterns, financial aids, and subsidies have helped to reallocate industries to areas designated for special development.

AMERICAN EMPHASIS ON REGIONAL, PHYSICAL, COMMUNITY, AND HUMAN REDEVELOPMENT RATHER THAN FINANCIAL INCENTIVES TO BUSINESS

In the United States we have in the course of the formulation of the current legislation, evolved a very different philosophy of the appropriate function of the Federal Government. The legislation contemplates no far-reaching assists to private industry to locate plants in the distressed areas. In fact, the new legislation specifically discourages movement of existing industry from one area to another. It has an explicit "antipirating" provision which denies aid for this purpose. Moreover, most States frown upon tax exemptions. Only the most underdeveloped areas have spoken of financing construction of new industrial and commercial structures. In the new legislation there are no Federal funds for these subsidies or grants.

The Federal Government will made credit available for such structures at lower rates of interest than are available in the commercial market. But it will be no less than that currently paid by the Federal Government, plus one-half of 1 percent for overhead costs or the 4⅜ percent for a 20-year loan. It is hoped that this differential in interest will be sufficient support to the major forms of aid. The primary contribution is, therefore, a lower interest rate to redevelop these areas.

Additional evidence that these programs for the construction of buildings are not the foundation of the new program is provided by the limited sums available; namely, $100 million for the 108 identified distressed labor markets, and another $100 million for the more than 600 rural counties which are likely to be classified immediately as redevelopment areas. Further credit to small private entrepreneurs continues to be available from the Small Business Administration. This agency has set its rate for small business in distressed areas at 4 percent.

The program of providing cheaper credit for industrial and commercial structures is designed primarily for the poorer areas, where funds are not now locally available and where the ultimate in local inducements have to be provided. Larger communities generally have funds to finance local projects. Moreover, the availability of these funds provides tangible evidence of the Federal Government's interest in the program and also are an assurance to the local community that if some pilot projects are necessary to start the redevelopment process, such cheaper credit will be available.

PURPOSE

The goal of the new legislation is not to force the location of industry in the depressed or underdeveloped areas, but to help improve the physical, communal, and human resources to enable them to share in the process of national economic growth. Their competitive position will thereby be improved by determining the line of long-range economic development and the strongest impulse for growth.

By rebuilding the physical surroundings and facilities in the community and upgrading the work population, these areas will be able to participate fully in the national economic advances. Their redevelopment will make the presently dormant or wasted social, private capital, and human resources available to the national growth process, and permit them to stimulate expansion in other areas. Their revival would also enable the Nation to reduce its minimal level of unemployment to below the 3-percent mark reached in the early fifties.

PROGRAMING GROWTH

The first emphasis in the new program of assistance to these areas should be a clear formulation of an economic program for redevelopment and growth. The Federal program will provide an immediate annual fund of $4.5 million for technical assistance to these areas for the preparation of programs. In addition, the distressed areas, regardless of size, will become eligible for assistance with funds for planning under the urban renewal law. The stress will, therefore, be upon helping the local areas diagnose their problems and future, and to formulate a rationale for their future economic growth.

Programing, therefore, becomes one of the key factors in the new area redevelopment movement. The importance of such plans is repeatedly noted in the prerequisite for supporting every submission for assistance with evidence that it will be consistent and conform with these plans. The individual projects will not be hit-or-miss undertakings; they must be blocks in the construction of a new economic pattern which will generate its own growth and expansion. Only through careful preliminary studies and programs will this objective be achieved.

PHYSICAL AND FACILITY REDEVELOPMENT

The second and very crucial provision is the aid to be provided for the physical redevelopment of distressed areas to make them better suited for economic redevelopment.

Throughout the testimony, the witnesses enumerated the barriers to local growth. Programs to remove these barriers could unleash a new vitality within the community; sewage systems, water pollution programs, waterworks, highways, and various community facilities considered essential to preparing the sites and areas for new industry.

These areas have generally lacked adequate public services. Their public expenditures had declined and services have been starved. Even if they were adequately maintained, they would often be insufficient for the newer industries looking for varied modern services. To attract employees of the more technologically advanced industries, there must

be good schools, libraries, cultural facilities, parks, recreation areas, and other similar opportunities. Communities must be made attractive and modern.

These improvements could not be easily undertaken by the depressed communities. Their low incomes and tax revenues acted as a brake on their growth. Another difficulty encountered in these communities is the absence of vacant land for expansion. The older useful land areas are occupied by slums or obsolete industrial and commercial properties. To allow for expansion, these would have to be removed. Present urban renewal laws also limit the development almost exclusively to residential purposes.

The most serious attention was, therefore, focused upon these provisions in the law. The act will provide for loans of $100 million for public facilities and in addition, most importantly, $75 million for grants to communities unable to finance the construction of such public facilities through loans. These sums will be available, in addition to the existing liberalized provisions, for financing community facilities in smaller areas under the Housing Act. In addition, the urban renewal provision of the Housing Act is being amended to permit the establishment or improvement of industrial plants and facilities in redevelopment areas. A serious bottleneck, the absence of vacant land in industrial areas, would thereby be removed.

It is also hoped that other agencies of the Federal Government will be helpful in this undertaking. Specifically, the forestry, highway, park, agricultural conservation, fuels and mineral programs and other public works agencies will be urged to focus specifically on these depressed communities, so that their cumulative impact might hasten the redevelopment plan.

UPGRADING HUMAN SKILLS

The third major part of this program is the provision for the retraining of people for the new occupations and the payment of subsistence grants for the training period, if these people had already exhausted their unemployment insurance benefits. The House bill provides $4.5 million annually for retraining and $10 million for retraining subsistence grants.

A RURAL REDEVELOPMENT PROGRAM NOW TO BE ROUNDED OUT

The outlook guiding the program is dramatically illustrated by the additions which the new legislation makes to the unfolding of the rural redevelopment program now being administered by the U.S. Department of Agriculture. This undertaking to help the low-income rural counties has been in operation since 1955. It has been meagerly financed and has depended upon voluntary local groups, colleges, and existing Federal agencies to assign personnel. Its primary achievement to date has been to establish redevelopment committees in over 100 counties. The second step has been to arrange for studies for the understanding of the local problems. Most groups ended their activity with these reports. But others ventured into more practical but modest undertakings to encourage some outlet for or processing of local agricultural products. The tangible results have been meager and the number of new employment opportunities is not impressive.

Now this venture can be reinvigorated. The committees can be revitalized and their horizons broadened. Their planning can become more venturesome. They now can see ahead of them, if needed, funds for the public facilities and credit for industrial and commercial structures, and also funds for retraining local labor resources.

ADMINISTRATION WILL EMPHASIZE PLANNING FOR SUCCESSFUL REDEVELOPMENT

As announced by the Secretary of Commerce, the new administration in the Department of Commerce will act as a leader in the implementation of this program. Its task is to stimulate the communities into action, proselytize the belief in redevelopment and help them in their planning. This is a truly cooperative endeavor, in which the Federal Government aids but does not substitute for local initiative. It is to assist areas in the preparation of the master economic plans which will guide their future program. The creation of the blueprints of growth will be their foremost responsibility.

Upon the completion and approval of this plan, the local groups will have to agree on specific projects which can then be submitted to operating agencies already in existence, for study and recommendations and finally for approval by the Secretary of Commerce. The Housing and Home Finance Agency will review the applications for credit for commercial and industrial structures and community facilities. The Urban Renewal Administration will cover the applications for land use for such renewal projects and for urban renewal planning. The Small Business Administration will deal with applications for financing projects of industrial development agencies. The Labor and Health, Education, and Welfare Departments will deal with the retraining programs. The Agricultural Department will handle the problems of rural communities. These project agencies will be coordinated and guided in their activities by policies and prescriptions set down by the Secretary of Commerce as the responsible head of this activity. In addition, the Secretary is directed to use the facilities and services of other departments, particularly idle or partially idle military installations.

CONCLUSION

The sponsors of the new legislation recognized that area redevelopment legislation is directed toward solving structural dislocations in the economy. Therefore, long-term programs of redevelopment and construction are necessary. The affected communities, industries, physical sites, and the persons involved have to be carefully rehabilitated and redirected in order to fit into the new industrial and economic environment. Merely providing inducements for industry to move into the area have proven inadequate if not largely unproductive. The task is to make the areas attractive to the newer industries seeking sites and areas for location. At times, the stigma of depression has to be removed or the evidence of locational advantages of the area have to be confirmed, and pilot industrial and commercial structures will have to be built to initiate the long-term economic upturn. But there is an underlying conviction that the goal is to create self-generating growth nucleuses and economic complexes which would feed their own growth process.

The major purpose of the legislation is to aid communities to initiate a local program of community physical and human redevelopment so that the capital and human resources may be preserved and utilized; and that the people in these communities will find the solution to their problems through careful study, diligent application, abundant investment and, where necessary, with the encouragement, advice, and the helping hand of the Federal Government.

The new program can make only a minor contribution to the efforts at bringing this Nation out of the depression. It is not designed to provide immediate aids to people in these communities. Other agencies will still retain this responsibility, though it will be helpful to the common effort if they coordinate these efforts with those undertaken for area redevelopment. Moreover, the actual economic prosperity of these communities will in large measure depend upon the realization of a high rate of national economic growth. Only as these areas begin to share substantially in the Nation's prosperity will they contribute significantly to the momentum of the overall growth itself.

Area redevelopment is a program for assuring the fullest participation of all areas in the national economy and the utilization of all human and natural resources, and capital in the promotion of the highest level of production, the standard of living, and employment in the United States. It is a long-term undertaking for maximum national prosperity.

A Century of MIT—A Dream Fulfilled

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. PHILBIN. Mr. Speaker, I am anxious to extend to the president, teaching staff, student body, and alumni of the illustrious and world famous Massachusetts Institute of Technology my very heartiest congratulations upon the 100th anniversary of its establishment.

This institution started from very humble beginnings 100 years ago. As it grew through the years it changed its base of operations, first, from Summer Street and then, Back Bay, Boston, to the present extensive facilities on Memorial Drive, Cambridge, and it is continuing to grow, not only in physical plant, but in rapidly increasing usefulness to the Government, American industry and the scientific world.

So renowned have been the contributions of this great institution in the fields of engineering, technology, research, and development, science and industry, that I would not venture to try to evaluate the most beneficient and deeprooted impact it has exerted upon the growth and development of modern civilization.

The history of this truly great Massachusetts institution has, indeed, been a saga of accomplishment far beyond the wildest dreams of its founder, Dr. William Barton Rogers, a record of achievement so vital and crucial in many respects as to defy full analysis, a shining epic in shaping the life of men and affairs in the 20th century.

MIT has been an admirably organized team operation in the best sense of the word, and outstanding leadership, outstanding teachers, outstanding scientists, engineers and administrators have played effective roles in the work and expansion of this great scientific institution.

MIT has produced many great leaders who have taken their place in the topmost ranks of American educators, engineers, scientists, and businessmen. It

has reared generation after generation of the most valuable and useful technically trained experts. It has greatly benefited our economic system and industrial structure and has contributed inestimably to the Government both in war and peace in remarkable and fabulous ways through extending the horizons and boundaries of scientific knowledge and bringing it into play industrially and practically in implementing the miracles and marvels of the space age.

On MIT's 100th birthday many dignitaries of science and technology gathered from all corners of the earth to hail the occasion and to participate in the various programs of celebration and enlightening scientific discussion.

From Europe, the Near East and Asia and elsewhere outstanding scientists, political leaders and other great minds have come to celebrate the occasion. The distinguished Prime Minister of Great Britain, and the distinguished American Secretary of State, a notable member of the British Parliament and others joined in some of the programs.

The American people and Government entertain highest admiration and deepest gratitude for the magnificent contributions of MIT throughout the years.

It is my hope and prayer that these contributions will continue to grow, and that they will, as in the past, be directed toward the building of a greater, free, humane, scientific community in our great country and in the world, which in the space age will greatly help to bring the choicest blessings of peace, plenty, and happiness to mankind, and exalt the free spirit of man.

Import Quotas on Textile Imports: Brief Affirmative Statement

SPEECH
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. MERROW. Mr. Speaker, I hope consideration will be given to imposing country by country, category by category quotas on textile imports. In my opinion the American textile industry finds itself in a critical position. Something must be done to improve the situation if the industry is to survive.

May I point out that imports of textiles have grown from about 73 percent of exports in 1954 to 170 percent of exports today. Meanwhile textile consumption has declined; cotton goods, to cite one example, from 30.9 pounds per capita in 1950 to 23.8 pounds in 1960.

As a result, 838 cotton textile mills were liquidated between 1947 and 1960. Unemployment in the textile industry resulting in large measure from import competition is estimated at 225,000.

Hourly earnings in textiles average about 30 percent under those of manufacturing workers in general, yet they cannot be increased because our textile industry already finds it impossible to compete with low-wage, modern industries from other countries in our domestic and in many foreign markets.

Textile industry profits continually range below the average for manufacturing as a whole. They were 3 percent lower in the third quarter of 1960.

Small wonder that we cannot compete when one realizes that in foreign countries our cotton can be purchased at 8 cents a pound advantage over our domestic mills.

Foreign nations are establishing textile industries geared not to their own markets, but to the lush American market. It is uneconomic and unfair even to them not to limit the quantity of textiles they can export to us. I say this because it is to the longrun advantage of such countries to establish industries which contribute more to their own development than to rely on industries which contribute only temporarily to solving their own economic problems.

Our textile industry ranks next to steel as essential for our defense. It is mandatory that we keep it strong.

It seems to me that import quotas would not be unfair. They would tend to equalize the position of our domestic textile industry in competition with those of other countries.

At present there is little incentive for increased investment and modernization in the industry. Research and development are falling behind. It is imperative that something must be done to remedy this situation.

Although other actions might be taken to alleviate the serious financial condition of our textile industry, the real solution is country by country, and category by category quotas on imports. My belief is that we should establish such quotas by country and by category.

The Cabinet Committee appointed to consider this problem has been studying the matter and it is hoped that action soon will be taken to help assist the textile industry. It seems to me that the remedy which I have suggested is the course that we should follow. There should not be a delay in adopting a country-by-country, category-by-category quota system in the textile field. This I am sure will be of benefit to all concerned.

Maj. Gen. R. L. Vittrup

EXTENSION OF REMARKS
OF
HON. PAUL J. KILDAY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. KILDAY. Mr. Speaker, for the past 20 months the Congress has been most fortunate in having Maj. Gen. R. L. Vittrup as Chief of the Army's Office of Legislative Liaison. The outstanding service rendered by General Vittrup have proved invaluable to the individual Members and committees of the House of Representatives in obtaining a clearer understanding of the roles, missions, and requirements of the Army. Also he has been of great assistance in providing answers to inquiries posed by our constituents concerning Army policies, procedures, and operation. I am sincerely sorry to see General Vittrup leave but I am pleased to note that on April 1, 1961, he was designated the Deputy Chief of Staff for Personnel where his distinctive capabilities will continue to be utilized by the Army and our country. I am also pleased to note that he received a well-deserved promotion to lieutenant general on the same date.

General Vittrup has had a truly outstanding career. He entered the U.S. Military Academy from Texas and graduated with the class of 1929. Prior to World War II, he served as an infantry company officer for 63 months, student and instructor at the infantry and tank school, student at the command and general staff college, and instructor at the U.S. Military Academy.

Shortly after Pearl Harbor, General Vittrup was assigned as Assistant Secretary of the Army General Staff. A short time later he became Assistant Secretary to the Joint and Combined Chiefs of Staff where he worked on the overall planning and operations of World War II. He also was the first Secretary of the Joint Strategic Survey Committee. In 1943 he was assigned to the Allied Force Headquarters, first in North Africa, and then in Italy. He participated in the planning and execution of the Allied invasion of Italy, southern France, and Germany during 1944 and 1945.

After the war General Vittrup progressed through a variety of assignments of ever increasing responsibility. In 1945, he was assigned to the Operations Division of the Army General Staff serving first as liaison officer between the War Department and the State Department and then as Chief of the Policy Section of the Strategic and Policy Group. During the later assignment he traveled about the Far East negotiating disposal of military materiel in the Western Pacific. Upon completion of his studies at the National War College in 1948, General Vittrup served as G3, U.S. Army Caribbean and Command of the 33d Infantry stationed in the Panama Canal Zone. After a tour as instructor at the Army War College he became Chief of the Army Section of the Joint U.S. Military Advisory Group in Greece. On his return to the United States, he served as Chief of the Operations Division, G3, Army General Staff from October 1953 to August 1955. In August 1955 he became Assistant Deputy Chief of Staff of Military Operations—International Affairs—and concurrently the U.S. Army Delegate to Inter-American Defense Board; the Permanent Joint Board of Defense-United States/Canada; and the Army member of the Mexican-United States Defense Commission and the Brazilian-United States Defense Commission. These duties provided a wealth of experience in worldwide Army operations and in international relations.

In 1956 General Vittrup became Commanding General of the 24th Infantry Division in Korea and subsequently

Chief of Staff of the Army Forces Far East, 8th Army. Then in 1957, he was designated Deputy Chief of Staff for Plans and Operations for the U.S. Army Pacific. While in this capacity he was sent to Indonesia to negotiate sale and delivery of certain military supplies and equipment to that country. In July 1959, General Vittrup left Hawaii to assume his duties as Chief of the Office of Legislative Liaison in which capacity he served with such distinction.

I know that all my colleagues in the House will join me in expressing our warm thanks to Lieutenant General Vittrup for his past services in our behalf and to wish him every success in his new assignment.

A Military Code of Ethics and a Step in the Right Direction by Secretary of Defense McNamara

EXTENSION OF REMARKS
OF
HON. F. EDWARD HÉBERT
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. HÉBERT. Mr. Speaker, I ask unanimous consent that the directive of Secretary of Defense, the Honorable Robert S. McNamara, issued April 14, 1960, No. 1000.8, concerning the acceptance of gifts; use of Government facilities, and use of official representation funds, be printed in the RECORD.

I have long sought to see a code of ethics for guidance of officers and employees of the Department of Defense which would be enforced. As chairman of the Subcommittee for Special Investigations of the Committee on Armed Services of the House, I have conducted many inquiries into this general area.

Congress has been promised time and again that there would be a code of conduct set up; that action would be taken to curtail abuses; that direction would be given; and that there would be restored a standard of ethical values which could be clearly understood and enforced.

The standards contained in this directive reflect the Secretary's own personal high ethical standards. They are a decent set of rules by which the personal integrity and the official responsibility of members of his Department can live.

I am gratified at the spirit which prompts this directive. It follows soon upon the Secretary's assumption of office. I look forward, as I am sure do the Members of Congress and a waiting public, for the cure which it is intended to effect; and for the standard of personal integrity which it will create.

There is little time to be lost. Many excesses, in the past, have gone unchallenged and unpunished because there seemed to be a vacuum which personal standards did not always fill—sometimes at very high level.

Now there is a code of ethics.

I think, however, this code should be considered only as a beginning. Conscientious administration and observance will make it meaningful.

I congratulate the Secretary for this prompt and discerning action:

DEPARTMENT OF DEFENSE DIRECTIVE

(Subject: Acceptance of gifts; use of Government facilities, and use of official representation funds)

I. Purpose:

This directive sets forth standards of conduct for Defense personnel with respect to the acceptance of gifts, the use of Government facilities, property and manpower, and the use of official representation funds. Its provisions apply to all military personnel on active duty and to all civilian personnel.

II. Acceptance of gifts and use of Government property:

(A) Defense personnel shall not—

(1) Accept any gift, favor or hospitality for themselves or their families from any enterprise or person doing business or seeking to do business with the Department of Defense which might reasonably be interpreted by others as being of such nature that it could affect their impartiality;

(2) Personally use or permit the use by others of Government facilities, property, manpower or funds for other than official Government business.

(B) The tender of any gift, favor, or hospitality which might be considered to be in the nature of bribery shall be reported immediately through departmental procedures to the Department of Justice and the General Counsel of the Department of Defense. Any questions concerning what might be construed as bribery shall be resolved in favor of reporting the incident.

(C) Gifts from foreign governments shall be handled in accordance with DOD Directive 1005.3.

III. Official representation funds: Use of official representation funds shall be subject to the approval of the Secretary of Defense, the Deputy Secretary of Defense, or the Secretaries of the military departments. Funds are to be utilized only for official entertainment to maintain the standing and prestige of the United States by extending official courtesies to certain officials and dignitaries of the United States and foreign countries.

IV. Use of Government facilities, property, and manpower:

(A) Government facilities, property, and manpower, such as stenographic and typing assistance, mimeograph services, and chauffeur services, shall be used only for official Government business.

(B) Special mission aircraft shall be used only for official purposes and such use shall be approved by the Secretary of Defense, the Deputy Secretary of Defense, the Secretaries of the military departments, the Chairman of the Joint Chiefs of Staff, the Chiefs of Staff, Army and Air Force, the Chief of Naval Operations, or the Commandant of the Marine Corps.

(C) Motor vehicles:

(1) Full-time assignment of official vehicles to officials of the Department of Defense at the seat of government shall be subject to the approval of the Secretary of Defense or the Deputy Secretary of Defense. Full-time assignments at field installations will be subject to the approval of the Secretary of the military department concerned.

(2) Defense personnel authorized full-time use of official vehicles shall not use such vehicles for other than the actual performance of official duties. Vehicles authorized on a full-time basis shall not be reassigned to others not entitled to such use.

(3) Other administrative use of motor vehicles shall be authorized only when official transportation is essential to the successful operation of activities of the Government.

(4) Use of motor vehicles, whether authorized on a full-time or trip basis, is not authorized for the official concerned, members of his family, or others, for private business or personal social engagements. Questions with regard to the official nature of a particular use shall be resolved in favor of strict compliance with statutory restrictions.

V. Implemention: Two copies of instructions in implementation of this directive will be forwarded to the Secretary of Defense within 30 days after the effective date of this directive for approval prior to promulgation.

VI. Effective date: The provisions of this directive are effective immediately.

ROBERT S. MCNAMARA,
Secretary of Defense.

The Honorable Virginia Duff, Lady Legislator

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks in the RECORD, I want to include an article which appeared recently in the Dallas Morning News relative to Miss Virginia Duff, of Ferris, Tex. Miss Duff is a member of the Texas State Legislature since 1950. I have counted her as one of my close friends since that time, and it gives me great pleasure to be able to have these few words inserted in the RECORD.

The article follows:

OWNS ONE HERSELF—FERRIS' LADY LAWMAKER KNOWS FARM PROBLEMS

(By Eddie Hughes, News staff writer)

FERRIS, TEX.—A little lady lawmaker from Ellis County holds no fear of political rivals slinging mud at her.

In fact, Miss Virginia Duff, a State representative for 11 years, has a deep love for the soil.

And ever since she first decided to throw her bonnet in the political ring, she has been throwing male political opponents for a loss.

She estimates that she travels 4,000 miles a year around the county, talking with farmers so that she can better cope with all sorts of problems—real or imaginative—that face the residents of her district.

For this, and her straightforwardness in supporting or opposing bills that come before the Texas Legislature, the 40-year-old lady farmer and lawyer owns the respect of all her fellow representatives.

Miss Duff believes women are naturals for politics. She is one of three serving as representatives in the 57th legislature.

"Special groups hesitate to put pressure on women," she declares.

Miss Duff lives in a comfortable white home smack in the middle of her 50-acre farm west of Ferris, where she raises a yearly crop of cotton, wheat, and maize.

With a firsthand knowledge of farm problems she has served on many agriculture committees during her six terms and recently headed a study committee which proposed a closer state check upon local water projects.

She is fiercely proud of her great-great-grandfather, a pioneer who attended the first Texas Legislature and helped found Ellis County.

Miss Duff entered her first political race in 1950 for State representative of Ellis County. "I was elected on my 30th birthday, and my life's ambition was realized."

In that first try, she defeated two men—one in a runoff—then in her second go she beat another male. During one election, the citizens of Ferris gave her 93 percent of their votes.

In the 1960 election last spring, Miss Duff was opposed by four men. Three were eliminated in the regular election, and the remaining opponent was defeated in the runoff.

During her off moments—if there is such a thing—Miss Duff practices a little law in Ferris, digs a few potatoes at the family farm, and personally tries to answer some 100 letters a week from voters who regard their lady lawmakers as a 24-hour public servant.

The Dutch Need Our Support

EXTENSION OF REMARKS
OF
HON. JACK WESTLAND
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. WESTLAND. Mr. Speaker, President Kennedy is currently engaged in conversations with President Sukarno, of Indonesia. All of us are aware, I am sure, that these discussions include the disposition of West New Guinea.

The situation simply is that Dr. Sukarno wants the Netherlands to get out so that Indonesia can move in. Up to this point the United States has remained on the fence. Personally, I think it is about time that we stood by our friends, the Dutch.

The Dutch, we know, fought beside us in World War I and in World War II. And, because the United States was an ally of the Dutch during World War II, Dr. Sukarno has criticized us. He believes that we should have forced the Dutch to yield West New Guinea to Indonesia. Influenced by Marxism, he has also been motivated by the doctrine that a big capitalist power must of necessity be imperialist. However, the record shows that in the case of West New Guinea this is not true.

The Dutch spend $27 million each year to give West New Guinea its government. Their 10-year program has produced a largely native legislative council. The Dutch, because of this expense, is willing to leave this island, but they desire that the Papuans, the natives of West New Guinea, have a chance to determine their own fate. In fact, the Dutch welcomed a recent Malayan proposal to hand over this possession to a three-nation United Nations trusteeship, but Dr. Sukarno continues to block this move.

Mr. Speaker, I have been using the title "doctor" in my references to Sukarno. Well, he calls himself "doctor" on the strength of a degree in engineering at the University of Bandung. But, his engineering skills have never been in building bridges. It has been in crossing them.

The first major opportunity for Sukarno to cross a political bridge was in March 1943 when the Japanese promised Indonesia independence to gain his support. The Japanese made him president of an appointed council, which they were supposed to consult. Sukarno shortly went to Tokyo to thank Japan for this so-called step toward self-government. Meanwhile, Netherland soldiers, sailors, and airmen were bitterly engaged in a war of survival against the Japanese. Japan's esteem for this collaborator was shown when it decorated Sukarno with the Order of the Sacred Treasure for his wartime service.

Sukarno is regarded as an Asian uncommitted to either the Western democracies or the Communist bloc. He believes in dealing with both and with getting aid from any source. But, the similarity between Sukarno's conception of government and the Communist pattern has not been lost to observers. In fact, the Communists have performed the function of agitators and propagandists for Sukarno. This is surprising when one considers that he called on his people to put down a Communist revolt in 1948.

Sukarno, Mr. Speaker, stresses that "democracy is not merely government by the people; democracy is also government for the people." Perhaps this is why his government is infiltrated by Communists. Recently he banned four political parties including the pro-Western nationalist PIR. But, he allowed the Communist PKI and the Communist Murba to exist.

In January of this year, Gen. Abdul Haris Nasution, Indonesia's defense minister, went to Moscow and came back with $450 million in military aid after U.S.S.R. officials had publicly pledged themselves to help Indonesia take over West New Guinea.

The Netherlands want self-determination for the Papuans, who, by the way, are not Indonesian. The fate of West New Guinea was undecided by the Indonesian Treaty of 1949 because its people and problems are extraordinary. Sukarno claims it on the grounds that Indonesia is the legal heir of all the Dutch Indonesian possessions. This is a dubious claim, and although the Dutch are willing to go to the World Court to settle the dispute, Sukarno refuses this or any other logical solution.

What he wants is to distract the attention of his people away from the failure of his own government.

Mr. Speaker, Sukarno served Japan when we were at war with that country. He has been friendly wth the Communists and has openly accepted their aid. He has refused to accept the result of a plebiscite in West New Guinea, probably because he is afraid of the results. As long ago as 1950, two Papuan leaders, Nicolaas Jouwe and Markus Kasieppo, speaking for their countrymen, said they preferred to remain under the Dutch. The dominate attitude of Papuan leaders today—though sometimes critical—is loyal to the Dutch.

Mr. Speaker, I sincerely hope that President Kennedy does not encourage Sukarno's pretention and I hope we can be able to take a positive position on behalf of the Dutch. Also, Mr. Speaker, I am happy that Sukarno was not asked to address this Congress, for if he had been asked I, for one, would not have been present.

Committee on Consumer Interests

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. MULTER. Mr. Speaker, this morning I had the pleasure of testifying before the House Rules Committee on behalf of my House Concurrent Resolution 15 and House Resolution 42. I would like to commend to the attention of our colleagues my remarks at that time:

STATEMENT OF ABRAHAM J. MULTER, DEMOCRAT OF NEW YORK, IN SUPPORT OF HOUSE CONCURRENT RESOLUTION 15 AND HOUSE RESOLUTION 42, BEFORE THE HOUSE RULES COMMITTEE, APRIL 25, 1961

Mr. Chairman, I want to thank you for the opportunity to appear here this morning on behalf of House Concurrent Resolution 15 and House Resolution 42, which I introduced on January 3.

These resolutions are both designed to accomplish the same end, the protection of the interests of the consumer.

House Resolution 42 would provide for the creation of a select committee of the House to be composed of 15 Members appointed by the Speaker. House Concurrent Resolution 15 would provide for a joint committee composed of 7 Members of the House and 7 Members of the Senate. I have introduced measures similar to these in every Congress since the 83d.

A committee such as that proposed by either resolution would be impowered to investigate, conduct studies and report to the Congress on the status of the consumer in the American economy.

Many observers have often thought that strict regulation of the monetary policies affecting our economy would alone achieve economic stability and provide the consumer with adequate protection of his interests. We have seen the sad results of such narrow thinking in the inability of the American business community and the Federal Government to prevent either inflation or deflation. It has become obvious that many other factors must be dealt with to prevent inadequacies and imbalances which periodically occur.

It is generally recognized that the monetary and credit policy instruments of the Federal Reserve System played an important role in the efforts to make the impact of the 1954 recession easier to absorb. Similarly they performed this service in the inflationary movement of the 1955–57 period and in the recession of 1958. They did not, however, prevent these economic crises from occurring, nor did these policies in themselves correct the situations.

It appears clear that a full investigation is urgently needed of wages, prices, employment, and the other factors which affect the consumer if we are to avoid this continuing cycle of inflation-recession that we have experienced in the fifties.

Some of the tasks of a committee such as is called for in my resolution would be the

study of classical inflation and deflation caused by decreases in the effective supply of money and credit and an investigation of the effect of monopolistic or quasi-monopolistic practices on prices, production, and employment. We have seen exposed recently an aspect of this latter problem in the conviction for price fixing of officers and directors of some of our largest electrical manufacturing companies.

Other matters we would hope the proposed committee would study are the effect upon prices, profits, production, and employment of increases in wages, of government expenditures, taxation, monetary and debt management policies, and international influences.

From the consumer's viewpoint the prices charged for cost-of-living items such as food, fuel, and clothing, and the availability of these items, are of utmost importance and the special function of the committee would be to attempt to determine the variables which influence these aspects of the consumer interest.

The results of an investigation and study of these problems would immeasurably increase the effectiveness of the Federal Government and the business community in guiding us along a path of continuing prosperity and progrress.

I strongly urge this committee to favorably report either House Concurrent Resolution 15 or House Resolution 42, or in the alternative, my resolution, House Resolution 62, which would give to the Banking and Currency Committee jurisdiction over these problems, in which event that committee could conduct the necessary investigations and studies.

Big Little Town in Texas

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. TEAGUE of Texas. Mr. Speaker, several weeks ago, a tornado struck the small town of Italy, Tex., located in my congressional district. I immediately wired the city council and the editor of the local newspaper advising of the President's disaster fund and how they could apply for assistance. The mayor replied to the effect that the Federal Government needed the money more than the town of Italy and that it should be applied to reducing the public debt.

The editor of the paper, Mr. Russell W. Bryant, wrote several editorials with respect to the courage of the people of Italy in turning down Federal assistance. I think they are to be commended and personally wish to pay my respects to the mayor, the Honorable Robert Windham.

[From the Italy (Tex.) News-Herald]

WERE WE SURPRISED

Naturally, city officials and the editor of this newspaper expected some attention for the community when the offer of Federal disaster funds was turned down, but no one could possibly have anticipated the tremendous nationwide response it touched off.

Telephone calls began coming in a few hours after the telegram was sent Congressman TEAGUE. Then telegrams, and then an avalanche of mail that caused the Italy post office to look like Christmas last Friday and Saturday mornings as they opened sack after sack of first-class mail. It was still coming in Wednesday of this week.

The expression of surprise on the face of Little Italy in the cartoon appearing on this page could not have been more accurately depicted had Harold Maples, the Fort Worth Star-Telegram artist who drew it, been here to see the faces of those who brought about the whole thing. The cartoon appeared in the Star-Telegram last Thursday morning.

The offer of aid was turned down in all sincerity because it had already been determined that, while total damage was high individual losses were relatively low and for the most part covered by insurance. It was felt that a disaster area designation would be of more harm than benefit.

There was absolutely no doubt about Italy being better off financially than the Federal Treasury because during the time the Federal debt has increased $30 billion, the city of Italy has increased services to its citizens, reduced the tax rate 25 cents on the $100 valuation, and created a surplus more than sufficient to retire all bonded indebtedness.

At the time of rejection it was not known whether the aid might amount to a few hundred dollars or several million. It now appears that there wasn't much turned down after all—except an opportunity for the Federal Government to send in bureaucrats to do a lot of dictating to us. The city might have gotten some money to repair the city hall. It is doubtful if 1 cent could have been obtained by private citizens. Little better is the offer of small business loans that were made available after rejection of the first offer. No loan will be approved for doing any more than rebuilding exactly like the original structure, except where building codes prohibit it.

The Federal Government has been working a cruel hoax on the people of this Nation. It takes their money through excessive taxes on the pretext of offering greater service, and then when aid is needed or wanted it is doled back in most meager amounts and under degrading conditions.

Congress might well send a committee to Italy to read the wonderful letters from all over this United States of America. (Many letters show carbon copies to the President and various Congressmen.) They would find that Americans, from 12-year-old youngsters to men and women whose writing is so quavery as to be almost illegible, are deeply concerned about Federal spending and Federal debt; that they have been fooled about just how much the Federal Government pretends to do for its people.

Italy has apparently not rejected nearly as much as it, and others throughout the country, thought. It has stirred the American people by its action, however, and—as so many expressed hope—may prove a turning point in Federal giveaway programs. Although Italy's action was not mentioned, there was a report this week of a Dallas veteran returning three compensation checks for a minor World War II disability to Congressman OLIN TEAGUE.

Regardless of what may have come to Italy under the Federal program, it appears we stand to gain more by turning it down. One company wrote that Italy will be considered in an upcoming plant expansion program, and two men were here the rest of the week to discuss locating a new plant here.

[From the Italy (Tex.) News-Herald]

CREDIT WHERE CREDIT IS DUE

On May 21, 1947, the citizens of Italy closed up shop, donned their work clothes, cleaned, scrubbed, and repainted their store fronts in their first "Good Neighbor Day"—an appellation given the event by the late Raymond Vanlandingham. Everybody helped everybody else without thought of credit, pay, or praise.

Sunday night this same spirit was again in evidence as they joined hands to lay plans for a gigantic cleanup of tornado damage.

Possibly some of the experience gained in that big publicity promotion 14 years ago was unconsciously applied to the present situation. Possibly it was just levelheaded leadership on the part of some who hold positions of leadership and others who do not.

Obviously, it is a physical impossibility for the News-Herald to learn the names of all who worked through the night Sunday and Monday and Tuesday—or who did not work—so names of local people are being eliminated from all accounts as much as possible. It is assumed that everyone did all they could do—it is known that some exceeded all reasonable expectations—and it is likewise assumed that those who were not observed shouldering their part of the load were either not seen or had good reason for not helping.

Some have received attention in out-of-town newspapers and on radio and television, while others who did equally as much, or more, went unrecognized. This is not due to self-seeking, but rather to having been at a given place at the time a reporter happened to be there. Some errors were made in giving credit—even as the News-Herald would make some if it tried to give credit where credit is due—but the News-Herald will not attempt to correct stories appearing in other papers.

Mayor Robert D. Windham has been extensively quoted, much to his embarrassment, and he has asked that it be explained it is the office being recognized and not he personally. The same holds true for the editor of this paper who has been contacted by newsmen acquaintances and used as a source of information.

An attempt will be made to list outside groups who have assisted, with the certainty that some will be omitted because they were not known to have been here or have been forgotten in all the confusion.

They are as follows: Constable Herschel Smith, of Avalon, who was able to pick up a radio plea for help and retransmit it to the sheriff's department in Waxahachie; the sheriff's department which was on the scene within 30 minutes after the tornado hit, accompanied by ambulances from the two Waxahachie funeral homes and the Ellis County Emergency Corps with its firetruck, power generator, portable lights, shortwave radio, and a wrecker unit; State highway patrol units; ambulances from Frost & Cleburne funeral homes; wreckers from a number of garages; Salvation Army personnel from Waxahachie, Corsicana, and Dallas, the latter setting up a canteen truck within an hour and a half; the Waxahachie National Guard unit with floodlights, portable generators, jeeps, walkie-talkie radios, guardsmen to patrol the streets, and a field kitchen that prepared and served breakfast about 5:30 a.m.; Hillsboro fire department emergency truck with fire extinguishers, portable generators, and floodlights; the American Red Cross, which set up emergency headquarters in the American Legion auditorium about midnight and had a canteen truck here Monday morning; all four county commissioners who furnished men, trucks, loaders, and cranes; State highway department men and trucks from Waxahachie and Ennis; city of Waco, with two trucks and six men; eight power company crews with full equipment, including two large generators; telephone and gas company crews.

Numerous communities radioed offers of help Sunday night but were told all was under control.

The News-Herald wishes it had the name of every person, local and out of town, who helped; the space in which to list them and their deeds. Many of these people worked without letup from the time the tornado hit

until darkness closed in Monday night. Many returned Tuesday morning for another full day, and again Wednesday.

May we say only that the most minute act of assistance is as highly appreciated as the most sacrificial, and that credit can only be given where due by each individual who knows what he did.

Smithsonian Institution's Hall of Coal

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. SAYLOR. Mr. Speaker, today I have written to Dr. Leonard Carmichael, Secretary of the Smithsonian Institution, to request information on plans for the exhibits on coal, steel, and related industries at the new Museum of History and Technology.

Some time ago I received a press release from the National Coal Association calling attention of residents of mining communities to the need for tools and equipment to be displayed in the new Hall of Coal. I am interested in learning whether adequate material has been obtained by those in charge at Smithsonian; if not, Members of Congress from mining regions could undoubtedly perform an important service by giving publicity to the project.

The people of Pennsylvania have a basic interest in the proposed exhibits on coal, steel, and related industries. Our history is closely associated with the early use of the ironmaking process developed by William Kelly. Some of the earliest commercial coal mines in the United States were operated in Pennsylvania.

The exhibits at the Museum of History and Technology will give American and foreign visitors alike an opportunity to understand the outstanding advances that have taken place in these industries. The building can be one of the most effective media of pointing up the progressive nature of the U.S. coal and steel industries.

For some time coal has been accused of being a backward industry. Critics have found it convenient to blame many of the industry's problems on lack of foresight. The fact is that the coal industry has an outstanding record in improvement of productivity through research and technology. With the cooperation of a progressive union, the United Mine Workers of America, coal management has installed such highly mechanized mining processes that today coal is selling at the mine on an average of 26 cents per ton lower than the price a decade or more ago.

This is the information that needs to be brought to public attention. Coupled with data on coal reserves, it will serve to provide assurance of a continued energy supply for centuries to come. It will also notify visitors from abroad that America has a vast storehouse of energy that can be utilized either as an ingredient in the production of an enormous war machine or in the manufacture of materials that will contribute to a better life now and in the years to come.

After meeting with representatives of the Smithsonian Institution, I shall relay to Congress the information that I have obtained on the new Museum of History and Technology. I am certain that all my colleagues will want to have a progress report of this nature from time to time.

The Future of the Private College

EXTENSION OF REMARKS
OF
HON. CATHERINE MAY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mrs. MAY. Mr. Speaker, a crisis is developing in higher education where rising costs could quite easily force great numbers of deserving young people to forgo a college education. I have long felt that in an attempt to help solve this threat, serious consideration should be given to the allowance of a Federal income tax deduction or credit for tuition expenses paid for the college education of our children.

In this regard, I am favorably impressed with a recent article by Virgil C. Blum, S.J., associate professor of political science at Marquette University, which appeared in a recent issue of Our Sunday Visitor. Under unanimous consent, I ask that Father Blum's article be printed at this point in the RECORD:

THE FUTURE OF THE PRIVATE COLLEGE—IN THIS TIME OF CRISIS NEW METHODS OF FINANCING MUST BE DEVELOPED

(By Virgil C. Blum, S.J.)

You may be planning to send your son or daughter to a private college or university. There are strong indications, however, that you may not have the opportunity. In the years ahead many private institutions of higher education are likely to collapse financially; others will, as experts predict, boost their tuition by more than 100 percent and thus price themselves beyond your financial reach.

But the demise of our private college is not inevitable. Nor is a tuition level beyond your reach inevitable. Private institutions can be saved. But it is a task to which every citizen who believes in diversity in education, academic freedom in the pursuit of truth, free enterprise in education, and the best interests of the taxpayer must take a personal interest. In this time of crisis for education, new methods of financing private education must be found.

The rapid increase in the cost of classroom buildings, laboratories and operations is at the heart of the problem of financing private education. The problem cannot be solved simply by raising tuition. Such an approach might well aggravate the problem.

The private college, however, cannot fix the price of the product it is selling—education—on the basis of production costs. It does not operate in a free market. It operates in the context of a State-subsidized educational system. Under present conditions of high-cost education, the high public institutional discount rate of 80 to 90 percent on the full cost of education spells destruction for most private institutions.

This fact was underscored by Dr. Lawrence A. Kimpton, former chancellor of the University of Chicago, when he spoke of this destructive situation. "To put it in the crassest terms possible," he said, "it is hard to market a product at a fair price when down the street someone is giving it away."

Private colleges are like private grocery stores which, even while selling their products at a substantial loss, would be forced out of business by State-owned and operated supermarkets that sell their products at an 80- to 90-percent discount.

In such a competitive situation the private college cannot raise its tuition to meet necessary costs. If it does, it simply prices itself out of the education market. Some students, to be sure, will continue to attend private schools, even if they must borrow money to pay tuition.

But the typical student (and his parents) will not incur large debts to pay tuition when he can get a college education at the taxpayer's expense. The typical student will not borrow $1,000 or $1,500 a year to pay tuition when he can get an education "free."

The impact of the growing gap between tuition in public and private institutions is clearly demonstrated by the rapid shift of students from private to public institutions. As recently as 1950 more than 50 percent of our college students attended private institutions. Today it is less than 40 percent.

Experts predict that, if present trends continue, 80 percent of our students will be in tax-supported colleges and universities by 1970. The tuition-imbalance is one big reason why there are thousands of vacancies in private colleges while tax-supported institutions are asking for hundreds of millions of dollars to expand facilities.

It costs a minimum of $3,600 to supply classroom facilities for a student. Hence, it is in the taxpayer's interest that existing private school facilities be used to the fullest extent possible. This is not being done. A year ago there were 709 private colleges with fewer than 500 students each. Their average enrollment was only 226. It is a fair estimate that these colleges have available many hundreds of millions of dollars of unused facilities. In Wisconsin alone the private colleges have $17 million worth of unused space.

Why do students bypass small private colleges for large State institutions? Dean Martin Quanbeck, of Minnesota's Augsburg College, says that this preference "can be explained largely in terms of differences in quality, prestige, and tuition costs." Relatively high tuition costs are a deterrent to attendance at private colleges. Yet, it is precisely because tuition cannot begin to cover the full cost of quality education that many of our small colleges are short on quality and prestige.

Under present conditions the faculties of most private colleges are terribly underpaid and overworked. "What all this amounts to," said Dr. Barnaby Keeney, president of Brown University, "is that every student at almost every private college in the country is on a scholarship from the faculty, whether he needs one or not, indeed whether he wants one or not. This scholarship is paid by the faculty of the institution, out of their hides."

But it is true, nevertheless, that most parents cannot afford to pay a tuition that covers a greater portion of the full cost of education. For one thing, taxes are too high. And the larger the proportion of students in tax-supported institutions, the higher the taxes.

How then can private colleges and universities be saved and enabled to render a valuable service to American society? A number of proposals are now receiving serious consideration.

Direct Federal matching grants to public and private institutions for classroom buildings and laboratories are being proposed. Such direct grants would, however, be of little help to the vast majority of the Nation's 1,300 private institutions. Since additional students increase the operating deficit, private schools are reluctant to spend meager resources to match Federal funds to expand their facilities.

Some way must be found to increase the income of private schools for operating purposes. "Otherwise," predicts Dr. Louis T. Benezet, president of Colorado College, "we may expect to see the monumental construction of State university metropolises on the one hand and on the other the disappearance of most of the private colleges."

A Federal tax credit against tuition or fees deserves serious consideration. It would enable parents to pay a greater portion of the full cost of education, thus making higher tuition feasible. A 40-percent tax credit on a tuition of $1,000 would enable the taxpayer, parent or other, to claim a credit of $400 against his Federal income tax. If his income tax is $900, he pays only $500. If a parent sends his son to a State university where tuition is $200, he could claim a credit of $80.

There is nothing revolutionary about the tax credit. The Federal Government makes innumerable tax concessions to business and the professions to promote some particular aspects of the public interest.

If the tax credit would induce student attendance at private schools, it would result in substantial savings for the taxpayers. Since it costs the taxpayers from $1,600 to $2,000 a year per student in a State university (less in a State college), a tax credit of $400 to a parent who sends his son or daughter to a private institution would constitute a large saving in tax dollars.

It is sometimes objected that a tax credit would not greatly aid low income families. This is true. But it must be emphasized that with or without a tax credit these families cannot send their children to private colleges. They need scholarship help. The adoption of the tax credit plan would enable private colleges to give more scholarships to needy students. This would aid low income families. Moreover, an increasing number of States are adopting extensive scholarship programs, and the U.S. Office of Education has proposed an extensive Federal scholarship program.

In early December representatives of the major educational associations, meeting in Washington, adopted a package recommendation in support of Federal scholarships, Federal matching grants for classroom buildings and laboratories, and a tax credit plan. There was a feeling, however, that support of the tax credit plan would be controversial.

Although the major educational associations have repeatedly adopted resolutions supporting the tax-credit plan, State universities and land-grant colleges have in recent years publicly opposed the plan. The reason is not difficult to discover. Since all their in-State students enjoy a hidden tax-provided scholarship that covers most of the cost of their education, tuition is nominal. Hence the dollar value of a 40-percent tax credit to these students is not high. Consequently, public institutions, if they desired to absorb the tax-credit benefit by raising tuition by 40 percent, would receive less in increased tuition-income than private institutions.

Public institutions want direct Federal matching grants for capital construction, rather than tax credit. It seems to me, however, that the best interest of America, as well as the best interest of both public and private higher education, would be served by the adoption of both the matching grant proposal and the tax-credit proposal, together with a scholarship program with grants weighted in favor of the low income group.

Academic freedom, the need for diversity in education, equity and economy strongly urge the adoption of the 40-percent-tax-credit plan. Such a Federal program would enable parents to pay a greater portion of the full cost of education. This would enable private schools to raise their tuition substantially without pricing themselves out of business.

Almost 100 Days

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. TEAGUE of Texas. Mr. Speaker, we have been hearing and reading a lot about the first 100 days of the Kennedy administration. In the near future, a member of the Republican Party is scheduled to comment on the Kennedy administration's record to date.

I should like to insert in the RECORD an editorial which appeared in the Washington Post for April 20 entitled "3 Months of Kennedy," that I found to be most interesting reading. I came to the Congress with Mr. Kennedy, and as he steadily rose to the position which he now occupies today, I have had nothing but praise and admiration for him. I, like others, may not always agree with him, but no one can detract from the method in which he has handled himself, his display of determination, and his sincere dedication to his position, and more important, to his country:

THREE MONTHS OF KENNEDY

President Kennedy's address to the editors today will mark the completion of his first 3 months as Chief Executive. He has presented an impression to the country and to the world of broad intellectual grasp, poise, vigor, and quiet competence. But it is fair to say that this period has been occupied more with sizing up problems than with moving boldly to surmount them.

No doubt this was inevitable in the situation. The new President inherited a host of deferred decisions and neglected needs. Perhaps he also found that some issues did not seem so simple, once he was in the White House, as they had seemed when he was an aspirant to office.

Moreover, Mr. Kennedy was confronted with an exteremely delicate electoral balance. Not only was the popular vote in the presidential election last November very close; the divisions in Congress have proved to be much narrower than the superficial party statistics would indicate.

This factor alone makes Mr. Kennedy's situation very different from that which attended Franklin Roosevelt's first months in office. It was fashionable on the eve of the inauguration to predict a burst of activity similar to that of the Roosevelt 100 days. There is indeed something of the same intellectual ferment and creativity. But on deeper analysis the comparison was misleading.

In 1933 the country was at the bottom of a grim depression. Legislators and citizens were eager to grasp at any measure, including social innovation and experimentation, that might hold promise of some relief. In 1961 the country is, to be sure, in a recession; but it is fortunately miniscule by contrast with the great trauma of 28 years ago. There are ugly pockets of poverty and unemployment which worry some Americans and ought to worry more, but the major uncertainty probably concerns the country's position in the world. There are complaints of considerable complacency.

In foreign affairs Mr. Kennedy has made the most visible impact. His conferences with major allied leaders have gone well, and he has given impetus to a broader design for Atlantic unity. He has faced ugly reality in Laos. His willingness to accept a genuinely neutral government plus his determination to intervene militarily if necessary are essential to a stabilization. It is too soon to say whether his handling of the Cuban situation has been wise, but he has taken commendable initiative in Latin America generally. He has looked coolly at issues with the Soviet Union, assuring firmness but avoiding provocation.

His appointments have for the most part been highly meritorious. His changes in the structure and routine of the executive branch have shown that he intends to be his own chief of staff; but he also delegates authority to capable men. He has evidenced his intention to use Executive powers in the field of civil rights. He has placed notable emphasis upon flexibility in the Defense Establishment, though what happened to the missile gap remains something of a mystery.

In domestic legislative affairs the President's pace has been substantially slower. Members friendly to him won the fight on House rules at the beginning of the congressional session, but the big tests are still ahead. In most areas of concern from antirecession measures to housing, health, agriculture, and the overall national budget, Mr. Kennedy has proposed an essentially cautious program. It has been criticized by some as inadequate to stimulate revitalized economic growth. It may represent less what the President thinks desirable than what he thinks he can get.

No one is yet in an authoritative position to dispute this approach. Mr. Kennedy has the counsel of some able and experienced men in legislative affairs, including Vice President JOHNSON. Moreover, it probably is useful for the new President to demonstrate to the country that his approach is moderate rather than radical.

But it also is accurate to say that the country has not yet been called upon for the sacrifices that Mr. Kennedy envisaged during the campaign. The response to the Peace Corps has dramatized the willingness of Americans to identify themselves with a national cause. But the people can hardly respond to such needs unless they are asked.

The question is whether the President has talked directly to the people on enough occasions. Mr. Kennedy is an extraordinarily accessible Chief Executive, but his accessibility is seen more through reflection than through direct contact. Apart from his news conferences, which are difficult to focus despite his sense of command, he has not yet made major appeals to public opinion.

And here is something of the conundrum that confronted President Eisenhower. The Gallup Poll shows Mr. Kennedy having an even higher percentage of public approval in his initial months than his predecessor had. But how can this approval be translated into legislative support? Returning Congressmen report that their constituents applaud Mr. Kennedy but not his program. This reaction may be superficial, but the question remains how popularity can be used to influence congressional action.

Mr. Kennedy is said to view his task as partly one of education. There have been many suggestions for renewal of the fireside chat technique. Understandably the President may want to use any such devices sparingly so as not to waste his ammunition. The quintessential foreign aid appropriation,

or affairs in Cuba, may prompt him to additional action. The point he always must consider is that by delaying he runs the risk of not mustering public opinion in time to influence the results.

The President may well be a better judge of appropriate timing than some of the second-guessers. What has been seen of his performance so far displays a distinctive and in some ways dazzling style of operation. But much of the New Frontier, in domestic affairs at least, remains on the far horizon.

Castro's Cuba: A Revolution Betrayed?—An Article by Theodore Draper

EXTENSION OF REMARKS
OF

HON. JOHN BRADEMAS

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. BRADEMAS. Mr. Speaker, because of the unhappy events of recent days in Cuba, I should like to call to the attention of Members of Congress an extremely valuable article entitled "Castro's Cuba: A Revolution Betrayed?" by Theodore Draper, which was published in the March 27, 1961, issue of the New Leader.

Although the article is a more lengthy one than I like normally to insert in the CONGRESSIONAL RECORD, I believe it contains such a useful analysis of the rise of Fidel Castro and the way in which he has betrayed the revolution which he originally promised to the Cuban people that students of our relations with Cuba will consult it with advantage.

ABOUT THE AUTHOR

Mr. Draper is a distinguished authority on the Communist movement, and at this point I include a brief biographical sketch of him:

ABOUT THE AUTHOR

Theodore Draper has spent the last 25 years as a journalist, historian, and editor who has specialized in international affairs and American foreign policy, with extended excursions into the history of the American labor movement in general and the American Communist movement in particular. He has worked in and written about France, Germany, Morocco, Haiti, Guatemala, Mexico, the Dominican Republic, Cuba, and other countries.

The author of four books, his first, "The Six Weeks' War—a study of the French defeat of 1940—appeared in 1944. His second, "The Battle of Germany," published in 1946, was the official history of the 84th Infantry Division, the unit with which he served in World War II. When the project on communism in American life was formed by the Fund for the Republic, Draper was asked to write the history of the Communist Party of the United States from its beginnings to 1945. His first volume in this series, "The Roots of American Communism," came out in 1957; the second, "American Communism and Soviet Russia," was issued in May of last year. He plans to start working on the third and final volume, dealing with the period 1930–45, next fall.

The article follows:

CASTRO'S CUBA: A REVOLUTION BETRAYED?

(By Theodore Draper)

Who is Fidel Castro? What is he? After 2 years in power, he still evades both his defenders and detractors. In the first months of his regime, Castro used to speak of "humanism," which he defined as "liberty with bread without terror"—hardly a political or social program. But after trying it out a few times, he dropped it in favor of even more ambiguous formulas. When he or his associates were asked what kind of society they were building or what it should be called, they usually answered that they were building "a reality, not a theory," or that they were interested "in deeds, not words," or that their revolution was "indigenously Cuban." Castro still refuses to be pinned down to anything more definite and, until he commits himself, the question officially remains open.

At a youth congress in Havana last August, however, Ernesto Guevara, Minister of Industry and former president of the National Bank of Cuba—whose bank notes are signed with his nickname, "Ché," nothing more—took a long step toward giving the regime an ideology and a name. Since Guevara is the ideological éminence gris of Castro's regime, he has a habit of saying today what Castro will say tomorrow. He said: "What is our ideology? If I were asked whether our revolution is Communist, I would define it as Marxist. Our revolution has discovered by its methods the paths that Marx pointed out." In "Notes for the Study of the Ideology of the Cuban Revolution," published last October in the magazine Verde Olivo, Guevara wrote: "The principal actors of this revolution had no coherent theoretical criteria; but it cannot be said that they were ignorant of the various concepts of history, society, economics and revolution which are being discussed in the world today." Then he declared: "We, practical revolutionaries, initiating our own struggle, simply fulfill laws foreseen by Marx the scientist."

These statements raise more intriguing questions than they pretend to answer. Did Guevara mean to imply that the ideology was Marxist but not Communist? Was it the Marxism of the Communists or some other Marxism? Did Fidel, Guevara and the others really come upon Marxism as if they were bright but naive children rediscovering the roundness of the earth? Could the laws of Marx the scientist, which have not been fulfilled anywhere else, be fulfilled in the little island of Cuba by those who did not know what they were doing until after they had done it?

Guevara's explanation obviously explains too little or too much. But Castro, Guevara, and other Cuban leaders have spoken much more freely and at far greater length to a chosen few who have become their foreign interpreters and apologists. This growing band, however, has not had an easy time of it, and has been forced to do much of the theorizing that the Cubans have refused to do for themselves. In time, every revolution has created its own mythology but, in this case, these foreign sympathizers, in lieu of embracing one readymade, have had to produce their own. Each of these sympathizers has made his own characteristic contribution to this mythology which, if nothing else, tells us what those who feel closest to Castro make of him. The situation is undoubtedly an oddity but, then, the Cuban revolution is an odd one.

1. THE MYTHMAKERS

One of the first and favorite myths has been that of Castro's peasant revolution.

It turned up in the articles written and interviews given by the French writers, Jean-Paul Sartre and Simone de Beauvoir, who spent March 1960 in Cuba. After the usual hectic round of short trips and long talks, Sartre wrote a series of 16 articles in France-soir. In one of them he related how he had informed the Cubans that, like the Chinese, they had made a peasant revolution. The Cuban reaction, he reported, was divided: the bearded ones (those who had fought in the mountains) agreed with him; the unbearded ones (those who had fought in the resistance movements in the cities) maintained that the peasants had fought little or badly and that the revolution had sprung from the cities.

Mme. de Beauvoir gave a somewhat different version in an interview in France Observateur. She said that the petty bourgeoisie had begun by stirring up the urban revolution while the peasants had held back; then, bit by bit, the peasants had joined in, the immediate interests of the victorious revolution had become those of the peasant class, and thus despite its origins, the urban revolution can be considered a peasant revolution.

As a full-fledged theory, however, the Cuban peasant revolution made its appearance in the book, "Cuba, Anatomy of a Revolution," by Leo Huberman and Paul M. Sweezy, editors of the magazine, Monthly Review. After 3 weeks in Cuba, they were persuaded that the revolution had succeeded because the peasants as a class had actively joined the rebels and had become one with the revolutionary army. Fidel Castro appeared to them to be the embodiment of the revolutionary will and energy of the peasantry. As for the kind of system that this peasant revolution had brought forth, Huberman and Sweezy have no hesitation in answering: the new Cuba is a Socialist Cuba.

Six months later, they paid another 3-week visit to Cuba. By this time, the Castro regime had nationalized a large part of the Cuban economy. This development caused them to revise their previous estimate—the Cuban revolution was no longer essentially a peasant revolution because the working class had finally been swept into it. Castro himself had not yet reached the point of calling himself a Marxist, but the two visitors conferred on him the distinction of having arrived, by virtue of his own rich experience and sharp and fertile mind, at an unmistakably Marxist interpretation in a way that would have made Marx himself "proud to acknowledge him as a disciple." Despite Castro's modesty, however, they heard so much about a Socialist Cuba that it had become a commonplace, in contrast to their first trip, during which no one had spoken to them of Cuba as a Socialist country, and socialism was not even included among the revolution's ultimate goals.

And so, in the spring of 1960, a new path to socialism was discovered—a peasant revolution led by the middle-class son of a wealthy landowner. And in the fall of 1960, there was more certainty than ever of the Socialist revolution in Cuba because the working class had at last caught up with it.[1]

Other Castro sympathizers have gone farther. Paul Johnson of the British weekly, "New Statesman," took a quick look at Cuba and reported that Castro had come to power through a peasant revolution but governs through a genuine dictatorship of the proletariat, expressed through the arbitrary rule of one man. In the "New Republic" Prof. Samuel Schapiro, an American academic advocate for Castro, merely limited himself to commenting that "the heart of the revolution, the land reform program, is essentially Marxist." And C. Wright Mills of Columbia University, has made an anthology of all the things that Castro and his closest associates say of themselves, at least as of last August.

Professor Mills' recently published book, "Listen, Yankee," is a peculiarly useful and exasperating work. It purports to be the voice of the Cuban revolutionary, not that of its author. From the conversations I had in Cuba last April, I can testify that the Castro leaders talk much in the way Mills had recorded them. Sometimes the words in the book were so close to those I had heard

Footnotes at end of speech.

that I felt I knew the name of the source. To this extent, Mills had made himself the vehicle of the purest and most direct propaganda, unlike the others who talked to more or less the same people but passed on in their own name what they had been told. No one ever said "Listen, Yankee" or "Yankee this" and "Yankee that" to me, but except for this touch of artistic license, I consider these long monologues more or less authentic. Anyone who wants to get the Castro party line most nakedly can get it here.

Nevertheless, Mills has put his name to the book and in the last few pages gives the Castro case his personal endorsement. He says that he leaves it to the reader to agree or disagree with the points in it, as if there might be one non-Cuban reader in a hundred or a thousand with the necessary background. A reader has a right to expect that the author should do some work of his own beyond listening only to one side, and that a sociologist would at least be able to give a reasonably accurate report of the social structure of the country. The book as a whole is just as honest and dishonest as any unrelieved propaganda is likely to be, and if Mills merely sought to be a front man for the Castro propaganda machine, he has succeeded brilliantly. But is that all that should be expected of C. Wright Mills?

Mills' Cubans—one never knows where they end and he begins—are not altogether in agreement with Sweezy and Huberman. First, Mills tells what the revolution was not—"not a fight between peasants and landowners, or between wageworkers and capitalists—either Cuban or Yankee; nor was it a direct nationalist battle between Cubans and foreigners." It was "not an economically determined revolution—either in its origins or in its sources." Nor was it "a revolution by labor unions or wageworkers in the city, or by labor parties, or by anything like that." What was it then? The leaders were "young intellectuals and students from the University of Havana"—they are also called a few middle-class students and intellectuals—who made "a lot of false moves for a long time before some of their moves began to pay off." The revolution "really began" when, in one of these moves, "a handful of these young intellectuals really got together with the peasants."

Thus Mills' version contains no nonsense about a "peasant revolution"; it merely claims that the decisive forces in the insurrectionary period were the intellectuals and the peasants, with the former in total command. There is also no nonsense about the workers making the revolution; they are said to have joined in after the victory, and their "revolutionary consciousness" has allegedly been aroused only in recent months. At this point, however, mythology takes over and Mills also has the workers superseding the peasants as a revolutionary force. But the greatest nonsense is written about the middle class. The original "handful" of leaders admittedly came exclusively from that class. Nevertheless, the mythology requires that "the middle classes generally supported the revolution, at least in a passive way, during the insurrectionary period, although as a class they had little to do with making it." I take it this means that most members of the middle class supported the revolution passively or not at all.

Mills has also compiled a number of programmatic statements by Castro's group. There is still the old reluctance to be pinned down to anything definite, because a political system would hamper the leaders, because very few people care about it anyway, or because the very lack of a system proves that it is democratic. But this motif slides gently into another one: "We ourselves don't quite know what to call what we are building, and we don't care. It is, of course, socialism of a sort." Or, whatever the system is, the Cubans discovered it all by themselves: "Insofar as we are Marxist or leftist (or Communist, if you will) in our revolutionary development and thought, it is not due to any prior commitment in our ideology. It is because of our own development." Still later in the book, Castro's Cuba becomes "a dictatorship of, by and for the peasants and the workers of Cuba" or "a dictatorship of the people." Mills himself considers Castro's regime to be a revolutionary dictatorship of the peasants and workers of Cuba in which one man possesses virtually absolute power.

All these theories by Sartre and de Beauvoir, Huberman and Sweezy, Johnson and Schapiro, Mills' Cubans and Mills, cannot be true but they have one thing in common—they serve the purpose of concealing the fact that the Cuban revolution was essentially a middle-class revolution which has been used to destroy the middle class. And without understanding this apparent contradiction, very little can be understood of Castro's Cuba as a social system.

2. TERROR AND COUNTERTERROR

To begin with, what truth is there in Castro's "peasant revolution?" The 82 men under Castro who invaded Cuba from Mexico in December 1956 and the 12 who survived to fight in the mountainous Sierra Maestra at the eastern end of the island all came from the middle class. Castro himself was their ideal representative—son of a rich landowner, university graduate, lawyer. The guajiros, or peasants, in the mountains were utterly alien to most of them. But they had to win the confidence of the peasants to obtain food, to protect themselves from dictator Fulgencio Batista's spies and soldiers, to gain new recruits. As the months passed, the relations between them and the peasants took on a new dimension. The crying poverty, illiteracy, disease and primitivism of the outcast peasants appalled the young city-bred ex-students. Out of this experience, partly practical and partly emotional, came a determination to revolutionize Cuban society by raising the lowest and most neglected sector to a civilized level of well-being and human dignity.

But, for over a year, Castro's fighting force was so small that he did not expect to overthrow Batista from the mountains.[2] Victory was foreseen through the vastly larger resistance movement in the cities, overwhelmingly middle class in composition. This calculation was behind the ill-fated general strike of April 9, 1958.[3] It failed because the middle class could not carry off a general strike. Only the workers and trade unions could do so, and they refused mainly for two reasons: they were doing too well under Batista to take the risk, and the official Cuban Communists deliberately sabotaged the strike because they had not been consulted and no attempt was made to reach an agreement with them in advance. Without the key transport workers under Communist leadership, the strike was doomed. The national committee of the Communist Party, known since the last war as the Partido Socialista Popular, issued a statement (on April 12, 1958), a copy of which I have seen, blaming the fiasco on the "unilateral call" for the strike by the leadership of Castro's 26th of July movement in Havana under Faustino Pérez.[4]

In the mountains at this time, Mills was told, the armed men under Castro numbered only about 300. Four months later, in August 1958, the two columns commanded by Majors Guevara and Camilo Cienfuegos, entrusted with the mission of cutting the island in two, the biggest single rebel operation of the entire struggle, amounted, according to Guevara, to 220 men.[5] Sartre was informed that the total number of barbudos in all Cuba from beginning to end was only 3,000. Castro's fighting force was until the end so minute that it hardly deserves to be called an army, let alone a peasant army, and even the influx of the last 4 or 5 months failed to give it anything like a mass character. In any case, the character of an army is established by its leadership and cadres, which remained exclusively middle class throughout, and not by its common soldiers—or every army in the world would similarly be an army of the peasantry and proletariat.

How could such a small band defeat Batista's Army of over 40,000?

The answer is that it did not defeat Batista's Army in any military sense. It succeeded in making Batista destroy himself. Until the spring of 1958 life in most of Cuba went on much as usual. But the fiasco of the April strike forced Castro to change his tactics. Disappointed in his hopes of a mass uprising, he shifted over to full-scale guerrilla warfare—bombings, sabotage, hit-and-run raids. Batista's answer to the terror was counterterror. The Army and secret police struck back blindly, indiscriminately, senselessly. The students, blamed as the main troublemakers, were their chief victims. It became safer for young men to take to the hills than to walk in the streets. The orgy of murders, tortures, and brutalities sent tremors of fear and horror through the entire Cuban people and especially the middle-class parents of the middle-class students.

This universal revulsion in the last 6 months of Batista's rule penetrated and permeated his own army and made it incapable of carrying out the offensive which it launched in May against Castro's hideout. As Mills' book says, Batista's army "just evaporated." The engagements between the two sides were so few and inconclusive that Batista's abdication caught Castro by surprise. The real victor in this struggle was not Castro's peasant army but the entire Cuban people. The heaviest losses were suffered by the largely middle-class urban resistance movement, which secreted the political and psychological acids that ate into Batista's fighting force; Sartre was told that Batista's Army and police killed 1,000 barbudos in the last clashes in the mountains and 19,000 in the urban resistance movement.

Castro's guerrilla tactics, then, aimed not so much at defeating the enemy as at inducing him to lose his head, fight terror with counterterror on the largest possible scale, and make life intolerable for the ordinary citizen. These tactics can be employed by even a few hundred rebels, and they are now being applied against the democratic government of Romulo Betancourt in Venezuela. The same terror that Castro used against Batista is now being used against Castro. And Castro has responded with counterterror, just as Batista did.

3. THE PROMISED LAND

The struggle for power also helps to answer the question: Was the Cuban revolution "betrayed?" The answer obviously depends on what revolution one has in mind—the revolution that Castro promised before taking power, or the one he has made since taking power.

Huberman and Sweezy have written: "Fidel had made his promises and was determined to carry them out, faithfully and to the letter." But neither they, nor Mills, nor Sartre, ever say what these promises were. The oversight has been a necessary part of the mythology.

I have made a brief inventory of the promises, political and economic, made by Castro from his "History Will Absolve Me" speech (at his trial in 1953) to the end of 1958. These promises have already become so embarrassing that some of his literary champions have begun to rewrite history (after

---

Footnotes at end of speech.

less than 2 years) by avoiding all mention of them.[9]

Political

(a) Castro's 1953 speech predicted that the first revolutionary law would be restoration of the 1940 constitution and made an allusion to a "government of popular election."

(b) Castro's manifesto of July 1957, his first political declaration from the Sierra Maestra, contained a formal promise of general elections at the end of 1 year and an "absolute guarantee" of freedom of information, press, and all individual and political rights guaranteed by the 1940 constitution.

(c) Castro's letter of December 14, 1957, to the Cuban exiles upheld the prime duty of the post-Batista provisional government to hold general elections and the right of political parties, even during the provisional government to put forward programs, organize, and participate in the elections.

(d) In an article in Coronet magazine of February 1958, Castro wrote of fighting for a genuine representative government, truly honest, general elections within 12 months, full and untrammelled freedom of public information and all communication media, and reestablishment of all personal and political rights set forth in the 1940 constitution. The greatest irony is that he defended himself against the accusation "of plotting to replace military dictatorship with revolutionary dictatorship."

(e) In his answers to Jules Dubois of May 1958, Castro pledged full enforcement of the 1940 constitution and "a provisional government of entirely civilian character that will return the country to normality and hold general elections within a period of no more than 1 year."

(f) In the unity manifesto of July 1958, Castro agreed "to guide our nation, after the fall of the tyrant, to normality by instituting a brief provisional government that will lead the country to full constitutional and democratic procedures."

Economic

(a) In the 1953 speech, Castro supported grants of land to small planters and peasants, with indemnification to the former owners; the rights of workers to share in profits; a greater share of the cane crop to all planters; and confiscation of all illegally obtained property. His land reform advocated maximum holdings for agricultural enterprises and the distribution of remaining land to farming families; it also provided for encouragement of "agricultural cooperatives for the common use of costly equipment, cold storage plants, and a single professional technical direction in cultivation and breeding." In addition, the speech expressed the intention of nationalizing the electric and telephone companies.

(b) The manifesto of July 1957 defined the agrarian reform as distribution of barren lands, with prior indemnification, and conversion of sharecroppers and squatters into proprietors of the lands worked on.

(c) The Coronet article favored a land reform to give peasants clear title to the land, with "just compensation of expropriated owners." It declared that Castro had no plans for expropriating or nationalizing foreign investments and that he had suspended an earlier program to extend government ownership to public utilities. On nationalization, he wrote:

"I personally have come to feel that nationalization is, at best, a cumbersome instrument. It does not seem to make the state any stronger, yet it enfeebles private enterprise. Even more importantly, any attempt at wholesale nationalization would obviously hamper the principal point of our economic platform—industrialization at the fastest possible rate. For this purpose, foreign investments will always be welcome and secure here."

(d) In May 1958 he assured his biographer, Jules Dubois:

"Never has the 26th of July Movement talked about socializing or nationalizing the industries. This is simply stupid fear of our revolution. We have proclaimed from the first day that we fight for the full enforcement of the constitution of 1940, whose norms establish guarantees, rights, and obligations for all the elements that have a part in production. Comprised therein is free enterprise and invested capital as well as many other economic, civic, and political rights."

(e) The unity manifesto of July 1958, which was written by Castro, merely called for:

"A minimum governmental program that will guarantee the punishment of the guilty ones, the rights of the workers, the fulfillment of international commitments, public order, peace, freedom, as well as the economic, social, and political progress of the Cuban people."

Such were the promises that Fidel had made. The near-unanimity with which Castro's victory was accepted in January 1959 was the result not merely of his heroic struggle and glamorous beard but of the political consensus which he appeared to embody. This consensus had resulted from the democratic disappointments of 1944–52 and the Batista despotism of 1952–58. There was broad agreement that Cuba could never go back to the corrupt brand of democracy of the past, and the Cuban middle class was ready for deepgoing social and political reforms to make impossible another Prio Socarras and another Batista. Castro promised to restore Cuban democracy and make it work, not a direct or people's democracy but the one associated with the 1940 constitution which was so radical that much of it, especially the provision for agrarian reform, was never implemented.

It is, moreover, unthinkable that Castro could have won power if he had given the Cuban people the slightest forewarning of what he has presented them with—a wholly government-controlled press and all other means of communication, ridicule of elections, wholesale confiscation and socialization, cooperatives that are (as Huberman and Sweezy admit) virtually state farms, or a dictatorship of any kind, including that of the proletariat. It was precisely the kind of promises Castro made that enabled him to win the support of the overwhelming majority of the Cuban middle and other classes; a peasant revolution would hardly have been expressed in quite the same way.

The least that can be said, therefore, is that Castro promised one kind of revolution and made another. The revolution Castro promised was unquestionably betrayed.

4. THE SOCIOLOGICAL IMAGINATION

The Castro mythology tends to distort not only the original nature of the Cuban revolution but also the character of Cuban society.

Pages are written by Huberman and Sweezy about the peasantry, a single paragraph about the working class, and almost nothing about the middle class. Mills never seems to have made up his mind which Cubans were speaking through him. Judging by his own list of the Cubans who spoke to him, there was not a worker, and certainly not a peasant, in the lot. Without exception, his informants were middle-class intellectuals and professionals of the type in power. Sometimes he makes them speak in their own name; more often they masquerade as the most impoverished and miserable of Cuban peasants. They say, "We squatted on the edge of the road in our filthy huts," as if they were the "we" and as if this was typical of all Cubans. The average reader might imagine that Cuba was nothing but "a place of misery and filth, illiteracy and exploitation and sloth." This may be a triumph of propaganda but it is a travesty of sociology.

Cuba before Castro was, indeed, a country with serious social problems, but it was far from being a peasant country or even a typically "underdeveloped" one. Its population was more urban than rural: 57 percent in the urban areas and 43 percent in the rural, with the trend strongly in favor of the former (according to the Geografia de Cuba written by Antonio Núñez Jiménez, the present director of the Agrarian Reform Institute). The people dependent on agriculture for a living made up about 40 percent, and of these over one-quarter were classified as farmers and ranchers. In 1954, the national income was divided as follows: The sugar industry, agricultural, and industrial, 25 percent; other agriculture, 13 percent; other industry and commerce, 40 percent; everything else, 21 percent.

The standard of living, low by United States and West European standards, was comparatively high by Latin American; only three countries, Venezuela, Argentina, and Chile, rated above Cuba in per capita income; Cuba's was almost as high as Italy's and much higher than Japan's. Cuba ranked fifth in Latin America in manufacturing, behind Brazil, Argentina, Mexico, and Chile. Cuba had 1 automobile for every 39 inhabitants (in Argentina, 60; Mexico, 91; Brazil, 158), and 1 radio for every 5 inhabitants (second to Argentina, with 1 out of 3). Cuban tourists were able to spend more in the United States than American tourists spent in Cuba. After World War II, Cuban interests were strong enough to buy a substantial share of U.S.-owned sugar production which fell from 70 to 80 percent of the total at its high point in the 1930's to about 35 percent in 1958. Government encouragement of Cubanization would easily have cut the figure in half again in a short time under a post-Batista democratic regime.

I am not trying to suggest that Cuba's economy was a healthy one. It was precariously dependent on the fluctuations of a single crop, sugar, which accounted for more than 80 percent of Cuban exports and employed about a half-million workers for only 3 to 4 months a year. As the rates of illiteracy show—41.7 percent in the rural areas and only 11.6 percent in the urban areas—the social development of Cuba was shockingly unbalanced in favor of the cities and towns, and Castro's crusade for the peasantry has repaid the Cuban upper and middle classes for decades of indifference to the welfare of the land workers.

But this is not the same thing as implying (as Mills often does) that Cuba was nothing but a land of backward, illiterate, diseased, starving peasants. When he writes, "We speak Spanish, we are mainly rural, and we are poor," the first statement is undoubtedly correct, the second is demonstrably false, and the third is partly true. Cuba was one of the most middle-class countries in Latin America.

In effect, this mythology of the Cuban social structure makes Castro's victory inexplicable. If a handful of middle-class students and intellectuals had the active support of only a few hundred or even a few thousand peasants, without either the working or middle classes (as Mills maintains), the Batista regime would never have toppled. It was the desertion of the middle class, on which Batista's power was based, that caused his regime to disintegrate from within and his army to evaporate.

5. ECLIPSE OF A MOVEMENT

Castro's betrayal of the Cuban revolution has also taken another form.

Footnotes at end of speech.

When Batista fell, two movements entered into competition—Castro's 26th of July movement (named after the date of his first unsuccessful attempt in 1953) and the official Communist Party, the Partido Socialista Popular. The odds seemed to favor the former overwhelmingly. In his first victory address at Camp Liberty, Castro spoke of the popular sympathy and almost unanimous support of the Cuban youth which the 26th of July movement enjoyed, and he appeared to argue that there was no need for any other movement.

But a different fate soon awaited the 26th of July movement. The reason, as it was explained to Mme. de Beauvoir, is most revealing:

"The 26th of July movement, from which the revolution issued, had an apparatus, but a petty-bourgeois one, which could not follow the revolution in the radicalization that has been proceeding since the taking of power; it was not capable of going along with the advance of the agrarian reform. So it was permitted to fall away."

Mme. de Beauvoir passes on this information without the slightest indication that there might have been something unwholesome in this procedure. But apart from the justification for Castro's decision to eviscerate his own movement, she confirms the middle class character of that movement and Castro's political reason for condemning it to a nominal existence—the difference between its revolution and his.

Not so long ago also, there was no higher honor in Castro's Cuba than to belong to the rebel army. It was the chief basis of Castro's rule; army men actually ran the country through ostensibly civilian organizations, such as the Agrarian Reform Institute. When Huberman and Sweezy first visited Cuba last March, they reported that "from January 1, 1959, to this day the real power has always been in the revolutionary army, manned and nourished by as radical a social class as any in the world today"—the Cuban peasantry. But on their second visit 6 months later, they noted the relative eclipse of the rebel army and the officially inspired rise of the large, amorphous militia. Indeed, in their December 1960 article, they no longer refer to it as the rebel army; it had become the regular army. Instead of the "truly most remarkable relations of solidarity, trust, and understanding" between Castro and the army at the time of their book, they intimated that it had become a potential counterrevolutionary force, typical of Latin American "standing armies." Once the rebel army's peasant character had been its greatest glory; now it had apparently become a serious drawback. Bohemia Libre, the edition in exile of Cuba's most famous magazine, has gone so far as to say editorially that the rebel army "already does not exist." In any case, it has gone the way of the 26th of July movement.

The fate of David Salvador, the outstanding labor leader of the 26th of July movement, tells the same story. Before Batista fell, Salvador represented the underground group, Labor Unity, and coordinated the resistance within the working class. At a time when the official Cuban Communists opposed Castro as a putschist, Salvador believed in him and in the last period of Batista's rule went to jail for his underground activity. After the victory, he took over the leadership of the Cuban labor movement for the 26th of July movement and served as secretary general of the Cuban trade union federation. At its national congress in November 1959, however, Salvador's fortunes suddenly changed. The 26th of July movement would have scored an overwhelming victory over the Communists, if Fidel Castro himself had not unexpectedly appeared at the congress, berated the delegates for having given proof neither of prudence, nor of unity, nor of anything, and demanded, in effect, the installation of a triumvirate in the federation's leadership, including pro-Communist candidate, Jesús Soto. The real leader soon became Soto, not Salvador, whom the Communist organ, Hoy, began to attack openly for his strange attitude.

With his family, David Salvador was caught in November 1960 trying to escape from Cuba in a small boat, and he has again been cast into prison, this time by Batista's successor, Fidel Castro. The trade unions have lost even the bargaining power they had under Bastista; they have become propaganda appendages of the Ministry of Labor which makes all decisions on wages and conditions, Soviet style.

What does all this mean? In his own 26th of July movement, in the rebel army and in the labor movement, Castro has shunted aside the very ones who helped him in the struggle for power. He has done so, as Mme. de Beauvoir has hinted, because they were led to expect a different revolution from the one he is making. The 26th of July movement was sacrificed first because it was the embryo of a political party. It could grow into a full-fledged party or become an empty shell. The rebel army has never recovered from the shock of Castro's persecution of one of his closest former comrades-in-arms, Maj. Hubert Matos, who was sentenced to 20 years' imprisonment for having protested against the favoritism shown to Communists in the army. As Mills remarks in "Listen, Yankee," "that was the biggest blow."

The mass assemblies and amorphous militias now suit Castro's purposes better because they are so impersonal and anonymous. The individuals in the outdoor spectacles have a direct relationship only to Castro personally, not to each other. The demonstrations are as democratic as Hitler's Nuremberg rallies and Mussolini's balcony speeches once were.

The 26th of July movement and the rebel army were more than Castro's personal emanations; their members were bound by a cause for which they had fought and sacrificed together. That cause went back to a period before Castro's personal rule and to a revolution waged against personal rule. That Castro could not live with the 26th of July movement and the rebel army is more than faintly reminiscent of Stalin's need to abolish the Society of Old Bolsheviks.

6. THE TWO REVOLUTIONS

Lukewarm lemonade helped Jean-Paul Sartre to understand the nature of Castro's democracy.

One day, as he tells the story, Castro invited Mme. de Beauvoir and himself on an inspection tour of the Veradero Beach. Soon the party stopped at a little refreshment stand. Castro offered them some lemonade. He started to drink some himself, put down his glass, and said loudly: "It's lukewarm." Then the following dialogue ensued:

"Don't you have refrigerators?" Castro asked.

"Sure we do," the waitress said. "But they don't work."

"Have you reported it to your superior?"

"Of course, last week. And it isn't a big job," she added familiarly. "An electrician could do it in 2 hours of work."

"And no one has been ordered to make the repairs?"

She shrugged her shoulders. "You know how it is," she added.

And this is Sartre's comment on the scene:

"It was the first time that I understood—still somewhat vaguely—what I called the other day 'direct democracy.' Between the waitress and Castro, an immediate secret understanding (connivence) was established."

Castro was not yet satisfied. Sartre relates how Castro insisted on going over to the delinquent refrigerator and vainly tried to fix it himself. At length, Castro turned to the young waitress and muttered: "Tell your superiors that if they don't get busy on their problems, they will have problems with me."

One reads and wonders. Could it really be that this banal and somewhat embarrassing little scene convinced the famous and worldly French philosopher that Castro's Cuba was—not an ordinary kind of democracy but—a "direct democracy"? Involuntarily, my mind went back to some experiences in the Dominican Republic a few years ago. There, too, the Líder Máximo, who prefers being called El Jefe, liked to visit his domain, see his subjects personally and settle problems on the spot.[7] To my dismay, I discovered that there was much to be said for his regime in purely physical terms, that the peasants worshipped him, that he could have won honest elections quite as overwhelmingly as his fixed elections, and that the only ones who seemed disturbed were a few intellectuals and other dubious middle-class characters. It was easy to imagine the same scene played by El Jefe, the young waitress, lukewarm lemonade, and the refrigerator that wouldn't work, except perhaps that El Jefe, having had much more time, no longer permitted lukewarm lemonade under any circumstances. But the greatest blow of all came one day when I entered into a philosophical discussion with a leading official and asked whether El Jefe's unique system had a name. Gravely and courteously, he answered: "neodemocracy." I must have flushed in anger. If only they would leave democracy alone. If Generalissimo Rafael Leonidas Trujillo was the leader of a democracy, even a neodemocracy, who was not?

At bottom, all these neo and direct democracies rest on a simple proposition: that the leader and his people are one and indivisible. Hence they need no representative institutions, no elections, no loyal or disloyal opposition, no free or partially critical press, none of the rights and safeguards traditionally associated with a democracy.

The horror of this thinking is that it wipes out the lessons to be learned from the most desperate and tragic experiences of our time. If there is anything that should have burned itself into our consciousness, it is the excruciating evil of the popular despot, the beloved dictator, the mass leader. The connivance which Sartre imagined between Castro and the waitress existed between Hitler and a too large portion of the German people and between Trujillo and an even larger portion of the Dominican people. More horrible still is the fact that, with the whole modern machinery of propaganda at their disposal, the leaders can manufacture a reasonable facsimile of popular consent even if they may not have it to start out with. Is it necessary at this late date to recall these terrible lessons to Jean-Paul Sartre? Could he have survived the direct democracy that he recommends to the Cubans?

Castro's democracy poses awkward problems for all his apologists. Their argument runs: (a) Castro could win any election overwhelmingly and, therefore, (b) elections are unnecessary or harmful and, anyway, (c) all previous Cuban elections were crooked. Here, again, it seems necessary to recall the A B C of democracy to people who pride themselves on being the only real democrats. The democratic mandate is not one that once given cannot be revoked; it is of the essence of democratic consent that it must be periodically renewed. Most observers estimated Castro's popular support at 90 percent or more in January 1959, and at 75 percent or more a year later, but it may well be, as some claim, that the figure has been cut to 50 percent or less at the present time. It is no longer certain that he could win any election overwhelmingly or at all.

Footnotes at end of speech.

There have been three stages in Castro's attitude toward elections. First, he promised them. Then he said they were not immediately feasible. Now he ridicules them. In effect, he once said: "Cuba has never had an honest election and a truly free press. I will show Cuba how to have them." Now he says: "Cuba has never had an honest election and a truly free press. Therefore, Cuba has no right to have them under me." Here, in essence, are the two revolutions of Fidel Castro.

The problem of elections is evaded by the counteroffer of something even better. Huberman and Sweezy write: "What we do maintain is that the revolution itself gives the Government a far more democratic mandate than the freest of free elections ever could, and that it is the sacred duty of the Government to carry out the oft-announced platform of the revolution before it comes back to the people asking for either approval or further instructions." What revolution? What platform? The revolution to restore the constitution of 1940 and hold elections in 12 to 18 months? Or the revolution against the constitution and against elections for an indefinite period? How can the Government come back to the people for approval and further instructions when it has never once gone to them for approval or instructions?

The reference to the "oft-announced platform of the revolution" is simply incredible. Huberman and Sweezy might have been less tempted to make it if they had not successfully avoided stating that platform. They themselves tell a story which belies it. According to them, the first draft of the agrarian reform law contained no provision for cooperatives. All the revolutionaries around Castro believed that the peasants were not ready for them. The decision to have them was made by Castro alone against the better judgment of his closest advisers and adherents. By Huberman and Sweezy's own admission, then, Castro did not carry out the oft-announced platform of the revolution as anyone else had understood it in this key area; he carried out a basic revision of that platform to the surprise of everyone but Fidel Castro.[8]

But there is something even more deeply objectionable to this reasoning. It implies that anyone who claims to possess the true idea of the revolution confers on himself a more democratic mandate than any of the people, even in the freest of free elections, can give him. The next step—and revolutionists have taken it—is to say that it is democratic to make the revolution without the people or despite the people—in, of course, the people's interest. Out of such revolutions have invariably come the worst tyrannies.

7. SCAPEGOAT HISTORY

While some writers see everything but communism in Castro, others see nothing but communism. The most extreme version of this second school of thought may be found in the book, "Red Star Over Cuba," by Nathaniel Weyl. Weyl knew the international Communist movement from the inside during the 1930's—he has testified that he once belonged to the same American party unit as Alger Hiss—and he has also written a book on Mexico's agrarian reform under ex-President Lázaro Cárdenas. There is no indication, however, that he has had a personal knowledge of Cuba in the last 2 years or at any other time.

Much of Weyl's book is based on police and intelligence sources, such as the Batista regime's Bureau of the Repression of Communist Activities (BRAC). A lurid series of articles in a sensation-mongering New York tabloid is treated as if it were a serious historical source. The recklessness with which Weyl uses his materials, good, bad, and dubious, is matched by that of his views. These range from the conviction that Fidel Castro has been a trusted Soviet agent since 1948, when he was little more than 21 years old, to the imputation that Cuba was lost to communism by appeasement-oriented officials of the State Department. The implicit thesis of the book was stated by Senators JAMES EASTLAND, Democrat, of Mississippi and THOMAS DODD, Democrat, of Connecticut of the Senate Internal Security Subcommittee, whom Weyl quotes: "Cuba was handed to Castro and the Communists by a combination of Americans in the same way that China was handed to the Communists." In effect, this is the extreme rightwing case against Castro and those who allegedly put him into power.

Weyl's methods hardly inspire confidence in his results. He makes some members of the State Department the butt of his indignation for having failed to accept the evidence that Castro has been a Communist and Soviet agent for a dozen years. But, for some reason, he fails to mention that Gen. C. P. Cabell, Deputy Director of the U.S. Central Intelligence Agency, testified in November 1959, before the Senate Internal Security Subcommittee (one of his favorite sources) that "we believe that Castro is not a member of the Communist Party, and does not consider himself to be a Communist." Presumably the CIA had gone to some trouble to find out all about Castro's past political allegiances and was less riddled than the State Department with appeasement-minded subordinates (Weyl's phrase for then Under Secretary Christian Herter, Assistant Secretary for Latin American Affairs, Roy R. Rubottom, and Director of the Caribbean Division William A. Wieland). The CIA may have been wrong, but its evaluation of the evidence certainly has a bearing on Weyl's case against members of the State Department with a similar view.

Weyl, however, cites the testimony before the Senate Internal Security Subcommittee of Raphael Díaz Balart (Castro's former brother-in-law), who worked for Batista to the end. He writes that Díaz Balart gave "basically the same account" as that of Dr. Emilio Núñez Portuondo, Batista's former Prime Minister, who declared that "Fidel Castro subordinated himself to Communist Party discipline during his first year at the university (1945–46) and used his party name of Fidelio." Weyl then quotes those portions of Díaz Balart's testimony which indicate that Castro and the Communist students had had a very nice understanding about helping each other. But he does not quote Díaz Balart's direct assertion: "No, he was not in that moment a member. He was just in that moment an opportunist leader who wanted to promote himself." Basically, Díaz Balart gave anything but the same account as Núñez Portuondo.

Weyl also plays fast and loose in his references to Communist money allegedly put at Castro's disposal in the Sierra Maestra. He quotes from the articles by two newspapermen in the New York Daily News: "Once, said a man who was close to Fidel, Carlos Rafael Rodriguez, an active member of the Communist Party in Cuba, arrived with a dozen men loaded with money. It came to $800,000 and Fidel hugged him and shouted, 'Now we're ready to win the war.'" Thus Weyl quotes two newspapermen who quote "a man who was close to Fidel." But some 30 pages later, Weyl writes: "We have seen that Carlos Rafael Rodriguez, who was not only a member of the Political Bureau of the Cuban Communist Party, but its brains, went to the Sierra Maestra to bring Fidel Castro almost a million dollars." There is no doubt about Rafael Rodriguez' journey to the Sierra Maestra in June 1958—he readily admitted it to me when I talked to him last spring—but only a reader with a short memory would have seen that Rafael Rodriguez had brought Fidel Castro almost a million dollars. Perhaps he did, but the evidence is third-hand at best. Nevertheless, Weyl goes on to assert that "Fidel Castro's forces won primarily because they had almost unlimited supplies of money."

How much more complex Cuban politics can be than Weyl appears to make it may be gathered from his reference to Raúl Roa. Weyl writes that one of the Cuban Communist Party's "charter members and early leaders was Raúl Roa, whom Fidel Castro would later appoint Foreign Minister of Cuba." That is all. From this a reader might suppose that Roa was just another Communist functionary in Castro's entourage. But Roa has had a rather more varied political career. He wrote an article in Mexico in 1956 denouncing the crimes, disasters and outrages perpetrated by the Soviet invaders in Hungary. This article, together with other uncomplimentary references to communism, were reprinted in his book, "En Pie," issued by an official publishing house in Cuba in October 1959. The Communist leader, Blas Roca, in the official Communist organ, Hoy, of March 11, 1959, denounced Roa as a plattista—the historical equivalent of an "agent of American imperialism."[9] Yet Roa has become a servile spokesman of the communism and Soviet Union which he had many times condemned. He has never, however, completely won the trust of the Communists, one of whom has been put in as his under secretary.

Weyl also identifies Faustino Pérez as a Communist on the basis of Batista's sources. The official Cuban Communists have always blamed Pérez (the leader of the former Havana underground) for the failure of the April 1958 strike on the ground that he refused to make a deal with them. They took their revenge in November 1959 when he was ousted from Castro's government for protesting against the treatment of Maj. Hubert Matos. Weyl even cites a Cuban underground report that Matos worked for the Communists as early as 1957, without saying a word about the price Matos has paid for his anticommunism. Such blunders are inevitable in a book which accepts Batista's and Trujillo's sources uncritically. Communists, ex-Communists, non-Communists and opportunists are indiscriminately lumped together. Every bit of evidence that does not fit the book's thesis is ruthlessly suppressed or glossed over. All the hard problems of Castro's political developments are oversimplified and vulgarized.

Sometimes a reader of both the Mills and Weyl books might be hopelessly puzzled. Mills' Yankee is taunted with the question, "What did you do—about the weapons, for example, the Yankee government kept sending—and sending—and sending—to Batista?" But in Weyl's book, former Ambassador Earl E. T. Smith says of the U.S. decision to stop sending arms to Batista in March 1958, that "the psychological impact on the morale of the government was crippling." In his recent book, "Respuesta" (Reply), published in Mexico, Fulgencio Batista also complains bitterly against the harmful effect of the U.S. embargo on arms. A reader of Mills' book would never know that the arms had ever been cut off. A reader of Weyl's book would never know that the effect of the arms embargo was partially undone by the failure to withdraw the military mission.

Weyl's chief American scapegoat is Herbert L. Matthews of the New York Times. In February 1957, Matthews published three articles and photographs which proved that Castro was alive, and he vouched for his idealism, courage, and innocence of communism. The chief count against William Wieland seems to be that he advised the newly appointed Ambassador Smith to be briefed by Matthews before assuming his post. Rubottom's main misdeed appears to have been that he told a Senate subcommittee on De-

---

Footnotes at end of speech.

cember 31, 1958, the day before Batista's flight, that "there was no evidence of any organized Communist element within the Castro movement or that Senor Castro himself was under Communist influence." As if this were not trouble enough for Rubottom, he also stands accused of having been the protege of Dr. Milton Eisenhower, whom Weyl brushes off as "a well-intentioned, vaguely leftist, former New Deal bureaucrat."

Ambassador Smith's briefing by Matthews, which promises to become a minor cause celèbre in some circles of American politics, runs true to form in Weyl's book. On checking, I found that Ambassador Smith had testified: "I spent 6 weeks in Washington, approximately 4 days of each week, visiting various agencies and being briefed by the State Department and those whom the State Department designated." He also said that "in the course of 6 weeks I was briefed by numbers of people in the usual course as every Ambassador is briefed." One of these people, suggested by Wieland, was Matthews. Weyl converts this testimony to: "Ambassador Smith made the remarkable disclosure that Wieland sent him to none other than Herbert Matthews to get his briefing on Cuban affairs before departing for his post in Havana." Thus a briefing is transformed into his briefing, as if Matthews were the only one to brief Smith. And it is hard to understand what is remarkable about the recommendation of Matthews in May 1957, among many others, since at the time he was one of the very few Americans who had talked to Fidel Castro.

Some other testimony before the Senate Internal Security Subcommittee, which Weyl does not quote, might not have been irrelevant. According to Batista's commander in the Sierra Maestra area, Col. Ugalde Carrillo, his forces there numbered 6,000 to 7,000. He estimated Castro's men at 700 to 800. In addition, Batista's army contained more than 33,000 men elsewhere. This force of over 40,000 had for years obtained as much arms as it had wanted from the United States and elsewhere. The American Ambassador from 1953 to the middle of 1957, Arthur Gardner, was so pro-Batista that, as Mrs. Ruby Hart Phillips (the longtime New York Times correspondent in Havana) has written in her recent book, the dictator was embarrassed, because he thought that the Ambassador was overdoing it. Despite Matthews' remarkable briefing, Gardner's successor, Earl Smith, was so anti-Castro that his subordinates pleaded with him in vain to be less partisan. And despite Matthews' pro-Castro articles of February 1957, Castro's entire force 14 months later numbered only 300 (according to Mills) and at most 800 (according to Ugalde).

The forces at Batista's disposal were to the very end so superior in numbers and weapons that only a vast popular revulsion can account for Batista's debacle. Batista's chief of staff, Gen. Francisco Tabernilla, came much closer to the truth when he was asked whether the army could have successfully resisted Castro's march on Havana. "It could," he replied, "but not for a long time, because by that time, the people of Cuba were already against the regime of Batista, and there is no army, once the people get up in arms, that can suppress it."

Herbert Matthews has expressed his latest views in the "Hispanic American Report" (August 29, 1960, Stanford University). He has evidently been saddened by the development of Castro's regime into a dictatorship, without freedom, under the control of one man. He maintains: "Despite strong resemblances, it is not Marxism, communism, or fascism, but it is getting close to a totalitarian structure of some sort." Yet, even as Matthews wrote these words, Guevara was characterizing the Cuban revolution as implicitly Marxist. Matthews also continues to resist the evidence of Castro's deliberate policy of aid and comfort to the official Communists. For example, he declares that "Fidel played into their hands unwittingly from the beginning by allowing his 26th of July movement, which had made and won the revolution, to wither away. This left a vacuum into which the Reds naturally moved." Unwittingly? It was, as has been admitted, a coldblooded decision, no more unwitting than the more recent one to allow the rebel army to wither away. Unlike some pro-Castro apologists, however, Matthews does not pooh-pooh the possibility of Communist domination. On the contrary, he regards it as so far advanced that the point of no return does not seem far away. But in his anxiety to absolve Castro himself of the prime responsibility, he sometimes argues that Castro's pro-Communist policy was logical, sometimes that he blundered into it, and sometimes that he was pushed into it. In effect, Matthews' faith in Castro has dimmed but not died, and he is still capable of writing: "Paradoxical though it may seem, Americans should be praying that nothing happens to Fidel Castro. Any hope of changing the situation for the better lies with him."

8. WHOSE REVOLUTION?

On one thing Mills, Johnson, and Weyl almost agree. For Mills, Castro's regime is "a revolutionary dictatorship of the peasants and workers." For Johnson, it is a "genuine dictatorship of the proletariat." For Weyl, it is "a dictatorship of the proletariat." What can these long-suffering, ill-defined words mean in relation to Cuba today?

When I visited Cuba last spring, the Cabinet—a fair sampling of the top leadership—was made up of eight lawyers, three former students, two professors, one architect, one engineer and the like. Most of them still hold the same offices or have been replaced by people of the same type. Everyone attended a university (some in the United States), came from upper- or middle-class homes, and became or aspired to become a professional or intellectual. Not a single one represents in any conceivable sense the peasantry or proletariat, or owes his position to its organized strength or pressure. What they are they owe solely to Fidel Castro, and they are responsible to him alone. This much is recognized by Mills who flatly states that Castro possesses "virtually absolute power" in Cuba today. But where does that leave the "dictatorship of the peasants and workers?"

Reflecting on the situation as they saw it in the spring of 1960, Huberman and Sweezy gave the peasantry the decisive role in the victorious revolution, made Castro the "embodiment of the revolutionary will and energy of the peasantry," and extolled the Cuban peasantry as "perhaps one of the world's most deeply revolutionary classes" and "as radical a social class as any in the world today." Six months later they returned to Cuba and discovered that the peasantry had been superseded as the "most revolutionary class" by the working class and that the peasant manned and nourished rebel army had suffered a relative eclipse. They were delighted in the spring and they were enchanted in the fall; the peasant revolution was wonderful and the swift dispossession of the peasant revolution was even more so. But why the peasantry should have been superseded if it really was "as radical a social class as any in the world today," they do not try to explain. It is conceivable that the class which had really made the revolution, which the Lider Máximo embodied, and which was perhaps the most deeply revolutionary class in the world today, would permit itself to be pushed into the background without a word of protest or token of resistance? Is this the behavior of a class toward its revolution?

The process thus conjured up is clearly mythological. Those who gave the revolution to the peasantry could also take it away. The peasantry never had in its hands any of the levers of command of the revolution, before or after the victory. The revolution was made and always controlled by declassed sons and daughters of the middle class, first in the name of the entire people, then of the peasants, and now of the workers and peasants. At most the revolution is doing things for and to the peasants and workers. The good and evil in these things may be open to debate, but who decides these things and to what class they belong are not. For Marx, the notion that the peasants would have been the driving force of a socialistic revolution would have been simply unthinkable; the idea that the working class would have to be swept into a socialist revolution after it had been made by another class and as a mechanical result of nationalization from above, equally so.

The alleged role of the working class in this revolution is just as fanciful as that attributed to the peasantry. In December a few hundred authentic proletarians employed by the Cuban Electric Co. staged a protest march from union headquarters to the Presidential Palace. The rank and file was discontented because the new management of the nationalized electric company had cracked down on privileges long tolerated under the dictatorship and thereby had reduced its standard of living. The leadership, headed by an old 26th of July militant, was enraged because the central Trade Union Federation (now completely controlled by the Communists) had moved to oust it. The rebellion was quelled by the flight of the union leaders to foreign embassies and a long, angry speech by Prime Minister Castro. He admitted that a large part not only of the electric workers but of the mass of workers in general was confused. He scorned those who would exchange the right of the working class to govern and direct the country for a plate of lentils. At one point, he declared: "Do you know what is the first goal for which the working class should fight, the only goal for which a working class in a modern country should fight fundamentally? For the conquest of political power."

This speech was noteworthy for the political vocabulary employed for the first time by Castro, but it told much more about him than about the Cuban proletariat. Would it be necessary to exhort the proletariat to take power in a dictatorship of the proletariat? And if it followed his advice, would all the lawyers in Castro's government remain in power? Of all the dictatorships of the proletariat which have been bestowed on us in this century, Castro's is surely the least convincing.

Events have also dealt unkindly with Jean-Paul Sartre's clairvoyance. In the introduction (dated September 12, 1960) to the Brazilian editon of his series of articles on Cuba, he wrote: "No, if Cuba desires to separate from the Western bloc, it is not through the crazy ambition of linking itself to the Eastern bloc." He also communicated his certainty that its objective is not to strengthen one bloc to the detriment of the other. On December 10, Major Guevara was crazy enough to announce publicly in Moscow: "We wholeheartedly support the statement adopted by this conference [of 81 Communist parties]." It would be hard to imagine any way of linking Cuba more closely to the Eastern bloc or of strengthening that bloc to the detriment of the West than the wholehearted support of this statement.

The attitude of Paul Johnson in the New Statesman toward Latin America in general and Cuba in particular smacks of a peculiar

kind of anticolonial colonialism. For him, their basic economic problems cannot be solved through mere electoral victories, since effective legislation requires the assent of the armed forces. Therefore, only Fidelismo or communism—which he regards as natural enemies—remain as practical alternatives. In the case of Cuba, he seems to have cut the ground under his own argument, since the armed forces disappeared and the need for their assent vanished with them. The main theme of Castro's "History Will Absolve Me" speech of 1953 and of all his statements until he assumed power was that Cuba's social and economic problems could be solved within the framework of the constitution of 1940. But there was one thing the constitution excluded—the dictatorship of a Lider Máximo and his junta. The colonialists used to say that some peoples were not fit for anything but some form of imperialism. The anticolonial colonialists say that some peoples are not fit for anything but some form of totalitarianism.

In the end, one wonders how far such words as "socialism," "democracy," "Marxism," and "dictatorship of the proletariat" can be stretched. For some of Castro s admirers, they can be stretched to the point of meaninglessness.

Five years ago, for example, Huberman and Sweezy were shocked by Nikita Khrushchev's expose at the Soviet Communist Party's 20th Congress of his predecessor's vices. After a suitable period of reflection and repentance, they came up with a theory of Stalinism as "good ends with bad means." They explained that Stalinism "became the instrument of the advance to socialism" but, unhappily, "incorporated the methods of oriental despotism—murder, mendacity, duplicity, brutality, and above all arbitrariness." [10] This view of Stalinism has its roots in a certain conception of socialism. In this conception all that essentially matters is that the economy should be nationalized. The nationalizing state may be murderous, mendacious, guilty of duplicity, brutal and arbitrary, but it is still "socialist." And by separating the ends from the means, the political from the economic, what the state controls from who controls the state, socialism can be arrived at through oriental despotisms of pseudopeasant revolutions.

9. THE CUBAN VARIANT

Marxian socialism was predicated not merely on a nationalized economy but on the harmonious development of several factors. The achievement of economic democracy by the socialist revolution presupposed the achievement of political democracy by the bourgeois-democratic revolution. For this reason, the classical Marxists took political democracy for granted, as we no longer can, and they assumed that economic democracy would be built on it. They conceived of socialism as the culmination of capitalist development, without which the prerequisites of socialism—an advanced industrial economy and a preponderant, impoverished, class-conscious proletariat—could not be fulfilled.

History has not worked out that way. Where capitalism has been successful, the prerequsite of a preponderant, impoverished, class-conscious proletariat has not been fulfilled; and where capitalism has not been successful, the prerequsite of an advanced industrial economy has also not been fulfilled. Either the middle class has not been strong enough to achieve a viable capitalist economy or it has been strong enough to bar the way to a socialist economy.

This familiar dilemma of modern socialism has spawned all sorts of bastard and spurious socialisms. Instead of the proletariat, they issue out of the middle class, but of that portion in revolt against the failure of the middle class. These sons and daughters of the bourgeoisie gravitate irresistibly toward the ideology of socialism, but they can make use only of those aspects of socialism which conditions permit them to utilize. They cannot be faithful to the fundamental ideas of the socialist tradition—that the proletariat should liberate itself, that there are prerequisites of socialism, especially an advanced industrial economy, and that socialism must fulfill and complement political democracy.

But there is one aspect of socialism on which they can seize without delay or restraint. They can find in Marxism an ideological sanction for the unrestricted and unlimited use of the state to change the social order, and they can find in Leninism a sanction for their unrestricted and unlimited power over the state. In classical Marxism, the role of the socialist state was conditioned by the stage of development at which it was put into effect and by the class relationships which governed its realization. In this caricature of socialism, however, the only prerequisite that really matters is the seizure of power, no matter by whom, how, when, or where. Thus we live in a time not only of Cuban socialism but of Indonesian socialism and even of African socialism.

This phenomenon indicates that we are badly in need of new words to assume some of the burden that has been thrust on socialism. The order of development cannot be inverted—first the revolution, then the prerequisites of socialism—without resulting in a totally different kind of social order, alien to the letter and, infinitely more, to the spirit of socialism. These inverted revolutions from above belong to what, for want of a better word, we must call the Communist family of revolutions, which, in practice, serve to industrialize the peasantry rather than to liberate the proletariat. But even this family has grown so large and now covers so much ground that its name does not necessarily guarantee full understanding.

For about 30 years, the only communism was Russian communism and, in effect, communism was whatever the Russians said it was. Then, in 1948, came the Titoist variant—a small Communist state in rebellion against Russian domination—and, at the end of 1949, the Chinese variant—a Communist state so vast that it could rival Soviet Russia in power. But both the Yugoslav and Chinese Communist leaderships derived from a common source, the Comintern, which from 1919 to 1943 was tightly controlled by and wholly dependent on the Russian Communists. Thus far the line of decent was clear and direct.

Now a new branch of the family has begun to emerge. It is related to the national-revolutionary movements which the world Communist movement long before Khrushchev had recognized as a distinct force and with which it had sometimes collaborated and sometimes competed. As late as 1954, the Soviet press attacked Ghana's President Kwame Nkrumah and his party as a screen for British imperialism. Under Khrushchev, however, the pendulum has swung over to the outermost limits of collaboration. This policy, apparently one of the points at issue between the Russian and Chinese Communist parties, reflects the undeniable fact of the last few years that no Communist has been a match for Nkrumah in Ghana, Sékou Touré in Guinea, or Fidel Castro in Cuba. The local Communists were, therefore, advised to bide their time and achieve their goal in two stages instead of one. First the national-revolutionary movement could win power, then the Communists could win power in the national-revolutionary movements.

This strategy owes its success to a shrewd assessment of the national-revolutionary movements. They are far more capable than the Communists of achieving national unity against the common enemy. But the common enemy, not a social and political program, gives them their raison d'être. As a result, they are much more inspiring and effective, before taking power than they are afterward. Filling the political and social vacuum the day after the revolution gives the Communists greater opportunities than they had during the revolution. Above all, the nationalist leaders are usually men whose magnetic mass appeal is combined with intellectual fuzziness, adventurist temperaments, and insatiable egos. Their strong point makes them indispensable and their weak points vulnerable to the Communists. They serve the Communists only on condition that the Communists should appear to be serving them. Their political school was nothing like the Comintern, and they represent a variant still farther away from the Russian prototype than Marshal Tito or Mao Tse-tung.

This variant has gone farther in Cuba than anywhere else, though the story is far from finished there, too. For this reason, Fidel Castro has cast such a large shadow from such a small island.

The phenomenon of Fidel Castro has, as yet, received little serious study. His revolution may not be the one that he promised to make, but it is for all that a genuine revolution. It is related to other upheavals in countries with similar national and social resentments and inequalities. It cannot be dismissed as nothing more than a diabolical aberration because it is not what it claims to be. It belongs to a new type of system, neither capitalist nor socialist, that emerges where capitalism has not succeeded and socialism cannot succeed. In most pro- and anti-Castro propaganda, the revolution that brought him into power is so ruthlessly distorted that his entire political development begins and ends in fantasy. The serious student will seek answers to questions that the mythologists of "Left" and "Right" do not even ask. How could a revolution basically middle-class in nature be turned against that class? How could a revolution made without the official Communists and for the most part despite them become so intimately linked with them? How, in short, could Fidel Castro promise one revolution and make another, and what consequences flowed from this revolutionary schizophrenia?

The answers, as I have suggested, take us into territory that has been as yet hardly explored. For the Communists and the Fidelistas to meet, both had to travel some distance from their starting points. The Communists had to make up their minds that they could win power, not against Fidel but only through Fidel. In all probability, this decision was made after an internal struggle in the first half of 1958 between the old guard Stalinist leadership headed by the general secretary, Blas Roca, and a more flexible Khrushchevite group represented by the editor of the party organ, Carlos Rafael Rodriguez. Some competent observers believe that the deal was made in the Sierra Maestra before Castro took power and that all his moves have been determined by this pact. Others think that he went through a period of wavering and vacillation in the first months of his regime. In any case, his major decisions were made so secretively and within such a small group that even former members of his government profess to be uncertain of his commitments and motives.

The inner history of Castro's regime remains to be told. Its main lines, however, have become increasingly clear. Fidel Castro—as much demagog as idealist, as much adventurer as revolutionary, as much anarchist as Communist or anything else—was suddenly and unexpectedly catapulted into

Footnotes at end of speech.

power without a real party, a real army, or a real program. In the struggle for power, he had put forward no original economic or political ideas and had stayed well within the limits of traditional democratic reform and idiom in Cuba. He differed from Batista's other enemies chiefly in the tactics he was willing to employ, in his faith in armed struggle and his willingness to organize it. But once power came into his hands, he refused to permit anything that might lessen or restrict it. He would not tolerate the functioning of a government which was not the facade of his personal rule or of a party which might develop a life of its own. His power and his promises were from the first incompatible, and this contradiction forced him to seek a basis for his regime wholly at variance with that of the anti-Batista revolution. He did not have the disciplined and experienced cadres, the ideology, and the international support to switch revolutions in full view of the audience. Only the Cuban and Russian Communists could make them available to him. Having formerly collaborated with Batista (whose government once contained both Juan Marinello and Carlos Rafael Rodriguez), the Cuban Communists were easily capable of collaborating with Castro. The united front of Communists and Fidelistas is heading, as Guevara recently intimated in Moscow, toward a united party, and if it materializes, Fidel Castro will certainly go down in history not as the Líder Máximo of a new movement but as the Pied Piper of an old one. Still, as long as the Communists need him at least as much as he needs them, further surprises cannot be ruled out; Fidel's ego may give the Communists as much trouble as it has given many others.

When I returned from Cuba last spring, I wrote: "Castro once spoke of his revolution as 'liberty with bread and without terror.' If he continues to push too hard, too fast, and too far, Cuba may yet have more terror without either bread or liberty." [11] Unfortunately, my worst apprehensions have come true, and Fidel Castro has given Cuba not a national revolution but an international civil war.

---

[1] In their book, Huberman and Sweezy devote less than a page to the working class, compared to pages about the peasantry, and they vaguely suggest far more working-class support for the revolution before 1959 than was actually the case. In part of one sentence elsewhere in the book, however, they admit that growing support among urban workers came to Castro after he took power. In the subsequent article in the Monthly Review of December 1960, they imply the peculiar backwardness of the Cuban workers by writing that "the nationalizations of the summer and fall have swept the working class into the revolutionary process."

[2] Castro himself described his isolated and near-desperate situation in his letter of Dec. 31, 1957, to the so-called Council of Liberation: "For those who are fighting against an army incomparable in number and in arms, without any support during a whole year other than the dignity with which we are fighting for a cause which we love sincerely and the conviction that it is worth while to die for it, bitterly forgotten by fellow countrymen who, in spite of having all the ways and means, have systematically (not to say criminally) denied us their help." The entire document is contained in Jules Dubois' "Fidel Castro" (1959), to this date the best documentary source, though its pro-Castro bias has been regretted and repudiated by its author.

[3] Castro's manifesto of Mar. 12, 1958, reads in part: "2. That the strategy of the final stroke should be based on the general revolutionary strike, to be seconded by military action."

[4] Declaraciónes del P.S.P., 12 de abril de 1958.

[5] Verde Olivo, Oct. 8, 1960.

[6] Castro's pre-1959 promises are dealt with by Huberman and Sweezy in a peculiar way. Twelve-and-a-half pages of the 1953 speech are cited, but omitted is the five-point program on which he said the revolution was based. This program began: "The first revolutionary law would have restored sovereignty to the people and proclaimed the constitution of 1940 as the true supreme law of the state, until such time as the people should decide to modify it or to change it." The others provided for grants of land to small planters and peasants, with indemnification to the former owners; the right of workers to share in profits; a greater share of the cane crop to all planters; and confiscation of all illegally obtained property.

While the speech makes other important points, this is the only itemized program in it, and it is hard to see how its omission can be justified. The unity pact of July 1958 is handled in the same way. It contained three points: a common strategy, postwar normality, and a minimum governmental program. I have quoted the second point in full in the text. Huberman and Sweezy cite a paragraph in this unity pact which asked the United States to cease all military and other types of aid to Batista, but ignore the three-point program, which might have put Castro's promises in a somewhat different light.

Mills simply ignores the whole collection of Castro's prepower pledges.

[7] One of Castro's titles is also "El Jefe de la Revolución," as on the front page of the leading semiofficial newspaper, Revolución, December 16, 1960. The same issue contains two "lider máximo."

[8] The present-day Cuban cooperatives are usually traced back to Castro's "History Will Absolve Me" speech in 1953. A careful reading of the key passage in that speech hardly bears this out:

"A revolutionary government, after transferring the ownership of parcels of land to the 100,000 small farmers who today pay rent, would proceed to a definite solution of the land problem by, first, establishing as the constitution orders, a maximum acreage for each type of agricultural enterprise and acquiring the excess acreage by means of expropriation, recovering lands usurped from the state, filling in swamp and marsh lands, planting vast tracts and reserving zones for reforestation; second, distributing the remaining land among farming families with preference given to the largest ones, encouraging agricultural cooperatives for the common use of costly equipment, cold storage, and a uniform professional direction in cultivation and breeding, and, finally, to facilitate assistance, equipment, protection, and useful knowledge to the farming population" ("Pensamiento Político, Económico y Social de Fidel Castro," Editorial Lex, Havana, 1959, pp. 44–45).

I have purposely translated this passage in its literal form in order to give the reader a sense of where cooperatives belonged in the total scheme of Castro's 1953 agricultural policy. They obviously occupied a minor place in the general scheme; they were intended, in the traditional meaning of cooperatives, to service independent landowners. These 1953 cooperatives were clearly not the state farms of 1959. In addition, Castro seems to have dropped or rarely mentioned cooperatives after 1953.

The version of this passage in the Huberman-Sweezy book (p. 41) is taken from the official English translation of this speech, published by the Liberal Press, New York. For some reason, the phrase "for the common use of costly equipment, cold storage" was omitted from this translation, as a result of which the whole section on cooperatives is somewhat distorted. In 1953, Castro's "agrarian reform" meant what it has usually meant: land for landless peasants. But, then, Huberman and Sweezy discovered, via a translation, that Cuban peasants do not want their own land; they did not even understand the question of owning their own land "until it had been repeatedly rephrased and explained" (p. 116, note). Huberman and Sweezy add that this incident set them off on their entire interpretation of the Cuban revolution. If so, the Cuban peasants are truly unique, and no one apparently ever understood them before—certainly not Fidel Castro who put so much emphasis on giving them their own land in 1953 and after.

[9] Senator Orville H. Platt gave his name to the famous amendment which empowered the United States to intervene in Cuba; it was revoked in 1934. The Platt amendment was written into the Cuban Constitution as an appendix in 1901 and embodied in the United States-Cuban Treaty of 1903. Weyl manages in a single sentence (p. 55, note) to get Senator Platt's first name and the date of his amendment wrong—a curious feat for a student of Cuba.

Hon. A. R. Stout

EXTENSION OF REMARKS
OF
HON. OLIN E. TEAGUE
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. TEAGUE of Texas. Mr. Speaker, we have just finished in this body debate on the judgeship bill. I wish to insert in the RECORD an editorial which appeared in a recent issue of the Wexahachie Daily Light which I feel sets forth my concept of a Federal judge. Like the editorial states, I personally feel that the Honorable A. R. Stout, present district judge for the 40th district of Texas. Judge Stout has been a friend of mine of long standing, and the following editorial is, indeed, a tribute to his abilities.

JUDGE STOUT MERITS APPOINTMENT

A Federal judgeship has become a position of increased importance, because of the ever increasing number of cases which come under the jurisdiction of the Federal courts. Soon two, and perhaps three, new Federal judges will be appointed to serve the northern district of Texas.

Citizens and lawyers alike are vitally interested that the imminent appointments to Federal judgeships be made with due regard to demonstrated competence on the bench, and our national leaders are to be commended for their public statements that competence, rather than politics, will control the appointments.

Competence on the bench requires a careful blending of scholarship in the law, experience as a trial judge, and a wide knowledge of human experience and human frailties which lead to lawsuits. These qualifications can only be attained by years of intelligent devotion to duty. Success in attaining the goal can only be judged by a man's accomplishments in the related fields of legal scholarship and trial experience.

In weighing competence, Ellis County can be proud that it offers a potential Federal district judge in the person of A. R. Stout

who satisfies the rigid requirements. His legal research, published works, and addresses at legal institutes have demonstrated his scholarly approach to the law, with due and proper regard for legal precedent. His 23 years as a trial judge have demonstrated his practical applications of law in an ever-changing era. But, most vital of all, his unquestioned integrity as a judge would maintain the high level of confidence which this country has always had in the fairness of its Federal courts.

Ellis County is right in urging that the said A. R. Stout be given foremost consideration for appointment as a Federal judge.

Holders of Prime Government Contracts Urged To Spread Work Out Among Small Firms

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following address delivered by Hon. Irving Maness, Deputy Director of the Small Business Administration before the Small Business Symposium at Chicago on April 5.

Mr. Maness' remarks are cogent and contain advice that holders of prime contracts should heed:

ADDRESS BY IRVING MANESS, DEPUTY ADMINISTRATOR OF THE SMALL BUSINESS ADMINISTRATION FOR PROCUREMENT AND TECHNICAL ASSISTANCE, BEFORE THE SMALL BUSINESS SYMPOSIUM, CHICAGO, ILL., APRIL 5, 1961

I am happy to be here in Chicago to take part in this important symposium. It is good for small and large business to get together for such a constructive purpose.

The SBA is very glad to participate in this meeting, bringing together as it does, small business concerns, high officials of the Air Force and Navy, political leaders and officials of the Flight Propulsion Division of the General Electric Co.

As you gentlemen know, the SBA is continuously interested in insuring that small business concerns obtain a fair share of the total Government purchases. The Small Business Act also enunciates this principle as the declared policy of the Congress. When one considers that the total Government procurement expenditures amount to $29 billion a year—that the U.S. Government is by far the largest single consumer of goods and services in our economy—then it readily becomes apparent that it is important for small firms to have an opportunity to share equitably in this continuing investment in our national security.

If I may be permitted to paraphrase Lincoln, "God must love small business, otherwise he would not have made so many of them." The fact of the matter is that about 96 percent of the business enterprises in our Nation are small and the maintenance of a healthy and vigorous small business community is essential to continued economic growth. While I do not believe that a business concern, small or large, should be dependent solely on Government contract work, I do subscribe to the premise that the continued welfare of our economy depends in keeping open the avenues of opportunity and competition for small business.

I shall tell you why I believe this. Small business has played a vital role as innovators in the development of new ideas, new products, and new processes. These are the elements that continuously stimulate economic development.

We in the SBA know, and the facts bear us out, that increased small business participation in Government procurement means more competition and more competition means better prices and improved quality.

Large business firms are very important to our economy and to the defense production program. No one, I think, would deny this. Defense procurement has shifted toward highly complex weapons and materiel which sometimes cannot be produced in their entirety by small business concerns. The trend is also toward the weapons system type of procurement, under which the prime contractor furnishes all the components for end items. These factors create a situation where the largest percentage of the dollar value of Government contracts go to large business concerns, and that is why the Congress has been concerned that the small firms be given a fair opportunity to share in the purchases and sales of the Federal Government. Many small business concerns do not have the opportunity to take on Government prime contract work. For them, the only possibility to participate in Government procurement is through the subcontract route.

The SBA believes in the type of cooperation that brings together the large prime contractor and the prospective small business subcontractor. In its subcontracting assistance program the Small Business Administration guides small business concerns in obtaining subcontract opportunities. Through its facilities the SBA is able to provide assistance to all parties at all levels. We are in a position to locate qualified small business concerns that can bid on specific items or services.

As part of this program, the Agency is contacting those prime contractors who have the largest Government contracts to arrange a cooperative program of subcontracting to small business concerns. Although some of the principal prime contractors contacted have not agreed to participate in such a program, 47 arrangements with primes have been concluded. These agreements are not limited to defense contracts, but include commercial production as well. All of these agreements are on a voluntary basis and additional informal arrangements are in effect with other prime contractors. We urgently hope that the SBA subcontracting program will be utilized more extensively because it can be of material assistance to large and small business and the Government procurement program.

The SBA is equally concerned in obtaining prime contract opportunities for small business concerns. SBA representatives continuously screen proposed purchases at the principal Government purchasing offices to set aside suitable procurements exclusively for small business bidding. The decision to set aside for small business all or part of a purchase, or class of purchases, is made jointly by the SBA and the purchasing agency.

Small firms that want to sell to the Government should obtain listing on all appropriate bidders lists in order to gain the opportunity to bid on purchases set aside for small business.

An important service of the SBA is that of referring prime contract opportunities to small firms. Under this program the SBA arranges with Government purchasing offices for its field offices to receive bid sets of many procurements which are susceptible to participation by small business concerns.

The SBA then notifies small business concerns which have come to it for assistance in selling to the Government, of the bidding opportunities suitable to their facilities. This service is provided until the firms have time to obtain placement on bidders lists of the procurement offices suggested by the SBA. Notices of future purchases are then received direct from the purchasing installations involved. This procedure enables the SBA to bring bidding opportunities to the attention of many small business concerns of which they otherwise would be unaware.

I have explained in some detail the programs developed by SBA to carry out its important assignment to help small firms gain a fair share of Government purchases and sales.

How effective have these programs been? From 1953 through December 1960, under this program small firms were awarded 105,559 Government contracts for slightly more than $4 billion.

But what is disturbing to the SBA, and to many Members of Congress as well, is that in the fiscal year 1960, for the first time, there was a decrease in the number and value of joint set-asides.

Even more significantly, the small business share of total military purchases of goods and services has been declining from 25.3 percent in 1954 to the low of 16.1 percent in fiscal year 1960. The loss amounts to a proportionate reduction of one-third in the small business share of defense work in the short space of 6 years.

So, it is apparent from these figures that although much has been accomplished, much remains to be done. I can assure you small business proprietors that we in the SBA are determined to make our procurement assistance program as effective as we possibly can.

In this we have the active support of President Kennedy who just recently issued instructions that small busineses, particularly in depressed areas, be given an opportunity to obtain a greater share of defense work.

President Kennedy has announced that his administration is going to try to increase by at least 10 percent the $3,440 million in military contracts allotted to small companies in the 1960 fiscal year.

Immediately upon taking office, our new SBA Administrator, John E. Horne, directed all SBA offices to concentrate their efforts on reducing the heavy backlog of business loan applications and to step up activities in Government procurement set-asides, giving priority to small firms seeking assistance in surplus labor areas.

In line with a Presidential directive, special action was ordered in surplus labor areas. The regional offices of SBA have been advised of the urgency of the situation and directed to give high priority to SBA activities in these areas.

The accelerated SBA program in labor surplus areas calls for the closest cooperation with procurement officers of other agencies to increase the number of procurement contracts for small business, to expand small business procurement set-asides and to secure additional prime subcontracting for small firms.

I can assure you that this much-needed cooperation is being obtained, and that the SBA is determined, in cooperation with other Government agencies, to increase the flow of Government contracts to qualified small firms.

Let me say, in closing, that symposiums such as this are of the highest value, and offer the strongest evidence that Government and business are natural allies. Our interests are closely intertwined.

This symposium, sponsored by General Electric's flight propulsion division, is a great forward step. I hope that in the months to come many other large firms follow this example. This teamwork between General Electric, the SBA, the various branches of the Armed Services and small business community in this great industrial area will, I am sure, pay great dividends.

For my part, I pledge that the SBA will work ceaselessly with and give full cooperation to all businesses, large and small, to the end that enterprising small producers will always have a chance to devote their ingenuity and their energies to helping build a stronger America.

Communists and Clergy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting editorial which appeared in the Pilot, Boston, Mass., on April 22, 1961, with reference to the book "Communism and the Churches," by Ralph Lord Roy:

COMMUNISTS AND CLERGY

Last year a very exceptional book was published which can still be read with great profit by thoughtful Americans. It was entitled "Communism and the Churches" and its author was Ralph Lord Roy. The aim of the study—almost 500 pages long—was to measure the involvement of the American churches in the Communist movement in this country and to weigh Communist influence in the religious area generally.

The topic is one that has at once a strange kind of fascination, since the two forces involved seem to be natural enemies. Communism is atheistic, materialistic, and antireligious; the churches by presupposition are concerned primarily with the spiritual life of man and his salvation. Between these two there is plainly an irreconcilable difference which makes anything like cooperation or long coexistence impossible. However, the fact is that a number of churchmen in America themselves joined the Communist Party, a larger number were plainly fellow travelers, and many more allowed themselves to be used unwittingly by the party for its own purposes. How explain all of this?

Mr. Roy in a very painstaking and patient way tells the story of these involvements, attempting to put each one into an appropriate context and striving to stay within the facts as they are known. It is possible to understand the "social gospel" and "social action" reasons why many fervent young ministers, for example, espoused leftwing causes which paraded under appeals to peace, democracy, social justice, civil rights, and human liberty. The Communists made adroit use of these appeals and, especially during the thirties, surrounded themselves with respectability in a manner that made deception easy.

It is possible to sift the evidence with objectivity and to discover certain patterns which expose the motives of those involved and the depth of their commitment. Mr. Roy suggests in summary, for example, that the number of Protestant ministers who actually joined the Communist Party may have been as small as 50 and certainly never more than 200. When one considers that there are half a million clergymen in the United States, this is a tiny percentage. But even for this group there must be an explanation and a careful study like this one helps us to understand the strange phenomenon of the churchman-Communist. More difficult to analyze was the very successful use of the front, where prominent names were carelessly given in support of the most dubious causes. Here some people were what are now called dupes, unwittingly taken in, others apparently knew the nature of the activity but still wished to be associated with it. Each person must be considered separately and his other actions weighed to get the full picture. Mr. Roy's book does this quietly, firmly, and without excitement.

We mention this study at this time because once again there are wild and inexact statements making the rounds on this subject. Although it is never possible to give precise figures on matters of this kind, it is possible to choose reasonable estimates based on the evidence. Everyone who likes to see a careful use of fact and evidence in a difficult and emotional context should read Mr. Roy's book and draw his own conclusions on its intelligence and fairmindedness. It will be hard to avoid the conclusion that his deductions are the final and valid ones in this case.

We may add a postscript which will be of special interest to Catholics. Although some Catholics in the labor movement were wooed, and even won, by the Communists the number was always minuscule. The clergy were apparently never involved in any way and the Catholic opposition to communism was always well known. This is not something about which we should feel superior but rather grateful to the church leadership which had so early diagnosed and condemned the ideology and tactics of the Communists.

Imports on Textiles and Apparels

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. SAYLOR. Mr. Speaker, from time to time I have stood on this floor and expressed my opinion and the majority opinion of the Commonwealth of Pennsylvania to seek some relief for the domestic coal and glass producers of Pennsylvania and the rest of the country.

I would now like to speak in behalf of the apparel manufacturers of my district and of the State as a whole. As some of the basic industries of my district have been forced to go out of business due to unfair competition, other industries have come in to help take up the slack. One of these industries is the apparel manufacturing group. My district enjoys a happy relationship with the Phillips-Van Heusen Shirt Corp. and we hope and are working for a larger employment by this company and for similar companies.

I am no isolationist. I recognize that foreign trade is a positive instrument in the assistance in raising living standards of workers throughout the world. But this does not blind me to the scramble for American markets from countries where wages, including all possible fringe benefits, are only a fraction of American wage rates. We have recently voted an increase in the minimum wage from $1 to $1.15. The Senate has voted a similar proposal with escalators to $1.25 an hour.

One does not have to be a trained economist to understand that the American manufacturer who must pay a minimum of $1.15 an hour cannot compete with industries in the Orient that pay from 10 to 29 cents per hour.

Let me take a simple mathematical formula carefully prepared by one of the largest apparel manufacturers in the country who buys exclusively from American mills. His actual cost breakdown per dollar of sales is as follows:

Materials	$0.60
Labor and overhead	.35
Taxes	.03
Profit	0.02
Total	1.00

Foreign apparel manufacturers who operate in low-wage countries pay only a fraction of what the American manufacturer has to pay and that breakdown runs:

Materials	$0.51
Labor and overhead	.03
Taxes	.02
Profit	.02
Total	.58

How does this come about? The great discrepancy between the American and oriental costs of labor and overhead are obvious, but this is compounded by the fact that the foreign manufacturer can buy American cotton at a subsidy of from 6 to 8½ cents a pound, depending on quality. This is roughly a subsidy of 25 percent of the total cost of raw material for the foreign manufacturer.

What kind of a policy is this that subsidizes foreign manufacturers at the cost to American taxpayers and in the last analysis, exports jobs that rightfully belong to American workers?

This is no narrow concept. As a member of the House Committee on Veterans' Affairs, I have a deep and abiding interest in the National Defense Establishment. It is a matter of record that next to steel, apparel and textiles rank next in importance to national defense. This Nation cannot allow itself to slip into a position where it is dependent on foreign sources of supply for clothing and equipment for our Military Establishment. We know the disasters that befell Germany and Japan because they could not supply their armies with sufficient clothing.

I listened the other day to my colleague, the gentleman from North Carolina [Mr. HENDERSON], point out that 40 percent of the budget for Camp Lejeune, the base of the 2d Marine Division for the Atlantic Fleet, is for equipment and supplies classified in the category of textiles. Mr. HENDERSON said that this was not just a matter of clothing of all types, but the essentiality of web equipment for such things as cartridge belts, rifle slings, and the hundreds of other military items of which textiles are an essential component.

We must not simply cling to old ideas because at one time or another we thought they were right. They were right at the time we expressed them, but in this rapidly changing world we must be alert to change our ideas with the changing world. I make no plea, nor do the apparel and textile industries of my State make any plea, to ban or prohibit imports. We know this is

impossible in the world in which we live, but we are also fully aware that laissez faire in foreign trade is no more reliable than laissez faire economics in the domestic scene. Adjustments must be made.

Some of us would go further in adjustments in many respects than others, but we should not blink the fact that unless imports of apparel and textiles are controlled on a quota basis, country by country and category by category, we are only increasing the hard core unemployment problem that our country faces.

This is especially true for my State.

We have a hard-core unemployment problem in the bituminous and anthracite coalfields and in glass-producing districts. The specialist on unemployment from the Labor Department said the other day the danger is that hard-core unemployment will increase. He made it clear that the increase in hard-core unemployment came from the unskilled and semiskilled. The vast number of people in the apparel industry would qualify as semiskilled. If they are dumped on the heap of the unemployed because we fail to regulate imports which gobble their jobs, then we have failed in our duty.

Many areas of the country, and this is true in my State, are hard pressed to find tax money to keep our communities running at a high level.

Gentlemen, if we force industries to close and lose the corporate income, and at the same time create unemployment, which loses individual income, where are we heading? It is my opinion that you know.

Let us not be derelict in our duty.

Operation California

EXTENSION OF REMARKS
OF
HON. FLORENCE P. DWYER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 13, 1961

Mrs. DWYER. Mr. Speaker, I am sure that many of our colleagues are very familiar with the excellent work being done by junior achievement programs throughout the country. By providing the necessary guidance and facilities, junior achievement makes possible a unique opportunity for young people to obtain a direct and personal understanding of the problems, procedures and rewards of business under the American free-enterprise system.

By operating their own junior achievement companies, under the auspices of a parent company, young people are introduced to the complexities of modern and highly competitive business. Accepting full responsibility for all aspects of business management, sales, distribution, production, cost control, and so forth, they learn by doing—not only the specific operations of business but the real value of developing the virtues of initiative, teamwork, reliability, hard work, and imagination.

Although my knowledge of individual junior achievement programs is limited, I can imagine no program anywhere in the country which surpasses that offered by Junior Achievement of Union County, Inc., in scope, numbers of young people participating, in the ambition and originality of its programs, and in the success of its operations. Credit for their outstanding record must go to the dozens of outstanding industrialists and businessmen who give so much of their time and experience to junior achievement and to J. Kenneth Roden, executive vice president of the Union County organization.

During the past junior achievement year, a special youth incentive program, called Operation California, was developed and executed. The winning participants are now enjoying the fruits of their achievements during a weeklong trip to California.

In order to acquaint our colleagues with the major features of this unusual and highly successful program, I include as a part of my remarks, first, the winning essay, entitled "Why I Believe in Our Free Enterprise System," submitted by William Christer of 702 Bayway Avenue, Elizabeth, as a part of Operation California, and an outline of the operations and objectives of Operation California prepared by Mr. Roden.

The essay and the outline follow:

JUNIOR ACHIEVEMENT
OF UNION COUNTY, INC.,
Elizabeth, N.J., September 12, 1960.

To: Junior Achievement Advisers.
From: J. Kenneth Roden, executive vice president.
Subject: Operation California.

Operation California is a three-pronged public relations, youth incentive, and youth educational project, planned, and developed by Junior Achievement of Union County, Inc. Pending final approval by the junior achievement board of directors, Operation California is tentatively scheduled for April 24 through April 29, 1961.

OBJECTIVES OF OPERATION CALIFORNIA

(1) To provide junior achievers and advisers with a positive, effective incentive program designed to stimulate a clear, complete understanding of the benefits and rewards of the American free enterprise system. The program will demonstrate that every individual, whether employee, manager, or community leader, must always be aware that the American way of life, the free enterprise system, depends upon personal initiative, creative thinking, responsible leadership, teamwork, and that each individual must carry his share of the load and discharge his responsibilities to the best of his ability. The program will further demonstrate that each individual's contribution, if properly utilized, will result in a profit to the individual, to the employer, to the community, and to the Nation; and that corporate profits will assure us of continued growth, prosperity and stability, all of which are more valuable and desirable than security through handout or a welfare state.

(2) To reverse the emphasis teenagers are placing on benefits and security in employment. Such attitudes contribute to a preference for a welfare state economy and fail to develop the full potential of the individual as an employee, manager, and community leader.

(3) To maintain the high standards of performance, productivity and prestige of the Junior Achievement program. Special emphasis will be placed on stimulating and developing personal initiative, creative thinking, responsible leadership, high attendance, punctuality on the individual and total company level, improved production techniques to result in reduction of operating costs, and aggressive and continuing safety programs.

(4) To expand the "learn by doing" principle of Junior Achievement. The experience of jet air transportation will demonstrate to the junior achievers how, under the free enterprise system, research and development in the transportation industry have aided overall industrial development by bringing all segments of the Nation closer together. We believe that this type of incentive program will develop in the achievers full understanding of the teamwork and responsible, cooperative leadership necessary to the continued growth and strength of the Nation and the individual.

(5) To demonstrate to junior achievers, parents, educators, and the community at large the degree of interest which local businessmen have in our young people. The program will demonstrate to the community that local business and industrial organizations are good neighbors, willing to help prepare young people for the day when they must accept responsibilities of business, professional and international leadership.

SUMMARY OF OPERATION CALIFORNIA

Operation California will be a 6-day project. A group of Achievers, accompanied by adult advisers, will be flown to California via American Airlines jet aircraft. The program during their stay in California contemplates visits to historical and educational cities, and visits to west-coast industries, including the motion picture studios. A meeting at Disneyland with Mr. Walt Disney is planned. Mr. Disney's accomplishments and contributions to education and this important industry are an excellent example of individual success under the free-enterprise system. Meetings with other prominent leaders in the motion picture industry are also being arranged. (These plans are presently in the discussion stage. The program and itinerary will be distributed by January 16, 1961.)

PLANNING BY ADVISERS

Operation California is an incentive program to encourage each Junior Achievement company, as well as each individual Junior Achiever, to maintain high standards in all phases of operations. Only Junior Achievement companies which meet or exceed the performance standards outlined below will qualify to nominate company members for participation in Operation California.

Advisers should prepare now to maintain standards in company operations which will assure that their companies will qualify, and also prepare to select outstanding Achievers for nomination to participate in Operation California.

PERFORMANCE STANDARDS

(1) Attendance: Each Junior Achievement company must maintain a monthly attendance rating of not less than 85 percent. In order to be counted present, each Achiever must have punched his timecard and reported to his company work area no later than 7 p.m. Attendance record sheets signed by the company secretary and an adviser must be turned in to the program director at the end of each company meeting. In the case of Merck, White Laboratories, Bristol-Myers, Lockheed, and Mineral Products which do not meet at the Elizabeth Business Center, attendance forms must be mailed to Junior Achievement headquarters in Elizabeth the day following the company meeting. Reports received by mail will be checked as to the time and date stamped on the envelope by the post office.

Achievers who fail to attend the first company meeting will be contacted by telephone. If the notice of the first meeting was received, and unless the achiever was ill, the absent achiever will be dropped from the company and a replacement assigned by Junior Achievement.

In the event of dropouts, and if the junior company wishes to maintain its total membership at its beginning number, replacements will be made by Junior Achievement up until December 1, 1960.

(2) Company meeting schedules: Each company must meet one night a week from 7 to 9 p.m. The first company meeting should be scheduled as soon as possible after Junior Achievement issues the membership list.

There will be no company meeting on November 24, Thanksgiving Day. Companies which wish to make up lost production and sales time may request an extra work night by contacting the program director.

There will be no official company meetings from December 23 through January 1. Regular company meetings will be held starting January 2, 1961. During this Christmas vacation period it is strongly recommended that advisers stress the need for achievers to continue to sell their products and to maintain high individual and company sales. This is also a period during which advisers can plan plant tours and other special events.

Official company meetings cannot be canceled because of special school events such as shows, athletic tournaments, etc., or for any operating reasons such as lack of raw materials, low production schedules, or other operating difficulties which reflect poor planning or lack of achiever interest.

In the event of extremely bad weather, cancellation of a company meeting must be cleared with Junior Achievement headquarters in Elizabeth.

(3) Production: The junior company must be in production not later than the fourth company meeting.

(4) Operating plan and budget: The company must submit to Junior Achievement headquarters not later than the eighth company meeting, a copy of its operating budget and profit plan which must provide for fixed company payments as outlined in the bulletin dated September 12, 1960, entitled "Operating Procedures—Fiscal Practices."

(5) Special credits for outstanding performance: Special consideration will be given to nominees of Junior Achievement companies which have shown evidence of outstanding performance in any of the following areas:

(a) Exceptional improvement in any phase of company performance, through increased efficiency, cost reduction programs, sales incentive plans, safety programs, 100 percent attendance, punctuality, good housekeeping, etc.

(b) Originality in any phase of company operations.

(c) Outstanding teamwork among company members.

(d) Unusually good management by company officers.

(6) Penalties: Although it is not anticipated that there will be any reason for imposing a penalty upon any junior achievement company for any reason, it must be emphasized that a severe penalty will be imposed upon a company in the event of an accident caused by carelessness or horseplay.

NOMINATION OF ACHIEVERS

Each Junior Achievement company which qualifies will have the privilege of nominating two members, one boy and one girl, for participation in Operation California. Consideration should be given only to outstanding achievers.

Advisers should take into consideration qualities of leadership, personal initiative, appearance, poise, ability to get along well with young people and with adults, Junior Achievement attendance, punctuality, attitude toward safety regulations, knowledge of Junior Achievement company operations, and general knowledge of the sponsoring company's operations.

Advisers must bear in mind that junior achievers who are selected to participate in Operation California will be good-will ambassadors of our industrial and educational community, and will be guests of California businessmen and governmental leaders.

SELECTION OF ACHIEVERS

Nominations will be made on a nomination form provided by Junior Achievement. Four signed copies must be returned to Junior Achievement headquarters prior to a deadline date which will be specified by Junior Achievement staff.

All nominees will be interviewed by a committee of Junior Achievement officials and a member of the Junior Achievers Association. They will be notified by Junior Achievement of the time and place of the interview.

Selection of achievers who will participate will be announced several weeks in advance of the trip dates. At that time arrangements will be made to obtain written permission of parents or guardians for those achievers who will make the trip to California.

TRANSPORTATION

Transportation to California will be arranged by Junior Achievement. Advisers will be requested to assist in making satisfactory arrangements for transportation of achievers to and from the Junior Achievement business center. The Elizabeth Daily Journal will furnish transportation to and from Idlewild Airport.

PREPARATION OF ACHIEVERS

If an achiever from your company is selected to participate in Operation California, you should take full responsibility for his or her preparation to participate actively in all phases of the program.

Remember: The impression our junior achievers make upon the press, the California officials, representatives of the motion picture industry, and other businessmen, will reflect upon Junior Achievement of Union County, upon our advisers, and upon our sponsoring industries.

The following points are essential. You will think of others.

(1) Be sure your achiever is thoroughly prepared to discuss the operation of his junior achievement company and, in a general way, his sponsoring company.

(2) Explain carefully to the achiever that he will be the guest of Californians, and will have a unique opportunity to leave with those he meets a fine impression of American youth.

(3) Review the questions which have been prepared for the guidance of the achievers.

(4) Impress upon the achiever that it is common courtesy to show a sincere interest in his host's community and activities. The achiever should ask questions.

(5) Explain the importance of good grooming. Advise the achiever to follow instructions which will be given to him in writing with regard to dress.

(6) Explain the importance of courtesy and punctuality. Ask the achiever to keep in mind that press, magazine, newsreel and television photographers and cameramen will be invited to take photographs throughout the trip. The achievers must remember that these men and women have a job to do and should help them by being cooperative, punctual and courteous.

INCENTIVE PROGRAM COMMITTEE

The committee in charge of the planning and execution of Operation California includes: William M. Bristol III, president, Bristol-Myers Products Division; John J. Conlon, vice-president, Phelps Dodge Copper Products Corp.; Harry Frank, publisher, Elizabeth Daily Journal; James L. Macwithey, president, American Publics Relations Association, New Jersey Chapter; G. Ross Murrell, manager, Esso Standard Division, Humble Oil & Refining Co.; J. Kenneth Roden, executive vice president, Junior Achievement of Union County, Inc.

As part of our youth incentive program, Operation California, each junior achiever was invited to submit an essay titled "Why I Believe in Our Free Enterprise System." The following is the essay which was awarded first place by the committee of judges. The winner was William Christer of 702 Bayway Avenue, Elizabeth, N.J. He is a junior at St. Mary's High School in Elizabeth and a member of Jay-Vern Co., the Junior Achievement company sponsored by S.E. & M. Vernon, Inc.

WHY I BELIEVE IN OUR FREE ENTERPRISE SYSTEM

(By William Christer)

There is one outstanding reason why I firmly believe in our free enterprise system, it works. All we have to do is to look around, and we can see the advantages of our system everywhere, in the school, in the factory, and in the home. The people in the United States have the highest standard of living in the world. What is Russia's? Our Government does not control industry, and yet it is willing to help industry when it needs it. Our factories have no fear that if production doesn't go too well the Government will close down the factory and say: "Heads will roll." Socialism just doesn't work. It kills incentive, stifles initiative and destroys ambition. How can such a system hope to last? It can't. Socialism only intends to take over what our system has already created.

We Americans have never had it so good—but we can and will do better. Our system has developed us into the powerful and influential country that we are today. And yet, free enterprise is not stopping—it is constantly going forward, striving toward new and better goals. There is no doubt in my mind that we can achieve these goals—in time. We have not evolved to our present position overnight. It has taken many years and much hard work. Our forefathers were not afraid to work and certainly if there has been no change in this spirit of the American people, there is no limit to what we can do, to what we will do.

It makes no difference to us who believes and who doesn't believe in free enterprise. We know it works. It provides incentive, encourages initiative and spurs ambition. It has provided more benefits for more people than any other system yet devised by man, and it will for years to come, for as long as man's desire to better himself remains with us.

Business Ethics in 1961

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. HOLIFIELD. Mr. Speaker, under unanimous consent I include in the Appendix of the RECORD a speech by Henry Ford II which was made before the Minneapolis Junior Chamber of Commerce on Thursday, April 20, 1960. I also include an editorial appearing in the Washington Post on April 21 be printed after the text of the speech.

Mr. Ford's speech on "Business Ethics in 1961" is a notable and responsible contribution to public understanding. It is refreshing in its honest approach to a solution for the problems of corporate violations of the various antitrust laws on price fixing, collusive bidding, and illegal marketing practices.

The speech and editorial follow:

BUSINESS ETHICS IN 1961

I want to speak this evening on a subject that I believe merits our immediate and serious attention.

Our American industrial system has long been one of the most outstanding accomplishments of our society. We started out as a pioneer people, fervently independent and individualistic, and we built an economic system to match. With time there came increasingly complexity in our society and certain excesses in our corporate behavior. Laws were passed and the untrammeled freedom of business action was restricted. On the whole, it was wisely restricted, so that America was able to enjoy the benefits of substantially free competition, risk capital and profit incentive without the social and human abuses that often attended early-day capitalism.

Because of its early excesses, as we all know, business fell under a cloud and for long years became the scapegoat for many of the Nation's problems, a whipping boy for most of its griefs. Chastened by antitrust laws, squeezed in the giant wringer of the great depression, and restricted by the emergence of huge and powerful labor unions, the American corporation painfully learned that it must assume responsibilities beyond its traditional function of making money for the stockholders.

It learned that, however legal and proper its actions, to act in terms of profit and loss alone was not quite good enough. Something more was required—a positive awareness of national goals and objectives, social as well as economic, and an effort to make its actions conform as much as possible with the prevailing tides of public opinion.

In the past 20 years there has been a material change in the whole outlook of our larger business enterprises, a change toward far greater social maturity and responsibility. Business today understands well how its actions may impinge not only on the lives of individuals but also upon the goals and the policies of our Nation both at home and abroad.

This maturing process did not take place in a vacuum. The business corporation is a mirror of society. It exists at the sufferance of society to serve the broad purposes of society. It reflects at most times the prevailing ethical, moral, and even cultural values of society. More particularly, it tends to reflect the values of the people at the top levels of management.

One of the many fascinating things about a business corporation is that—in its daily life, and not merely in the legal sense—it does take on many of the attributes of a person. It may have quite a distinct personality. It may be liked or hated with real emotion. It may be venal and greedy, negative and reactionary, pompous and self-righteous, just like some people; or it may be full of good will and a sense of public service, adventurous and confident, open and forthright—just like some other people. It may be corrupt, shady, and dishonest, like a few people; or honest and law abiding—to the best of its ability—like most people.

One thing that most corporations—like most people—cannot do is to succeed in creating the impression that they are something other than what they really are. No amount of false front will keep the real character of your company or mine from showing through.

Another important similarity between people and corporations is that both tend to behave as people expect them to behave. Though the business enterprise, like any person, must earn and deserve the respect of society, it too can be discouraged and disheartened by an atmosphere of constant hostility, suspicion, and criticism.

I am concerned, as I am sure many of you are, at a recent chain of events that could arouse broad popular distrust and that could revive old and wornout hostilities toward American business and industry. Too fast and too close together for comfort we have had a series of falls from grace involving some of our oldest and most respected business firms. As a director of one of the electrical goods manufacturers, and as the chief executive officer of an automotive manufacturing business, my concern is more than academic. In addition to price-fixing convictions in the one industry and conflict-of-interest charges in the other, congressional committees, in still other industries, have turned up evidence of widespread collusion between corrupt unions and equally corrupt management. Let me note that, whatever differences our company may have had with the UAW, we have developed a genuine respect for the determination of its leadership to keep it free of corruption.

It would indeed be a sad thing, if the good will and confidence that business has laboriously built up over the years should now be washed away at this very critical juncture in our history.

I am sure all responsible people would hate to see a return of that national pastime of the 1930's—business baiting—or for the matter, an outbreak of labor baiting or any other kind of divisive attacks on American solidarity.

We have vast national problems to solve at home and abroad, problems of chronic unemployment and economic breakthrough, problems of competing more effectively in world trade, problems of leading the free world in strengthening freedom and economic progress in vast continents being courted by international communism.

I think it may be no exaggeration to project the 1960's as the most critical and far-reaching 10 years in the history of the world. In such a decade, America needs more than ever before an atmosphere of mutual trust and confidence among such major elements of our society as industry, labor, and Government. Without that confidence, we will not only be far less effective in meeting the goals of our country, we will present to the world at large the image of a quarrelsome, divided and possibly corrupt society. World communism could not ask for a better gift than this.

When I say this, I am not suggesting for a moment that we should abandon the real benefits of vigorous competition. Neither am I suggesting that American businessmen—or unionists or farmers or any other element in our society—should suddenly play dead, that we should transform ourselves from a society of freemen to a country of docile followers. Freedom to compete, to differ, to dissent, to criticize, to urge change—these all are a cherished part of our heritage as Americans, of the values that we seek to defend against the onslaughts of communism. Most of the world, I believe, understands these basic things about our country, and multitudes of its people long for them. But there is a difference between the kind of earnest, healthy, rational debate that forwards America's interests—indeed, is essential to the workings of the American system—and the kind of internal warfare that can weaken it.

No doubt there are those who will say that it is neither necessary nor wise for us to wash our business linen in public, that by talking about these things we will draw attention to them and, by so doing foster the impression that things are much worse than they actually are.

I don't agree. I think what has happened has very grave implications for all of us in business. I believe we need to think very hard about what we can do, individually and collectively, to reduce the likelihood of such things continuing to happen. If they still should happen now and then—since sin has never been entirely eliminated—we need to think about how business can handle itself so as to minimize the unfavorable impressions that result. Of one thing I am sure, the confidence and faith of the American people in business—particularly in the big corporations that play so vital a role in our whole life—will not be strengthened by alibis, excuses, or counterrecriminations.

If we are to preserve the good name of our respective companies, we must be sure that management does everything reasonable in prudence and good sense to prevent such things happening, and takes swift and sure corrective action when the occasional misdeed does occur. At the very least, the top operating executives are responsible for establishing strong and explicit policies concerning the conduct of employees under the law and in conformance with high ethical standards.

These executives also are responsible for communicating these policies to their employees and making sure they are understood. Let me emphasize that this is not a simple or a routine matter. It must be carried out with the utmost thoroughness and intensity. Employees at all levels must be made to feel in their bones that their company's codes and policies mean exactly what they purport to mean.

Finally, it is the responsibility of the executives to punish swiftly and impartially violations of those policies at whatever level of the business they may occur. If they are firm in this, there will be far less danger that subordinate officials will apply their own standards of judgment and conduct in place of the company's.

In other words, it is the job of our corporate executives to keep their own houses in order. If and when they fail to do so, the house-cleaning job certainly will be put in less friendly hands.

I believe these recent happenings should alert outside directors to the need to be aware of the pertinent codes and policies of the companies on whose boards they sit. Normally, the outside director has only a broad picture of the business and cannot be completely familiar with the day-to-day operating details. But, when serious improprieties occur, all companies, whole industries and individuals, whether legally responsible or not, suffer the consequences of an inflamed and properly outraged public opinion.

Comforting as it may seem, and true as it may be, I'm afraid it is little use—for instance—to drag out the old bad-apple alibi to explain away things—the idea that there are always a few bad ones in every barrel. In my opinion, it is up to business to find the bad apples in the barrel, if there be any and clean them out before they contaminate the whole.

And it does even less good to yell foul and blame all our troubles on those so-and-so's in Washington, out to smear business all over again. Like all of you, I read the newspapers and I have recently read that the Kennedy administration is now showing its true colors and that the honeymoon with business is over, that the President's Advisory Committee on Labor-Management Policy, of which I am a member, is a Trojan horse devised to impose wage and price controls on the economy.

I don't happen to believe this is true. Thus far, I have seen no reason to draw such a conclusion. President Kennedy in a talk to the National Industrial Conference

Board, said—and I certainly agree with him—that the revenues and the successes of his administration depend on business profits and business success, that far from being natural enemies, business and government are necessary allies. He pointed out that the 1960 drop of $6- to $7-billion in corporate profits cost the Government enough taxes to pay—and I quote the President—"the Federal share of all our antirecession, health, and education proposals for the next fiscal year, and still have enough left over to start closing what the Democrats and this administration used to call the missile gap."

The President also said this: "If business and Government are necessarily partners, what kind of partnership is it going to be? Will it be marked by mutual suspicion and recrimination, or by mutual understanding and fruitful collaboration?"

I, for one, don't believe America can afford the ludicrous spectacle of old-fashioned guerrilla warfare between business and Government; certainly not in this moment in history. We need all the energy we can muster to fight Communist economic aggression. Without ceasing to uphold the things we in business believe are right, we have got to learn to live in decent dignity and mutual respect with our Government.

There is really only one thing for top executives to do at such a time as this. That is to forget the alibis and the explanations and have the fortitude—the plain guts—to stand up and say: "This is our failure. We are chagrined and sorry. It will not happen again."

Since it has happened, I think that we now run a serious risk of having codes with sharp teeth imposed on business, not by chambers of commerce, or associations of manufacturers, but by a Federal legislature. Because such codes would further restrict the areas of free business action and decision, it is up to us in our various companies and industries to see to the establishment of our own formal principles of ethical practice, plus the effective means of selfpolicing those principles.

I recognize that no amount of law, no amount of written codes of ethics, or pius promise will take the place of a rigorous and unshakeable integrity in the total conduct and in the ideals of industrial management.

I do not agree that the time has come, or is likely ever to come, when a corporation should assume social or political or other nonbusiness roles. I believe business corporations will continue to serve society best as individual companies vie to achieve maximum long-range profitability consistent with the public interest.

Nor do I believe that industry should submit supinely to domination by the ideas of other groups in the society with which it may not concur.

Let me by specific. It is a fact well known to most businessmen and lawyers, but often not to laymen, that there are many areas of law, and particularly of antitrust and monopoly law, that it is highly difficult to be sure not to violate in the normal course of business.

Along with most businessmen, I believe that strong and effective antitrust law is essential, that it preserves competition and over the years has benefited all groups in our society, business included. But it is important that we understand that, in broad areas of action, the law is far from a clear guide.

As our General Counsel explains it, the Sherman Act, which has cast a long shadow over American industry for 70 years, has worked mainly as a kind of enabling legislation. It has allowed "judges—in the particular economic and social climate of their particular days—to apply the brakes to a course or trend of conduct that—in its context—looked unhealthful * * * antitrust laws in America are never in a state of being; they are constantly in a process of becoming. You can never close the book and say that now we know what we cannot do."

That is a lawyer's view. I could add that in numerous specific actions involving matters of pricing, dealer relations, acquisitions, or mergers, you simply can't expect to get in all cases a consensus from lawyers as to whether what you want to do is lawful or unlawful.

Business must often act in a legal no man's land, moving on the advice of counsel—if indeed it is aware of the need for counsel—and not knowing whether at some future time it may be found in violation of antitrust or other laws.

Through sheer excellence of performance, superiority of product, efficiency and aggressiveness a company may come to so dominate a market as to bring itself in violation of the law for monopolizing, under section 2 of the Sherman Act.

In industries where there are large complex sales organizations, distributors and franchised dealers you walk a constant legal tightrope. A few months ago Ford Motor Co. entered a plea of nolo contendere in an antitrust pricing case where, unfortunately, a subordinate district sales employee of ours did not realize that he had legal problems on his hands, and did not clear it with counsel. His was not the only fault. It was also the fault of our management for failing to communicate effectively with the field, for failing to instruct the field personnel fully on the details of proper conduct.

Unfortunately, whenever you are hailed into court, or asked to testify before a committee of Congress, the popular supposition is likely to be that you are up to no good, probably guilty of willful wrongdoing, and very possibly a bunch of crooks.

Great caution should be exercised by the courts, legislatures, and press, particularly in vague areas of antitrust and monopoly, to let it be understood that the mere fact that you are sued, investigated, or even indicted—or that Senator KEFAUVER's committee disagrees with how you price your products—that all this does not necessarily mean that you are crooked, unethical, or even wrong. A distinction should be made between the obviously criminal situation and that in which the court's purpose is to define, clarify, or correct a situation. Otherwise, irreparable harm may be done to ethical firms and their management acting, to the best of their understanding, within the law and in the best interests of stockholders and the public at large.

But in making this comment, I do not mean to offer business a loophole through which to escape the requirement to deal fairly and ethically.

There is one and only one way for business to keep its skirts clear; that is to insist that top management maintain the highest standards of integrity in all aspects of business operation.

Perhaps more than anything else, our integrity will be reflected in the products we offer. I believe today, more deeply than ever before, that the future of the company I represent, indeed of our whole industry, depends directly on our ability to produce products that perform exactly as we say they will perform, products that establish their own standards of integrity—of quality, durability, and dependability.

Indeed, gentlemen, all American industry will be judged before the court of world opinion on the basis of its success or failure in maintaining high integrity in its actions, its products, and its services. We live in a world that is bigger than our own world and must compete with products from all over the globe—many of them of the highest integrity of manufacturer. We must compete also with a way of life, an ideology, an imperialist system that seeks every opportunity to hold us and our economic way of life up to scorn.

Around the world, we are often described as a corporate society. If that is so, and if it is judged that the corporations are corrupt, then it will be assumed that the society itself is corrupt.

So I would like to suggest that all of us in business management take a new long look at ourselves and all our business practices. I suggest we look not only at the obvious areas of danger, where we may run afoul of the law, but also at those borderline areas of corporate action which might have unfortunate social consequences for our fellow man.

Morality is not just avoiding price fixing or conflict of interest. Obedience to the law is not enough. The law is negative. It tells us only what we must not do. As Crawford Greenewalt, president of DuPont, has suggested: "We in industry must be concerned more specifically with 'obedience to the unenforceable'—the things we do, not because they are required but because they are right. This strength is more potent and compelling than the law."

A corporation may be primarily a producer of goods, but it is more than just that; it is a small society within society, one with motivations, with rules and principles of its own. It is a purposeful organization that can and must give more than just money to those who serve it, and those it serves. It should reflect in its daily actions the principles and aspirations of our society in its finest tradition. If it does so, I have no fear for America's ability to stand strong and free before the world for long and good years to come.

NEW BUSINESS CONSCIENCE

Henry Ford II has laid down a stiff challenge to American business. Alarmed by the recent price-fixing convictions in the electrical-goods industry, the conflict-of-interest charges in the automobile industry and the congressional findings of "widespread collusion between corrupt unions and equally corrupt management," he has called upon corporate executives "to keep their own houses in order." His candid and hard-hitting address to the Minneapolis Junior Chamber of Commerce contains some of the best advice offered by a big-business spokesman in recent years.

Especially pointed was his call upon corporation heads to face the ugly consequences of laying morality on the shelf. "There is only one thing for top executives to do at such a time as this," he said. "That is to forget the alibis and the explanations and have the fortitude—the plain guts—to stand up and say: 'This is our failure. We are chagrined and sorry. It will not happen again.'"

In sharp contrast to Ralph Cordiner, head of the General Electric Co. who denied personal knowledge of the criminal conspiracy to which his company had pleaded guilty, Mr. Ford sees positive virtue in washing the dirty linen of business in public. Only in this way can industry in general be alerted to pitfalls and build within itself the necessary safeguards against crumbling ethical standards.

As a director of one of the electrical companies, Mr. Ford called upon "outside directors" to exercise a special vigilance to avoid the growth of corrupt practices in the companies on whose boards they sit. If this corrosion is to continue, all business will suffer, and extreme legislative remedies will be sought. The only safe course is for top executives and directors to insist, not merely on the avoidance of scandal and convictions in the courts, but on adherence to high standards of conduct because they are right.

Mr. Ford acknowledged that the antitrust laws are vague and that it is impossible to

know in advance whether some business practices are legal or illegal. Likewise he noted that some firms are unjustly maligned because of investigations or indictments for allegedly monopolistic practices that may have little substance. A distinction needs to be made between clearly criminal conduct and the correction of practices in the twilight zone of the Sherman Act.

This in no way restrains the thrust of Mr. Ford's argument for business management that can see social obligations as well as profits—that holds fast to a respected place in a free society. A new era of business-baiting or labor-baiting would be tragic, as Mr. Ford suggests. Even more tragic would be a disintegration of our free society because of crass misuse of free enterprise to serve the selfish ends of a few men who have lost their sense of values.

Can We Meet the Challenge?

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 13, 1961

Mrs. DWYER. Mr. Speaker, a distinguished jury of awards of the Freedoms Foundation at Valley Forge, Pa., has awarded for the second time its coveted George Washington Honor Medal and $100 to the Sacred Heart High School of Elizabeth, N.J.

Sacred Heart High School also won the award in 1959.

The 1960 award was made for the editorial which appeared in the school's paper, the Crier, entitled "Can We Meet the Challenge? Its author was Miss Mary C. Feehan, 749 Van Buren Avenue, Elizabeth, editor in chief of the school newspaper and salutatorian of the class of 1960. The award also honored Sacred Heart High School for its work in helping to encourage a better understanding of the American way of life in 1960.

Through the courtesy of Mr. George E. Stringfellow, of East Orange, N.J., secretary of the board of trustees of the Freedoms Foundation, a copy of the award-winning editorial has been made available to me. Because it is evidence of the encouragement Freedoms Foundation is offering young people to think through the significance of their heritage as American citizens, and because the editorial itself is an impressive example of the values and ideals motivating many of our younger people, I take special pleasure in calling the attention of our colleagues to Miss Feehan's excellent work.

Under leave to extend my remarks, the editorial follows:

CAN WE MEET THE CHALLENGE?

We, the class of 1960, shall join more than a million high school graduates on June 16. This is rightly called a commencement exercise, for so it is. Graduation marks the beginning of a brandnew chapter in our lives—a chapter in which we must put to use the education we have received.

We are blessed that we are living in a country where all men can receive the same education and have equal opportunity for success in life. There is no caste system here where only the wealthy are educated, nor is there anyone telling us how we shall use our education. It is ours to do with as we choose. Perhaps we shall further it and become scientists or teachers, or we may use it immediately and become members of the American "9-to-5 club."

Though education gives us the right to improve our condition in life, it also imposes a duty, a responsibility we should be proud to bear; namely, to preserve the freedoms of our country, making secure our American way of life. We may not have to sacrifice our lives to preserve these freedoms as did the heroes at Bull Run, Okinawa, and Pork Chop Ridge. However, in a time when our love for freedom is being challenged daily, and our President and his Cabinet are being insulted and ridiculed by our Communist enemy, we, the younger generation, possessing strong American ideals, must fight and fight hard in our own private way to prove to ourselves and the world that we are a nation under God, striving for liberty and justice for all men.

We are a nation under God. In Him lies our strongest weapon. If He should ever forsake us, we would be nothing; therefore, if for this reason alone, we must be true to our faith. If we are, we will be a moral people, and history has proved that a morally sound nation is a secure nation.

We have always been a nation loyal to traditions, and we must continue to be so. Traditions and customs are important to a nation for they instill patriotism in her people. Take our flag, for example. This demands respect for it is a symbol of America herself. Yet how many Americans today have the regard they should have for Old Glory? Lack of patriotism is a dangerous thing. Let us remind our indifferent fellow Americans of this.

America has always defended the individual dignity and freedom of man. The basic freedoms in our Bill of Rights insure our security, but we must not misinterpret the idea of security by demanding excessive benefits from our government or our employers. We seniors will be starting work soon. Let us not become part of the crowd who advocate strikes in order to obtain a coffee break, a Christmas bonus, or other fringe benefits.

There were no coffee breaks or 40-hour weeks on the blood-dyed fields of two World Wars and the Korean war where our freedoms were defended with lives, though dearly bought, these freedoms were not permanently insured. It is our turn to keep them intact. We may never be called upon to shed our blood, but we must support our Government, respect our country's leaders, love our flag and all that it symbolizes, be loyal and honest in our dealings with our fellow men, be ready to give rather than to receive. In this way we shall do our part to keep America a morally sound nation as well as a gloriously free nation.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

Appendix

Israel Independence Week

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an excellent editorial from April 20, 1961, issue of the Chelsea (Mass.) Record which deals with the 13th anniversary of the State of Israel:

ISRAEL INDEPENDENCE WEEK

Israel's Bar Mitzvah anniversary, this week, represents a coming of age in a world of unparalleled progress in the fields of economic and scientific development. In the space of 13 years, Israel has many achievements to her credit: the million immigrants who have arrived, the new factories, farms, and homes that have been built, and an expanding export trade. All this has been achieved without utilizing the full potentialities of the country. The people of Israel, as they recall the wanderings of their forefathers in the ancient wilderness, are keenly conscious of the fact that the Negev Desert, comprising one-half of Israel's area, is still largely a wilderness. This year, one of their most vital activities will be the establishment of industrial towns in the Negev.

American poet, Robert Frost, recently paid tribute to Israel's achievements in absorbing and integrating immigrants from many countries. Mr. Frost, who came to Israel as a guest of the Hebrew University, told the press that he was proud of America's interest and support of Israel. He said the world must be grateful there is such a place as Israel, a refuge for immigrants from many lands.

It is interesting to note that non-Jewish students from 22 countries on all continents are studying at the Hebrew University this year. Most students from Europe and the United States are studying the humanities, particularly in the fields related to the Bible, archaeology and history. African and Asian students are concentrating on medicine, agriculture and the natural sciences. In addition many of these students are taking time off from their studies to master the Hebrew language.

The State of Israel has an important contribution to make in the newly established Peace Corps will observe that to the emerging peoples, Israel is a valid example of a country which has made rapid progress in industrialization in freedom. It furnishes a demonstration of a successful democratic way of living.

The State of Israel has made important contributions of technical assistance. For example, an Israeli medical mission under the U.N. auspices was one of the first to enter the Congo after it achieved freedom. Israel has made these contributions despite the fact that she herself faces the difficulties of boycott and blockade under an uneasy armistice.

Despite the absence of a real peace, the world can be glad that there has been in that area a period of relative calm with freedom from disturbing border incidents. The free world will hope and work for the day when peace and good will will return to that region which is the cradle of civilization and religion.

Project Hope a Success

EXTENSION OF REMARKS
OF
HON. WILLIAM H. BATES
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. BATES. Mr. Speaker, the prestige of America has been vastly improved all over Asia because of the medical mission provided by Project Hope, and it is my sincere hope that some day, the SS *Hope* will expand into a fleet of vessels bringing medical knowledge, supplies and service to people in many places throughout the world. Dr. William B. Walsh, president and founder of Project Hope has just issued a very interesting report for the first 6 months of its operation, and because of the national interest in this program, I am inserting same in the RECORD.

The report follows:

PROJECT HOPE PRESIDENT ANNOUNCES FIRST 6 MONTHS OUTSTANDING

"In its first 6 months of operation in the island nation of Indonesia the success of the SS *Hope I* has been outstanding," according to William B. Walsh, M.D., president and founder of Project Hope. The *Hope* vessel is the main vehicle of the nonprofit organization with headquarters here.

In making the 6-month report, Dr. Walsh noted that the vessel has made nine stops to help teach and train Indonesian medical personnel. American medical personnel have performed 600 operations and seen 16,000 patients, both aboard the gleaming white floating medical center and at shore-based facilities.

"One of the main purposes of the *Hope's* visit to Indonesia, and any other nation to which it will go in the future," Dr. Walsh said, "is to update the medical knowledge of the local people. In this respect, 800 classes, lectures, seminars, and meetings were held in the classrooms and lecture halls aboard the ship during this first 6 months.

"Interest in the vessel, its interior operation, and the American medical personnel has brought 30,000 shipboard visitors. A total of 4,687 diagnostic X-rays were made by the medical technicians."

Dr. Walsh noted that in the first few weeks of June the vessel will steam to Singapore from Indonesia's capital Djakarta for resupply and refitting and then it is tentatively scheduled to visit Saigon, South Vietnam's capital. The *Hope* will remain there for 2½ months before it returns to the United States to complete its successful first-year tour.

"Our expectations are that the *Hope* will leave San Francisco late next fall and steam again to one of the Asian or Southeast Asian nations which have invited us to visit," Dr. Walsh noted. "The *Hope* only visits those nations to which the government and the medical profession request it. Then, the entire tour of duty is scheduled by the local medical people, with the assistance of our medical operations department."

Besides Djakarta, the first and last Indonesian stop of the *Hope*, the ship has visited Surabaya, Bali, Sumbawa, Makassar, Ambon, Kupang, Ende, and Bima. The vessel is now serving at Lombok with Semarang the last stop before the scheduled return to Djakarta May 17, 1961.

The *Hope* is operated through the voluntary contributions of individual Americans, by donations from business and industry, labor, and interested organizations. Many of the Nation's largest firms have donated material and supplies, in addition to cash contributions, to help keep the ship in operation and to aid those people less fortunate than we at home, Dr. Walsh said.

"I want especially to commend those dedicated American doctors, nurses, dentists, pharmacists, and medical technicians who have left their practices and the comparative comfort of their homes and families to serve the mission of *Hope*. There is not enough praise anyone can give to these men and women and they deserve the commendation of their fellow Americans and their backing.

"It is the desire that with sufficient contributions we can send other floating *Hope* medical centers to Africa and South America, where the need for medical teaching and training is also as great as it is in Southeast Asia. There are additional Navy hospital ships in mothballs to serve our purposes," Dr. Walsh stated. "The *Hope* personnel have shown the people of Southeast Asia that the American people want to help them to help themselves.

"Project Hope is a success and, with the help of the American people," Dr. Walsh said, "will continue to bring medical diplomacy to all sections of the world."

Mervin P. Whitbeck

EXTENSION OF REMARKS
OF
HON. SILVIO O. CONTE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. CONTE. Mr. Speaker, in this day of racing through the process of living, there are few men remaining who are known for a homey philosophy at the fireside, or a vigorous life close to nature, or a true brotherhood with their fellow man from all walks of life. Certainly I have known few. The following comments are appropriate to the memory of one such man, Mervin P. Whitbeck. His lasting contribution in the field of conservation to his lifelong home, the Berkshires of Massachusetts, is an example for us all. I was fortunate to know Merv Whitbeck and to be broadened in my outlook on life by him.

Mr. Speaker, I include the attached article by Theodore Giddings, from the Berkshire Eagle, Friday, April 21, 1961, in memory of Mervin P. Whitbeck:

[From the Berkshire Eagle, Apr. 21, 1961]

OUR BERKSHIRES—MERVIN P. WHITBECK

(By Theodore Giddings)

Although close friends knew that Mervin Philip Whitbeck, 55, of Mount Washington, had had a close brush with death while on the operating table last November at Deaconess Hospital in Boston, few, if any, were prepared for the shock of his untimely passing Monday afternoon. Many of them had chatted with him at the recent testimonial dinner for John E. Buckley, retired conservation officer, and had remarked that he seemed like his oldtime self again. If he wasn't feeling well, he certainly did a good job of concealing the fact.

Maybe that's not surprising, though, for Merv wasn't one for self-pity. He lived close to nature all his life and while deeply appreciative of its beauties and bounties he also knew firsthand of the cruelties and punishment that it can inflict. He could take the bitter with the sweet without yelling "foul" like some of the rest of us do.

Merv's knowledge of the outdoors and his skills as a woodsman, hunter, and trapper came in large measure from his father, the late Isaac Whitbeck. Ike, as he was widely known, established a wide reputation as a rattlesnake hunter and once received considerable publicity for catching one with a shoestring. However, his customary weapon was a pair of tongs with the pinching end covered with rubber to save bruising the necks of the reptiles. He caught many rattlers for Dr. R. L. Ditmars, curator of the Bronx Zoo, who sometimes joined him in the hunt.

Merv also was adept at capturing the rattlers but was inclined to soft-pedal this activity, especially in recent years. He would go out on a reptile hunt at the persuasion of a friend, or a friend of a friend, but didn't like to have these trips "written up" or headlined in the press. Poor publicity for Mount Washington, he felt, and gave the town an unwarranted reputation since the snake population is relatively small and limited mostly to certain areas.

Deer hunting comes first to mind when one thinks of Merv Whitbeck. The Whitbeck deer camp operated for years by Merv and his efficient wife, Vicky, has been one of the best in the East and certainly one of the most productive. No one knew better than Merv how to organize a deer hunt and, of course, his knowledge of the Mount Washington whitetail country was unsurpassed. He knew where to find the deer and the famous Whitbeck "drives" accounted for the outstanding success of the hunters in his camp season after season.

This isn't to infer that everyone in the camp got a deer. They didn't but they were seldom heard to complain. The general excellence of the camp, including the food, and, above all, the camaraderie of the hunters was its own reward for all who participated.

Gathered around the table of an evening at Merv's camp were men from all walks of life—doctors, lawyers, farmers, contractors, politicians, schoolteachers, businessmen, and just plain ordinary guys. In the swapping of stories specially of the day's hunt, no one added more to the enjoyment of the occasion than Merv. A master of the terse, clipped expression, he punctured more than one inflated ego but always in a good-natured way.

Don Stillman, late outdoor columnist for the New York Herald Tribune, and a friend of the Whitbeck family from boyhood, once referred to Ike Whitbeck as being as much a part of the Berkshire wilderness as "the shy deer, the drumming grouse, and the furtive fox." And the same could be said of Merv. He was a master of the coon and wildcat hunt and pursued these sports with his brothers, Russell, retired superintendent of Mount Everett Reservation, and Henry. For several seasons Russ and Merv bagged their limit of coon and sold the pelts to Beebe, the Canaan, Conn., dealer. Merv and Henry pursued wildcats, often on snowshoes, over the rugged mountain terrain more for the sport of it than for the $10 bounty. Their last kill, a 28-pound bobcat, was made about a week before Merv's unexpected death.

Mount Washington has lost part of its tradition in the passing of Merv Whitbeck. But the family is deeply rooted on the mountain, and it's not unreasonable to say that as long as there is a Mount Washington there will be a Whitbeck living on it. It is hoped that Vicky Whitbeck and son, Jim, will continue the deer camp. She has been the guiding genius for years of the camp operation, and he has been well-schooled by his dad in the know-how of the deer hunt.

Panama Canal: Craftsmen on the Locks

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks, I quote a letter to the editor from "The Mail Box" of the Panama American, the well-known evening newspaper on the Isthmus:

THE MAIL BOX—CRAFTSMEN ON THE LOCKS

SIR: With the damage to the miter gates at Gatun locks, the Panama Canal Company's penny-pinching policies have started to catch up with it. This process will continue unless these policies are changed.

Before the penny-pinching policies were inaugurated, all U.S.-rate employees on the locks were skilled craftsmen. All had completed their apprenticeship, and many had years of background in their trade.

Along came some big brain with the idea that they were being paid too much for operating the mules. It is to be remembered that when not operating the mules, these craftsmen worked on the maintenance and inspection of the locks equipment.

So the big brains hired Tom, Dick, and Harry for less money, with the result that the skilled men were gradually reduced. The mule operators they have now, when not operating, sit on their tails doing nothing.

It seems to me that present Panama Canal policy is to add to the office and supervisory staffs at the expense of the skilled craftsmen. We only have to look around and see the population explosion of the office and administration staffs.

The Governor before last hired himself a public relations officer who has now hired himself an assistant and in the end no doubt will soon be a bureau chief like some of the others.

In the past when a man was appointed to a craftsman's job on the canal he had to produce his apprenticeship papers. That was strict policy. Now they hire any shade tree mechanic they can get especially if he is known by the right people. Not only do they hire him, but they then proceed to push him ahead.

They can say what they like, but the great engineering project which is the Panama Canal is not doing as well as it should. There must be a clean up, or there will be a bust up.

When the Panama Canal Company was formed it was stated that it should pay its way. There was nothing said about making the big profit that they now seem to want to clear every year.

In closing, I would like to ask what happened to the Booz, Allen, and Hamilton report?

CRAFTSMAN.

Critic at Large

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. OSTERTAG. Mr. Speaker, for many years I have championed the position of our Seneca Indians in their struggle to retain possession of their homelands on the Allegheny Reservation, instead of having this area flooded by construction of the Kinzua Dam. However, the Congress approved the construction of this dam under these unfortunate conditions.

A sensitive commentator on cultural developments of our society recently reviewed this situation in a newspaper column, entitled "Proposed Dam That Would Violate Treaty With the Senecas Poses Moral Question." Under unanimous consent I wish to have this column reprinted from the New York Times of April 21, 1961:

CRITIC AT LARGE—PROPOSED DAM THAT WOULD VIOLATE TREATY WITH THE SENECAS POSES MORAL QUESTION

(By Brooks Atkinson)

During the presidential campaign, the Democratic candidate made this statement about his Indian policy:

"There would be no change in treaty or contractual relationships without the consent of the tribes concerned." He also promised that his administration would "discharge its moral obligations to our first Americans."

But preparations carried forward from the previous administration are already far advanced to dishonor the treaty that George Washington's deputy, Timothy Pickering, signed on November 11, 1794, with the Senecas. Referring to certain lands in western New York and Pennsylvania, the deputy of our first President put the national seal to a promise that "the United States will never claim the same, nor disturb the Seneka Nation." "Never," the treaty said.

Next month, public hearings will be held by a House subcommittee on public works to consider the first major appropriation, $15 million, to build the Kinzua Dam on the Seneca Reservation. It would drown most of the lands the United States once promised that it would never claim. It would disturb about 800 Senecas by driving them from the lands their tribe has held for 167 years.

It would break a pledge made by the United States at a time when it needed the support of the Senecas against foreign enemies—very valuable in the War of 1812—and it would unilaterally scrap the oldest continuing treaty in the National Archives.

No one in the Government has faced the moral issue raised by this project. No one could without being ashamed. Numerous

public spirited organizations and individuals have protested to Members of Congress or to various departments of the Government. The replies have been uniformly bland. They say, as President Kennedy remarked on March 8 in reference to business of the last administration, that the courts have ruled that Congress has the legal right to break a treaty—something that no one has doubted. Since Congress has authorized the Kinzua Dam and started to make appropriations for it, the letters conclude that no branch of the Government has a right to stop it now.

Like a certain priest and likewise a Levite who left a man half dead on the road from Jerusalem to Jericho and passed by on the other side, so the various Government agencies pass by on the other side, hoping perhaps that no one will see them. For the moral question is one that no one dares face: Is the Kinzua Dam right or wrong? It is wrong.

In this shameful situation the Senecas have all the decency and goodwill on their side. They agree that a dam must be built in the Allegheny River to prevent floods in Pittsburgh and to conserve water. Acting on behalf of the Senecas, Dr. Arthur E. Morgan, a civil engineer with a long experience in flood control, has surveyed an area in western New York—called the Cattaraugus-Conewango project—which he believes will accomplish the same purpose more cheaply and effectively, using inferior lands, leaving the Senecas undisturbed and dislocating other people less ruthlessly.

He believed it would save the United States $100 million. He also believes that a Cattaraugus-Conewango Dam will have to be built in 25 years in any case.

The Senecas' request is modest. In a letter to President Kennedy, dated George Washington's Birthday, the President of the Seneca Nation of Indians, Basil Williams of Salamanca, N.Y., wrote:

"The Seneca Nation asks you, therefore, to make an independent investigation into the merits and comparative costs of the Kinzua Dam and Dr. Morgan's Cattaraugus-Conewango alternative, and that in the interim you direct that the work be halted on the authorized project."

When George Washington asked the Indians to meet with Timothy Pickering in Canandaigua, N.Y., to make a treaty, the Indians asked the Philadelphia Yearly Meeting of Friends (Quakers) to send delegates to advise them. Four friends, two of whom kept journals, made the difficult journey, 8 days long, through much wild country, and participated in the long negotiations.

The Philadelphia Yearly Meeting of Friends is still in existence. At a meeting last Tuesday evening the members decided to undertake an emergency program to find some satisfactory solution to this episode in jobbery. The tradition of conscience is still alive among Friends.

Money Is Not Education

EXTENSION OF REMARKS

OF

HON. E. L. FORRESTER

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. FORRESTER. Mr. Speaker, the April 18, 1961, issue of Christian Economics carries an article entitled "Money Is Not Education." The wisdom expressed in this article entitles it to a place in the CONGRESSIONAL RECORD. The article reads as follows:

MONEY IS NOT EDUCATION

The February number of the First National City Bank Monthly Letter of New York is authority for the statement that "more money has been spent on schools and schooling in the past 10 years than in the entire previous history of the United States."

Obviously, more money is not the answer to the educational problem. Few will agree that more progress has been made in sound education during the past 10 years than in former times. The prodigal outpouring of money has not accomplished its purpose, and there is little reason to believe that the enormously increased expenditures contemplated by the present administration, the NEA, and others, will achieve better results.

Less elaborate educational palaces, fewer frills, and more solid, character-building subjects in the curriculum, more local control and attention to the content of textbooks and the character, integrity, and dedication of teachers are the ways to move forward in education.

Inter-American Social and Economic Cooperation Program

SPEECH

OF

HON. CRAIG HOSMER

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, April 25, 1961

The House in Committee of the Whole House on the State of the Union had under consideration the bill H.R. 6518 making appropriations for the Inter-American social and economic cooperation program and the Chilean reconstruction and rehabilitation program for the fiscal year ending June 30, 1961, and for other purposes.

Mr. HOSMER. Mr. Chairman, there seems to be considerable misapprehension that the clouds on today's international horizon amount merely to intransigence on the part of the Communist countries. A lot of people believe their obstructive tactics are vexing but that somehow they will diminish and disappear. One country after another swings away from our sphere of influence and example, but many people are serenely confident that, like a pendulum, things will soon swing back the other way. Riot, brutality, strife, and plunder are epidemic in many parts of the world around us, yet many regard them as things which just somehow happen and just somehow will stop happening.

The brutal truth is that these things are made to happen, trouble will not just go away and there is no pendulum swinging. There is war today just as surely as though bullets were flying and bombs were dropping. It is a nonmilitary war, yes, but a war for the domination of the world and the struggle is deadly. It is fought on many, many fronts. Until we realize we are fighting it, until we fight on those fronts and fight the war as a coordinated whole, with the same intensive national effort as we would fight hot war, we will lose, battle by battle, front by front, until all is lost.

Today we have before us a measure dealing with just one of the many fronts of the war. Had we been a little more alert, had we been able to conceive the nature and extent of the powers of aggression against us, we might have foreseen its development long ago.

As delegates came to the United States in 1945 to take part in discussions of the formation of the United Nations, many of them toured our country, speaking before many different groups of people. One theme was common among them all: the critical need for industrialization. The position of economic and political power of the United States at the end of the Second World War was clearly due to our industrial strength. It followed, then, or seemed to follow, that less developed countries which wanted to improve their economic positions could do so by becoming industrialized, and could become industrialized by loans or gifts from the United States of capital equipment.

Here was the first open indication that the peoples of the world sought a basic change to improve their lot. That many of these countries could begin by manufacturing or extracting raw materials which were in increasingly scarce supply may have been a logical point, and may have been a valid interpretation of the principle of international division of labor, but it was emotionally unsatisfying. Gradual growth from primitive economies to industrial societies by the long process of capital accumulation seemed too slow, difficult, and frustrating. Leapfrogging to positions achieved by the more advanced nations only through centuries of capital accumulation became the unrealistic aspiration.

In the years since 1945, we have followed a policy of international good fellowship and helpfulness. We started with the attempt to keep starving people from starving. We offered the Marshall plan. We have continued, sending, under the aegis of the International Cooperation Administration, our best technicians to advise and to help. We have lent money to help less developed nations to acquire the start toward industrialization. Yet, somehow, the tremendous sums of money—sums our great grandchildren will still be paying interest on—have not touched the heart of the situation.

THE BASIS OF DISCONTENT AMONG THE LESS WELL DEVELOPED ECONOMIES

The people of a large part of the world are have-nots. To an astonishing degree, they live at a bare subsistence level, lacking both the means of bettering their lot and the political liberties to influence their governments. They live in countries where there is virtually no middle class, but where a small part of the population lives in sybaritic splendor, and the larger part lives in squalid penury.

This regrettable difference between the rich and the poor seemed to be the nature of life until we developed broader and more complete methods of communication. But when the few radios in a primitive village began telling of the wider distribution of a suitable standard of living elsewhere, the have-not's for the first time had a mirror showing them their own nakedness. Of democracy

they knew little, but of hunger and sickness they knew much. And when they learned that others were not so hungry or so ill, they felt a grievance which they burned to express.

Now, our giving aid to countries in which the people are in extremely depressed condition has not always worked out to alleviate the condition of these people. Sometimes the profits of the small entrepreneurial group have been increased, and the people themselves have had no abatement of their exploitation. Pouring more money and more equipment into such countries merely increases the discontent which is the fuel of revolutions.

Throughout much of Latin America there are wide differences between wealth and poverty. Even in Mexico, which is becoming an economically advanced country, there are a good many million people living below the monetary economy, on the crumbs of subsistence they can find. In other areas the situation is equally difficult. People who live in desperation are not political theorists—they are actionists. They will follow whoever promises them consideration, help, and food.

HUNGRY PEOPLE AS A COMMUNIST PRESSURE POINT

Throughout the world, Communists hunt for desperate people to incite them to revolution. That they ultimately learn that they have been fooled and made catspaws of does not deter them from an early and enthusiastic response to incitement. Civil affairs in various of the Latin American countries are now beset with disorder. Communist infiltration has gone quite a way—so far in fact that it would be difficult to ban it by edict in several places. The most extreme case is that of Castro in Cuba. That Castro started out as a follower of communism we suspect but cannot prove. But now there is no doubt that the Cuban Government is Communist, and that it continues to be an irritant in international relations throughout all of Latin America. The Cuban situation illustrates the difficulties in which we find ourselves.

For many years, the people of the United States have had a deep affection for the people of Cuba. Conscious of oppression of the Cuban people by Spain, this country went to war with Spain to lift tyranny from Cuba. We could have made Cuba, a rich and fertile island not a hundred miles from our shores, a part of the United States, but instead, promised the people of Cuba their freedom, and after a number of years of tutoring in government and finance, withdrew. And in the years since that time, we have paid many, many millions of dollars to the Cuban people above the world price of sugar. In 1952, Batista seized power, and subjected Cuba to a harsh dictatorship without foreseeing the consequences. Substantial numbers of people in our country wished Fidel Castro luck in his attempt to free Cuba from this dictatorship, and I am confident that many of them did much more than wish.

Out of that background, Castro has stirred up "anti-Yanqui" sentiment as the fuel for revolutions throughout all Latin America. And he has established a beachhead for communism just a pleasure cruiser day's run from Florida.

Throughout Latin America and throughout the undeveloped and the less developed countries, we are involved in a propaganda war. Those who most freely attack us are those we have most tried to help. But many are unstable and hysterical because they are hungry and hopeless.

The proposal before us, made first by former President Eisenhower and reiterated by President Kennedy, for developmental assistance throughout Latin America in proportion to the degree to which the countries needing aid have bettered their own internal problems of social justice is possibly the most constructive step we have so far taken in our relations with our hemispheric neighbors. Yet its success is by no means guaranteed. We must wait to see how willing the people of wealth in those lands will be to open the way to greater prosperity to the less well situated—peon, unskilled worker, or landless nomad.

PROBLEM OF CAPITAL FORMATION

While we seem to be confronted with a conflict of propaganda, our real and basic difficulty is the age-old problem of capital formation. To some extent in Latin America, and to a very great extent in Africa, there is need for industrial growth to support existing populations. Outside aid can introduce some food, though rarely enough to support a population. It can introduce certain kinds of equipment. And though the food and the equipment may help, capital formation must still come from an excess of production over the immediate needs for consumption.

We may send big drilling equipment, and dredging equipment and scoops and other forms of diggers into a primitive country. We may send technical missions to train the native workers to use the equipment. But the native people must work the machines, and must somehow be supported by their own inadequate economy while they do so. Not until people living in undeveloped economies have learned to save, in the economic sense, can they expect any consequential or permanent improvement in their standards of living.

It is strange that even Canada, with whom we have had closer and friendlier relations than we have had with any other country, should now be feeling slightly antagonistic toward us. Much is made of the fact that our particular culture is likely to sweep over Canada, destroying the attitudes and folkways which are typically Canadian. Our radio programs are to be heard in Canada. Our magazines can be subscribed to in Canada. Our technical achievements can influence the thinking of technicians in Canada. It is true that these ills are due to proximity. But they make Canada something less than Canada for Canadians. And behind this fear of a cultural osmosis is a different fear: the fear of the domination of Canadian industry by investment from the United States. It must be remembered that when investment funds flow to Canada, they flow in response to the promise of higher return. And this higher return is a symptom of a scarcity of investment funds in Canada. What we may realize is that the 17,442,000 people in Canada are not forming capital as rapidly as the needs of Canada or the opportunities for investment in Canada would suggest.

Summing up this train of thought:

First. The major amount of instability among the less well-developed peoples of the world is due to the depressed state of the common people and their feeling of hopelessness in the face of the richness of the few wealthy men in their countries.

Second. This discontent is fanned, wherever possible, by alert Communists, who see their opportunities enhanced by revolution and discord.

Third. The development of a greater degree of social and economic equality and justice within the less well-developed countries will improve world peace.

Fourth. The long-term remedy, however, will be the increasing rate of capital formation among the have-not nations. It will be a very difficult achievement to stretch a bare subsistence living to allow saving for capital formation, yet that must be done, and any help we can give that results in such capital formation will be real and constructive help.

In relation to my opening remarks this summary leaves three points yet to be discussed: First, how far can we go in continued giving of aid abroad, second, does the inhibition against interference in internal affairs of other nations preclude us from conditioning aid on elimination of Communist influences, and, third, can we any longer afford to operate aid and other programs abroad on the present, uncoordinated basis?

WE CANNOT ACHIEVE CAPITAL FORMATION FOR OTHERS

How much foreign aid can we give? We have just stood a run on our gold supply, a run probably originating from a number of simultaneous causes. But it gave us a fearful premonition of what could happen if we carried our national economy without frugality. We have pushed our own economy to the point at which we shall have to suffer increasing inflation as we increase our welfare expenditures. It seems clear that we are going to increase our welfare expenditures, and that we shall suffer a continued and somewhat more rapid inflation. Thus, our foreign aid—of whatever kind it may be—will be given against the increasing costs of inflation. We can give a considerable amount of technical assistance. We can give articles and commodities which we have in surplus. And we can help our friends make expenditures which we should make on our own behalf if they did not make them. Possibly much of our military aid will fall into this classification.

But it is doubtful that we should or even can give the kind of blank check we gave soon after the Second World War. Large loans which will be spent throughout the world, and ultimately tend to reduce our gold reserve are to be avoided. The kind of technical help and the gift

of what amounts to "seed corn" will surely accomplish most in the long run to help our friends raise their standards of living.

STRINGS ON FOREIGN AID

Shall we continue to hand out hundreds of millions of dollars every year and have no real voice in what happens to those funds? The propaganda against making grants with strings attached is of Soviet origin. So is the much-vaunted idea of neutralism, the whole object of which has been to put strings on America's policies and to prevent us from making effective use of the aid funds that are appropriated. The time has come to stop fooling ourselves. Not a dollar of foreign aid ought to be spent for use by any government which tolerates Communist agents or intrigue of a political party with affiliations in Moscow or Peiping.

If the countries which we are to help will rid themselves of Communist influence, we can support them to a certain extent, but we must not be expected to do that job alone. The nations aided must show some positive signs of a capacity to establish and maintain their own independence and self-governing system.

In this connection a specific showdown in Latin America is due and it must come at once, particularly in connection with this program of developmental assistance. The Monroe Doctrine warned European governments in 1823 to stay out of this hemisphere. It is still a valid doctrine today. It applies whether attempts to establish influence in the Western Hemisphere are overt or covert. Implementation of the Monroe Doctrine in the administration of this program is as much a responsibility of our government as is armed resistance to an armed intervention which might be attempted by a European power in Latin America.

WE MUST COORDINATE OUR DEFENSE AGAINST COMMUNIST NONMILITARY AGGRESSION

The simple fact is that this Nation and its free world allies are engaged in war today. Because it is a nonmilitary war many people, even in high places fail to recognize its existence. Nonetheless it is as deadly serious a war as we have ever been in. The stakes run as high as national existence itself. It is a war into which the Soviets are pouring a vast portion of their national effort. It is a war which the Soviets are fighting with the same degree of planning, intelligent attention and command decision as they would fight hot war. It is a war which we on our side are fighting with piecemeal efforts, without coordination and without actually knowing we are fighting it. The aid programs, the propaganda efforts, the intelligence services, diplomatic machinery are not combined into one coordinated defensive effort. No attention whatever is given to incorporating these and other nonmilitary weapons available in free world arsenals into an organized offensive to win the war. At a later date I will make specific recommendations in these regards. I believe their need and wisdom will be so apparent they will be adopted. Otherwise I would not support the legislation for the Latin American development program or any other expenditure abroad. For unless we start doing all the things we must do to win, there is no sense in doing just a part of them. And, unless we do well all the things we must do, there is no sense in doing them at all.

Letter to the President from Cuban Refugees in Florida

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 25, 1961

Mr. FASCELL. Mr. Speaker, it is my great pleasure and privilege to call to the attention of the Members a letter directed to the President on February 27, by a group representative of the more than 60,000 Cuban refugees in my district in Florida.

This letter expresses the Cuban exiles' profound gratitude for the effective and helpful steps directed by the President to aid them in adjusting to their life in exile, here in our country.

The letter follows:

MIAMI, FLA., *February 27, 1961.*

The PRESIDENT OF THE UNITED STATES,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: The undersigned, heads of all Cuban industrial and commercial associations that compose the economic section of the Cuban democratic revolutionary front, wish to express to Your Excellency their most heartfelt appreciation for your concern and sympathy for our countrymen in exile, as demonstrated by your appointment of Mr. Abraham Ribicoff, Secretary of Health, Education, and Welfare, as your personal representative to study and handle the sad plight of the Cubans, who have had to flee their homeland due to the existing Communist terror.

Here in Miami, the high moral principles of your great country have been put into action in behalf of our fellow exiles by Mayor Robert King High.

Under his early leadership, the community of Miami accepted all the problems brought to it by our countrymen in exile in a generous and friendly spirit of brotherly love and esteem. The mayor has worked unceasingly to assist us and to demonstrate to all Latin America that the United States is the true defender of the oppressed and the world's bastion against international communism. He has demonstrated this in his deeds as well as his words. The mayor truly represents here the moral and practical leadership you are giving the United States.

As human beings we have had our moments of despair and hopelessness. But reinspired by your great leadership in Washington and Mayor High's great work in Miami we realize that we are not standing alone in our hour of need. When we hear words like those pronounced by you in your inaugural address and in your state of the Union message, we know that the American people realize that the Cuban situation is not merely Cuban, but the present line of defense for all democratic and freedom-loving peoples. Thanks be to the Almighty God.

The knowledge that your soft, courteous and restrained words backed by action, fortitude and determination, based on rock-solid principles, give us new hopes for the future; and gives us added strength to keep on our fight to death against international communism.

Your words and actions to help the Cubans are of tremendous significance to all the free world. They give the millions of non-Communist inhabitants of Communist dominated countries new hopes and strength that will increase their revolt against their oppressor.

Your words will also make the millions of inhabitants of countries, which the Communists are trying to control, aware of the fact that they will not be left alone to their fate, but that the United States will help them maintain the freedom to which they are entitled to by the grace of God.

May God give you all the strength necessary to be able to perform all your duties and to bear the heavy burden imposed on the shoulders of the President of the bastion of democracy and on which the free world has set its last hopes, the United States of America.

Respectfully yours,

Bankers Committee for the Economic Rehabilitation of Cuba, Miguel Diaz, President; Cuban Home Owners Association, Ing. Rafael Garcia Bango, President; Cuban Packer Association, Guillermo Fernández Quirch, President; Cuban Association of Match Manufacturers, Andrés Carrillo, President; Cuban Association of Poultry Products, Dr. Manuel Castillo President; Cuban Association of Producers & Foodstuff Distributors, Dr. Francisco Gurri, President; Cuban Association of Candy Manufacturers, Andrés Carrillo, President; Cuban Soap & Toilet Articles Manufacturers, Dr. José M. Cuba, President; Cuban Association of Potato Growers & Other Products, Pedro Valdés, President; Cuban Independent Sugar Manufacturers, George Fowler, President; Cuban Cigar & Cigarettes Manufacturers, Dr. Tulio Diaz Rivera, President; Cuban Association of Brokers & Insurance Companies, Gaspar Contreras, Jr., President; Cuban Association of Industrial & Agricultural Equipment, Manuel Menendez, President; Chamber of Commerce of the Republic of Cuba, Roberto Suero, President; Cuban Industrialist Association, Pedro Villoldo, President; Cuban Department Stores Association, Dr. Humberto Solfs, President; Committee for the Rehabilitation of the Tourist Trade, Adolfo Redolta, President; Cuban Independent Rice Growers, Julio Cadenas, President; Cuban Road Shippers Association, Agapito Amaro, President; Bus Commuter Service Association, Antonio Sánchez, President; Associated Contractors of Cuba, Ing. Antonio Tella, President; Associated Mortgage Creditors of Cuba, Adolfo Arenas, President; Cuban Laboratories & Drug Stores Owners Association, Oscar Luis Mestre, President; Road Passenger Service Association, Rodolfo González Gallardo, President; Cuban Lumbermen Association, Ramiro Fernández Moris, President; Associated Marine Agents Brokers & Ship Owners of Cuba, Jaime Villar, President.

Israel's Independence Day

SPEECH
OF
HON. CHARLES C. DIGGS, JR.
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Thursday, April 20, 1961

Mr. DIGGS. Mr. Speaker, on the 13th anniversary of Israel's Independence Day it is well to recall that for nearly 2,000 years Jews were practically banned from

their historic homeland prior to the rise of today's State of Israel. During all that time they lived in dispersion in all parts of the world. In the course of that long period, in their misery and suffering, in times of troubles and in the face of almost unending adversity, they all cherished the dream of returning to their own ancestral home. After nursing this noble idea fervently, after clinging to it firmly and resolutely, at last Jewish leaders saw the possibility of attaining their goal soon after the First World War.

When Palestine was placed under British mandate, the safety of Jews there was assured, and the gradual return of Jews to Palestine seemed guaranteed. Then utmost efforts were made, and Jews worked for the increase of the Jewish population there. In this task they were successful; during the interwar years the number of Jews in Palestine increased from about 80,000 to nearly 500,000. Thus a real beginning was made toward the creation of Israel. In May of 1948, when the British relinquished the mandate, the Jews in Palestine, numbering more than 650,000, pooled all their moral and material forces and proclaimed their independence.

Since then the new State of Israel has gone through many ordeals, and happily has come out of them physically stronger and morally unscathed. Today she is a powerful, dynamic, democratic force in the Middle East, a decisive force to be reckoned with in all Middle Eastern affairs. On the 13th anniversary of the birth of Israel we all wish its citizens peace, prosperity and happiness.

Economic Espionage

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I enclose therewith an article appearing in Bulletin No. 45, 1961, which is one of the greatest of the anti-Communist periodicals of West Germany. It has to do with the Leipzig Trade Fair. On March 1, 1961, the following was part of an interview broadcast by the North German Broadcasting Corp., with a member of the Ministry for All-German Affairs.

Mr. Speaker, there is no length to which communism would not go to infiltrate the unsuspecting minds of any person anywhere on earth. One has only to travel to Germany and listen to the endless radio broadcasts from countless stations which carry on an everlasting program in the cause of communism. The voice of freedom and of democracy has only a few voices. The representative of the Ministry for All-German Affairs is one such voice.

The article follows:

BULLETIN No. 45, 1961—ECONOMIC ESPIONAGE

Leipzig as a center, methods of agent activity during the trade fair. On March 1, 1961, the North German Broadcasting Corp. relayed the following interview on the Leipzig Trade Fair with a member of the Ministry for All-German Affairs:

"Question. Dr. Zahn, you have been acquainted with conditions at the Leipzig Trade Fair for many years from your own personal experience. And you maintain that exhibitors and visitors who come to Leipzig from the Federal Republic can easily fall a victim to Soviet Zone economic espionage and also to the activity of political agents. On what do you base this view?

"Answer. The economic espionage consists in the fact that the people of the Leipzig Trade Fair Department are instructed to obtain as much information as possible about internal conditions in the firm in question, about production, manner of production, number of employees, size of the firm, etc., on the grounds that the order one intends giving is then decided accordingly. An economic business transaction is thus used as a bribe and in order to obtain information on matters which are actually beyond the scope of a normal business deal.

"Question. Are specially trained persons used for this purpose?

"Answer. The majority of them are trained. I would say that at least 70 to 75 percent of the competent persons in this case, even down to the shorthand typists, are nowadays instructed to engage in economic espionage—for that is what it is—as part of their work.

"Question. And they are therefore also members of the intelligence services of the Soviet Zone?

"Answer. The evening training courses which are held in the Leipzig Trade Fair Department for specially selected persons undoubtedly serve this purpose.

"Question. You also said that visitors to the trade fair may easily fall a victim to agent activity. On what do you base your opinion in this respect?

"Answer. The activity of the agents consists in the fact that they call on visitors and involve them in noncommittal conversation and then want to know this and that, and try to get a bit friendly with them in order to get information which is of interest to them from these visitors to the fair. On one occasion I ascertained—and I was also assured from another quarter that this is actually the case—that special accommodation fitted up with concealed listening-in appliances is given to guests who are of particular interest to the Soviet Zone, and that any conversation carried on in such rooms is promptly recorded on a sound tape.

"Question. That would mean that the staff in such places of accommodation also belong to the intelligence service and to the network of agents?

"Answer. That can be assumed for certain, for in my opinion, and I do not hesitate to say so, Leipzig today is the center of Soviet zone or East bloc espionage. One has to be particularly on one's guard if one goes to a night club; they are usually very crowded, and the Leipzig Trade Fair Department issues tickets in advance to ensure that visitors get a seat. These places are teeming with agents and persons in the pay of the intelligence service, who try to get information out of their victims when the latter are under the influence of alcohol.

"Question. Since you are an authority, as it were, on this subject, what advice would you give exhibitors and visitors to the Leipzig Trade Fair?

"Answer. I think every person who goes to the trade fair, whether as an exhibitor or as a visitor, should realize beforehand that he runs the danger of being approached by agents and spies there, and that he should behave accordingly. A word too little is better than a word too much."

Commendation for the Czech Newspaper Ceske Listy and Its Publisher, Mr. Milos Svoboda

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. DAGUE. Mr. Speaker, it was my great privilege this morning to interview Mr. George Brada, of Munich, Germany, who is of Czech extraction and completely dedicated to the release of his beloved homeland from the tyranny of the Communist oppressor. Our conversation served to rekindle my sympathy for these valiant people and reminded me that we must be eternally vigilant if other free peoples are not to suffer a like fate.

Mr. Speaker, 11 years ago, in April 1945, the so-called Kosice program of the Czechoslovak National Front Government under the Communist Zdenek Fierlinger, now President of the Red Parliament in Prague, was proclaimed in Kosice, Slovakia.

The pattern of the Communist takeover in Czechoslovakia was the same as in all other countries, in which the Communists seized power through infiltration and subversion. The Special Report No. 8 of the Select Committee on Communist Aggression of the House of Representatives, headed by former Congressman Charles J. Kersten, of December 31, 1954, stated on pages 17 and 18—

It should be pointed out that the Communist advance in Czechoslovakia was greatly facilitated by the behavior of the non-Communist political parties and their leaders.

Especially the naive belief in the possibility of coexistence with the Communists, shared in different degrees by practically and Czech politicians, was responsible for the extreme ease with which the Communist Party took power in 1948. The signing of the Soviet-Czechoslovak agreement on December 12, 1943, and especially the proclamation of the Kosice program of April 5, 1945, opened the door for an unobstructed drive on the part of the Communists to seize full power in the country.

Far more fateful for the people (especially in Bohemia and Moravia) was the fact that they were misinformed by many fellow-traveling intellectuals by means of newspapers, books, and through all media of communication as to the real nature of communism, cleverly described for years even prior to World War II as undergoing an evolution toward a democratic, humanitarian ideology.

The apparently easy success of the Communists in the post World War II period in which a climate of confusion and ignorance is easily understood and should also serve as a strong warning to the still free nations of the world.

We have seen that the same pattern was used also in the take-over of China and, more recently, of Cuba. Indeed, the warnings of the Kersten committee are today more timely than ever. And in this connection praise belongs to the Czech exile newspaper Ceske Listy, published in Munich, Germany, by Mr. Milos Svoboda. Mr. Svoboda has been revealing the Communist tactics and bringing these facts to the attention of the Czech exiles and refugees and old Czech settlers in the free world. His newspaper should be commended and I hope that it will successfully continue its work and reveal the truth of the Communist tactics and serve thus not only the interests of the Czech people, but also those of all nations including the United States.

Any Real Gains in J.F.K. Tax Plan?

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Peoria Journal Star:

ANY REAL GAINS IN J.F.K. TAX PLAN?

The Kennedy economic stimulus program, for which we held such high hopes, has turned out to be a disappointing dud.

In the proposal to quit grabbing off more than half of corporate profit where such moneys are used for expansion and new enterprise, the administration reveals that it is aware of the problem.

They seem to recognize that the notion that the excess profits tax would discourage profits and encourage business to spend those 48-cent dollars was a naive, professorial dream that ignored the facts of life.

What really happened, of course, was that to maintain its financial integrity and have a level of actual profit to serve its needs, business did not get more careless about profit, but worked all the harder to maintain the after taxes level by increasing their before taxes profits.

Instead of relaxing the pressure, the law has increased the squeeze on income dollars and intensified the fight for those dollars between the wage earner and the operators.

Part of the new program seems to recognize that experience and seeks to correct it in a way that will stimulate new enterprise and additional jobs.

But then they chicken out.

They balanced it out by negating the whole thing and proposing, at the same time, to put more pressure on via dividends.

It also, apparently, is based on the theory that increasing the taxes on dividends will cause business to put in less money for dividends and more for expansion.

That's the same mistake all over again and completely ignores the reality of human nature and the reality of business necessity.

In fact, of course, in order to maintain the level of "take home" return for investment, most business will respond with a new drive for more profits in order to absorb the tax and still have as much left over.

This is pretty simple human nature, and it is also an economic necessity.

Without a fair return for the use of money, material, machinery, tools, or any form of capital, it dries up. The business with a profit squeeze so tight it cannot accumulate money, cannot borrow money, and cannot attract investors is sunk.

So, of course, this proposal is a blow at small investors—the healthiest development on our economic scene.

In addition, the combination of a need for more profits to meet new dividend taxes, and the need for more profits to take advantage of the tax-free expansion feature, screws on a double pressure against such things as wage increases, and a double pressure on managements to find cheaper ways to operate—i.e., automation.

Thus, the something-for-everybody approach to the economic problem, actually seems to cancel itself out and would be more likely to make things worse than better.

Railroads—Truckers

EXTENSION OF REMARKS
OF
HON. JOHN R. PILLION
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. PILLION. Mr. Speaker, at the request of Mr. Warren A. Colpo, of Cheektowaga, N.Y., I am pleased to insert in the Appendix of the RECORD the following: (a) an article entitled "Railroads," taken from the April 14 issue of Time magazine; (b) a letter dated April 7 from Time to Mr. Colpo; (c) a letter dated April 18 from Mr. Colpo to Time.

[From Time, Apr. 14, 1961]

RAILROADS—HOT FIGHT WITH HOFFA

In the long and bitter battle between the railroads and the truckers, the railroads are making new gains by inducing their opponents to defect. Their weapon: piggybacking, the carrying of freight-loaded truck bodies on railroad flatcars. Truck piggyback service for general freight has doubled in 2 years, become the rails' most profitable single freight operation. Last week six of the biggest U.S. trucking firms joined in a new company to cooperate with the Erie-Lackawanna Railroad in building special piggyback terminals for general freight in Jersey City and Chicago.

All this has not gone unnoticed by Teamster boss James Riddle Hoffa, a general who does not like to see his troops being ridden out of town on a rail. Piggybacking, claims Hoffa, has already cost the jobs of 20,000 teamsters. To fight the rails, he is pushing a new tax on truckers, requiring them to pay $5 into the union's welfare or pension funds, beginning next year for every truck they piggyback. Hoffa has already signed the first such contract with Midwest truckers, is pressuring other truckers to sign up. He has also launched a full-scale public relations barrage against the railroads, hoping to stir up support for an amendment to the Interstate Commerce Act that would limit the rails' power to undercut freight charges on piggyback runs.

POLITE REBUTTAL

The rails have gone a step farther than piggybacking. They have developed their own 3-deck, 15-auto flatcars that are helping them win back a big slice of the new-car hauling business lost to truckers. Once, the railroads moved 75 percent of all new autos. But the truckers devised efficient trailers that undercut railroad charges, by 1959 had left the rails only 8 percent of the business. Now the rails are grabbing a bigger share by charging only half as much as truckers on long hauls. One reason: on a cross-country haul, each flatcar replaces at least three high-wage truckdrivers. By year's end, Ford expects to ship 35 percent of its cars by rail, Chrysler 40 percent, American Motors 50 percent, Studebaker 70 percent. General Motors, which has widely scattered plants close to markets, ships less by rail than the others.

Ford Motor Co., where the Teamsters stand to lose the most business, is being subjected to the biggest mail barrage emphasizing the number of drivers being thrown out of work. Ford answers with a form letter politely pointing out that the Teamsters originally threw railroad workers out of jobs when they took away the rails' auto-hauling business, assures complainants that trucks will continue to handle the majority of the volume of car shipments. On hauls of up to 300 miles, trucks are still more economical; but for anything longer, when drivers must be put up overnight, rails win hands down. Even Hoffa's $5 tax will not cut seriously into the savings on long hauls.

Hot war? The fight for auto freight may get rougher than words. The St. Louis-San Francisco Railroad, which developed the first three-level cars (Time, Oct. 24), has already run into some mysterious acts of sabotage. Acid dumped from highway overpasses ruined the paint jobs on one shipment of 29 autos and on another 150. The railroad had to pay $484,000 for the damage. Other railroads have had cars damaged by shotgun blast or peppered with rocks. To guard the shipments, Frisco's auto trains now carry an extra caboose and an extra crew.

TIME,
New York, April 7, 1961.

DEAR MR. COLPO: It is Time's view that piggybacking can be beneficial to everyone concerned: truckers, railroads, shippers, and the general public. Obviously, however, piggybacking as well as the whole general subject of rail and truck competition are complex and controversial matters. Time has examined aspects of this competition in the past and will continue to do so in the future, whenever developments in it are significant and newsworthy. In the meantime, we appreciated having your thoughtful presentation of some of the dangers inherent in the railroads' massive effort to improve their competitive position in the freight business. Excerpts from your letter were considered for publication, but unfortunately, lost out in the keen competition for space; of the hundreds of letters we receive each week, we have room in the column for only a handful. Thank you very much for letting us hear from you on a subject of great importance to the transportation industry and to the health of the economy.

Cordially yours,

ISABEL KOURI,
(For the Editors).

BUFFALO, N.Y., *April 18, 1961.*

ISABEL KOURI,
Time, Time and Life Building,
New York 20, N.Y.

DEAR MISS KOURI: In your anxiety to see Hoffa destroyed, you are rendered helpless to see the grim truth as attested to by the obvious facts. Your April 14 article infers that this is largely a battle between the railroads and Hoffa. The reader gains the impression that the conflict is one within the realm of "union busting" tactics, when in reality, it is a battle between two giant industries with Hoffa playing a comparatively minor role. Hoffa merely represents the workers in one of the two industries involved, but Time would have its readers believe otherwise. To Time, the thousands that face unemployment are not decent husbands, fathers, breadwinners, citizen taxpayers; they are rather, Hoffa henchmen, and they are about

to receive their just desserts along with Hoffa.

Re Ford's polite form letter: the contention that the truckers were the original cause of an equal loss of jobs on the railroads is nothing more than a patent lie. Even Time should be able to understand that a seven-man railroad crew is capable of moving the same amount of goods that would require 300 men using highway equipment. Along with Time, Ford contends, even before a congressional committee, that the reduced labor costs is a good thing insofar as the public welfare is concerned. But the fact is that Ford was and is still charging its dealers and the buying public for services that they are not receiving. Ford stated that it saved $40 million in 1960 by using rail, but the actual truth is that Ford profited this amount since Ford was and is charging over-the-highway rates while securing for Ford the savings afforded by the use of rail.

The public is therefore receiving a double-barreled dose of monopolistic practices. It is being charged for the services of an industry now largely nonexistent, while it must at the same time make up for the loss of taxes and employment heretofore offered by that industry.

I question the depth of your alleged investigation into the facts because the foregoing information is a matter of general knowledge within the industry, and I therefore fail to see the logic of your statement to me, that Time believes piggybacking to be a good think for all concerned.

Your April 14 article implies a certain delight over the fact that, thus far, six of the biggest trucking companies have been forced to defect to the railroads. The inference here is not that the jobs of still more thousands of decent Americans is imperiled, but rather that Hoffa and his "troops" are being ridden out of town on a rail. It seems to me that Time and other influential news sources have needlessly confused Hoffa with a truck-railroad situation; whereby the general public as well as our legislators have not had an opportunity to gain a true perspective of the overall situation.

In the resulting confusion, Ford, as well as other shippers, is busily engaged in bleeding every last penny from the public, all the while piously declaring that there at last is true competition with the transportation industry, and that the public welfare is at last being served.

Why won't Time leave Hoffa to the Attorney General, and go back to reporting the unvarnished truth to its readers? Why must it be necessary to destroy an entire industry in order to get at one man?

Sincerely yours,

WARREN A. COLPO.

Thirteenth Anniversary of Israel Independence

SPEECH

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Thursday, April 20, 1961

Mr. FASCELL. Mr. Speaker, today we join with Israel in celebration of the 13th anniversary of her independence, a milestone in the history of human freedom. In 1947, under the leadership of the United States, the General Assembly of the United Nations resolved that there would be established in Palestine an Arab and a Jewish state. A few months later the National Council of the Jewish community in Palestine proclaimed the State of Israel. Since that day the people of Israel have stood forthright as an independent state, a full member of the United Nations.

The first task of the Israelis was to rebuild their country. They reclaimed the land, turning desert and swamp into green pastures. New cities were built; old ones expanded at a fantastic rate. Factories were built, and the standard of living of the citizens soared.

Having rejuvenated their own country, the people of Israel did not stop. Their assistance was then channeled to the less developed countries. As the United States and other countries had helped Israel in her hour of need, so Israel is now helping the new nations of Asia and Africa. This year 1,000 Asian and African students are expected to study in schools throughout Israel. More than 400 Israeli technical experts have been sent abroad. In Ghana, Israel contributed 40 percent of the capital necessary to establish the country's steamship line, the Black Star Line. Trained and experienced Israelis will run the line for 5 years, and then it will be turned over to the Ghanians. A similar procedure was followed with a construction firm and Israel has provided technical personnel for a Ghana nautical academy, and to teach civil engineering. Some of the other states which Israel has helped in similar ways are Burma, Liberia, the Congo, and Sierre Leone. It is this relationship between states—a mutual give and take—which strengthens self-sufficiency and independence, and which closes the door to Communist infiltration. I salute the people of Israel on this day of their independence.

Is Freedom a Frankenstein?

EXTENSION OF REMARKS

OF

HON. FRANCIS E. WALTER

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. WALTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Plain Speaker of Hazleton, Pa., dated April 11, 1961.

[From the Plain Speaker, Hazleton, Pa., Apr. 11, 1961]

IS FREEDOM A FRANKENSTEIN?

Having seen the motion picture "Operation Abolition" produced for the House Committee on Un-American Activities, we find it difficult to comprehend the motive behind a resolution adopted by Wyoming Valley ministers asking for an "explanation."

The resolution asks that organizations showing the film make it clear that there are objections and goes on to point out that the film has no standard credits and its producers are not identified.

This point of criticism can be quickly judged. How many film credits can you recall from motion pictures you have seen?

"Operation Abolition" is a documentary film prepared for the House Committee on Un-American Activities which is headed by Congressman FRANCIS E. WALTER, Easton, whose district includes Carbon County.

The film was compiled from newsreel clips of the student riots which occurred in San Francisco in May 1960 when Walter's committee attempted to hold hearings on Communist subversion in the San Francisco area.

Since its release the film has been the subject of sniping from various sources, a situation which arouses the suspicion that an organized underhand effort is being made to discredit it and the committee.

Our advice to anyone questioning the authenticity of this film is simple: See it.

It is a simple matter for the producer of an acted-out documentary to slant his script in any way desired.

But "Operation Abolition" is not an acted film. It is a photographic account of what happened. It is a frightening example of how people can be duped into attempting to destroy the very basic freedoms the Communists have as their main target.

The disgraceful demonstrations at San Francisco were purported to show the objections of students to what they are presumed to believe are the unfair tactics of the committee.

What transpired at San Francisco is fully documented by the film. The actions of the Communist rabblerousers in making a shambles of the hearing are there for anyone to see.

Any religious group questioning the authenticity of this film would do well to review the remarks of six Protestant clergymen who were witnesses to the riots.

We would like to ask any critic of the committee how such complete and chaotic disregard for national, State, and city authority could be justified even by a really sincere objector.

We would like to ask what prompts the attacks on the Walter committee from sources which ordinarily do not make news as adherents or opponents of major public issues?

We think these attacks are part of a Communist-inspired effort to discredit the Walter committee.

We do not infer that groups such as the Wyoming Valley ministers are themselves supporting communism. We believe that many sincere-minded champions of American liberty are being misled by inaccurate information.

The House Committee on Un-American Activities was recently given a tremendous vote of confidence by Congress with only 6 dissenting votes to a resolution providing for its continuance.

It has been praised by FBI Director J. Edgar Hoover who said its role 'in safeguarding our freedoms is well known to every patriotic citizen, and real Americans are not going to be fooled or misled by efforts to discredit its vital task."

But it is the target for abuse from Soviet Russia and the Communists. Apparently its work is beginning to hurt.

The fellow travelers and those blind to the Communist threat scream for the rights of the individual and cry persecution. They object to each and every probe of Communist infiltration on the grounds that the rights of individuals are being violated.

See "Operation Abolition" and decide for yourself whose rights were violated.

Take the case of the John Birch Society currently under fire. It is organized to fight communism and has enlisted some of the Nation's leading citizens as members. Now it is being assailed as Fascist and neo-Nazi. A favorite tactic of the Communists is to brand any opposition as dictatorial.

As a newspaper whose very existence depends on a free press we would be the first to champion the rights of free speech, free assembly and free thinking, and the other rights of our Constitution.

But we think it is time that the people of the United States wake up to the fact that our enemies are using these very rights as weapons to destroy us.

Is freedom to become a Frankenstein monster and destroy all that America stands for? Only the American people can decide.

Goodby America and Thank You Dr. Gargiulo

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. BARRETT. Mr. Speaker, under leave to extend my remarks in the RECORD, I am privileged to include a farewell address made by Lt. Comdr. Herbert G. Karlsruher, Dental Corps, Chilean Navy, at the naval hospital, Philadelphia, Pa., prior to his departure to his native land of Chile.

I personally recommend his speech to the membership of the House because of its sincerity and because it clearly demonstrates our good neighbor policy.

Of course, Philadelphia is known as the City of Brotherly Love, but even more important is the fact that Captain Gargiulo, who is the Chief of the Dental Service at the Philadelphia Naval Hospital, and his staff acted far beyond the call of duty to welcome Dr. Karlsruher and his family to their temporary home:

MY DEAR FRIENDS: It is not easy for me to find the proper words to express my feelings at this moment. I wish I had attended some of those toastmasters meetings with Captain Bowman. But I hope that you will understand what I will say, because I mean every word of it.

When I came to this wonderful country of yours, I was not exactly happy. I had not asked to be sent here. We were just going into summer, the children were out of school and we had planned to spend the vacation in our country house.

But that was not my only reason for not being particularly happy to be sent to the United States.

I knew that I would have to live and work with strangers, not even knowing much of their language. And I didn't know how I would be received and accepted. Well, now I know that all my fears were unwarranted.

It is true, that instead of the wonderful Chilean summer, I had one of your worst winters, with below zero temperatures, winds of 60 miles and more, rain, sleet, storms and snow, lots of snow. But I enjoyed the winter, even those 30 inches or so of snow.

And what wonderful people I met here. Everyone, everywhere was friendly, helpful, and understanding. Very soon indeed, I began to feel at ease, not being the very stranger I had feared to be, and the naval hospital became a home for me here in Philadelphia.

Captain Gargiulo, Captain Bowman, Commander Guay, Dr. Hale, Dr. Besley, Dr. Loizeaux, Mrs. Matthews, Chief Lonergan, Samford, Raub, McClain, Beech, Elkins, Robertson, Green, Surotchak, Kennett, the whole family of the dental department made every possible effort to make my being among them as nice and pleasant as possible. I was invited to official and non-official parties, I was asked to many of their homes, I met their wives, their children, other members of their families, and also their pets. I was allowed to share their interests, their happiness, and sometimes even their troubles.

All this made me very happy and I thank you very, very much for it. And I do it also in the name of Mrs. Karlsruher, to whom all your kindness and friendship was extended when she came to join me some 6 weeks ago.

I had wonderful teachers among you. I will name only two: Capt. Edward Gargiulo, the surgeon, and Capt. John Bowman, the prosthodontist. What they taught me is far more than they themselves imagine. It is a preciously guarded treasure I am taking home with me, for which I would like to express my deepest gratitude, my own as well as that of the Chilean Navy.

But all the rest of you have been wonderful teachers too. Maybe you do not even realize it. While showing me things, odd and important things, while talking with me about hundreds of subjects, you taught me that the American people are much more than just the most advanced in science and knowledge and in power in the present days, but also the most human, tolerant, and friendly. And this, maybe, is the most important thing I am taking home with me, for it is the understanding between people, the respect which one nation has for the other, not because of military power, but because of the kind of its people, that we will have peace and a better world in which to live.

In a few more days I will be on my way home. I am leaving satisfied, happy, and sorrowful. Satisfied because I have the feeling that my mission here has been happily accomplished. Happy because I had such a wonderful, unforgettable time in this country, because I was allowed to share your homes, because I met so many fine people and because I made real and good friends among you.

But I am sad too, because I know that very likely I am not going to meet many of you again. But one never knows, and it is really a small world, especially in these days of jet planes and missiles. Every year several ships of your Navy call in Valparaiso. Maybe one of you will be on board. Commander Guay is probably the first I will meet again when his ship, the U.S.S. *Midway*, docks in my home city. I want all of you to know that you will always have a friend there waiting to welcome you, to take care of you, and whose home shall be yours.

Thank you again, my good friends, thank you for all and everything and God bless you.

HERBERT KARLSRUHER.

To Avoid It, Accept It

EXTENSION OF REMARKS
OF
HON. E. L. FORRESTER
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. FORRESTER. Mr. Speaker, the April 18, 1961, issue of Christian Economics carries an article entitled "To Avoid It, Accept It," which is so sound that it should appear in the CONGRESSIONAL RECORD. This article reads as follows:

TO AVOID IT, ACCEPT IT

The press reports Arthur M. Schlesinger, Jr., special assistant to the President, as saying that the best security against communism is for the welfare state to provide food, clothing, shelter, education, and opportunity for the people. But that is communism. So Dr. Schlesinger would have us avoid communism by adopting it.

No state could make a serious attempt to provide all its people the goods and services involved in that program without controlling their education, activities, incomes, and the content of their minds.

Most people would make little effort of their own if the state were providing these things for them. Even the Soviet Union has not adopted so complete a program for the destruction of individual effort, initiative, and human personality.

Water Needs of the Nation From 1980 to 2000

EXTENSION OF REMARKS
OF
HON. CARL ALBERT
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. ALBERT. Mr. Speaker, Oklahoma is fortunate to have in her senior Senator a man not only of great ability and experience, but vision, as well. Since first embarking on his long and distinguished career of public service, ROBERT S. KERR has been a powerful champion of the conservation and development of our Nation's natural resources. He has gained respect as an authority in the field of water resources development. He has spearheaded a national awakening of the importance of our resources. He has even authored a book entitled "Land, Wood, and Water."

On April 17, 1961, Senator KERR addressed the Eighth National Watershed Congress, an organization whose members have played an important role in the progress of the water development program. The Senator's remarks, "Water Needs of the Nation from 1980 to 2000," will be of interest to many of our colleagues, providing a clear-cut challenge which we cannot ignore.

Mr. Speaker, under unanimous consent, I insert the following and commend it to the attention of all who are concerned with America's growth and prosperity:

WATER NEEDS OF THE NATION FROM 1980 TO 2000

(Speech by Senator ROBERT S. KERR, of Oklahoma, before the Eighth National Watershed Congress in Tucson, Ariz., April 17, 1961)

Mr. Chairman, ladies, and gentlemen, thank you for letting me come here and be the first speaker on your program. This bids fair to be a great congress. Considering the strength and vigor of the many organizations participating in it, I am tempted to say it promises to be the greatest congress I've ever attended. But I won't. Back in Washington we are having a Congress, the 87th, and it is composed of many fine fellows who knows theirs is going to be the greatest Congress ever. And, with the help of this Eighth Annual Watershed Congress, that Congress in session in Washington may well wind up deserving the fanciest superlatives you can think of. Certainly, this is an extremely important session of the National Congress insofar as our future water needs are concerned.

I realize the watershed congress has traditionally avoided direct action in its own name, preferring to accomplish the common aims of its member groups through the separate organizations participating in it. However, I hope the discussions and other features of this meeting will lead to positive action on many fronts aimed at the general

objective of solving the water problems we face in the next 20 to 40 years.

My subject is the water needs of the Nation in the period from 1980 to the year 2000. When considered with your general theme, "The Count-Down on Water," it strikes me as covering about the most important domestic issue the country faces insofar as its future economic growth and prosperity are concerned. This congress, and the organizations taking part in it, has been of great public service in this area in the past, and will, I am sure, contribute greatly in the future.

Arizona seems to me to be a most appropriate place to ponder just where we are in the count-down on water. Arizona, location of the pioneering reclamation project in the United States, the Salt River project, offers many object lessons for the student of water resources. Some of the lessons date back 1,800 years to the Hohokams, a prehistoric Indian tribe that first irrigated the Salt River Valley. Certainly, if we can find permanent solutions for the water problems of the arid regions of the Southwest, we can surmount the difficulties which will arise when water also grows short in the wetter areas of the Nation. Necessity is the mother of invention. Some of today's inventions for water-short lands will someday help the survival of areas where water at present is plentiful.

Arizona has had many heroes in the field of water development. Majestic, life-giving reservoirs, irrigation canals, and other facilities in this State serve as their monuments. One Arizona man, in particular, stands out, the Honorable CARL HAYDEN. We who have worked with Senator HAYDEN know well why his career, stretching all the way back to statehood in 1912, has brought him the unswerving support of his fellow citizens. We understand why the little Arizona schoolgirl, when asked to name the three separate branches of National Government, replied, "executive, judicial, and Senator HAYDEN."

Arizona also can be proud, along with members of this watershed congress, that President Kennedy named as his Secretary of Interior, the Honorable Stewart L. Udall. With Mr. Udall's genius in the Department of Interior, and Senator HAYDEN's leadership of the all-important Senate Appropriations Committee, not only Arizona but all of the Nation stands to benefit. Now—and I'm being facetious—if some of these benefits accrue to the benefit of my other distinguished colleague from Arizona, Senator GOLDWATER, I am sure Senator HAYDEN and other members of my political party will applaud the benefits despite any political reservations concerning the recipient thereof. Seriously, I have the highest personal regard for BARRY GOLDWATER and partisan political considerations must not interfere with the conservation of water and other natural resources. I hope my remarks prove the need for more bipartisan action.

Our future water needs must be considered in broad perspective. I am happy to see that your program this afternoon has the theme, "Multiple Use of Watersheds." The word "watershed" has different connotations for different people. In Webster, "watershed" is defined as the area draining into any given creek, stream, lake or river.

The "Countdown on Water" theme of this congress embodies a broader look at problems in which local watersheds are factors of varying importance. I solicit, therefore, your consideration of another concept—the basinwide interagency approach. This larger concept has been successful in my part of the country to a remarkable degree. It is interesting to note that it is gaining more and more support throughout the country. A recent publication of the U.S. Department of Agriculture points out that under Public Law 566, as amended by Public Law 1018, the Watershed Protection and Flood Prevention Act, Congress—the National Congress, that is—made it clear this law would be used, quote, "to supplement both our present soil and water conservation programs and our programs for development and flood protection of major river valleys."

In my home State, we are proud of the developments that are underway in the Arkansas, White, and Red River Basins. Oklahomans took the lead more than 20 years ago in establishing this approach. My first bill when I went to the U.S. Senate in 1949 created the Interagency Study Commission of these basins. This study covered 180 million acres, including all of Oklahoma and parts of Colorado, New Mexico, Kansas, Arkansas, Missouri, Texas, and Louisiana. President Truman, at the time, noted that for the first time there had been specifically recognized in such legislation the need for a broad-scale study of the multiple uses of the land and water resources of a river basin.

Since that mammoth study was completed, a coordinated system of land, wood, and water conservation has been under construction in the area. It has been labeled the "Kerr plan," a label that does injustice to a large number of inspired visionaries—starting with my dad—who taught me the value of land, wood, and water. I chose those magic words, "Land, Wood and Water," for the title of a book published last year, and I tried in the book to give credit to the many people who contributed to the dream which is fast becoming reality in Oklahoma.

My activities in this field also contributed to the publication of another book recently, a volume which the U.S. Government has made available in quantity, free, for those registered for this meeting. It is the report of the Select Committee on National Water Resources which the Senate created in 1959. This committee completed its work in January.

The committee was told repeatedly that any inquiry into the Nation's potential water supply necessarily required an appraisal of conservation programs affecting all of our natural resources. I hope that if you have not had a chance to study this report, you will pick up a copy while here.

The committee found that the Nation's water supply, in relation to demands, is shrinking rapidly. Withdrawals now are about 300 billion gallons daily. Based on medium projections of the population increase, by 1980 demands on the Nation's water resources will almost double, and they will more than triple by the year 2000. If, as the committee hoped, the Nation's growth rate is greater than the medium estimates, these increased demands for water will come upon us much faster. The committee assumed that the Nation's economy will continue to grow at the rate achieved in the past, and that there will be relatively little change in the present methods of water use—and water waste. The committee found five major categories of effort needed for meeting prospective demands on a long-range basis. I would like to recite these before I give you a few statistical details based on some charts taken from the committee report. The charts will support these general conclusions:

(1) We need to improve the regulation of streamflow through the construction of surface reservoirs and through better watershed management.

(2) We must improve the quality of our streams through more adequate pollution abatement. I prefer the term "water quality management" to pollution abatement, however.

(3) We must make better use of underground storage.

(4) More water-saving techniques must be developed in the fields of irrigation, sewage treatment, and substitution of air for water cooling should be encourage in areas of potential water shortage.

(5) Greater support must be given research programs leading to cheaper desalting methods, weather modification, or other methods of increasing natural water yield.

All of these objectives require planning now for action in the future. For this reason, I have relabeled a chart taken from page 7 of the committee report and enlarged it for your perusal. I have given the chart the label, "Why We Need More Planning Now," because it shows clearly that total withdrawals by the year 2000 will be fairly close to the total streamflow in the United States, exclusive of Alaska and Hawaii. As of 1954, the streamflow was about 1,100 billion gallons a day, and demands for withdrawals that year were about equal to 27 percent of streamflow. The withdrawals, you will note, are divided into consumptive and nonconsumptive uses, and the committee obtained a breakdown showing withdrawals for irrigation, municipal, industrial, and power cooling uses.

I want to point out also that the committee took into consideration water losses which may result in conservation practices for watershed improvement. This factor is shown at the opposite end of the bars illustrating the anticipated total withdrawals in 1980 and 2000.

The report of the committee points out that in addition to water to provide for consumptive uses or depletion, tremendous quantities of water will be needed in our flowing streams for hydroelectric power production, navigation, recreation, fish habitat, and pollution abatement—water quality management. Estimates of flow requirements for these purposes were obtained. In the second chart, it is assumed that if water requirements for navigation are met, and if water of adequate quality for fish life is maintained, the needs of recreation will be met.

This second chart, on streamflow uses, is lifted from page 10 of the committee's basic report. The most significant factor shown in it is the estimate of flows needed to maintain the water quality of our streams. No figure was available for the current dilution requirement for pollution abatement, either in 1954 or at present, but experts convinced the committee that vast quantities would be needed for this purpose in future years. The quantities shown as required for maintenance of water quality in 1980 and 2000 are projected on the basis that the desired quality will be achieved by the cheapest combination of waste treatment facilities and storage reservoirs to provide sustained flows for dilution of effluent.

With the construction of such reservoirs, there will be many opportunities to develop hydroelectric power, but since there are other sources of electric power, the quantities of flow needed for cleaning of water were assumed to be controlling.

I would like to come back to the pollution problem in a moment, but first let me show you a third chart, this one taken from the last of the 32 committee prints which were published to substantiate the committee's findings. These prints, incidentally, give in detail facts presented to the committee during its series of 26 hearings throughout the United States. More than 150,000 copies of the committee's report or prints have been sent so far to citizens requesting them.

I don't know whether you approve of the color scheme or not, but personally, I like this chart best of all. It forcefully shows how well we can meet our water problems in 1980 and 2000, based on the present outlook for the various water resource regions of the Nation. The Nation's water resources are not uniformly distributed, and full development of all of the available resources are needed before 1980 in the five regions at the bottom of the scale. These are the South Pacific which includes southern California, the upper Rio Grande and Pecos Rivers, the Colo-

rado River which includes most of Arizona plus the rest of the Colorado's watershed, the upper Missouri and the great basin area of Utah and Nevada. By the year 2000, full development will be needed in three other regions. I am confident that everyone here agrees with me that the comprehensive development of these areas must proceed with all possible speed.

This confidence in your understanding of the general problem prompts me to single out one particularly knotty problem, water quality management, for your earnest consideration.

Pollution is never a pleasant subject, particularly when we start discussing specific problems. Often, the specifics are hardly mentionable in polite company. The tragedy of the Potomac River fits this pattern to a degree. I have brought with me today a set of pictures furnished by the U.S. Public Health Service illustrating some of the problems of the Potomac where it flows past our National Capital.

In this first slide, we see rubbish stacked on the shores of this historic river upstream from the intakes that draw water into the District of Columbia Metropolitan Water District. This is a trash dump—a result of human carelessness and a lack of public understanding. The materials entering the stream from this dump are similar to those that would be emitted by a sewage pipe.

Slide No. 2: Here is another picture that is not pretty and not pleasant to look at. These are bubbles of scum filled with sewer gas rising from the bottom of Four Mile Run as it enters the Potomac River from Virginia. This gas is from decaying sewage solids that have settled on the bottom of Four Mile Run.

Slide No. 3: This is another picture of Four Mile Run a short distance above its joining with the Potomac. Blue-green algae are floating slowly downstream toward the historic grandeur of our Nation's Capital. Blue-green algae grows in polluted rivers and it decays and contributes to offensive odors.

Slide No. 4: Here is the outlet of Rock Creek sewer; normally a storm sewer but one of the major contributors to the pollution of the Potomac. After a heavy rain this huge pipe flushes tons of untreated sewage into the Potomac. The Public Health Service researcher who took this picture later analyzed the fish caught by the man standing on the bridge. He found the catfish had been feeding on sewage.

Slide No. 5: This is almost too repulsive to look at. It shows sewage solids floating in the Potomac River near our Nation's Capital. This horrible mess flows from the Rock Creek sewer.

Slide No. 6: This picture was taken a short distance below the Key Bridge which leads from the District of Columbia to Virginia just a few miles from the Capitol Building. The stuff floating on the water speaks indecently for itself.

The Potomac River, grossly contaminated by sewage, is far too typical in our Nation today. Man has perpetrated this enormous folly in every part of the country. One report to our committee advised that our cities are now receiving approximately twice as much pollutant from municipal sewage systems alone as was considered safe in 1955. Here are some slides showing other pollution problems, at random, across the Nation:

Slide No. 7: This shows blood pollution of the Jean Petit River in Arkansas caused by wastes from a small custom packing plant. Near this spot people were fishing for gar which had gathered in the area. These rough fish had been attracted by the wastes.

Slide No. 8: Here we have a scene that is far too common—showing raw sewage spilling into what would otherwise be a beautiful river. The picture was taken a few years ago at Idaho Falls where a municipal outfall discharged directly into the Snake River.

Slide No. 9: Here is evidence of industrial pollution on the Holston River, downstream from Kingsport, Tenn. Those slimy organisms grow only in water so foul nothing of value can survive in it.

Slide No. 10: Another example of industrial wastes, this time below an oil refinery in Arkansas. The oil has collected behind obstructions in the stream.

Slide No. 11: This may be destroying my buildup, but I couldn't show that series of pictures without providing some visual relief for you. Here is the way water ought to look. The picture was made at Big Falls on Henry's Fork of the Green River. The shocking pictures which preceded it more accurately, however, illustrate the peril of our position.

As I mentioned earlier, we must devote more and more of our streamflow resources in this country to pollution abatement, and to this end, I have offered legislation to the Congress this year which meets the need head on.

My proposal, Senate bill 120, also would increase Federal support for the construction of sewage disposal plants. It also would authorize an intensive 5-year program of research in developing new methods of treating sewage. We might as well face the brutal facts—we will have to achieve virtually complete storage of river flows in most of our country to meet the water needs of this century.

Most Americans will be drinking, cooking with, bathing in, and otherwise using secondhand or thirdhand water. This means water will have been used, and purified, and used again not once, or twice, but perhaps several times.

My bill would emphasize the responsibility of the Surgeon General in participating in planning reservoir capacity and releases of water where such capacity and releases might be used to aid in improving the quality of water for municipal and industrial uses, fish and wildlife, and other such purposes.

I was bitterly disappointed last year when President Eisenhower vetoed a clean water bill designed to expand a program launched in 1956. He actually rejected the advice of his own Health, Education, and Welfare Department. Since then, Public Health Service leaders have stated repeatedly our present laws are inadequate to keep up with the program. The Public Health Service told me last week the backlog of needed sewage facilities in this Nation is estimated at $1.9 billion.

Now, however, the prospects have brightened considerably for the passage and Presidential approval of legislation designed to strengthen this and other phases of our water resources program. I don't know what the weather has been like lately in Gettysburg, Pa., or Palm Springs, Calif., but I can tell you the political climate in Washington has improved tremendously. We expect our water quality management bill, as well as all other measures dealing with natural resources development, to fare much better. They certainly will if you watershed partisans really work.

During the past 8 years, we have been slowed down or stopped by an administration wedded to the "no new starts" theme. But President Kennedy in his special message on natural resources to the Congress stated: "Pollution of our country's rivers and streams has, as a result of our rapid population and industrial growth and change, reached alarming proportions. To meet all needs, domestic, agricultural, industrial, recreational, we shall have to use and reuse the same water, maintaining quality as well as quantity. In many areas of the country we need new sources of supply, but in all areas we must protect the supplies we have."

The President specifically referred to Senate bill 120 as a recommended approach to the problem.

In this same message, the President endorsed our interagency river basin concept for the development of our water resources.

Therefore, from this vantage point in Arizona, not far from the pioneering reclamation project on the Salt River, we can view our water resources picture with optimism despite the greatly increased needs of the coming decades.

As chairman of the Senate Aeronautical and Space Sciences Committee, I have frequently heard scientists refer in recent months to the long leadtimes required for development of rockets and space vehicles. Lack of leadtime is now costing us dearly in our efforts to match Soviet Russian exploits. Insofar as our water problems are concerned, we still have the leadtime to make the countdown entirely successful if we act with sufficient vigor.

Just a few days ago, President Kennedy clearly demonstrated his vision and imagination to press forward on this new frontier. Out of the flurry of excitement over the Russian penetration of space came a calm statement from the President putting the water problem into sharp focus.

President Kennedy pointed out that "democracy is more durable in the long run," saying he hoped that the United States would be first in other areas, first in achievements that will bring more long-range benefits to mankind.

And then, perceiving the romance and drama in the crusade for conservation, President Kennedy placed the scientific conquest of water problems on a par with the historic probe into space.

Specifically, he cited the effort of American scientists to find an inexpensive way to get fresh water from salt water and said that if this succeeds it "would really dwarf any other scientific accomplishments" from the standpoint of humanity's welfare.

This new accent on water problems gives us fresh hope and enthusiasm. Conservation has often been a hard and thankless battle. Now, the water man may be coming into his own. Water men and space men may be marching shoulder to shoulder in America's legions of honor.

And while we do honor and reward America's famed astronauts, let us fashion fitting citations of merit for the "hydronauts."

The "hydronauts" of the new frontier will crack the barriers of salinity control, complete conservation control and water quality control.

Then let these heroes of conservation be given due recognition by a thankful people and a grateful Government.

Miguel Ydigoras Fuentes: President of Guatemala

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, April 26, 1961

Mr. FLOOD. Mr. Speaker, in a statement to the House on March 13, 1961, I quoted an address by President Miguel Ydigoras Fuentes, of Guatemala, over the Manion Forum Network and commended the President for his effective repelling of an invasion of his country by forces of the international revolutionary conspiracy.

It is indeed a pleasure to quote his gracious acknowledgment, which follows:

MARCH 23, 1961.

Hon. DANIEL J. FLOOD,
Member of Congress,
House of Representatives,
Washington, D.C.

DEAR MR. FLOOD: I wish to thank you very sincerely for your timed intervention at the U.S. House of Representatives and for your thoughtful courtesy of sending me a copy of the CONGRESSIONAL RECORD with your statements to the House, in reference to my way of handling the unhappy problem of conquest of the Americas through subversions inspired and directed by the forces of international communism.

I feel indeed very gratified and much pleased to count among the good friends of Guatemala, such a distinguished member of the U.S. House of Representatives as you, and I make fervent vows for that friendship to flourish and for the democracy of our countries to remain firm and prevail ever for the sake of peace and prosperity of our American Continent.

With kindest regards,
Cordially yours,
MIGUEL YDIGORAS FUENTES,
President of Guatemala.

What Customs Brokers, Importers, Shippers, and Public Officials Say About Building a Customhouse 22 Miles Inland From the Harbor It Serves

EXTENSION OF REMARKS
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. HOSMER. Mr. Speaker, the Government is planning to build a customs house 22 miles from the harbor it serves. This is the truth, fantastic as it may seem. This is the customhouse for the twin ports of Los Angeles and Long Beach where the General Services Administration is planning construction at the downtown Los Angeles Civic Center, 22 miles inland. Here are samples of what customs brokers, importers, shippers, and public officials are saying about it:

Earl V. Sauls, vice president of Carmichael Forwarding Service & Custom House Brokers: "Locating the office of the Collector of Customs as well as the Appraiser of Merchandise in the contemplated new Federal Building at Temple Street and the Santa Ana Freeway would appear to be politically motivated. Relatively little customs bonded freight arrives in Los Angeles via motor truck. Los Angeles International Airport is closer to the harbor area, both by time and mileage, than it is to metropolitan Los Angeles. Admittedly, it would be expensive to move our office and staff to the harbor area. However, in the interest of efficiency, with lower cost of operation benefiting both the foreign trading public and the Government, we should ultimately gain thereby."

John P. Paralieu, terminal manager for Westfal-Larsen Co.: "It would save time and money for all of us if customs were located here. Now with customs headquarters in Los Angeles, 22 miles away, we face upward of 2 days' delay before we can get our cargo cleared for pickup by receivers."

U.S. Senator CLAIR ENGLE of California: "It's ridiculous to truck merchandise 22 miles from the harbor to a customhouse. They can make up their minds to get the customhouse where it ought to be, or not get any money for construction this year."

Resolution unanimously adopted by the California State Assembly: "The General Services Administration * * * is scheduled to begin construction of a customhouse at the Civic Center of Los Angeles. This will create great hardship and inconvenience for persons dealing with the Bureau of the Customs and employees of the Bureau of Customs." The resolution urged the construction of a customs office, appraisers' store and warehouse in the harbor area.

Los Angeles County Supervisor Burton W. Chace: "A new Federal customs headquarters should be mutually convenient to the port of Long Beach and the port of Los Angeles and located within the Los Angeles-Long Beach Harbor area."

Los Angeles County Supervisor Frank G. Bonelli: "Downtown Los Angeles interests must reconcile themselves to locating the new customs headquarters in the harbor area where it belongs, or risk losing the entire $30 million Federal office building proposed for the Los Angeles Civic Center."

Edward Frank, president of Moreddi, Inc., one of the three largest importers of quality furniture in the United States: "Since our firm brings shipments into all the leading ports in the United States, we know that the location of a customhouse within the harbor area results in far more efficient handling and clearing of shipments. To the best of my knowledge, the customhouses in all of the leading ports of the United States are located within the immediate harbor area. Nearly all the importers in the Los Angeles area are located just as far from the Los Angeles Civic Center as from the port. I strongly feel that the port location for the customhouse would be much preferred over the civic center location."

John P. Davis, president of the Long Beach Board of Harbor Commissioners: "It is absurd to conceive of customs headquarters being located 22 miles away from the ports of Long Beach and Los Angeles. If this occurred in the port of New York, it could even be located in another State.

Illinois Endorses Study of Economics of Commercial Fisheries on Mississippi River

EXTENSION OF REMARKS
OF
HON. MELVIN PRICE
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, April 18, 1961

Mr. PRICE. Mr. Speaker, under leave to extend my remarks in the RECORD, I herewith include the following letter I received from William T. Lodge, director, State of Illinois Department of Conservation:

STATE OF ILLINOIS
DEPARTMENT OF CONSERVATION,
Springfield, Ill., April 24, 1961.

Hon. MELVIN PRICE,
Member of Congress,
Washington, D.C.

DEAR REPRESENTATIVE PRICE: The Upper Mississippi River Conservation Committee unanimously passed the following resolution at the annual meeting held in St. Louis, Mo., on January 10, 1961:

"It is moved that the Upper Mississippi River Conservation Committee request the proper administrative officer of each State and the Midwest Association of Conservation Commissioners to write to their Representatives in Congress stating the need of a study of the economics of the commercial fisheries of the Mississippi River and urge that they lend their support to the assignment of this study to the Bureau of Commercial Fisheries."

Official State Conservation Agencies of Minnesota, Wisconsin, Iowa, Missouri, and Illinois are members of this organization. The Illinois Department of Conservation is wholeheartedly in favor of this joint resolution and ask your kind consideration and support.

Very truly yours,
WILLIAM T. LODGE,
Director.

None More Honorably Distinguished

EXTENSION OF REMARKS
OF
HON. L. MENDEL RIVERS
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. RIVERS of South Carolina. Mr. Speaker, there has only this week come to my attention an address delivered at the University of Virginia nearly a year ago by Rear Adm. Lamont Pugh, Surgeon General of the U.S. Navy from 1951 to 1955.

This address represents Admiral Pugh's speech of presentation apropos the dedication of two war memorial plaques commemorating 350 alumni of his alma mater who perished while serving in the Armed Forces of their Nation during World War II—321—and in the Korean war—29.

Under leave to extend my remarks, Mr. Speaker, I wish to submit this address for inclusion in the CONGRESSIONAL RECORD.

This desire stems from several stimuli: First, the literary quality of the offering; second, the cogency and timeliness of Admiral Pugh's remarks; and third, the author has honored the State of South Carolina by borrowing from two far-famed inscriptions that appear on monuments in my State. The first is incorporated in the opening sentence of the address, and while it is an original quotation from Milton's "Samson Agonistes," it appears on the tombstone of James Louis Pettigru, a distinguished South Carolina jurist, orator, statesman and patriot who was born at Abbeyville, S.C., May 10, 1789, and who died at Charleston March 9, 1863, and was buried there. Despite the fact that Mr. Pettigru's loyalties remained with the Union, he was held in highest esteem in Charleston. A copy of the classic Pettigru epitaph, Admiral Pugh informs me, was presented to him by Judge Lionel K. Legge of Charleston, Justice of the Supreme Court of South Carolina and a fellow member, with Admiral Pugh, of the Society of the Cincinnati.

The closing sentence of Admiral Pugh's tribute contains the opening lines of the inscription on the Confederate monument in front of the State capitol building in Columbia, S.C., and is certainly among the most beautiful

and most famous of all inscriptions of its kind in America.

COMMENTS BY REAR ADM. LAMONT PUGH, M.C., U.S. NAVY, RETIRED, APROPOS THE PRESENTATION OF TWO WAR MEMORIAL PLAQUES TO THE UNIVERSITY OF VIRGINIA, AT 9:30 A.M. SATURDAY, JUNE 11, 1960

Mr. President, ladies, and gentlemen, this is a solemn occasion, an occasion of serious import, but "nothing is here for tears, nothing to wail or knock the breast." Yet, one needs the habit of mental restraint and self control to contemplate and to comment upon the significance of observances of this kind uninfluenced by emotion.

The perpetuation of the memory and the honoring of war dead by one means, act, or device or another has, throughout the history of our country, been a highly cherished custom—in fact, something of a fetish and a faith—with us. It is therefore particularly fitting that we here take appropriate cognizance of the alumni of the University of Virginia who went out on the wings of their morning to keep their rendezvous with the destinies of war, and did not return.

The awfulness, the evil, the wastefulness, the senselessness of war has often and vigorously been decried in council halls, from pulpits, by pundits, and through editorial asseverations in the press of America. But, at the same time, in the absence of a more effective deterrent than has, as yet, been discovered, the apparent inevitability of war has also been recognized. Numerous definitive efforts have been made to establish some manner of an arrangement that would serve to prevent the wanton waste of life and of property by nations in armed conflict against each other.

Woodrow Wilson, an illustrious alumnus of this university, the 28th President of the United States, at the close of World War I, sought, through his League of Nations, to introduce a means of preventing future international conflicts. And, in an eulogy of Mr. Wilson, delivered before a combined assembly of the House of Representatives and of the Senate of the United States in Washington, D.C., Edwin Anderson Alderman, this university's first president, said, with reference to President Wilson's League of Nations endeavor, "If there was failure, it was humanity's failure." May I now simply say that humanity has continued to fail miserably in this exceedingly important regard.

Over 100 years ago Ralph Waldo Emerson observed, and I quote, "Our culture therefore must not omit the arming of the man. Let him hear in season that he is born into the state of war, and that the commonwealth and his own well-being require that he should not go dancing in the weeds of peace, but warned, self-collected and neither defying nor dreading the thunder, let him take both reputation and life in his hand, and with perfect urbanity dare the gibbet and the mob by the absolute truth of his speech and the rectitude of his behavior." Now, if there is in the world, an institution of learning where more emphasis has been placed upon the cogency of Mr. Emerson's observation—upon the virtue inherent in his cardinal attributes, truth and integrity of character—than at the University of Virginia, I just don't know where it could be found.

Deeply imbued with these qualities, many sons of the university have participated in every war in which their country has been engaged since their alma mater was born. And inasmuch as her administrative heads remain keenly mindful of the likelihood of a resumption of open warfare at any time, the university is continuing more than ever, through such instrumentalities as her ROTC programs, to train men for all of the branches of the Armed Forces of this Nation. Also various research projects in collaboration with the Department of Defense, have been and are being pursued here. And too, several members of each graduating class in medicine enter one or another of the armed services.

In his poem, "Man Making," Edwin Markham wrote:

We are blind until we see
That in the human plan,
Nothing is worth the making,
If it does not make the man.

Why build these States glorious,
If man unbuilded goes?
In vain we build the Nation
Unless the builder also grows.

The University of Virignia has, throughout its existence, closely and ceaselessly adherred to, and has strenuously applied the principles proclaimed by Markham. Thomas Jefferson had been a stanch exponent of the doctrine preached by Edwin Markham long before that poet was born.

So long as human nature remains what it is, and I see no prospect that this fundamental frailty, attribute, instinct, trait, call it what you will, is at all likely to change, war, it appears, will undoubtedly remain the sad lot of mankind.

The smoke that arose over Hiroshima and Nagasaki did not change human nature one iota.

So long as human nature continues as it has been throughout all of the centuries or milleniums since animals began walking upright as men, and acquired the mental faculty of thought, there will remain a need for military preparedness if we, as a nation, indeed if civilization as a whole, is to survive. This need was never more pressing than right now.

There would be little point in any attempt by me, however puny or prodigious, to eulogize the alumni of the university who have given "the last full measure of their devotion" to a cause or to causes their elected leaders have considered just causes. Some of them died in the flaming wreckage of airplanes, some on the field of battle, some of them "on dune and headland where" sank "the fire," some on and beneath the waters of the world, a few in hospitals and a few of natural diseases, of course. Some had been recognized for extraordinary valor. Some had been extraordinarily valorous, but, as is not uncommonly the case, their feats and degree of bravery were known but to God. Some were officers, some enlisted men, but they are equal now, or, in my humble opinion, as nearly so as men ever are. But to them all, certainly, one common denominator is applicable. They all wore the uniform of one of the armed services of this Nation. And I will submit, without reservation, that no man or woman may be more honorably distinguished than by being so attired. I have many times averred, and I repeat it now, that service in the armed forces of this Nation should be regarded as a privilege and not as a penalty, and if there be those in the rising generations who hold an attitude at variance with this, I would strongly recommend that they take account of themselves and trim their sails at a different angle. Disdain of the military uniform on the part of the citizens of any country, to me, bespeaks of decadence in that country. I would again borrow from the sagaciousness of Mr. Emerson who stated: "The true test of civilization is not the census, nor the size of cities, nor the crops; no, but the kind of man the country turns out."

It is to those who remain and who will come after those we primarily honor here that I would speak briefly this morning. I want to pay my personal respects to the parents, the widows, the children, and other relatives, the friends and former associates of these men. I want to voice to them all the sentiments of admiration, esteem, and gratitude that is owed these alumni, by the university, by the State of Virginia (and/or whatever may have been their native State), and by the Nation for their dedication to the proposition that truth, courage, and patriotism endure forever.

There has, since its inception, been a distinct atmosphere of ancient Greece or Athens about the University of Virginia, and it occurs to me that it would be appropriate for us at this time to harken back 450 years before Christ to Pericles, and to consider his admonition to the men of Athens. This is it: "I would have you day by day fix your eyes upon the greatness of your country, until you become filled with the love of her, and when you are impressed by the spectacle of her glory, reflect that it has been acquired by men and women who knew their duty and had the courage to do it."

Mr. President, it has been a splendid act on the part of the classes of 1943 and of 1948 to have had prepared and to have provided for permanent installation on the walls of the rotunda, an impressive bronze plaque bearing the names of the 321 alumni who perished while serving in the Armed Forces of their Nation during World War II. It is equally a gracious and generous act on the part of the Seven Society to prevent a similar plaque bearing the names of the 29 alumni of the university who gave their lives for freedom during the Korean war.

Speaking in behalf of the classes of 1943 and of 1948 and in behalf of the Seven Society, the philanthropic spirit of which society has for long been traditional here, it is to me, Mr. Shannon, a treasurable honor to be privileged to present to the University of Virginia, through you as its president, sir, these two estimable and smart plaques which together contain the names of 350 of the university's sons who "true to the instincts of their birth, faithful to the teachings of their fathers," and of Mr. Jefferson's school, "and constant in their love for their country, died in the performance of their duty."

Migrant Farm Labor Problems and "Harvest of Shame"—XVI

EXTENSION OF REMARKS
OF
HON. PAUL G. ROGERS
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, April 24, 1961

Mr. ROGERS of Florida. Mr. Speaker, this is the 16th in a series of articles presented in the public interest by the Palm Beach Post-Times to show the Members some of the progress being made in Florida to solve problems relating to migrant farm labor which were left out of the television presentation "Harvest of Shame." The omissions of all that has been, and is being done in this field did a great injustice to the Floridians who have given their time and efforts to these problems over the years. It is hoped that by reading these articles and the ones to follow the Members and public will have a better understanding of this important matter.

[From the Palm Beach Post, Feb. 3, 1961]

FLORIDA LAWS ARE EQUAL FOR ALL CHILDREN

"Most State child labor laws ignore farm children, and as far as the children of migrants are concerned, almost without exception, they leave school at the age of 16."—"Harvest of Shame."

Florida law makes no distinction between the children of residents and migrants.

Each group is governed by the same standards.

"The same educational opportunities are available to children of residents and migrants workers," according to Tom Bailey, State superintendent of public instruction.

"The influx of migrant children has created a tremendous problem for some counties to hire enough teachers during the middle of seasons—particularly in the smaller counties," he said. "But the counties are becoming familiar with the problem and are making adjustments."

Smaller counties don't have access to pools of teachers available for limited periods as do some of the larger counties, Bailey stressed.

The superintendent couldn't estimate the number of migrant children who leave school at 16.

"I don't think those figures are available," he said.

Clyde Harris, assistant superintendent of schools in Palm Beach County, agreed with Bailey.

Because the migrant families make frequent moves, Harris said school leaders have been unable to determine just how many drop out.

Florida has recognized the economic state of its migrant labor force and has made a provision not accorded to other nonresidents, Harris said.

"The law exempts the parents of these children from having to pay the school tuition fee demanded from other nonresidents." That fee is $50.

Furthermore, Harris said, Florida does not ignore the migratory children but requires them to attend school the same as permanent residents.

Herman Close and Ruth Ervin have been appointed special teachers to aid the Glades area children who show an inclination to drop out of school.

The two have found it possible in a large number of cases to persuade the youngsters to complete high school.

Girls are given special instruction in homemaking, boys in shopwork. All get special courses in reading and arithmetic as termination work.

A report compiled by Mrs. Margaret Mosley, supervisor of migrant education in the Glades area, and Mrs. J. R. Nutt, visiting teacher, shows Palm Beach County is facing up to its responsibility.

In May 1960, they said, white schools of their area had a total enrollment of 2,862, and 434 of those were migrant children.

Negro schools, they reported, had enrollment of 3,727, with 1,715 students being migrant.

"The schools of Palm Beach County have for many years welcomed migrant children into their classrooms. It is nationally recognized that migrant children go to school while they reside in Palm Beach County," Mrs. Mosley said.

The board of public instruction has been alert to the problems and educational needs of migrant children and has made heroic efforts to provide adequate schooling, she added.

What has been done locally to further the education of the migrant children? These are some of the things the report shows:

1. Two visiting teachers work between schools and homes to relieve conditions preventing children from attending classes.

"A greater portion of time is spent with migrant families," Mrs. Mosley said.

2. Generally, the children are enrolled in permanently organized schools and are integrated with resident children.

But the Hagan Road School in Delray Beach was built to serve the particular needs of non-English-speaking children, who know only Spanish. Additional teachers are employed to care for the increased enrollment during the harvest season.

3. Additional teachers are hired at the beginning of the school year to accommodate the larger number of children who enroll later.

4. Special services in speech improvement and remedial reading are provided, as well as psychological testing for exceptional children.

5. A supervisor of migrant education is employed to work with schools and community groups on educational probelms.

6. The county shared the cost of a national research program from 1954 to 1957 to learn ways to provide improved educational opportunities.

7. In-service training programs for teachers of migrant children have been provided by the county, and each course carries three semester hours of college credit.

8. The advisory committee for the education of migrant children has been created and meets regularly to study problems and provide solutions.

"As a result of the work of this committee, several worthwhile projects have been sponsored which have not only benefited migrant children but regular resident children also," Mrs. Mosley said.

An example? A mobile dental unit provides examinations and treatment. Civic groups contribute to pay the dentist's fee.

And a special junior high school program for children overage and in need of remedial instruction in basic subjects, homemaking, and industrial arts was provided.

9. Clothing, school supplies, and free lunches for the indigent are provided.

10. The migrant children are welcomed into classes in the same manner as permanent residents.

11. Spanish-speaking children are given status by their contributions in the elementary lessons.

12. Children are welcomed into extracurricular activities such as the safety patrol, athletics, 4-H Club, Junior Red Cross, Future Homemakers, and Future Farmers of America.

A Soviet Naval Goal: Satellite Seas

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, April 26, 1961

Mr. FLOOD. Mr. Speaker, in an address to the House on January 16, 1961, I discussed the critical significance of the current agitations to increase the width of territorial seas and quoted an illuminating article by George Winder on the subject of "Communist Strategy and the High Seas," published in the December 1960 issue of American Opinion.

The question of territorial water widths, however, is not the only maritime problem presented by the world revolution conspiracy. Others are attempts to establish Soviet satellite seas through securing control of key points of access.

It was, therefore, with the greatest interest that I read in the April 1961 number of the U.S. Naval Institute Proceedings a highly informative article by Capt. Frank M. Murphy, which deals with that significant maritime objective.

Appraising the problems involved with the realism of the experienced and thoughtful professional naval officer, Captain Murphy's article reflects a degree of strategic insight that is refreshing to encounter. I commend it for study as a sequel to the previously mentioned Winder article by all concerned with the formulation of our maritime policy.

Accompanying the article is a biographical sketch of its author:

A graduate of the Georgetown University School of Foreign Service, Captain Murphy served on U.S.S. *Zane* (DMS–14) and was commanding officer of the U.S.S. *Chandler* (DMS–9) during World War II. Subsequently, he attended the General Line School at the U.S. Naval Academy and the Naval War College, Newport, R.I. Since 1953, he has done staff duty with Commander 6th Fleet Cin-CNELM, and Commander Carrier Division 18. He is at present attached to the Office of the Chief of Naval Operations.

The article follows:

A SOVIET NAVAL GOAL: SATELLITE SEAS

(By Capt. Frank M. Murphy, U.S. Navy)

"Freedom of navigation is an important objective of American foreign policy."—Cavendish W. Cannon.[1]

In our grave concern over the military subjugation of the satellite states, it is easy to overlook another dangerous and related Soviet objective—the establishment of satellite seas. Just as the Soviet Union is striving to cut off large non-Russian land areas from the free world, so is it aiming to make the Black Sea, the Baltic, and the Sea of Japan into Russian lakes.

The closing of these international highways would mean a blow to non-Communist economies, a lowering of morale in the restive satellites, and a strategic naval loss which would significantly alter our military posture.

THE DANUBE LESSON

We know what it means for all concerned when the Communists seize a land area. The lost personal liberties, the warped economies, and the increased military and political tensions need no elaboration here. Since the results of Soviet control of strategic waterways have received less attention, it will be instructive to view a laboratory case—the Danube River since World War II. For nearly a century (1856–1948), this great cultural and commercial artery was managed by an international commission. Under this arrangement, the Danube benefited the riparian states and the entire civilized world much as do the St. Lawrence Seaway and the Panama Canal. Once Soviet Russia became paramount in the Balkans, however, it ended the liberal and intelligent regulations and began a narrow, discriminatory rule of this important waterway.

Although the Soviet Union could not give its actions the force of legality, it did provide them with a screen of formality by going through the motions of an international conference at Belgrade in 1948. To this meeting, as chief Soviet delegate, came no less a personage than the Foreign Minister, Andrei Vishinsky. This was at once an indication of the importance which the Soviets attached to the Danube and an indication of the results which could be expected from the conference. The United States designated its Ambassador to Yugoslavia, Cavendish W. Cannon, as its principal delegate. The satellite regimes and Yugoslavia sent dutiful and well-rehearsed Communists. In refusing to adhere to the Soviet-drafted treaty, the U.S. representative said:
